GUIDE TO THE SF10 CHIRIGUANO FILE

[The Chiriguano are a nation of agriculturalists, speaking a language of the Tupi-Guarani stock, and living in eastern Bolivia in South America. They have lived in the area since the 15th century, having migrated from the East shortly before that time. They are slash-and-burn agriculturalists, primarily dependent on maize, but also growing pumpkins, sweet potatoes, beans and sweet manioc. Hunting, fishing and collecting are of secondary importance.

There are seven sources in the Chiriguano File (numbers 1-2, 4-8), three of which are in English, two are translations from the Spanish (4: Nino, 8: Schmidt), one translation from the French (1: Métraux), and one a translation from the German (6: Nordenskiöld). The major sources are 1: Métraux, by a well-known Swiss anthropologist, which is a descriptive and historical analysis of technology and material culture; 4: Nino, by a Roman Catholic missionary, a general ethnography containing much useful information, as well as much religious dogma: 5: Nordenskiöld, by a noted Swedish explorer-anthropologist, a comparative study of acculturation and material culture; 6: Nordenskiöld, a generalized ethnographic description from a visit made in 1908-1909; 7: Rosen, a study by a Swedish ethnologist of Chiriguano material culture and other aspects of the culture from observations made during a visit in 1901-1902; and 8: Schmidt, a comprehensive but not exhaustive study of Chiriguano society based on a field trip made in 1935. As can be seen,

most of the data derive from the period ca. 1890-1935, with some historical information contained as well. There should be no particular focus problems in using these materials; however, the historical depth of the file may produce some problems and should be noted in using the materials. The file contains much information on material culture and subsistence patterns, less on socio-political organization. It should be adequate for most comparative purposes. One making decision has been made: information on 'great chiefs' has been filed in Category 643, information on ordinary chiefs in Category 622. The file was processed between 1964 and 1968.]

/295/ Preface

114 121 In the chapters to follow, I propose to publish part of the results obtained in the course of the expedition that I undertook in the Bolivian and Argentinian Chaco in my capacity as director of the Institute of Ethnology of the University of Tucumán.

114 [101] This expedition took place from February to June, 1929. Its itinerary was the following: Having left Tucumán, I went by railroad to La Quiaca where I stayed for several days, making observations on the more or less half-breed natives of the region. From La Quiaca I went to Tarija, where I remained longer than I might have wished because of the suspicions my trip raised at the time of the Paraguayan-Bolivian conflict.

114 101 103 After a 15-day stop I left Tarija to reach the Chiriguano tolderías of the upper Pilcomayo. I crossed the village of Santa Ana, then the Abra del Cóndor, the Narvaez River, the post of San Diego, passed five kilometers from San Luis (Entre-Ríos) to stop at the Cuesta de San Simon, where I found the first Chiriguano. Once having crossed the Cuesta de San Simón I quickly reached the Salado River, then the Chiriguano villages of Timboy [126] (Saladito). It was there that I made my best acquisitions of pottery and where I collected the oldest objects. The inhabitants [178] of these rancherías, who live relatively far from the highway from Argentina to Santa Cruz, have preserved the traditions and culture of their ancestors better than their racial brothers have. From Saladito I reached the village of Itasiti and then Salado Grande, [361] in order /296/ to reach the Pilcomayo at the confluence with the Salado. There, the Chiriguano villages are large and numerous. The most interesting are those of Ñawirenda, Ibopeytí, and Yumbía.

After stopping for some time in this place, I continued my trip toward Huacaya and the mission of San Pascual de Boicovo.

In one day I went from Boicovo to Cuevo, going by way of the mission of Santa Rosa.

[797] [178] From Cuevo on I was in the mission of Ivu, which is without doubt the one where the old Chiriguano customs have undergone the fewest modifications.

/296 cont./

114 From Cuevo I left for the northwest toward the Parapiti River
101 region. I crossed this river near Pipi. After stopping in that village,
103 I followed an Indian path which led me to Carurutí, to the home of my good friend Captain Karnapadyú. I spent a week with him and left him only to explore the whole Caipipendí valley, visiting all the Indian villages one after another. At Caipipendí itself I made fruitful excavations and collected interesting myths.

The limit of my trip toward the north was the little city of Charagua.

I devoted the last part of my trip to more or less long stays in the Franciscan missions of Tarairí, Tigüipa, Machareti, and Ivu.

Before going back to Argentina I made an excursion into the Igüembé valley as far as the village of Masavi.

114 The last two weeks of my expedition were devoted to the
127 study of the Chané Indians who live near Aguaray in the Salta Chaco (Argentine Republic).

Previously I had been obliged, for various reasons, to stop at Oran for a month. I took advantage of this to make collections among the Ashluslay Indians who come there for the sugarcane harvest.

In this volume I shall publish only the results of my expedition which bring new facts and details to light. Therefore the chapters I devote to the Chiriguano must not be considered an exhaustive study of their culture, but simply as a contribution. Chiriguano culture has been the subject of four important works, two of which are by ethnographers of great authority (1). /297/

1. Nordenskiöld (2, 5, and 10) and Rosen (1) /the underlined numbers following an author's name refer to the boldface numbers in the bibliography/. Campana's monograph on the Chiriguano, which I shall often have occasion to cite, is only a recompilation and reorganization of the manuscript notes left by the Italian missionary, the Reverend Father Doroteo Giannechini. This work is excellent in many respects. As for the book of the Reverend

/300 cont./

and id., 1, pp. 161-196; Church, pp. 206-227; Mujía; etc.). I shall limit myself to tracing here, in their main lines, the characteristics of the great Guarani migration which ended in the formation of the Chiriguano tribe.

The Chiriguano Indians belong to the Tupi-Guarani linguistic family. A branch separated from the great Guarani nation or, more exactly, a swarm separated from the whole group of tribes of Paraguay and southern Brazil called Guarani, they came to establish themselves at the foot of the Andes at the end of the 15th and the beginning of the 16th century after crossing the Chaco plains.

/301/ The causes of this great movement, which swept along so many thousands of Guarani toward the frontiers of the Inca Empire, are explained by the singular attraction which metal objects, clothes, in a word everything that can make life easier and more beautiful, exerted and continue to exert on the Indians. The Guarani of Paraguay and the Tupi of the Brazilian coast had known for a long time about Peru and its riches. From there they used to receive bronze instruments and ornaments of silver and sometimes also of gold (1). At the same time as these objects,

1. On the trade relations between the peoples of the Andes and the tribes of the Chaco, Paraguay, and Brazil, cf. Nordenskiöld, 9, pp. 255-259.

confused descriptions reached them of these mountain peoples, so strange, who lived in stone huts, had "deer with long hair" at their service, and who decorated their persons with brilliant jewels. Bronze axes, necklaces, bracelets, breastplates, diadems, and goblets of silver reached them by a trade route whose exact position is unknown, but which probably used to pass through the northern Chaco. The Chané /Chane/ who lived in direct contact with the populations of the Inca Empire and traded with them, played the role of brokers, and with them as middlemen these tools and ornaments reached Paraguay, passing from hand to hand (2).

2. Hernández, p. 322: "They were asked of what race are those who have the silver and the

/320 cont./

C 175 342

interesting: "they make a very big dormitory and, within it, as many small rooms as there are residents, and so small that they do not have room for more persons, and it is enough for them, because they do not have furniture, nor do they have wearing apparel and hence they go about naked." /Translated from the Spanish./ These facts agree on every point with those of the Relaciones geográficas, etc. (Vol. II, Plate CIV) and of Lizárraga (Vol. I, p. 259) on the same subject. The Guarani, just like the Tupinamba and other Tupi tribes, lived in maloca, gigantic halls capable of containing more than 150 persons and which often in themselves formed the village. The existence of this type of dwelling among the Chiriguano in the 16th and 17th centuries constitutes new proof for the recent character of their migration. In the 18th century we find them already in possession of the small rectangular house which they still have now and where one single family lives. (See Métraux, 2, p. 51.)

C [114] [113]

C [171]

C [174] [167]

C 114 127 175

novelist Garcilaso which might allow one to suppose that he really knew who the Chiriguano were. As for this conquest by the Inca, it would have been barely an attempt at conquest... Garcilaso confuses the Chiriguano with all the tribes of the eastern slopes of the Andes whom he had vaguely heard mentioned. Let us note that he is the only one to attribute this expedition to the Inca Yupanki, while the other chroniclers, better informed, are satisfied to say that the Inca Yupanki made an expedition against the Antis, probably around Cuzco. Unfortunately the vogue this pleasant writer enjoyed at a time when the history of America was still in limbo bluffs some modern critics into believing him, and they go so far as to prefer one of his unwarranted affirmations to the serious /321/ and precise evidence of chroniclers who get their information at first hand and from reliable sources.

C 114 127 175 648 [101]

/327 cont./

they have not done it any more for some years and sell them to the Spanish for the shoddy goods the latter give them in exchange. Indeed, they consider it more profitable to sell them for objects they need than to eat them. Their cupidity is such that there is no year when they do not go out to make war in the plains, with great trouble and at the risk of their lives, solely to procure prisoners. Among these Indians there are some individuals so rich that in addition to clothes of cloth and silk they have silver dishes, a service which costs as much as 500 marcs. Without counting a great number of horses saddled and bridled, with good harnesses, and all kinds of weapons which they owe to the thefts and plundering they do in the course of these unjust and pernicious wars. Up to the present no one has been able to bridle their cruelty or stop the disorder and insolence of these people. They have committed many offenses and lacked respect for the royal Power, taking up arms against Francisco de Toledo, who was viceroy of this kingdom. Besides, they have killed and stolen from the Spanish and have inflicted outrages of all kinds on them, depopulating villages, killing and pillaging the fields and farms of the vassals of His Majesty who live on these frontiers of Tarija, Paspaya, Pilaya, Tomina, and Mizque, and the government of Santa-Cruz de la Sierra." (Díaz de Guzmán, pp. 30-31.)

The Chiriguana (sic) live near these valleys (Tomina and Lagunilla) in warm mountains covered with trees where horses can scarcely walk. They are not natives of this country but foreigners come from Río de la Plata. The language is the same and does not differ from it in any way... The Indians toward whom they are most hostile inhabit a province behind these mountains, a very flat land lacking water, which is called Llano de Manso or the province of the Chané. These Chané are inoffensive people but of good tendencies, of a more congenial appearance and a better nature than the Chiriguana. The latter have eaten more than 60,000 of them, and I do not believe I am saying very many, for these plains were very heavily populated. At present there are only a few Indians, and as they have no one to defend them, these

C

Chané of Santa Cruz province coming to ask for aid and protection from the Chiriguano who were tracking them down; in 1798 the Chané of the Itiyuro were still making incursions against the Chiriguano of the region of Itáu and destroyed that mission almost completely. (See Corrado, pp. 98 and 225; Tamajuncosa, p. 211.)

[162]
[101]

/329/ The Chané tribe did not succumb to these hecatombs or to slavery. It was able to maintain itself on two points of its former territory: on the Itiyuro and the Parapití. Several villages whose density is rather great still exist there. The Chané of the Itiyuro still number about 1,500. They all live in Argentine territory in the province of Salta. I do not have any statistics for the Chané population of the lower Parapití, but I know these Indians are still numerous there.

Ce
191
[101]
C
[197]
Ce
[198]

Today the Chané are not distinguishable from the Chiriguano by their material culture or their language. They speak Guarani, but use certain locutions and certain words which the Chiriguano say they do not understand and which are perhaps so many vestiges of their ancient Arawak speech. They have kept the latter as a secret language. Nordenskiöld (2, p. 157) was able to collect a short vocabulary of it among the Chané of the Parapití. As was supposed a priori, it is certainly an Arawak dialect closely related to Moxo-Mbaure.

Ce
648
186
C
[186]
C
[101]

The modern Chané are no longer slaves, but their early condition is still manifested in their relations with their former masters. The Chiriguano always regard them with a certain scorn and a protective air, to which the Chané respond with open animosity. A Chiriguano would feel offended to be called Chané, and a Chané Chiriguano. The name by which the Chiriguano designate the Chané is always Tapii.

Ce
192
167

Even if historic traditions or ethnic facts were not in agreement to prove the existence in the western Chaco of an Arawak population, archeology alone would suffice to teach it to us. At Tarupayu, Nordenskiöld (5, pp. 40-41) brought to light pottery

C /331 cont./
105
175
[167]
[173]

This migration had as its motive power the attraction which the metal riches of the Inca Empire exerted on the Guarani, and perhaps also certain mystical factors (the myth of the "Land without affliction").

/332/ The famous expedition of García is probably only an episode in this great migration.

Ce
[197]
[177]

At the foot of the Andes the Guarani found a population of Arawak speech, the Chané, whose civilization had felt strongly the influence of the tribes of southern Bolivia subject to the Inca.

C
[648]
[563]
[619]

The Guarani exterminated part of the Chané, reduced the others to slavery, and took Chané women as wives.

The Chiriguano nation issued from this ethnic mixture.

C
[177]

From a cultural point of view, the Chané exerted a decisive influence on the Chiriguano; and it is through them that today certain aspects of the Inca civilization are continued by the Chiriguano.

Ce
[177]
[197]
[198]

On their part the Chané adopted the language of their conquerors, keeping for a long time their Arawak speech as a secret language.

C
175
131

Situation of the Chiriguano in the 18th Century and Today

In the 18th century the territory of the Chiriguano can be defined as follows: "According to Jolis and Hervas, their domain extended from Tarija to the east a distance of 50 leagues (250 kilometers), and from north to south, 100 leagues (500 kilometers). Their frontiers were the following: In the north they reached 17° south latitude and advanced as far as the Jesuit missions of Chiquitos. In the south they reached 22° south latitude. In the region of Salinas, Itáu, and the upper Pilcomayo, they had as neighbors the Matako-Mataguayo and the Toba. Toward the west they had establishments as far as Chichas, Pilaya, Laguna, and Valle Grande. Permanent

Chapter II

Agriculture

241 The Chiriguano, like the Guarani and the Chané, their ancestors, are excellent farmers, and the working of the soil represents their principal occupation and their great concern.
243 For them corn is of prime importance; it constitutes the basis
[273] of their diet, for it enters into the preparation of most of their dishes and in addition gives them their preferred drink, chicha or kāwi.

[132] The sandy lands of the western Chaco and its climate,
[134] hot and dry a great part of the year, but also rainy during the summer months, seem to be particularly suitable for this grain. I have never seen such beautiful fields of corn anywhere. The ears are large, well filled out /334/ with kernels, and extremely tasty. The Bolivian half-breeds and settlers who are coming in greater and greater numbers to take the place of the Indians devote themselves like them to the growing of corn, which, with cattle-raising, is their main resource.

114 My trip to the Chaco, which took place from the month
243 of February to the month of June, did not give me a chance to
● [101] be present at the sowing which is done at the beginning of the rainy season. For many details I shall therefore be forced to
[127] refer to Corrado (pp. 42 and 48), Campana (pp. 96-98), Nordenskiöld (2, pp. 181-184, and 10, pp. 23-24), to Nino (pp. 237-241), and Rosen (1, p. 205).

241 When a Chiriguano wishes to cultivate a new piece of
243 ground for himself and his family, he scours the environs of his village looking for a spot which may suit him and which is, in addition, easily irrigable. This condition is generally fulfilled by the lands at the foot of a hill or rising ground. The rain water which pours down there assures them of fertility.

/398 cont./

17 this explains why the Chiriguano culture of the upper Pilcomayo presents such close affinities with that of the Chicha, the Humahuaca, and the Atacama (1).

175
648
[101]
[177]

1. On the western borders of their territory the Chiriguano were in constant touch with the Chicha, whose territory they devastated and whom they obliged to pay tribute to them.

Lizárraga (Vol. I, p. 282): "the quality of the valley (of Tarija) being known, and the importance of its being populated, in order to check in that direction the Chiriguanas, who had done no little harm to the Chichas there, and they even paid them tribute, named as " corregidor, etc...." /translated from the Spanish/.

Lizárraga (Vol. II, p. 117): "he went to Mosquera and returned, and with more than thirty natives, twenty of them Chiriguanas, and the rest indios Chaneses /Chane Indians/ in service, and among them two more illustrious Chiriguanas, one called Marucare and the other par excellence Inga Condorillo, and another Indian of Chicha nation, whom they confined with those Chiriguanas ..." /translated from the Spanish/.

Archivo de Indias (74-4-1, cited by Coni, p. 19): "and in about a month they reached another nation of indios called chiriguanaes, who thus neighbor this city a dozen leagues from potosí, and they carry off a pueblo of indios chichas who are called chupas." /translated from the Spanish./

Coni (p. 21): "In a letter from the licenciado Matienzo he tells us that the Chiriguanaes continued to raze the plains of Manso and, in addition, made frequent onslaughts on the Charcas, where they

TRIBES OF THE EASTERN SLOPES OF THE BOLIVIAN ANDES

By Alfred Métraux

INTRODUCTION

Five tribes live along the slopes of the Bolivian Cordillera from the Argentine border to Perú: The *Chiriguano*, the *Yuracare*, the *Mosetene* and *Chimane*, the *Leco*, and the *Tacana*. The *Chiriguano* belong to the *Tupí-Guaraní* group; the *Yuracare*, *Leco*, and *Tacana* represent still isolated linguistic families. The *Mosetene* and *Chimane* form a single linguistic group. 101

CHIRIGUANO AND CHANE

HISTORY

The *Chiriguano* (*Ava Chahuanco*) (map 1, *No. 3;* map 2; map 8, *No. 5*) are the descendants of the *Guaraní* who in historic times migrated from Paraguay and crossed the plains of the Chaco in successive waves to settle along the foothills of the Andes from the upper Pilcomayo River to the upper Río Grande (Guapay River). (Lat. 18°–23° S., long. 63°–64° W.) Seven migrations are alluded to in historical documents. 175 167 101

The first migration (1471 or 1476), reported by Garcilaso de la Vega, took place during the last year of the reign of Inca Yupanqui. Another, between 1513 and 1518, can be surmised from the testimony of a *Guaraní* Indian who spoke to Alvar Nuñez Cabeza de Vaca. A *Chané* Indian captured by the *Guaraní* and brought to Itatí told Domingo de Irala in 1542 of a third migration, between 1519 and 1523, which probably came after the 1513–18 invasion and certainly before that in which Alejo García took part. The *Guaraní* migration described by Diego Félipo de Alzaya, curate of Mazaca, may perhaps be this third one, though many details are certainly fanciful. According to Gandía (1935 a, p. 24), this was the migratory shift which took the *Guaraní* from the region of Itatí to the Province of Santa Cruz and which contributed to the formation of the *Guarayú-Pauserna* tribe.

The fourth *Guaraní* invasion, about which we have the most complete information, occurred between 1521 and 1526. It is famous because a few White men, shipwrecked sailors of the Solís armada, accompanied the invading Indians. One of them, Alejo García, seems to have played a conspicuous part in this migration, although Díaz de Guzmán's (1914, 9:26–30) statement that García was the organizer of the raid may be doubted. With a strong force of *Guaraní* he crossed the Chaco, probably at lat. 13° S., and invaded the borderlands of the *Inca* Empire. The raiders advanced as far as Presto to the northeast and Tarabuco to the southeast of Sucre. Fearing a victorious return of the *Charcas* (*Chicha*), the invaders retreated, carrying their booty. On reaching Paraguay, with *Chané* and *Tarapecosi* (*Chiquito*), Alejo

[Maps 1, 2, 8 not processed for this file]

/76 cont./

174 When experience showed them that they could settle
167 in the regions which they occupy today because the harvests were certain, they made their homes there and, when invaded, defended the territory at all costs, as has been seen.
241 The region, as was seen in the first chapter, is certainly
433 very fertile; when it is irrigated by rain, it produces every
[461] type of cereal; maize matures exuberantly, and the crops are splendid with little labor. If the fields are kept free of weeds with a couple of weeding hooks and there is no lack of rain, the Chiriguano can sing all year around the big chicha bowl in the company of his friends.

433 But if rain is scarce, the crops are generally lost, and
241 then the Chiriguano suffers, digs roots for his food, and
511 sells everything he has, even his trousers and his wife's
[931] new tipoy, in order to support his poor family miserably. In times of scarcity the Indian plants with considerable hope a small patch where it is damp, such as around a lake or /77/ along some stream; plantings of this type are called socorro /succor/, and in fact they are, when roots can scarcely be found. Oh a few green gourd leaves at this time are like syrup in the Chiriguano's mouth! Poor Indian!

Language

192 By what has already been related it can easily be under-
[101] stood that the Chiriguano are descendants of the Guaraní of Paraguay; thus the Chiriguano language is very analogous to Guaraní, as well as the Guarayo language, and it can be stated as a fact that both the Guarayo and the Chiriguano languages have the same relationship to Guaraní as that which exists among the Spanish, French, and Italian languages with respect to the Latin language, which is their mother (1).

[194] [171] 1. The Chiriguano language has very few accented words; in Guaraní they are abundant. For example, "abati," maize,

/232 cont./

301 171 Berry women put pieces of glass and bits of ivory in their lips, respectively; among the Mittoo /Mittu/ and the Lobbatk, men and women wear in the lower lip tembeta that are conical in shape, and in addition the women even wear hoops in the upper lip (2).

> 2. In many tribes of the world, the tembeta is a mark of modesty, and women who wear it do not show themselves in public without having it in the lip.

In other regions the women are coquettes, only wearing in their upper lip a wood or ivory hoop, which the Sciulus do. Finally, even the Cormá /Korma/, investigated not long ago by the Italian Bottego, wear in their lip wide wooden hoops which increase the wideness of the lip itself.

In North America the tembeta is used by preference by the /233/ women; it serves them as an ornament, and they put around it as many little pieces of wood as they have years of age. The tembetas of the Tapíi of Isoso are small, and those of the Choroti and the Tapiete are of wood or of cane; no doubt up until today it was difficult for them to get the metal to make a de luxe one (1).

•101

> 1. The Tapiete are, or were, Chiriguano Indians. They stayed near the inlets, where there is flat land with hills and streams, in order to be able to do their planting.

301 773 776 According to what is known through faith, clothing was given to humanity as punishment for its disobedience, a punishment which has been converted into the luxury of frequent and extravagant fashions, so also among the Chiriguano does there exist the fabulous belief that the tembeta, which today they consider to be a distinctive mark of the race and a sign of virility, strength, and valor, was nothing other than a bitter and well-deserved punishment which a marvelous and very

/273 cont./

175 729 728 History tells us that the Chiriguano were not the first inhabitants of the region that they now occupy. Other savages had lived here, who handed over the territory by reason or right of the stronger. Subjugated by the number and valor of the invaders, some of them emigrated to perish, and others remained as vassals in their own land and little by little came to an end, leaving the Chiriguano masters of their land.

175 648 [101] In time the Incas tried to conquer this extensive territory, leaving behind innumerable marks of their tenacity, but they had to abandon this noble thought, contenting themselves with calling them with great contempt Chiriguano or Chirihuano, cold excrement. But however warlike or invincible a people or nation shows itself to be or is, its hour to succumb arrives. 175 648 799 What was not achieved by the Incas or by the arms of the Spaniard here has been brought about by the patience of the missionary and the tenacity of the whites of Santa Cruz and Tarija. Today the dread Chiriguano is subdued and bows his haughty head. 648 799 He has been reduced to nothing, and one who does not live in the missions is the vassal of the white man, who has dominated him completely. It is the disposition of Providence, which subdues the proud and decrees that they experience, although much more gently, what they made the invaded ones experience. It seems that in the last war of Curuyuqui, the Chiriguano learned his inferiority, but it cannot be denied that this race has been one of the most warlike that has existed here (2). [181]

175 648 729 266 2. The Incas tried to conquer the Chiriguano in order to moderate their customs. The Chiriguano treated the Tapiî with great cruelty: according to what has been told by the natives of Parapiti, they fattened them in order to eat them later.

/309 cont./

169
464
511

of the Argentine Republic for eight or ten years: they drink it all up and when they want to come back they scarcely bring back more than a knife and a small black garment /tensino/, which costs little.

If one asks the reason for this procedure, so strange for them themselves, they answer that in their town they could never save up ten or 15 bolivianos, because they spend them immediately on trifles for themselves and their families, while in the Argentine Republic they keep their money in the master's house and, when they come back, buy clothing and even animals, reals, saddles, and other items. There is some truth in this, but just as it is not completely true that here their money does not last, neither is it completely true that they bring clothing and other things from Argentina. Those who are a little careful and who are not lazy dress very well here, while the vice-ridden in Argentina let themselves be overcome by laziness and return as naked as they were before: they arrive, spend or waste, if they have anything, and finally go off to live as they please (?).

101
169

2. The Chiriguano Indians call the gauchos, or natives of Argentina, criollos /Creolos/: they apply the same name to those of their own race who settle there for many years.

The method of instruction as it is applied yields prodigious results in the girls, who, in addition to learning their letters and worship, learn in the schools the tasks proper to their sex, from spinning to embroidery in silk and gold: certain mission schools for girls, for example, the one at San Antonio del Paraquiri and the one at San José de Tigüipa arouse real admiration in visitors, both because of /illustration appears here/ /310/ the handwork which is done in them and, in the former, because of the Spanish language, which from first to last they all speak with considerable perfection, since from the beginning the language of their parents has been absolutely prohibited for them in the school, even among themselves.

/315 cont./

N 695 921 Nothing is known about the origin of these wretched Indians because they run away from civilized peoples; nor do they allow the latter to occupy the region that they inhabit, because they kill treacherously by night or even by day, if they are superior in number.

N 221 Perhaps in some distant day they can be reduced with the colonization of the territory, because it is supposed that they follow the dry course of the Parapiti River in order to be able to live, at least in winter, when the water in the lakes dries up.

Yanaiguas or Nanaiguas

T 174 199 It is not true that the Nanaiguas are Chiriguano in origin, for if this were so they would all speak something of the language. Those who understand it are rare, and those who speak it very rare; the latter have learned it from their dealings, not only with the Chiriguanos, but also with certain whites to whom they have begun to lend their services.

T (64) T 131 Their territory is located between the Parapiti River and the stream of Cuevo, from 20° to 20° 35' latitude and from 65° to 65° 40' longitude.

T 181 199 648 They are not numerous, but are quite inoffensive and peaceful, for which reason it is easy to reduce them, and I do not believe the day is far off. In the region of these and other Indians, there are explorations going on today which will necessarily result in intercourse and subsequent civilization, given the peacefulness of the natives.

C 101 186 T 101 The Chiriguano have given the said name to these Indians. They call them Yanaiguas because they are dwellers in the forest, and this is a term of contempt, because, according to the Chiriguanos, only wild animals live in the forest.

T 179 424 648 As I have said, these Indians are not like the previous ones, who run away from civilized peoples; they are already working with the whites, although not more than half a day, like the Toba and Matacos, and without the tenacity of the latter. They are often seen on the right bank of the Parapiti in little

Introduction.

c
ce
114

In Part I of this work I sought by a new method to analyse the material culture of two Indian tribes the Choroti and Ashluslay. In the introduction to the aforesaid work I explained the method employed. In Part 2 I have sought by the same method to make an ethno-geographical analysis of the civilization of two other Indian tribes. These are the Chiriguano and Chané, who dwell in the southernmost part of Bolivia and northernmost Argentina. The Chiriguano are Guarani Indians, while the Chané are Guaranized Arawaks[1]). They thus belong to two of the most important tribal groups in all America. Their civilisation is already well known, thanks to the missionaries who have worked and still work among them. Their works are referred to in the bibliography. The most important are those by CORRADO and NINO. DEL CAMPANA wrote a monograph on the Chiriguano based on information supplied by missionaries. We also find mention of the Chiriguano in many older works. The information they give us of their manners and customs is unfortunately scanty. It is, indeed, only in LIZÁRRAGA, CHOMÉ, VIEDMA, LOZANO and one or two of the LITTERAE ANNUEA that we find any useful matter.

c
ce
[101]
[131]
[197]
c
.114

SERRANO Y SANZ wrote an excellent work on the post-Columbian history of the Chiriguano. OUTES has written about their pottery. LEHMANN-NITSCHE has dealt with their physical anthropology. Works on their languages have been published by several missionaries. I visited these

[1]) Vide NORDENSKIÖLD (8).

can be kept in a museum or for which one may find — given favourable circumstances — archeaological comparative material. Besides weapons, ornaments etc there is thus included also burial customs, tatooing, dancing-masks, etc.

C
CE
128

The reader will find that I have endeavoured to make this part more graphic than Part I . From the maps of bibliography it will be seen regarding what regions I have had access to literature; it can also, in some measure, be seen whether the blanks on the maps are due to those particular tribes never having been closely studied.

The maps of distributions in this work are fewer in number than in Part I. This is because we find the Chiriguano and Chané, or one of these tribes, on twenty-nine maps in Part I. Part I is largely preparatory to Part II. Parts I and 2 together contain 45 maps showing the distribution of culture-elements occuring among the Chané and (or) Chiriguano.

C
CE
121

All who are interested in the ethnography of S. America will, I venture to think, find the maps worth close study and will see that from them various deductions can be made not only respecting the Chiriguano and Chané Indians but also as to the ethnography of S. America in general. In some measure I have, indeed, endeavoured to do this myself.

C
CE
131

The land of the Chiriguano and Chané the Indians streches from near Sta Cruz de la Sierra to near Rio Bermejo. Southwards of Sta Cruz the territory inhabited by the Chiriguano is continuous. The Chané, on the other hand, live in several different quarters, some at the river Itiyuro in the Argentine, some at Caipipendi near the Rio Pilcomayo, some at the Lower Rio Parapiti, and others near Itau south of the Rio Pilcomayo. The neighbours of the Chiriguano and Chané are the Mataco-Vejos, Mestizos, and Whites to the south, the Mataco, Toba, Tapiete, (Yanaygua) and Tsirakua to the east, to the north Mestizos and Whites, and to the west Quichua, Mestizos, and Whites.

C
CE
101
162

Some Choroti live near Yacuiba. In nearly all of the Chiriguano territory there are Mestizos and Whites. There are also several large missionary stations in their territory. Some few Chiriguano live in the village of Sta Rosa to the north of Sta Cruz de la Sierra. Some Chiriguano who sought refuge in central Chaco after their last rebellion, live there still. They are the only tribe of Chiriguano-Indians who are quite independent of the Whites. C 101 162 131 [797]

The country which is inhabited by the Chiriguano and partly by the Chané is a border land between the Andine mountains and the great plain of the Chaco. It is in the valleys between the outermost mountain ridges towards the Chaco and on the plain to the east of them that the Chiriguano and the Chané live. The land of the Chiriguano and Chané-Indians is not a real country of primeval forests. There are some great forests, but on the whole it is sparsely wooded, in places even very poorly wooded. The supply of water is the governing condition for settlement in the land of these Indians. It may be said that wherever there is access to water there the country is inhabited, at any rate as regards the region south of the Rio Grande, one of the great rivers that run through their territory There need not be a great supply of water for the Indians to find the country inhabitable. All that is necessary is sufficient drinking-water for man and beast, as at Itatique and in the Caipipendi valley near Rio Parapiti. C Ce 131 135 C Ce 361 312

The biggest rivers running through the territory of the Chiriguano and the Chané are the Rio Grande, the Rio Parapiti and above all the Rio Pilcomayo. The Rio Grande may now almost be considered the boundary river of these tribes towards the north, and is of but little importance to them. The Rio Parapiti is a strange river. While well supplied with water in the mountains it is almost shrinks to nothing in the plains during the dry season. During the rains it is very full of water and may be dangerous to ford. Fish are plentiful only in the Rio Pilcomayo, and we C Ce 133 C Ce [226]

/148/ Chapter Nine

The Land of the Chané and Chiriguano Indians

Just as I have tried to give a picture of the life of the Choroti and Ashluslay Indians, I shall also try to describe the Chané and Chiriguano Indians and my various visits among them. These Indians are considerably more advanced than the "savages" of the Chaco. For the most part they live in a state of dependence on the whites, and their old unique culture is disappearing more and more.

The Chiriguano are now also to a very considerable extent Christians. For more than 300 years, first the Jesuits and then the Franciscans have tried, with varying results, to convert them to the one soul-saving Christian faith. Even now there are several mission stations among the Chiriguano, but none among the Chané.

In the Chané and Chiriguano we meet people with a higher culture, people who are entirely different from the Indians about whom we have read in the preceding chapters. Comparisons between the two types of culture that we come across in the Chaco are, naturally, of interest.

What will perhaps surprise the reader most is the fact that the two primitive cultures are able to exist side by side, and have doubtless done so for centuries, without fusing, indeed, without learning from each other, and this even though there are no natural boundaries here.

/153 cont./

In the dry season the wind heaps large dunes along the banks of the river. After it has left the mountains, it does not receive a tributary. The Rio Parapiti is very wide, but never deep. During the driest period its bed is transformed into a sand desert where the wind plays with the fine river sand. When it storms, the sand is swept across the bottom of the river. If one wishes to cross it on such days, one may perhaps not get his feet wet, but he must shield his eyes. C 133 132

The Rio Parapiti is rich in fish, but the fish are tiny. The banks are quite fertile, but inasmuch as they are flooded during the rainy season, the harvests are easily lost. Often in the dry season everything is wasted by the scorching droughts. The locusts, too, hawk about in these regions and leave behind in their own unappetizing bodies a poor substitute for what they have destroyed. C 13

On the Rio Parapiti, high up in the mountains, live the Quichua Indians, then come the Chiriguano, beyond them, near the river, the Tapiete, also called Yanaygua, then the Chané, and finally, in the unknown wilderness, the Tsirakua Indians. C 101

My first visit on the Rio Parapiti was paid to Father Carmelo, who had a small mission station there among the Chiriguano. I became very fond of this monk; /154/ he had such confidence-inspiring friendliness. He is one of the missionaries who are needed here, people who desire and are able to sacrifice themselves for others, who show an equally great friendship toward all. C 114 797

I now continued along the Rio Parapiti to Isiporenda on the north bank of the river. The Tapiete live opposite Isiporendo. I shall later describe a visit that I made to them. C 114 T [31]

At Isiporenda I met the first Chané, or, as they are called here, Tapuy. I then visited most of their villages. I made the acquaintance especially of some of their storytellers, of whom Batirayu, the nephew of the last great chief, Aringui, became my good friend. Ce 114 [101 538 123]

From the lower Rio Parapiti I proceeded by way of Charagua, a village inhabited almost exclusively by whites, to the Caipipendi valley, where I stayed with the Chiriguano chief Taruiri. C 114

/155 cont./ C
Piray and finally unites with the Rio Mamoré. A few Chiriguano 133
live along this river, and savage Tsirakua and Siriono also [101]
rove about in the forests along it. C

Between the Rio Grande and the Rio Parapiti there is a 133
region with an extreme scarcity of water and largely covered 137
with completely impenetrable underbrush and low scrub forest 312
full of caraguata and cacti. This monotonous, dismal vegetation is interrupted here and there by hills and grassy plains. C

Besides the savage Tsirakua Indians who make these thickets 136
unsafe, one finds another curiosity here, namely the guanaco C
(Auchenia). It is altogether strange to find an animal like the [132]
guanaco, which one thinks of only in connection with the cold plateaus of the Andes or the /156/ pampas of Patagonia, often afflicted with frost, in this bush which is frequently scorched by droughts. It would be interesting to be able to determine whether this guanaco of the tropical forest is really the same as the one known from the colder regions. Intelligent whites with whom I have discussed this and who have seen both regard them, however, as the same species.

Having returned to the Rio Parapiti, I looked up Batirayu, Ce 115
with whom I had already become intimately acquainted in 1908 and who also speaks excellent Spanish.

With no other Indians with whom I became acquainted did I become as close as with Batirayu. He understood that I was collecting the old mementos out of an interest in his tribe. Batirayu did his best to explain to me the religious conceptions of his tribe. In the evening we used to sit in his room with a cigarette, and he told about olden times, sorcerers, chiefs, Ce
and spirits. Occasionally an old chief, Bóyra, also came, and [122]
from him I heard many charming Chané legends. We would sit until far into the night and chat by a flickering light that I had with me in order to take notes. Ce

One would be very much mistaken if he were to believe that 115
the conversations with these men were merely an interesting 123
study. I felt comfortable with these fine, tactful, yes, why not, cultured human beings. It was genuinely refreshing after coming
from the often vulgar, empty whites.

Ee /248 cont./
439
177

When we present a collection from the Chiriguano and Chané, we must not forget that, through trade between the tribes, they have obtained many things from the Mataco, Toba, Choroti, and Tapiete; otherwise we would have a mistaken conception of the
Ee great difference /249/ between the material culture of the Chaco tribes named here and the Chiriguano and Chané.

171 If we compare the material culture of the Choroti and Chané
Ee with that of the Choroti and Ashluslay likewise described here,
[285] we must remember the following. The Chiriguano and Chané produce basket work -- the
c Choroti and Ashluslay never.
Ce The former know how to paint
[323] clay vessels before firing,
Ee which is unknown to the latter.
[286] The Chiriguano and Chané
c never make bags out of
[415] →
[531]

Fig. 126.
Decorated calabash bowl.
Chiriguano. Yacuiba. 1/5.

caraguata, etc. If, moreover, we compare all the products made by the Chané and Chiriguano with those of the Choroti and Ashluslay, we find that most of them are entirely differ-
c ent. The Chaco Indians probably learned how to make certain
[177] things, such as the serére (Fig. 120) and huiramimbi pipes (Figs. 36 /omitted in the translation/ and 80), from the Chiriguano,
Ee but this is relatively insignificant.

177 We see here how two cultures can exist side by side for hundreds of years without mingling.

Ee If we follow the Rio Pilcomayo down toward the mountains,
● 101 we first come across the Quichua /Quechua/ culture, then come the Chiriguano and Chané, and after that the Chaquensic /Chaco/ culture which embraces equally the Mataco, Toba, Choroti, and Ashluslay, as well as the Lengua and other tribes in the Paraguay Chaco. These three cultures are entirely different.

The Chiriguano inhabit the part of the Andean region, bordering on the Chaco, that roughly extends from the 18th to the 22nd degree of S. latitude. Within this region there is also found another tribe, viz., the Chané. These two tribes do not occupy each a territory of its own, but Chiriguano as well as Chané villages are found throughout the whole district thus jointly inhabited by them. No enmity exists nowadays between these culturally allied tribes. After the last great Indian rebellion against the whites (in 1890), a small portion of the Chiriguano tribe moved away into the interior of Gran Chaco, where it is believed that they are still remaining.

The western Chiriguano country, in which part the majority of the tribe is living, consists mainly of partly forest-clad mountain ranges, flanking wooded (fig. 187) or grass-grown valleys and small plains. It is a poorly watered country, but it mostly gives good crops, particularly gourd plants and maize. The climate is tropical, but in the higher parts the heat is not especially trying, except during the hottest season.

Although the Chiriguano and the Chané are on much the same level of material culture, they do not, however, belong to the same racial group, the Chiriguano being counted with the Guarani group, whilst the Chané are Arawak. The Chiriguano, according to Matienzo, took possession of their present country in the beginning of the 16th century, when a portion of the original inhabitants emigrated and settled in the Tarija valley.[1] Possibly the subjugated Indians belonged to the Chané tribe. In later times this tribe has adopted the language of the Chiriguano, which is Guarani. Whence the Chiriguano originally came is not known, but it may be taken as probable that, formerly, this tribe inhabited the lower reaches of Rio Parapiti.[2] The name of Chiriguano (quichua), which means »dirt people» was given them by the vainglorious Incas, who despised the Chiriguano people, affecting to look upon them as barbarians. The word »guano» is the name for the well-known bird manure-found on the coast of Peru and Chile. It seems however unfair indeed that the Chiriguano, who, in contradistinction to the Puna and Chaco Indians, are scrupulously cleanly, should suffer from such a misleading and discreditable tribal name.

[2] Nordenskiöld (18), p. 156.

/3 cont./

Ce 101 or Tapyi /Tapii/, it was not possible from what they said to ascertain with which of the tribes known to ethnology they can be identified. The Chiriguano call themselves "Mbya." C [101] If the Izozó were a part of them, they would have called themselves by this name. Ce 101 17 No doubt they are Chané and that part of the latter which once had their homes in the Izozó River region, taking the name of this river for their own. Their culture, as demonstrated by the objects I collected among them, confirms this opinion. There are some differences between the objects collected among the Izozó and the Chiriguano in Machareti, either with regard to the decorations of the baked clay vessels or with regard to the making of the nets. But in principle it is not possible to decide whether these differences might not be only local differences. In general the culture of C 171 the Chiriguano was diffused in this way throughout the tribes 172 successively subjugated by them, which is why it is proper to 128 deal below with the aspects of the culture of the Chiriguano 648 of Machareti together with that of the Izozó.

C Ce 101 17

Influences on the Culture of the Chiriguano and Izozó, Taken from Historical Data

C Ce [197] At the present time the Chiriguano and Chané form a cultural entity which can be designated as the culture of the Chiriguano, because the Guaraní language of the Chiriguano came to be the common language of the whole group. The Izozó also belong to this ethnic entity. Thus it is necessary to consider this entity /4/ as being formed of completely different tribes. It is also necessary to conceive of their culture as the product of the fusion of very heterogeneous cultural elements. Nordenskiöld deals with this question in one of his books (1)

Ce [113]

different categories depending on whether they received them from the whites, from the culture of the ancient Peruvians, or from the Mataco, Toba, and other tribes of the Chaco, or have them in common with the tribes of the north and the east related to them, as well as those that they brought with them from their primordial homes between the Paraná River and the Paraguay River. In what follows we shall often run into this matter, and inasmuch as these cultural influences have taken place in historical times and we know the history of the Chiriguano through existing documents dating from the first days of the Spanish conquest, I would like to make a resumé of these historical data in what follows, insofar as they have influenced the cultural development of the Chiriguano and Chané.

C
Ca
101
17
121

Gi
174

In one of my previous publications which appeared in this journal, entitled "Los Guaraní," I ran into the point at issue, to wit: whether the first Guaraní immigration into the western regions of the Paraguayan Chaco took place before the expedition of the Portuguese Alejo García to Peru or whether it took place after that time. In that paper I then deduced that it can be supposed that before Alejo García's expedition there were no Guaraní in the western regions of the Paraguayan Chaco, because no author mentions that García, who was accompanied by many Guaraní, had met other Guaraní in those regions. With this opinion that the Guaraní immigration to the west occurred after García's expedition, which is based principally on indications by Guzmán, the opinions of Manuel Domínguez and Erland Nordenskiöld also agree. This question of the Guaraní invasion into the western part of the Paraguayan Chaco is also dealt with in detail by Fulgencio R. Moreno in his work Cuestión de límites con Bolivia (3). In that place (4) there

Gi

/A cont./

Indians, either before or after García's expedition. But in any case, this foray with which we are dealing is not that great Guaraní expedition against Guacane and his brother Condori, since it is related in the document cited that these Guaraní, after their victorious battles against Guacane and Condori, had settled on top of the Sierra, where they also remained after their defeat by Grigora, henceforth being called by the Peruvians by the name Chiriguano. The Guaraní who made the foray to which Alvar Núñez refers were almost all wiped out by their enemies, who were probably Chaco Indians, and only a few survivors escaped, taking refuge in the desert through which they had previously passed.

In Puerto de los Reyes, Irala received from a Chané cacique who spoke Guaraní the information "that in times past, before García had come from Brazil to the said Guaraní, a great gathering of the said Guaraní was held in the part that they call Itatin in order to go to search for metal" (9). On this occasion

9. Ibíduo II, p. 91.

the Guaraní passed through the lands of the Chané and destroyed their houses. Also in this statement of the Chané cacique nothing is said about a permanent settlement of the Guaraní in the west. Rather it says that the Guaraní wanted to "search for" metal. Thus we are also dealing here with a Guaraní foray.

The Guaraní expeditions and emigrations described above were from the beginning connected with hostile contacts with the various native groups of the lands through which they passed. In all the regions where the Guaraní met other Indians, they devastated their camps /[illegible]/ /?/ and carried off with them as slaves all the inhabitants who had not been killed in the fighting. They were the enemies of all and were hated by all. The Chané in particular, described as peaceful and unwarlike, suffered their acts of violence. When the Guaraní who had emigrated to the west after their defeat by Grigora had settled permanently on the cordillera, they

The Territory of the Chiriguano

Concerning the location and extent of the territory of the Chiriguano at the time of their independence, that is, from the beginning of the 16th century to the second half of the 19th century, we have Moreno's detailed studies in two places in his work already cited many times above, the titles of which are: "Las tierras de los Chiriguanos /The lands of the Chiriguano/" (50). According to Moreno (51), the

Chiriguano--Chiriguano /14/ of the Cordillera in contrast to the Ñatines-Guaraysu and the Piritagaris also often called Chiriguano in the literature -- from the time of the Conquest until they lost their independence inhabited the same territory, that is, the western spurs of the Andes from south of the Pilcomayo up to the lands which extend on both sides of the Guapay. The Chané, who formerly had a large well-populated territory, "although they formed several partial migrations, remained in great number subject to the conquering Guaraní within the region which these latter had converted into their impregnable abode" (52). In 1883 Father Alejandro Corrado

[417]

The notion that the pile-buildings employed as barns are here of different origin from those used as dwelling-houses, is unlikely. There is nothing in the geographical distribution to support this idea.

Outside their barns the Chiriguano and Chané have ladders consisting of logs in which steps have been hewn.

is a culture-element so coveted as in a few years to have spread from the Whites in Peru to the interior of the country. When the distribution of the platform bed is closely studied, it will be found that it is evidently a very old culture-element which remains in places where the hammock has not penetrated or has been found unpractical. In the land of the Chiriguano and Chané Indians it is often too cold to sleep in hammocks. A platform bed is therefore preferred by them, especially when they have clothes to put under and over them. Hammocks are few and are mostly used to recline upon during the day. I have endeavoured on the map to show the geographical distribution of the platform bed. The summary does not, however, pretend to be complete. Its aim is mainly to draw attention to a culture-element which has often been overlooked, and which gives me the impression of being older than the hammock by which it has been relegated to certain tracts, particularly on the eastern slopes of the Andes, where it is rather cold to sleep in hammocks, and rather uncomfortable to sleep on the ground, as is the custom up on the high fells or farther to the south.

In the regions I visited it was only the Sirionó, Huanyam and Huari who had hammocks of palm-fibre or bast. The other tribes who employ this form of bed have hammocks of cotton. The Chané hammocks are of cotton or caraguata[7]. The Chiriguano have hammocks of cotton, occasionally of wool. In Thurn and K. v. d. Steinen had already pointed out that, while cotton hammocks appear to be a Carib culture-element, the palm-fibre hammock is of Arawak origin. Pater Schmidt then thoroughly investigated the distribution of hammocks of various materials, confirming the theories of In Thurn and K. v. d. Steinen and showing, moreover, that the Guarani peoples, as a rule, have cotton hammocks.

---

[7]) In net-technique.

[8]) Anonn de la Compañía de Jesus. P. CIV The author speaks of two kind of hammocks from these Indians. Probably one of them were of Caraguatá. I am not quiet sure if he speaks of the Chané or the Chiriguano or of both «hacen unos grandes palos y de ellos cuelgan sus hamacas, que son unas mantas grandes ó tejidos de algodon ó hechas de red.»

C Ce ed poles *that are used both as fish spears and to punt their*
226 *rafts along.*
411 It is not unlikely at all that it is the multi-pointed pole
*171 which has suggested the fish spear. These poles are multi-pointed in order that they may be used in swamps, to punt their canoes along. It was natural that the Indians should try with these poles to have a thrust at any fish they might see. Then, if they migrated to a district where many-pointed poles were no longer needed, these poles lived on as fishspears.

C As I have already mentioned the Chiriguano shoot fish
226 with a bow and arrow. For this purpose they sometimes,
411 though not always, use many-pointed arrows. I have seen two different types which are depicted here (fig. 15). One has two wooden points, the other which was used at Rio Parapiti for shooting small fish, has many points of cactus spikes. Two or three-pointed arrows used for shooting fish are spread in South America chiefly in the water region of the Amazon, as indicated on map 5 and table 4.

Ce I have not visited any Chané who live where they are
226 able to use this method of fishing. Among the arrows in
411 my collection there are no multipointed ones that came from them.

As seen from map 5 and table 4, the many-pointed fish-arrow seems to be a cultural element that came to the Chiriguano from the north part of S. America, most likely from Mojos. I have seen the harpoon arrow neither among the Chiriguano nor the Chané.

C I have not seen these Indians fish with poison. At the
Ce Upper Rio Pilcomayo, however, I heard in 1913 that the
226 Chiriguano know how to poison the water with a certain kind of bark as a means of catching fish. A great number of plants are used by S. American Indians for this purpose, particularly in the basin of the Amazon.[1]) On the map and table, I have endeavoured in some measure to elucidate the distribution of this fishing-method. Curiously enough KARL V. D. STEINEN did not see this method of fishing among the Indians tribes at the upper Rio Xingú.[2]) I have neither seen it myself nor heard of it among the Indians in El Gran Chaco. Nor does MAX SCHMIDT mention fishing with poison from the Guató.

The Chiriguano and the Chané fish with dip-nets both in the Rio Parapiti and in the Rio Pilcomayo. Those used in the Rio Parapiti are small and the meshes fine, as only small fish occur there. They seem to be dwarfed specimens of the big nets used in the Rio Pilcomayo. I know too little about the distribution of different types of nets in S. America to try to show their geographical distribution. Dip-nets like those used by the Chiriguano and Chané I have only seen among the Choroti, Ashluslay, Mataco, Toba and Tapiete. C Ce 226 C Ce [171]* C

On the Upper Rio Pilcomayo the Chiriguano build great dams of stone in which they catch fish when the fish are making their way up the river. Such damming contrivances are also mentioned by CORNEJO[2]) from the Chiriguano C 226

les ponen una costra en ellos más negra que la más negra azabaja que puede ser;» Las Casas speaks of the expedition of PER ALONSO NIÑO Y CHRISTÓBAL GUERRA 1499.

MARTYR P. 368. »Between the ages of ten to twelve years when puberty declares itself, they chew, all day long, leaves of trees, as thick as a nut, taking no other food nor drink. With this substance they blacken their teeth till they are the colour of a dead coal. They contemptuously call the Spaniards women and children, because the latter like to have white teeth; or likewise wild animals, because they let their hair and beards grow. Their teeth last a lifetime and they are ignorant of the aches which sometimes oblige us to have our molars removed. Their teeth never decay». (The Eighth Decade)

RUIZ BLANCO P. 58, medicine-men. »dos calabacillas en una traen una yerba tostada que llaman a y o, que mascan y es buena para la dentadura, y en otra una calecilla con que ponen los dientes negros.»

SIMON (1) P. 316.

1 c. Paez, MANUEL RODRIGUEZ P. 25. »Mascan continuamente, aquella su yerva diabolica, la *coca*, de que tienen negros como una pez los dientes» . . . . . .

á dientes y labios para conservarlos así más lustrosos. Causa grima el ver cómo refriegan los labios con lo más áspero de la hoja del maiz para quitar el tinte antiguo hasta desollarlos, y echar sangre para que de esta manera asiente mejor el nuevo, y brille más por fresco y reciente.»

IX. Colorado, RIVET (3) P. 188.

(70.) Manobamba (Yanaximes), BALBOA Chap. 8; SARMIENTO P. 96. »Conquisto TOPA INGA y sus capitanes desta vez cuatro grandes naciones. La primera fué la de los indios llamados Opataries y la otra llamado Manosuyo y la tercera se dice de los Manaries o Yanaximes que quiere decir los de las bocas negras.» Yana = black, simi = mouth. Near Cuzco, not marked on the map. Possibly identical with Piro (70).

C 302 276 171*

BOLINDER, who has observed that the Ijca's teeth are stained black by their chewing coca and lime,[1]) has advanced the opinion that the staining of teeth among the Cumanogoto may not have been purposely done, but caused by the lime that was chewed with coca. I believe that BOLINDER may be right in this supposition. As early a writer as RUIZ BLANCO[2]), who lived in many years in Cumaná, considered that the lime chewed with coca was the cause of blackened teeth.

In N. Peru[3]), where lime is chewed with coca, the Indians have black teeth. In the rest of Peru, where coca is chewed with the ashes of quinua-haulm and other plants, the Indians' teeth do not get black from coca chewing. This corroborates the assumption of BOLINDER that the teeth of the Cumanogoto were blackened by the lime they chew-

[1]) (4) P. 122.

[2]) P. 52.

[3]) »Without doubt the lime destroys the teeth and consequently the Peruvian »coqueros» have disgustingly black and carious rows of teeth.» PORPPIG Vol. 2, P. 253.

dance masks from the Chané. Where the latter learnt their use it is at present impossible to say.

The map 12 and table 15 show us the distribution of the mask in S. America.

The places at which burial masks have been found are indicated in the map by squares. In making out this list I have followed PATER SCHMIDT, to whose statements I am able to make a few additions. The fact of the Ona and Yahgan Indians having masks seems to prove that their use is very ancient in S. America. At a ceremony of exorcism among the Mataco I saw some men with pieces of cloth hanging over their faces. I take this to be the most primitive kind of mask.

The loom only occurring among the Chiriguano is a band-loom which is depicted here, This loom is much more akin to the usual Peruvian loom and must be regarded as a western culture-element. (See fig. 55,4.) East of the Andes the Peruvian loom is unknown except among the Mataco.[2])

Appertaining to the loom outfit of the Chiriguano and Chané are weaving-implements of bone and wood (fig. 56).

To this bibliography several maps have been added which ought to prove useful from many points of view. *The maps indicate the territories concerning which the authors quoted in parts 1 and 2 made their investigations.*

The first map shows the literature from 1498—1600, the second from 1600—1700, the third from 1700—1800, the fourth from 1800—1900 and the fifth from 1900—1920. We find a separate map of the archæological literature. Several important works are unfortunately missing which I have not been able to study. It is difficult and expensive work to collect the literature on the S. American Indians. Not the least difficult of access are certain works printed in S. America during the 19th century. For my ethno-geographical studies I have of course read a number of books without finding anything to quote from them and consequently they are not mentioned here. I desired especially to show the merits and demerits of the maps of the distribution of the cultural elements here published. The maps of the authors' names show us the districts from which I have no material at all and those from which I only have the material of older authors, or only of modern writers.

Some authors have not travelled in the territories they have written about, but have drawn from the works of several other authors. The most remarkable existant work of this kind is COOPER's excellent work on all that has been written about the Indian tribes in southernmost S. America. If there were many such compilations, it would not be difficult to draw up maps of the distribution of the various cultural elements.

From the map that indicates about which districts the archeological treatises are written, we can see, even though

some names are missing, what immense territories in S. America are still entirely unexplored archeologically.

The bibliography includes some authors whose names will not be found in the maps, i. e. FRIEDERICI and PATER SCHMIDT, great as their services to the ethnography of S. America have been. This is because they have written comprehensive works dealing with the ethnography of the whole continent, and not with any particular part of it.

When I have quoted from several works by the same author, these are numbered 1, 2, 3, etc. in the bibliography. The same work has the same number in the First and Second Parts of my own book.

/295/ Preface

114 12 In the chapters to follow, I propose to publish part of the results obtained in the course of the expedition that I undertook in the Bolivian and Argentinian Chaco in my capacity as director of the Institute of Ethnology of the University of Tucumán.

114 [101] This expedition took place from February to June, 1929. Its itinerary was the following: Having left Tucumán, I went by railroad to La Quiaca where I stayed for several days, making observations on the more or less half-breed natives of the region. From La Quiaca I went to Tarija, where I remained longer than I might have wished because of the suspicions my trip raised at the time of the Paraguayan-Bolivian conflict.

114 101 ●103 After a 15-day stop I left Tarija to reach the Chiriguano tolderías of the upper Pilcomayo. I crossed the village of Santa Ana, then the Alta del Cóndor, the Narvaez River, the post of San Diego, passed five kilometers from San Luis (Entre-Ríos) to stop at the Cuesta de San Simon, where I found the first Chiriguano. Once having crossed the Cuesta de San Simón I quickly reached the Salado River, then the Chiriguano villages of Timboy (Saladito). It was there that I made my best acquisitions of [126] pottery and where I collected the oldest objects. The inhabitants [178] of these rancherías, who live relatively far from the highway from Argentina to Santa Cruz, have preserved the traditions and culture of their ancestors better than their racial brothers have. From Saladito I reached the village of Itasiri and then Salado Grande, [361] in order /296/ to reach the Pilcomayo at the confluence with the Salado. There, the Chiriguano villages are large and numerous. The most interesting are those of Ñawirenda, Ibopeytí, and Yumbía.

After stopping for some time in this place, I continued my trip toward Huacaya and the mission of San Pascual de Boicovo.

In one day I went from Boicovo to Cuevo, going by way of the mission of Santa Rosa.

[197] [198] From Cuevo on I was in the mission of Ivu, which is without doubt the one where the old Chiriguano customs have undergone the fewest modifications.

/296 cont./

114 101 103 From Cuevo I left for the northwest toward the Parapiti River region. I crossed this river near Pipi. After stopping in that village, I followed an Indian path which led me to Caruruti, to the home of my good friend Captain Kamapadyú. I spent a week with him and left him only to explore the whole Caipipendí valley, visiting all the Indian villages one after another. At Caipipendí itself I made fruitful excavations and collected interesting myths.

The limit of my trip toward the north was the little city of Charagua.

I devoted the last part of my trip to more or less long stays in the Franciscan missions of Tarairí, Tigüipa, Macharetí, and Ivo.

Before going back to Argentina I made an excursion into the Igüembé valley as far as the village of Masavi.

114 127 The last two weeks of my expedition were devoted to the study of the Chané Indians who live near Aguaray in the Salta Chaco (Argentine Republic).

Previously I had been obliged, for various reasons, to stop at Oran for a month. I took advantage of this to make collections among the Ashluslay Indians who come there for the sugar-cane harvest.

In this volume I shall publish only the results of my expedition which bring new facts and details to light. Therefore the chapters I devote to the Chiriguano must not be considered an exhaustive study of their culture, but simply as a contribution. Chiriguano culture has been the subject of four important works, two of which are by ethnographers of great authority (1). /297/

1. Nordenskiöld (2, 5, and 10) and Rosen (1) /the underlined numbers following an author's name refer to the boldface numbers in the bibliography/. Campana's monograph on the Chiriguano, which I shall often have occasion to cite, is only a recompilation and reorganization of the manuscript notes left by the Italian missionary, the Reverend Father Doroteo Giannechini. This work is excellent in many respects. As for the book of the Reverend

Cuevo

361 175 [103] The town of Cuevo is located on the left bank of the torrent or stream of the same name. Before the war of the year 1875, and even later, it was known by the Chiriguano who lived there as Ñumbicte, which means "halfway field," and in fact it occupies a beautiful level place located almost midway between the ranges to the west and those to the east.

Almost all of the first white inhabitants were from the department of Santa Cruz, and it is an undeniable fact that Colonel Víctor Antezana moved to the region of Cuevo-Ibo with some militiamen from Lagunillas and built a fortress where the public cemetery of Cuevo is today, and another one where the church of San Buenaventura of the mission of Yvu has been built, both works which are owed to the constancy and activity of the Franciscan missionaries of the Villa Imperial. The fortresses are later than 1875.

[797] [648] Subsequently, the town was formed under the protection of the missionaries themselves and around the Cross of the Savior; it was completely burned by the Indians in the uprising of Curuyuqui in 1892, but the inhabitants of Cuevo who did not perish, with the assistance of the flourishing mission of Santa Rosa, built anew and in better condition the new town, which continues to progress today.

175 648 [361] In the war of the year 1875 all the Chiriguano of Cuevo-Ibo and Huacaya, together with the treacherous Toba and guided by the great cacique Corone, who lost his life in the torrent of Baecua opposite the town of Igüembe, rose up as one man to overwhelm all the whites in the region.

/92/ In this critical situation the intrepid subprefect of the province of Acero, D. Antonio Menduiña, with the militiamen from Monteagudo, San Juan del Piray, Huacareta, and Ingre, flew to the region of Igüembe and with these people overwhelmed the innumerable and ferocious host, reducing it at once to impotence by the slaughter of Caipipendi.

/95 cont./

000 These disputes are prejudicial up to a certain point, inasmuch as they impede the free colonization of the Bolivian Chaco, which would not be the case if everything were peaceful in those remote regions.

Once the friendly settlements were made and the spirits of the settlers were calmed, the region would be colonized more, which would increase the number of inhabitants. If this were the case, it is my opinion that in a short time the Government of Bolivia could establish a new department in the Gran Chaco. The Chaco is open to commerce and to civilization throughout its area, many towns exist there, and, in them, commercial establishments; one can pass through the region without any danger, and the Chiriguano race receives the traveler with demonstrations of affection and subjection. /The remainder of p. 95 and the first sentence on p. 96 are omitted in the translation. Page 96 continues as follows./

Cayuguari

175 648 [103] Cayuguari is the name given to the country inhabited by an Indian of the same name who fled from Machareti with others in the year 1856 or 1857; they settled along the lake of Cumbarurenta, four leagues to the southeast of Yrentagüe, and subsequently withdrew 20 leagues farther to the east, because in the company of Toba, Tapiete, and other tribes they had committed innumerable cattle thefts, for which they were constantly hunted by the settlers of Carandaiti, where a picket detailed from Aguairenta is stationed today.

The flight of the Cayuguari Indian to Cumbarurenta first, and today to 52 leagues from Carandaiti, was not due to the death of Captain Taruncunti, murdered by the Macharitefios /persons from Machareti/ Barapiche, Arasuque, and Yepoina, residents of Avay, but to their disposition and outrages committed against their relative, Mandepónai.

/106 cont./

Yacuiba

[131] [167] Because of an error in the demarcation of the boundaries with the Republic of Argentina, the town of Yacuiba is located to the south of the boundary stone, while it should be to the north, and the latter, the boundary stone, should be located precisely in Itiyuru, the limit of the Chiriguano race, which has occupied Bolivian territory since its immigration.

[103] Yacuiba, or Yacuigua, as the Chiriguano pronounce it, means: lake of the wild turkey. It is a rich region throughout; its territory is level, the streets which are being built are as straight as a line of this name, the land fertile. There are grown there the arveja or pea, the garbanzo, and other cereals, which plants are irrigated with water which is relatively abundant.

The town, which also fell in the earthquake of 1899, is being rebuilt according to modern methods, and its progress is rapid. It now has a first-class hotel, where the traveler and the countryman are served with all culture and exactness, department stores, where every article is found, and permanent buildings, houses of great size, and a customs building all of zinc from the walls to the roof.

The little city, in addition, is quite picturesque because of the many orange groves which continually embellish it with their green foliage and yellow fruit, /107/ which indicates the fertility of the territory and the abundance of water.

The little city is located in the territory of Tarija; consequently it was founded through Bolivian efforts. It is the seat of the subprefecture of the Gran Chaco, and today it is a cosmopolitan town, whether because of the many foreigners who have settled there or because of the many others who are continually passing through, not to mention the importance given it by the continual arrival of vehicles and that which it will receive from the proximity of the railway.

[643] of Condorillo, we do not have any evidence as to whether this whole parcialidad was under the chieftainship of a great cacique. We only know that the town of Saigpuru was one of the most important and that it was the most feared by its enemies and that its inhabitants were defeated in the year 1779 by Don Tomás Leso (314).

[175] [927] [632]

314. Moreno II, p. 244.

631 632 643 103 According to the reports written by the Governor of Santa Cruz, Don Lorenzo Suárez de Figueroa, the Province of "Yvytupue," that is, the region governed by the great cacique Vitupuera, was made up of five large subdivisions. As can be assumed from the report cited, these subdivisions were in part made up of one town and in part of several towns and were, with the exception of one, governed by several caciques. Thus there is mentioned in the first place the subdivision "Taquirán and Caracará," probably meaning the towns which bear these names. As the caciques of this first subdivision, three are mentioned; thus the number of caciques does not correspond to the number of towns. Thus, we are not here dealing with a community which was established exclusively on a territorial basis. /84/ For the second subdivision three names are mentioned, Aguapea, Naipea, and Traibi. Thus it was probably made up of three towns. In this subdivision the number of towns, three, corresponds to the number of caciques. The third subdivision is called Tamboré. Thus it can be presumed that it consisted of but one town, and there is also mentioned but one cacique. The fourth subdivision is called Tendy, and three caciques of it are mentioned. It is stated that one of these caciques, called Abequé, was the son of the cacique Tendy, thus of that cacique who gave his name to that subdivision. Of the fifth subdivision, Ayaguá or Cayaguá, as many as four caciques are mentioned (315).

Stockholm, through Prof. C. V. Hartman, Dr. G. Lindblom, and last but not least by its skilled attendant A. Törnblom. The objects described here which belong to the Riksmuseum in Stockholm, are marked R. M. with the number of their inventory, those belonging to the Museum at Gothenburg are marked G. M.

In the last named museum there are, inter alia, collections made by Lieutenant O. Liljewalch and Mr. Otto Thulin. The latter has supplied me with a number of valuable oral particulars which are reproduced in the following.

I am also greatly indebted to Dr. Lars Wählin, Head Librarian of the Stadsbibliotek at Gothenburg, for procuring rare books for me to consult and for translations of Latin quotations. As the works of Italian authors occasionally caused me some trouble, since I cannot read Italian fluently, Consul-General E. Corvea was good enough to help me when in difficulties.

The illustrations to this volume are chiefly due to Mr. A. Hjelm and Miss A. Danielsson. Some of the stereotype-plates were kindly lent me by Mr. K. O. Bonnier, the publisher of my popular works. Most of the illustrations, however, were made by the Opla Company of this town from pictures not previously published.

The translation into English of my Swedish manuscript was carried out by two translators and revised by Dr. G. E. Fahlen.

The Language

C
Ce
197

I have already mentioned above that the Chané originally spoke a language different from that of the Chiriguano, but that during the long period of their captivity they adopted the latter's language. A cacique of the Chané of the Parapití, named Betiayo, told Nordenskiöld that some of the Chané still knew a few words of their original language and that today it had the nature of a secret language. Thus there are still often employed invectives of the original Chané language, such as "kattimiáyri," which the Indians translated as equivalent to "son of a whore." Songs in the original language can also be found for example, "siparakinánoye, siparakinánoye, siparakinánoye, tonéya, tonéya, tonéya, tonéya," which they cannot translate, however. Nordenskiöld, with much effort and patience, was able to take down six words of the original Chané language in the town of Huirapembe on the Parapití, where a few Chané Indians who still knew their original language were said to be living. From the comparison of these six words with the corresponding words of the Mojo language, a great similarity was apparent: thus there can be no doubt /91/ but that the Chané originally belonged to the Aruaco /Arawak/ linguistic group (386).

Vocabularies of the Chiriguano of Machareti and of the Izozó of the Parapití River

Notes on the Alphabet of the Vocabularies

In publishing below the Chiriguano and Izozó vocabularies which I took down in Machareti (Chiriguano) and Toledo (Izozó), I use the same alphabet as in my previous publication on the vocabulary of the Guayyú language in this same journal (Vol. III, No. 8).

Vowels

a: e: i: o: u. : long vowels.
ä: ë: ï: ö: ü. : short vowels.
ã: ẽ: ĩ: õ: ũ. : nasal vowels.
ɨ : guttural vowel (as in Guaraní and agua).
ö = ö in German (as in: Bär = bear).
ü = ü in German (as in: Übel = bad).
ai: au: oi are diphthongs.
au = au in German (as in: Auge = eye).
oi = eu in German (as in: Teufel = devil).
aĩ is a nasal diphthong.

The apostrophe after a vowel (a'i: a'u: o'i) indicates that it does not form a diphthong with the following vowel.

Consonants

The consonants used in the Chiriguano and Izozó vocabularies are the following:

b: d: (f is not used); g = g in German (as in Garten = garden); h is always aspirated as in Guaraní; j = j in Spanish (as in jabón); k: (l is not used) m: n: p: r: s = c in Spanish before i (as in cielo); t: v = w in German (as in Wagen = cart); y = y in New York, is exclusively used as a consonant; z = z in French; ch corresponds to the ch in Spanish; th = j in French, as in je = I).

The accented syllable of the vowels is indicated by means of the acute accent. /The word list, pp. 92-111, and the bibliography, pp. 111-115, are omitted in the translation; see the foreign text./

Ce /331 cont./

178 439 323 [177] The pernicious and corruptive influence of the white men, which makes so many ravages among the poor Chané, has at least spared their pottery industry. They still manufacture considerable quantities of vessels which they sell to the other Indians and to the whites. As clever business men they complied with the taste of their new clients, and the motifs with which they decorate the pieces they export are as hideous and gaudy as the ones which ornament half-breed or creole textile fabrics or baskets.

C G 177 178 342 596 Moreover, we can understand historically certain phases of the transformation of the culture of the Guarani when they mixed with the Chané. The ancient Guarani used to live in the large house or maloca, that is, in gigantic huts sheltering several families. Having emigrated to the foot of the Andes, they kept until well into the 17th century a type of habitation which corresponded to a particular social organization (the large maternal and undivided family). In the 18th century we see them living in huts similar to the ones they still have today, intended to house only one family. In the same way one can witness the disappearance of cannibalism, which in the 18th century is no more than a memory among the Chiriguano. Certain traces of it have survived up to our day.

E 177 178 266

C 17 Thus these pages justify the assertions of the preface. With the Chiriguano we are dealing with a nation of recent formation whose civilization is a composite of Guarani, Arawak, and especially Andean elements. The geographic area inhabited by the Chiriguano can be divided into as many diverse zones of acculturation as America has. It has brought about, not the joining of three cultures, but their fusion.

Résumé

C 105 175 The Chiriguano belong to the Tupi-Guarani linguistic family.

C [167] They emigrated from Paraguay to the foot of the Andes in the last quarter of the 15th century and the first half of the 16th.

C /331 cont./

105 175 [167] [173] This migration had as its motive power the attraction which the metal riches of the Inca Empire exerted on the Guarani, and perhaps also certain mystical factors (the myth of the "Land without affliction").

/332/ The famous expedition of García is probably only an episode in this great migration.

ce [197] [199] At the foot of the Andes the Guarani found a population of Arawak speech, the Chané, whose civilization had felt strongly the influence of the tribes of southern Bolivia subject to the Inca.

C [648] [563] [619] The Guarani exterminated part of the Chané, reduced the others to slavery, and took Chané women as wives. The Chiriguano nation issued from this ethnic mixture.

C [199] From a cultural point of view, the Chané exerted a decisive influence on the Chiriguano; and it is through them that today certain aspects of the Inca civilization are continued by the Chiriguano.

CE [199] [197] [198] On their part the Chané adopted the language of their conquerors, keeping for a long time their Arawak speech as a secret language.

C 175 131

Situation of the Chiriguano in the 18th Century and Today

In the 18th century the territory of the Chiriguano can be defined as follows: "According to Jolís and Hervas, their domain extended from Tarija to the east a distance of 50 leagues (250 kilometers), and from north to south, 100 leagues (500 kilometers). Their frontiers were the following: In the north they reached 17° south latitude and advanced as far as the Jesuit missions of Chiquitos. In the south they reached 22° south latitude. In the region of Salinas, Itáu, and the upper Pilcomayo, they had as neighbors the Matako-Mataguayo and the Toba. Toward the west they had establishments as far as Chichas, Pilaya, Laguna, and Valle Grande. Permanent

/426 cont./

531 171 Sign of unknown significance. On the Machareti yambui (Plate LII, 2) was painted a crescent-shaped sign having in its concave part two dashes perhaps representing feet. The subject is doubtless a stylized bird, a presumption all the more plausible because another vessel from the same locality and made by the same hand is decorated with animal figures (dogs and toads) (Plate LII, 1).

This mysterious sign is very similar to the one found on a puco from Tolomosa in the Tarija department (Rosen, 2, Fig. 175, p. 112) and on some dishes from La Paya. These designs are also more or less stylized pictures of a bird. (Boman, 2, Vol. I, Plate X, Fig. 22, and Ambrosetti, 6, Figs. 35-40, pp. 56-61.)

Zoomorphic representations. Animal figures are rare in Chiriguano pottery, but their occurrence only brings out the better the similarities of this art to that of the neighboring Andean regions. The rows of yaku (pavo del monte) on the yambuí from the Aguaray are the counterpart of the nandus on the Diaguite funerary urns and the La Paya birds. The dog on the vessel in the plate appears nearly identical with the bottom of a puco from Molino del Puesto, Catamarca. (Bruch, 2, Fig. 70, p. 72.)

531 171 105 The comparisons we have made could doubtless be extended and many another relationship noted between the modern pottery of the Chiriguano and that of the populations which have today disappeared from the Bolivian altiplano and northwestern Argentina. To continue such an investigation would be superfluous, for there is no one acquainted with the art which formerly flourished in the Andean and Chiriguano regions who would hesitate to establish a relationship between the two and would not have the second derive from the first.

As one might logically expect, these similarities become more numerous and more striking in proportion as one leaves the south and advances toward the north into the Andean zone which runs parallel to the habitat of the Chiriguano and Chané. When eastern [192] Bolivia is methodically explored, models of the vessels which the ancestors of the Chiriguano admired and copied will be found.

[See p. 231 -- Anslyst]

C /426 cont./
531 Lacking them, the study we have pursued brings us the estab-
171 lishment of a very important fact. The existence on the upper
192 Pilcomayo of a pottery /427/ closely related to that of the
105

Ce
531
415

Fig. 83. Chané vessel. Prov.: Tuyuntí (Aguaray, Salta Chaco). On the belly: series of yakú (pavo del monte) in blackish brown on white background. (1/3 nat. size.)

C
531 Quebrada de Humahuaca is an indication which proves in a sure
171 way that the art of the former inhabitants of these regions was
192 identical to that of their neighbors, and perhaps racial brothers,
105 of the Bolivian altiplano.

Apropos of the Chiriguano, I believe it is wrong to speak of
S Andean or Inca culture. The first of these terms is too vague and
121 the second partially false. In this chapter I have tried to demon-
531 strate that Chiriguano pottery exhibits close affinities with that
171 of the civilizations which, by their numerous points of similarity,
105 seem to have undergone a Chincha or Atacama influence and
which Preceded Inca Culture.

000 /427 cont./
C 531 171 105 which preceded Inca culture. If one compares the present-day pottery of the Chiriguano with that of the Quicha /Quechua/ of Cuzco, certain analogies will appear, but they will be neither abundant nor conclusive enough to establish a direct filiation. Aryballuses are missing or rare, ornithomorphic dishes seldom found, etc.; on the contrary, we have seen how multiple and close the ties are between this pottery and that of the Chincha-Atacama period. Chiriguano pottery, in relation to that of Cuzco, is in a situation analogous to that of northwestern Argentina: on an Andean but original base, influences from Cuzco have been superposed. This Inca action on the Chicha is attested to even today by /428/ the presence among the Chiriguano of footed vessels of the purest Inca type and apodal ones of the same origin. Arising from the same influence, one may add certain decorative motifs, with which I have already dealt.

A [531] [171] [415] Arawak and Amazonian tradition is scarcely represented, except by footed bowls (compoteras), vessels with a ribbed belly, those with a body in the shape of a truncated cone and a subspherical belly, and perhaps by some motifs (T-shaped figures, Plate XXXVIII, 1).

The conclusion of this chapter will be: there exists today and for some years to come a civilization which, closely related to that of the Chicha, continues an art earlier than that of the Inca but influenced by them. May this fact make archeologists cautious!

Chapter VII

Calabashes

C 531 462 [323] The second art in which the Chiriguano excel is pyrography and engraving on calabashes. When pottery-making was an essentially feminine activity, pyrography was the province of the men. Nordenskiöld (9, pp. 233-236) thinks, completely wrongly it seems to me, that pyrography is of Andean origin. He advances in support of this opinion the advantages that knowledge of metal offers to this art. Nevertheless, the populations of the

Translated from the French for the Human Relations Area Files by J. Winchell.

/The Chiriguano, a Guarani-speaking tribe inhabiting the eastern slopes of the Bolivian Andes, are descendants of the Guarani invaders migrating in successive waves from Paraguay across the Chaco to the Andean area, and in so doing absorbing and assimilating cultural traits of other tribes. The Chiriguano have undergone much deculturation and detribalization from Western and missionary contact. They have a primary subsistence economy of forest slash and burn horticulture, with some secondary hunting and herding. They also have a patrilineal kinship system and a political structure of tribal chiefs. Their institutions on the whole conform to the South American tropical forest tribal pattern. This monograph, written by a French ethnographer, is a descriptive and historical analysis of Chiriguano technology and material culture. Métraux attempts to reconstruct the origins, derivations and cross-cultural relationships of the Chiriguano tribe and its technology by the appraisal of archeological and other distributional evidence from pottery, weaving, and basketry forms and styles among the

1: Métraux, Alfred.

Chiriguano and other tribes. Although Métraux is rather selective in his treatment of material culture, he does discuss and illustrate the following topics in some detail: food resources, food preparation or cooking; fire use; tool use and manufacture; pottery, basketry, weaving, calabashes (their art styles and designs, regional variation, materials, uses, techniques of manufacture); types of masks; furniture; toys and games; and medical treatment and remedies. This report does not deal with settlement patterns, housing or dwellings, clothing, ornamentation, transportation devices, weaponry, or other objects of material culture. Since the historical identity of the Chiriguano has never been definitely clarified by ethnologists, historical data in this source which has been subheaded for SM4 Guarani may also apply to the Chiriguano especially if, as the author contends, they are descendants of these migratory Guarani groups. The researcher is therefore directed to look in category 116, pp. 1-30 for historical information which may or may not be pertinent to both files. This source has been subheaded for other groups as well, when information on their technology and material culture has been noted by the author in reference to the Chiriguano data. The bibliography (pp. 600-608 of the foreign text) is omitted in the translation. The lists of figures and plates which follow the table of contents in the translation were made up from the captions and are not part of the original text. Although the foreign text indicates that the article was to be continued, no more was published./

/This source is limited to a discussion of the Chiriguano (and the closely related Chané) as one of the five groups listed by the author as occupying the eastern slopes of the Bolivian Andes. Data on the remaining four groups--the Tunacare, the Musetene and Chimano, the Leco and the Tacana--have not been processed for this file. In addition to a general culture history of the Guarani with some specific references to the Chiriguano, the author presents additional but limited information on archaeology, subsistence activities (farming, collecting, hunting and fishing), domesticated animals, food preparation, villages and houses, dress and ornament, transportation, carrying devices, manufacture (pottery, spinning and weaving, netting, basketry, painting and incising of gourds, fire making, and weapons), social and political organization, the life cycle (postnatal care and puberty), warfare and cannibalism, esthetic and recreational activities, religion and shamanism, and mythology and folklore. This source provides excellent background information for a more intensive study of the Chiriguano./

Translated from the Spanish for the Human Relations Area Files by Sydney Muirden.

(This survey monograph on the culture of the Guarani-speaking Chiriguano tribe of eastern Bolivia was written by a Franciscan missionary, and represents his findings from experiences and observations as a missionary in the Chiriguano territory. Regrettably, the quality of his descriptions and analyses is very uneven, deriving from his extreme moralistic outlook toward primitive society. Symptomatic of this theological examination and evaluation of many Chiriguano cultural patterns and social institutions is a disparagement or deprecation of any sociocultural behavior deviating noticeably from Western Judeo-Christian standards or ideals. This fault is most evident from his discussion of Chiriguano religion, ceremonial, ideology, kinship and social organization, and sexual behavior areas that can conflict most sharply with his official religious doctrines. At points it is not easy to determine whether the author imputes the existence of institutions to Chiriguano merely to 'demonstrate' their spiritual bankruptcy. Fiction and fact thereby become indistinguishable. But if the reader can dismiss or ignore many of the author's religious injunctions against the Chiriguano he will find a fair amount of useful and valuable qualitative data on the following -- the political system and the

4: Nino, Bernardino de.

nature of power and authority, settlement patterns and house construction, family organization and socialization, warfare, secular ceremonies, technology and material culture. Furthermore, in some detail, he describes the geography of the area, Chiriguano ethnobotany and ethnozoology, the uses made of plants and animals, and concepts of disease, therapy, and death. (Yet his description of economic processes: systems of production and exchange is rather superficial and fragmentary.) The author mainly fails to relate what sound evidence he has to any theoretical framework. Neither a diffusionist, ethnohistorical, or structural-functional context integrates his data. His descriptions, at least in this sense, are scientifically neutral and factually objective. What might have been a major contribution, considering the author's own competence as a missionary, could have been some analysis of how aboriginal Chiriguano differ socially and culturally from those subject to mission acculturation and modification. Yet he does discuss some of the native resistances and acceptances to religious proselytizing and secular change undertaken by the missions. Many of the author's comments and views that were found in the original source but are extraneous to the Chiriguano have been deleted from this translation. The sections or pages omitted are indicated in the table of contents of the translation.]

/This source, based on the collections made by the author in the field (during a period of four to five months in 1908, 1909 and 1913), and on his study of material in museums and on previously published works, attempts to make an ethno-geographical analysis of the material culture of two closely related Indian tribes, the Guarani-speaking Chiriguano and the Arawakan speaking Chané, both of whom live in the southernmost part of Bolivia and northernmost Argentina. As may be seen from the table of contents practically all aspects of material culture and associated behavior patterns (e.g., property marks and symbols of authority) are well covered and in addition the author attempts to show which of these culture elements are native to the Chiriguano and Chané, which have been obtained from the "Whites" and the "Mountain civilization to the west" and various other external sources, and what each of these acculturative elements have contributed to the common stock. In the presentation of his data the

Sc Nordenskiöld, Erland.

author shows by means of maps the distribution of various culture elements throughout the entire South American area.

A unique feature of this source is the series of six bibliographical maps following the bibliography at the end of this source. These maps show the general area of ethnographical study covered by the various authors listed in the bibliography during specific time period.

Part 1 of this series, frequently referred to has not been processed for this file, but may be found in its entirety in the SK6 Chaco1 file, source number 2, category 18. /

/This is a generalized account of the ethnography of the Chane and Chiriguano Indians living in the area enclosed by the rivers Itiyuro, Pilcomayo and Parapiti in southern Bolivia with whom the author visited during the period 1908-1909. Most of the data contained deals primarily with material culture, with little if any information on social structure or organization. Pertinent data on the Chane have been subheaded on the pages where they appear. After a brief introduction to the geography of the area, the author discusses the various aspects of the native's adaptation to the geographical environment--knowledge of directions, distance, etc.--and his knowledge of his own culture history. The source is then divided into several chapters dealing with such aspects of ethnography as daily routine, division of labor, subsistence economy, foods and food preparation, games, clothing, personal cleanliness, the life cycle events, stylistics in language related to "ugly words", homosexuality, suicide, modesty, chiefs, sanctions for various offenses, drinking bouts and the making of alcoholic beverages, arts and industries, folktales, the effects of mission life on the Chane and

6: Nordenskiöld, Erland.

Chiriguano, and relations with the whites (on rubber plantations and in military service). The author used several Chane and Chiriguano informants, most of whom were men of high status in their respective communities, either village or "great" chiefs. One informant who was not a chief, but upon whom Nordenskiöld nevertheless heavily relied for the information contained in this source was a Chane by the name of Batiayu./

B: Schmidt, Max. Los Chiriguano e Isoseño [The Chiriguano and Isoso]. Revista de la Sociedad Cientifica del Paraguay, Vol. 4, No. 3, pp. 1-115. Asunción: Imprenta y Librería La Mundial, 1930.

Tales: Paraguay AS3p 0330 4. [HRAF MSs pp. 1-334; 30 plates.]

Translated from the Spanish for the Human Relations Area Files by Sydney Melvins.

[This ethnographic monograph on the Chiriguano offers a comprehensive but not exhaustive coverage of culture and society. While there is in-depth description and analysis of Chiriguano technology and material culture, the discussion of their sociopolitical structure, religious organization, processes of ecological adaptation, and economic system is very brief. The author is a German ethnologist and expresses the viewpoint of the German-Austrian ethnohistorical and diffusionist theoretical movement. Schmidt examines and evaluates data on materials, mode of construction, and style variations of the following: transport types, house forms, ceramics, basketry, weaving, implements and weaponry, stone and wood technology, leather use, cooking, diet, clothing and ornament, etc., according to the nature of the origins, derivations, and cross-cultural relationships of the material culture inventory. The sections on material culture derive mainly from his own research in the field, those on religion, history and sociopolitical organization from both primary and secondary sources. Considerable comparative material on the Chaco and the Isoso (a division of the Chaco) are also included. It should be noted that in the

St Schmidt, Max.

section on the cultural history and foreign relations of the Chitigueno, pp. 13-30, the author believes that the Chitigueno are actually the same Guaraní he had been discussing previously, with simply a change in name: therefore, cultural data have been combined for both files since a clear-cut distinction has not been made between them. The vocabulary for the Chitigueno of Isiboroti and the lower of the Paraguay River, pp. 89-111, is omitted in the translation, as is the list of sources on the Chitigueno and Chaco and their history, pp. 111-115. [These sections are provided in the foreign text.]

interesting: "they make a very big dormitory and, within it, as many small rooms as there are residents, and so small that they do not have room for more persons, and it is enough for them, because they do not have furniture, nor do they have wearing apparel and hence they go about naked." /Translated from the Spanish./ These facts agree on every point with those of the Relaciones geográficas, etc. (Vol. II, Plate CIV) and of Lizárraga (Vol. I, p. 259) on the same subject. The Guarani, just like the Tupinamba and other Tupi tribes, lived in maloca, gigantic halls capable of containing more than 150 persons and which often in themselves formed the village. The existence of this type of dwelling among the Chiriguano in the 16th and 17th centuries constitutes new proof for the recent character of their migration. In the 18th century we find them already in possession of the small rectangular house which they still have now and where one single family lives. (See Métraux, 2, p. 51.)

novelist Garcilaso which might allow one to suppose that he really knew who the Chiriguano were. As for this conquest by the Inca, it would have been barely an attempt at conquest... Garcilaso confuses the Chiriguano with all the tribes of the eastern slopes of the Andes whom he had vaguely heard mentioned. Let us note that he is the only one to attribute this expedition to the Inca Yupanki, while the other chroniclers, better informed, are satisfied to say that the Inca Yupanki made an expedition against the Antis, probably around Cuzco. Unfortunately the vogue this pleasant writer enjoyed at a time when the history of America was still in limbo bluffs some modern critics into believing him, and they go so far as to prefer one of his unwarranted affirmations to the serious /321/ and precise evidence of chroniclers who get their information at first hand and from reliable sources.

/339 cont./
consumption was limited (1).

1. Father Giannechini (Diccionario Chiriguano-Espagnol, etc., pp. 169-170) gives us very interesting details on this topic. Formerly, says he, tobacco was reserved for magicians and adults. He states that even today where its use is most widespread it is cultivated on only a very small scale. The Chiriguano do not have the patience to let it ripen and dry it over the fire in order to be able to smoke it.

When they were called to a sick person, the medicine men used to put themselves in a trance by smoking ever so much. By this means they discovered the author of the illness and gave him battle.

We shall see farther along (p. 76) the role of tobacco in the magical ceremonies intended to make rain fall.

At harvest time I visited the lands cultivated by the Indians of the Caruruti region in Caipipendi valley. From the end of February to the month of April, the Indians rarely spend the day at home. Most of the time they go to settle down in their fields, leaving the village as soon as the corn begins to ripen, not to return until the /340/ end of the harvest. The house of the absentees is made safe from all foreign intrusion by thorn hedges which they raise all around or only in front of the door. The latter can also be closed by a cot or bedstead, which they put up against it and anchor solidly (Fig. 6).[1]

This temporary migration of the whole population of a village to the fields sometimes made my job as a collector rather difficult. It /Fig. 7 appears here/ often happened that I found myself in nearly empty villages. The rare Indians who had remained there refused obstinately, and rightly, to sell me the objects which interested me, if they belonged to an absent person.

75 Fig. 16) was present at an analogous treatment also practiced
/481/ by a medicine woman on a child at Yumbia, not far
from the Salado. She rubbed him and blew on his body (1).

[113]
[192]

1. In the Diccionario Chiriguano-Español y Español-Chiriguano, etc. (p. 72), we find the word hunga translated "to rub, to massage" and the sentence Šiyari Šerungarunga tein, iróí á šẽ with the following meaning: "My grandmother rubbed me enough, but I did not get well." The medicine women, add the authors of the dictionary, use the word hunga to express the act of rubbing with the hand any painful part of the body, especially the chest, without any remedy other than the saliva they spit on their hand. These women attribute a special virtue to saliva.

[827]

755
756 The sick boy's father told me that, once suffering from prolonged headaches, he had had recourse to a sorceress, an old woman with woolly hair, who was called the Samba. She sucked the place where the ache was localized and drew out worms from it. The half-breed got well, of course.

757

[121] I shall devote a special st[illegible] to Chiriguano medicine men in a future volume of this Review. Meanwhile I shall limit myself to describing, according to the Diccionario Chiriguano-Español y Español-Chiriguano (pp. 166-167), the way in which these powerful personages customarily proceed when they are called to the bedside of a sick person. I am forced to have recourse to the observations made by another for lack of having been able to be present myself at the spectacle which Father Giannechini evokes with as much accuracy as vivacity. The great Chiriguano paye are now all in the Ivoka where they take

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10

typical *Inca* designs. At Caipipendi (pl. 41, *top, right*), near Charagua, he found a *Chiriguano* cemetery consisting of large, corrugated urns, identical to modern *Chiriguano* chicha jars, covered with smaller jars. Near the surface was found a vessel with incised decoration which has no resemblance to any modern *Chiriguano* ware. The same site yielded a small pot with thin incisions and two suspension holes. 172

SOURCES

Short descriptions of the *Chiriguano* appear in the early literature. Garcilaso de la Vega's picture of *Chiriguano* culture is on the whole quite inaccurate, but for a few details. Díaz de Guzmán (1914), Barco Centenera (1836, 1912), and Lizárraga (1909) speak briefly of *Chiriguano* culture, but the earliest firsthand account of it is Father Chomé's letter (1819 b). Tamajuncosa's report (1910) about the state of the missions at the end of the 18th century is also an interesting document. Weddel (1853), who visited the *Chiriguano* in the middle of the last century, published a few notes about their culture. The best sources are the reports and books written by the Franciscan missionaries, Cardús (1886), Corrado (1884), and especially Campana (1902). Nino's (1912) much-quoted book is based in great part on Campana's monograph. 113 114

Nordenskiöld dedicates several chapters of his "Indianerleben" (1912) and of "Forschungen and Abenteuer" (1924 a) to the *Chiriguano* and *Chané*. His data are accurate though somewhat superficial. Great stress is placed on the economic life and the material culture, but social organization and religion receive only cursory attention. However, the collection of *Chané* and *Chiriguano* myths is fairly large and of great interest. Nordenskiöld made a comparative analysis of *Chiriguano* material culture in one of the volumes of his ethnographical series (Nordenskiöld, 1920). More minute details about *Chiriguano* artifacts may be found in Eric von Rosen's (1924) luxurious publication based on a collection he made among these Indians at the beginning of the century.

Several aspects of *Chiriguano* history and material culture were studied in some detail by the writer (Métraux, 1930 b), who also published new *Chiriguano* myths (1931 a) and two sociological essays (Métraux, 1931 b and 1935).

Several monographs deal with *Chiriguano* pottery, which is today one of the best in South America. (Outes, 1909; Nordenskiöld, 1920; Métraux, 1930 b; Paulotti, 1942.) Recently, Max Schmidt (1938) again published and described *Chiriguano* artifacts and techniques.

Knowledge of *Chiriguano* religious and social life is meager and is limited mainly to Campana's monograph (1902) and to observations made by Nordenskiöld (1912) and the present author (1930 b) at a time when aboriginal *Chiriguano* culture was already decadent. The Paraguayan-Bolivian war accelerated its breakdown and little of it now survives.

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10
Chane SF8

The migrations, wars, and the religious conversion of the *Chiriguano* have been the subjects of many historical monographs. The most important of these are by Corrado (1884), Serrano y Sanz (1898), Dominguez (1918), Gandia (1929 a, and b), Métraux (1930 b), Coni (1925), Moreno (1929), and Finot (1939). The Jesuit missionary work among the *Chiriguano* has been described by Lozano (1941) and Muriel (1918).

CULTURE

SUBSISTENCE ACTIVITIES

As today *Chiriguano* and *Chané* share in the same culture, the following data may apply to both tribes.

Farming.—The *Chané*, conquered by the *Chiriguano*, were proficient farmers who, though practicing a tropical type of agriculture, were probably acquainted with many of the methods of cultivation of the Andean area. The *Chiriguano* adopted their traditions. The new habitat of the *Chiriguano* did not offer the same resources for hunting and fishing as had their homeland. Therefore, these Indians depend on farming to a larger extent than any other *Tupi-Guaraní tribe*. The basis of their livelihood is maize, of which they have 11 varieties, all related to those of Paraguay. Then follow in order of importance: Pumpkins, beans (11 varieties), sweet potatoes, sweet manioc, peanuts, and some Barbary figs (*Opuntia* sp). Sweet potatoes were grown on a large scale by the *Chané* of the Parapeti River.

These Indians also raise cotton, tobacco, urucú, and, in the Parapeti region, reeds for arrow shafts (*Arundo donax*). Plants of the Old World adopted by the *Chiriguano* include melons, watermelons, oranges, sugarcane, and sorghum.

Chiriguano men clear the fields and surround them with a tall fence as a protection against the inroads of wild or domesticated animals, a task which is considered to be particularly strenuous. They also till the soil, but at harvest time they are assisted by the women and children. The latter, armed with slings, drive away the parakeets and other birds which prey on the crops. Nordenskiöld (1912, p. 183) observed that among the *Chané* of the Itiyuro region, large maize fields were tended by men while pumpkins and beans were raised by the women.

Collecting wild food.—When their crops fail, the *Chiriguano* subsist on the same species of pods and fruits as those collected by the Chaco Indians: Algarrobo, tusca, mistol, caraguatá, and other plant foods.

Hunting.—Hunting is a very secondary economic activity, at least in modern times. Peccaries, which are the main game animal, are hunted with specially trained dogs and killed with bows and arrows or with clubs. Rheas, which are abundant in the Chaco plains, are caught with bolas. Pigeons are captured with clap nets. Special arrows with two points are used for hunting yacu birds (*Penelope* sp.).

THE YURACARE, MOSETENE, AND CHIMANE

TRIBAL DIVISIONS

Culturally, the *Yuracare*, *Mosetene*, and *Chimane* are closely related (map 1, *No. 3;* map 2). The *Leco* probably belonged to the same cultural area, but information on them is scanty and, therefore, it is presented in a special chapter.

The *Yuracare* (*Conix, Cuchis, Enetes*) territory was defined by D'Orbigny (1839, 1:354–355) as the large zone of Tropical Forest at the foot of the Andes, extending from Santa Cruz in the east to Cochabamba in the west (lat. 16°–17° S., long. 63°–66° W.). In more recent times, *Yuracare* settlements were scattered along the Mamorecillo, Chimoré, Chaparé, Securé, and San Mateo Rivers and their tributaries.

The *Yuracare* were divided into two mutually hostile groups: The *Soloto*, or eastern *Yuracare*, and the *Manziño* to the west, on the slopes of the Andes. The *Oromo*, though exterminated by the *Manziño*, seem to have belonged to the latter nation. The *Soloto* of the Mission of San Carlos were called *Moge* by the inhabitants of Santa Cruz.

The contacts of the *Yuracare* with the Whites go far back in time. On several occasions in the 17th c[illegible], they raided the Spanish settlements near Mizque and Cochabam[illegible]. The first missionary to visit them was Father Francisco Marcos who, in 1776, founded the Mission of Asunción de Maria Santissima on the Paracti River, between the Coni and Chaparé Rivers. This mission was soon abandoned but was restored for a few years in 1784. The Mission of San José on the Coni River was established in 1795 by Father Tomas Anaya, but was deserted by the Indians in 1805, after it had been shifted to the Mamoré River. The Mission of San Francisco, founded on the Mamoré River in 1793, was also soon abandoned. At the beginning of the 19th century, Father Lacueva tried to restore the Mission of Asunción, but it was in ruins when D'Orbigny passed through it in 1831.

The *Yuracare* language is still regarded as unrelated to any other group.

with that of Tarija because the inhabitants of the missions of both colegios were of the same Chiriguano race.

/110/ The illustration placed at the beginning of this chapter /see p. 148/ is one of the said photographs; it shows a group of Chiriguano women with their festive clothing and adornments, who are ready to attend a public gathering for drinking; it was made in the Boicovo Mission and taken with the others to the exposition. The group of Indian day laborers is reserved for the chapter which deals with work and chores; both groups show the physical constitution of the race, about which Señor del Campano, after the exposition was over, wrote his book; perhaps this gentleman also had seen the four Chiriguano who were brought from the Tarija missions (1).

[113]

1. Notzie intorno ai Ciriguani /Information on the Chiriguano/. Florence, 1902. This is the most complete work that exists in Italy, in view of which I decided to write the present one here where the Chiriguano live.

Physique

14

After having studied the territory that a tribe occupies and consigned to paper what is most characteristic, and, next, having discovered appropriately by means of traditional and historical data or well-founded suppositions the origin and derivation of the tribe, the first thing that is exhibited to the ethnographer and to any observer is the physical body; its proportions, whether large, small, or average, soon strike the eye, the later, the observer, considers mentally what the former, the physical ethnographer, sees, and begins his narration and then goes on to the character.

/111 cont./

144 114 who conquered Mexico and Peru (1).

[113]

1. Guillermo Robertson. Historia de América desde el descubrimiento hasta antes de la Independencia /History of America from the Discovery to before Independence/. Travelers exaggerate their stories in order to attract more attention.

144 [191] [142] There are extensive areas where mixture of the two races was frequent, but it must be pointed out that in these areas the children of such have ceased to be Chiriguano, both because of the Spanish language, which they now speak perfectly, and the color, which is completely different; it is no longer parchment, as Father Corrado states, but a skin which is up to a certain point fine and velvetlike, so that for this class of persons who descend from white and Chiriguano the appropriate name is mestizo and not Chiriguano, and consequently the physical characteristics of the race have not changed. In these same areas families which have kept pure Chiriguano blood are not rare, and these families, or the individuals which make them up, have the same characteristics as other Chiriguano, without any noteworthy difference (2).

2. From the left bank of the Parapiti River northward this radical change is taking place, making the race disappear.

On the contrary, in the great Chiriguano centers, such as all the missions and a few other areas outside of them, the physique of the native has not changed at all. As a rule their stature does not reach one meter and 70 centimeters in men, and rare are the women who reach 1.60; the hair is black, glossy, and coarse, and very vigorous in

141 142

181 /114/ the same as everywhere else, so that certain travelers who say Indians are very bad would be wrong, as would those who call them very good. A celebrated explorer said not long ago that he found more goodness in an Indian than in a white man and that it is enough to notice only with average attention the faces of the two to be sure of the relative morality of both; as a missionary I neither can nor should consign to these pages my judgment in this regard (1).

1. The same explorer approves of the resolute attitude of the Curuyuqui uprising, taking the point of view that they were fighting for their independence and for the recovery of their territory.

186 648 Before the conquest so gently carried out by the Catholic missionaries took place, it was extremely dangerous to enter their territory, even just in passing, and not too long ago it was difficult to pass through the Cuevo-Ibo countryside, where the Franciscan missionaries of Potosí founded their missions, as they had founded those of Tarija in other regions. There was reason for the danger to exist.

The Indian now knew the white man by his deeds; he called him and still does call him caray, that is, astute, greedy, oppressor, and owner of what belongs to other people; if then he looked with misgiving upon the caray and up to a certain point did not wish to have relations with him, it is because this extremely bad image had been formed, from which arose the idea of not wanting to have a bad neighbor in his territory, and he blocked his way in order that he might not come to like the fertility of the area. He was wise to the fact that after exploration comes reconnaissance, and from this rises the desire to possess, which sooner or later is put into execution, as has been the case (2).

[113]

2. Giannecchini. Expedición al Alto Paraguay, año 1883.

/114 cont./

648 721 Once the conquest had been completed through the work of the missionaries and through colonization by the inhabitants of several departments, the Chiriguano had to submit to the rights of the stronger; on several occasions he tried to raise his head by means of general uprisings, such as the one of 1875 and the one of 1892 in Curuyuqui de Cuevo-Ibo, but they succumbed because of the difference in arms and because the whites were well situated (3).

[113]

3. Martarelli. Addition to the Historia de Misiones del Colegio de Potosí, which deals with the Curuyuqui war and the beginnings of the founding of the San Buenaventura de Ivu Mission.

648 178 /115/ A new uprising seems unlikely today because they are few and because the territory is populated by whites who have taken over the territory by right of conquest and through purchase made before the Supreme Government, but the Indians have not resigned themselves to permanent servitude, having once been lords of their house and land; their pride has been put down by superior forces, and most of them endure their fate with resignation.

To be sure, it is a fact that the Chiriguano of today is not the Chiriguano of other times; he is not the one who fought so tenaciously against the soldier of the Inca army, against the Spaniard, and against the Bolivian soldier himself. This change has taken place, I shall say once more, through the loss of territory and his independence, and in repeated struggles of extraordinary tenacity, which only resulted in aggravating a bad situation, and in the loss of their most beloved people and of their lands. For better or for worse they have had to submit to the laws of the Government of the Republic, which still exercises supreme authority over them, in the missions, where it is embodied in the conversores, in the provinces in the person of the subprefects, and in the cantons in that of the corregidors, who generally make use of the cacique or the alcalde to

South American Indians 57

Notes on the Bibliographical maps.

S
C
Ca.
113●
117
128
108

To this bibliography several maps have been added which ought to prove useful from many points of view. *The maps indicate the territories concerning which the authors quoted in parts 1 and 2 made their investigations.*

The first map shows the literature from 1498—1600, the second from 1600—1700, the third from 1700—1800, the fourth from 1800—1900 and the fifth from 1900—1920. We find a separate map of the archaeological literature. Several important works are unfortunately missing which I have not been able to study. It is difficult and expensive work to collect the literature on the S. American Indians. Not the least difficult of access are certain works printed in S. America during the 19th century. For my ethno-geographical studies I have of course read a number of books without finding anything to quote from them and consequently they are not mentioned here. I desired especially to show the merits and demerits of the maps of the distribution of the cultural elements here published. The maps of the authors' names show us the districts from which I have no material at all and those from which I only have the material of older authors, or only of modern writers.

Some authors have not travelled in the territories they have written about, but have drawn from the works of several other authors. The most remarkable existent work of this kind is Cooper's excellent work on all that has been written about the Indian tribes in southernmost S. America. If there were many such compilations, it would not be difficult to draw up maps of the distribution of the various cultural elements.

From the map that indicates about which districts the archaeological treatises are written, we can see, even though

UCSB LIBRARY

some names are missing, what immense territories in S. America are still entirely unexplored archeologically.

The bibliography includes some authors whose names will not be found in the maps, i. e. Fernowarr and Fermo Sessarrt, great as their services to the ethnography of S. America have been. This is because they have written comprehensive works dealing with the ethnography of the whole continent, and not with any particular part of it.

Where I have quoted from several works by the same author, these are numbered a, b, c, etc. in the bibliography. The same work has the same number in the First and Second Parts of my own book.

Bibliographical map 6. Archæological literature.

/161 cont./

In the wilderness of the Chaco there still lives a Chiriguano 173 chief, Cayuhuari, in whose village no white man has been. 361 It is said to lie on a big lake. Large herds of horses and cows graze there, and the maize granaries are always full. The Indians are rich there, because no whites are there. At least so it is said.

Cayuhuari, who has lived in the Chaco since the uprising 563 in 1890, has an abducted white woman as a daughter-in-law. It is said that, with the Toba, he visited the sugar factories of northern Argentina. He had his daughter-in-law with him. The owners of the factory offered to rescue her from the Indians. "I do not want to leave them," she said. "With them I have my children." This answer honors her.

The manners and customs of the Chiriguano Indians have 114 been described by several authors (4), mostly missionaries, /162/ 797

> 4. We find most of the literature cited by Domenico del Campana: "Notizie," etc., loc. cit. /"Notizie intorno ai Ciriguani (Notes on the Chiriguano)," Arch. per L'Anthr. e la Etn. Firenze, 1902. Page 61./ [113]

so that we know more about them than about the Choroti and the Ashluslay.

A part of what I have reported about these Indians is not new, though seen in a new light. Nevertheless, various things, especially concerning religion, differ from the descriptions of the various missionaries. What I have gathered here is from the Chané, and the missionaries know the Chiriguano best.

What I do not like in the various descriptions of the Indians by the missionaries is that they seem to be striving to paint their shortcomings in colors that are all too faint, so that their own "civilizing work" may seem as important as possible. The missionaries seem to me to be unable to describe the religion of the Indians objectively.

/167 cont./

is a village called Tapiirenda. The valley is now inhabited exclusively by Chiriguano, and none of them remembers that, as the name of the place indicates, Tapii (Chané) lived there. Ce 103 C 361

The place names of the Indians of higher standing are retained by the whites, even if they have become the masters of the country. Thus, almost all the places inhabited by them in Chiriguano territory have Guarani names, such as Charagua (name of the cliffs peculiarly carved out by the water), Carandaiti (where palms grow). The place names of the lower tribes, on the other hand, are not kept by the whites. Thus, no white knows the Mataco or Choroti names of the various places on the Rio Pilcomayo. The settlements of the whites are named after saints, Bolivian statesman, and explorers. If a tribe, for example, the Choroti, becomes extinct, there is nothing left of its language in the place names. Investigators of place names should not overlook this. St 103

Through association with the whites, the geographical knowledge of the Indians has been extended considerably. They go farther and farther away to seek work, and they see countries which they had never heard of before. S 177 823

The Indian as Historian

If we wanted to write the history of the Choroti and Ashluslay, we could not go back very far in time. It is only in the last decades that we see them mentioned more specifically in the literature. On the other hand, we already know about the Chiriguano, from their battles with the great ruler, Inca Yupanqui, from the period before the discovery of America. Garcilasso de la Vega (1) reports on his attempts C 175 648

1. Garcilasso de la Vega: The Royal Commentaries of the Yncas. Vol. I-II. Hakluyt Society. London, 1869 and 1871. C [113]

/173 cont./

Under the influence of the whites, however, the Chané and Chiriguano are gradually changing their huts, and many Indians are already building huts that are identical with theirs.

No hut here has its original Indian form. The genuine Chiriguano huts (the original Chané huts are not known) were very large; up to 100 persons lived in one house, and the entire /174/ village consisted of only a few large huts (1). These

1. Annua de la Compañia de Jesus. -- Tucuman y Perú -- 1596. Relaciones geográficas de Indias. Madrid, 1885. Vol. II. Page CIV.

evidently correspond to the large family houses well known in Brazil, which I saw in Bolivia only among the Chacobo, a Pano tribe from Lago Rojo-Aguado.

Even in Viedma's (2) time, at the end of the eighteenth

2. Viedma: loc. cit.

century, /Fig. 83 appears here/ however, they seem to have given up the original type of house and built smaller huts.

In many villages there belongs to each hut one or more maize granaries (Fig. 84a), in which maize, gourds, etc. are /175/ stored. These granaries are built on piles and are perhaps a reminder of the time when the Chiriguano and Chané lived in swampy regions. To each granary there belongs, as a rule, a ladder (Fig. 84b). Sometimes the granaries and the dwellings are built together into one house. /Fig. 84a appears here./ I saw such huts in the vicinity of Machareti and at Yatavéri, not far from Ivu. Not infrequently the granaries stand in the fields, far from the dwellings.

These villages are neat and clean. Huts and market place are swept daily and the refuse is burned.

The space in the huts is not too cramped. /176/ In each house, as a rule, there lives only one family, which, aside from the rest of the family members, sometimes consists of the husbands

[177]

Games

Sometimes one sees the men playing. The most common game is now taba, which is played with the ankle bone of a cow and which these Indians learned in the sugar factories. Dice games, too, are not uncommon there. The rules for these seem to be their own, or rather seem to be copied from the whites.

"Daro," as the Chiriguano call the dice game after the Spanish, is played by two persons with /191/ dice made by them themselves. In Tihuĩpa I noted down the following rules for this game (Fig. 93).

All other combinations are = 0. The first one to have ten strokes wins. The strokes are marked on the floor.

As for their own games of chance, they have two. The first is the same as the one we became acquainted with on page 73 /untranslated/ in connection with the Choroti and Ashluslay. The Chiriguano call this game "chũcarãy," the Chané "chunquãnti" (1).

Fig. 93. Rule for the game of "daro." Chiriguano. Tihuĩpa.

C
Ce
[113]

1. Cf. Erland Nordenskiöld: Zeitschr. f. Ethn., 1910, Nos. 3 and 4.

The other game known to the Chiriguano and Chané I did not see among any other Indians. They call it tsũcareta and play it with a pile of little sticks which are convex on one side and flat or concave on the other (Fig. 95).

First a stick (mãma) is placed in such a way that it points to the one who is supposed to throw (Fig. 96). Let us assume that it is placed so that the convex side is up. If two or more sticks fall on one another crosswise with the convex side up and without being touched on the upper side by a stick with the flat side up, they go to the thrower. If the mãma had been placed so that the flat side was up, only those which formed a cross with the flat side up would have counted.

Chapter Twelve

On the Life of the Chané and Chiriguano Indians (Continuation)

From the Womb to the Grave

C Ce 843 Ce [123] Ee 844 Ee 846 Ce [171] Ce 846 262 Ce [825] c 846 262 Ee 171 846

The Chané and Chiriguano women work hard even during pregnancy, until they are to give birth. In Vocapoy's village there was a pregnant woman to whom I gave a pigeon that I shot. Vocapoy thereupon told me in great excitement that a pregnant woman must not eat pigeons. When a Chané or Chiriguano child comes into the world, it undoubtedly does not cause its mother much pain. These women are healthy and give birth easily, as do all Indian women who lead a healthy life and have never worn tight-fitting clothing. They also do not lie in childbed; instead, that must be done by the papa of the little one. Here, too, we come across this strange custom, the "couvade," which is known from so many Indian tribes. The husband is supposed to lie down for several days and observe a diet. Among the Chané on the Rio Parapiti he is permitted to eat only cooked maize and maize soup during the first few days, and later sweet potatoes as well. For several days he may not eat meat. For example, if he eats the meat of a goat, he will die, bleating as it does. The Chiriguano Indian Taco told me that he got his fat stomach because he did not observe this important custom. "I should have lain for five days and stayed on a diet," he said.

The custom of the couvade, as is well known, is very widespread in South America. Among the tribes with whom I am familiar it definitely occurs, aside from the /207/ Chiriguano and Chané, among the Choroti, Gûarayû, and Chacobo. K. v.d. Steinen (1), who describes this custom in detail from the Rio Xingu,

C Ce [N3]

1. Karl v. d. Steinen: Unter den Naturvölkern Zentralbrasiliens /Among the Primitive Peoples of Central Brazil/. Berlin, 1894.

Ce 551 /208 cont./

untranslatable. Not infrequently a nickname is added to this name. Thus, for example, the Chané chief Boyra (Boy-snake) was called yúruhuasu, which means big-mouth. Indeed, old Boyra was a talker who had a great weakness for everything that was a bit indecent.

Ee 862 163 Ee 847 Ee 163

Mothers nurse for an unusually long time, and it is several years, as a rule, before they have another child. Perhaps the woman also aborts the fruit of her womb occasionally, like the Choroti woman, so that the family will not become too burdened.

In the mission station in Ivu I tried to gather statistics about the number of surviving children in 127 Chiriguano marriages and found that in ten marriages there were no children, in 27 one, in 35 two, in 29 three, in 13 four, in 9 five, and in 4 six. These figures, however, are quite uncertain. Nevertheless they show that here, as among many other Indian tribes, there is a sort of two-children system.

C 847 114 C [113]

Corrado (2) maintains with certainty that infanticide occurs among the Chiriguano. It is done in desperate cases among us, too, and therefore the example cited by Corrado means nothing. The question is: does /209/ infanticide and abortion occur as an institution accepted by the tribe, as among the Choroti? /Fig. 110 appears here./

2. Corrado: El Colegio Franciscano De Traija y sus misiones. Quaracci, 1884. Pages 526-527.

C 847

C Ce 868 857

The Chané and Chiriguano children, as has been mentioned, are brought up in freedom. They spend their childhood playing. Gradually the child begins to help its parents in small matters, for example, in carrying water and wood, tying up /210/ the domestic animals, fishing, etc. The girls learn spinning, weaving, making clay vessels, brewing maize beer, etc. from their mothers. They learn everything by imitation. The boys pursue small birds around the village and in this way learn the use of weapons. The children accompany their parents to fish and to till. The boy

/210 cont./

When a girl has her first menstruation, she is put in a compartment in the hut, a sort of closet. Her hair is cut short, and she may not come out until it has grown medium long again. Accompanied by her mother she may go out and attend to her needs, for example, bathe, etc. Between the first and second menstruation she must stay on a diet. She may eat cooked maize and meal. The Chané call this custom "yimundia."

In a Chané village, Aguaráti, I saw a girl who was sitting in such a closet. She was spinning. I peered into the closet, which was probably wrong of me, for on the next day girl and closet had disappeared.

P. Chomé (1) already mentions this custom in connection with the Chiriguano. He says the Indians believe a snake has bitten the girl.

1. P. Chomé, p. 320. The same priest also speaks of the custom of the couvade among these Indians, p. 321. Lettres édifiantes /Edifying Letters/. Vol. XXIV.

When the girl emerges from this imprisonment, she is marriageable.

/211/ When the Chané boy is about 10-12 years old, his lower lip is pierced by a man particularly experienced in this. A small piece of wood is stuck in the hole. The boy must lie down for a day. His grandfather comes and tears deep wounds in his body, so that he will become brave in battle and a capable hunter. In the morning, when it is still quite cold, he takes him to bathe, so that he will become a proper man.

For one day the father may not consume anything, so that the boy will not become loquacious. This shows that the Indians do not like prattlers.

When the boy grows older, he receives in place of the small piece of wood a larger one, and when he becomes a man he may parade around with a large plug, "tembeta," in his lower lip (Fig. 79). This is supposed to be of wood in which pieces of turquoise and chrysocolla are set. Among the Chané and most of the Chiriguano only the old men now have the tembeta.

/211 cont./

C 301/178 [304] e [578] c [186] Ee 301/177 C 301/314

Chiriguano only the old men now have the tembeta. The Chiriguano chief Maringay, who still respects old customs, has the lower lip of all boys pierced. Maringay is one of the old ones who say contemptuously: The "ava," the man, who does not wear a tembeta looks like a "cuña" (woman). To call men the insulting word "woman" is to insult them in Chiriguano fashion. The ones who are "ava" say of the Chané, who have small tembetas, "cuñareta" (women).

Nowadays most of the tembetas are made out of tin and pieces of glass by the whites in mountainous regions. Among those who have made them is the Italian Pablo Piotti. His work has even managed to get into European museums, without ever having lodged in an Indian chin. In former times the Chiriguano also had tembetas made of transparent resin (1).

C [113]

1. P. Chomé: Lettres édifiantes. Vol. XXIV, p. 317.

Ee 583 584

If the Chané or Chiriguano boy wishes to marry, he sends the parents of the girl all kinds of hunting booty. Vocapoy /212/ told me that he places wood in front of their houses. If the wood is used, it means consent, if he finds the wood untouched, he is rejected. If he has been successful with the wood, he asks the mother of the girl for her. She then answers that she cannot know whether he will be a good husband who can provide food for his wife. In order to demonstrate this, he must serve his future mother-in-law for about a year. Thus, marriage is a sort of purchase.

Ee 584 178

The Chané and Chiriguano men go courting nowadays in the same way that they did 200 years ago (1).

1. P. Chomé, op. cit., 319.

Ee 585

The night before the wedding, the young man sleeps with his girl. The wedding is celebrated with a drinking bout, with no other ceremonies than much drinking of maize beer. The newlyweds receive good wishes. As a rule, the young people go on living for a while in the house of the mother-in-law.

K. v. d. Steinen (1) and Koch-Grünberg (2) have pointed

1. K. v. d. Steinen: op. cit., p. 25.

C Ce [113]

2. Koch-Grünberg: op. cit., Vol. I, p. 133 /Zwei Jahre unter den Indianern (Two Years among the Indians), Berlin, 1909/.

out that even the women among the Indians on the Xingu and Rio Negro speak of sexual parts quite openly, as of something natural. The same is true among the Indians with whom I became acquainted. When I inquired about words touching on the most intimate things, even the women, indeed, the young girls, answered in the most natural manner.

Ee [124]

C Ce 195 834 838

There are words, however, which are prohibited. Such words among the Choroti are "ametché," which is an abusive word, "ictivähi," which designates homosexual intercourse, "huéle," which means onanism, and "tévi" among the Chané /222/ and Chiriguano, which has the same meaning as ictivähi. Here, too, the unnatural in sexual life is so shameful that it is not proper to speak of it.

C 834 838

There are also Indians who never want to speak about such things. This was true, for example, of a Chiriguano whom I had with me on my first trip on the Rio Parapiti. He even pretended that he had never heard such things mentioned. When I asked him about homosexuality among his countrymen, he feigned stupidity and said more or less: "Is that what the whites do?"

C [124]

Ce 538 831 [551]

Among the Indians, as among ourselves, there are nevertheless some who take pleasure in telling obscene stories. Such a one was the old Chané Bóyra, he who had the abusive name yúruhuasu, big-mouth. The more disagreeable the things he related, the more old Bóyra enjoyed himself. Sometimes he told such things that even my friend Batirayu, who used to interpret, was quite embarrassed. The old Chiriguano Yambási was also one who could tell all kinds of obscene stories.

Ce [115] C [538] [831]

Ee 838 171 c Ce [113]

/224 cont./

According to Westermarck (2), homosexuality is very

2. Westermarck: Ursprung und Entwickelung der Moralbegriffe /Origin and Development of Ideas of Morality/. Vol. II. Leipzig, 1909.

widespread among the Indians of America. The conception that this is a disgrace is by no means as marked everywhere as it is among the Indians mentioned here.

C Ce 839 171 c Ce 833 171 [839]

/225/ Among the Chané and Chiriguano I did not hear anything about onanism. Among the Choroti, on the other hand, it is said to be practiced by the men who are ignored by the women at a dance.

Perversions in the relationship between men and women, which were common in ancient Peru, do not seem to occur here. The primitive mammal position in coitus is said to be common among the Chaco tribes.

M 832 824 Ea 825 773 839

Mataco gave me a root which they used as an aphrodisiac.

The relationship between human beings and animals is so intimately intertwined in the legends of the Indians that one cannot always determine whether they mean the one or the other. The legends that describe love affairs between human beings and animals are not descriptions of bestiality, which seems to be unknown among these Indians.

Ee 834 171 Ee [126]

The sense of modesty has developed very differently among these peoples. It seems to me to depend very much on the mode of dress. None of these Indian men or women of whom I have spoken here regards it as improper, insofar as they have not been completely corrupted or civilized, to expose the upper part of the body. The Chiriguano and Chané women are much more ashamed than the Choroti and Ashluslay when they expose the sexual parts. The latter were very reluctant to undress completely in order to be photographed. I did not even dare propose such a thing to the former.

C /243 cont./
171 (Fig. 130) is typically Peruvian in form, as is the silver hair re-
291 mover, of which, however, I have no specimen. The festive
[534] costume of the man (Fig. 81) also seems to me to have a Peruvian
[413] cut. It is possible, however, that the influence of Peru did not
177 manifest itself among the Chiriguano until after the conquest of
the plateau by the Spanish.

e Boman (1) has proved that the Chiriguano, or more cor-
131
172
e
[113]

rectly the Gûarani tribe to which these Indians belong, formerly extended much farther south than they do now. He found there the grave urns so characteristic of them.

C The material culture of the Chané
Ce Indians does not, in general, differ very
171 much from the culture of the Chiriguano.
Ce The Chané, on the other hand, who are
[323] more isolated on the Rio Parapiti, have a completely independent pottery which we
C do not find again among the
[534] Chiriguano. If we compare the
534 remaining products of Chané
C and Chiriguano industry, we do
[184] not find any greater differences than we find in the various Chiriguano villages themselves.

C For example, if one collects clay vessels in the Iguembe
323 valley and in the Caipipendi valley, both of which valleys are
184 occupied by Chiriguano, one inevitably finds that the pottery, though strongly related in ornamentation and form, nevertheless /244/ also varies locally. I have already spoken of the individual variations (p. 85).

2. Im Thurn: Among the Indians of Guyana. London, 1883, op. cit., p. 375.

Ee [171] Ehrenreich says that such an anthropomorphic conception of the sun, as here in the first legend, is unusual in South America.

Ce Visits in Aguararenta (the Village of the Foxes).

539 775 Batirayu told me the following about the beliefs of the Chané Indians with regard to life in the world beyond and in the realm of the dead. Aguararenta (aguara = fox, tenta = village) is a village where the dead, ãna, live. It lies in the east. At night the dead there have human form; during the day they go about as foxes, rats, and other animals, or they go into a tree trunk. Every night there are great drinking bouts in Aguararenta. All the Chané, children, women, and men, go there. Bewitchers (ipáyepótchi) and murderers also go to this village. No one is punished in the Chané realm of the dead.

Ce [787] The living have also visited Aguararenta and have told what they saw there. I shall give a couple of these stories here. They give us a good insight into the Indians' conceptions about the realm beyond.

The Girl Who Followed Her Husband to Aguararenta.

Ce [115] Told by a Chané Indian in Aguarati (white fox) on the Rio Parapiti.

A girl wanted to marry a man, but he died. She had been very fond of him. In the morning, /256/ on the day after his death, while it was still dark, she was standing in front of the house of her parents and was pounding in the mortar. Then somebody came and seized the pestle.

"Who are you?" she asked.

"It is I," he said. It was her dead husband. "Do you want to come along?"

Ee 539 171

/277 cont./

Part of this legend reminds one very much of a legend from the Yuracáre Indians given by D'Orbigny (1). There "Tiri," who,

Ee [113]

1. D'Orbigny. Voyage dans l'Amérique Méridionale /Journey in South America/. Vol. 3, 1. Paris, 1834, p. 212.

in order to avenge his mother, kills all the felines except the jaguar with the four eyes, who takes refuge with the moon, corresponds to Tatutunpa. In former times the Chiriguano and Chané were undoubtedly in touch with the Yuracáre Indians. When the whites conquered the land around Santa Cruz de la Sierra, the Chiriguano moved south and the Yuracáre to the north. On my last journey I also visited the Yuracáre Indians, whom I shall describe later in another book.

Ee 174 179

Ce 539

The Man Who Married the Daughter of the Thunder God, Chiqueritunpa.

Ce [115]

Told by the Chané Chief Bóyra.

In olden times there were once three poor men who had no relatives. They were very hungry. Two of them went forth to look for something to eat. First they came into a large forest through which went a path. /278/ After three days they came to a great plain. In the middle of the plain there was a house. They walked around the house, but found no entrance. Finally, however, a woman came out; it was Chiquéritunpa's sister. She bade them come in. "We are dirty," they said and did not want to go in. She brought maize beer to one of them. He drained four calabash bowls of maize beer. She brought the other one maize beer. He, too, drained four calabash bowls of maize beer. "Go now and bathe," she said, "and wash your heads." She gave them the root of the "yúag" (1).

Ce [139]

1. = mistol /Zizyphus mistol Griseb./.

539 came to the edge of the village and played his most beautiful airs, but the girl did not want to go with me who had such a little hut.

When the Tick, Yaéu, Ran a Race with the Ostrich, Tíndo.

The tick and the ostrich wanted to put on a race to see who could run better. When they started running, the tick hopped on the ostrich and dug itself into the corner of its eye.

When the ostrich had run a short distance, it glanced sideways to see whether the tick was coming along. Since it was in the corner of its eye, it saw it at one side.

/293/ The ostrich hurried on. When it had run a stretch, it again glanced to one side and saw that the tick was still at its side.

The ostrich ran with might and main. When it was quite close to the goal, the tick hopped out of the corner of its eye and arrived there first.

The tick had won the race.

539 These little animal stories have a very widespread dis-
171 tribution. Thus, we find the story of the turtle and the jaguar almost unchanged in Santarem, at the confluence of the Rio Tapajo and the Amazon River (1).

[113] 1. Cf. Fredr. Hartt: Tortoise Myths. Rio de Janeiro, 1875.

Similar stories about foot races are also known from the coast of Brazil (1) /see footnote 1 above/. These last are found among us too, as is well known.

It has been proved (2), as was mentioned, that certain

2. Ehrenreich: loc. cit.

legends from North America and Asia have traveled as far as

Compulsory Service for the Whites

The Chiriguano and Chaná who work as servants in their own country for the immigrant white race are extraordinarily poorly paid. This is especially true in the remote regions where the higher prices for labor in the Argentine sugar factories, as the result of competition, have not been able to exert an wages. The Chaná on the Río Paraguí, for example, are seldom paid more than 10 centavos (not quite 10 pfennigs) per day with board. The women earn about half as much. The Indians are paid their wages partly in spirits and sugar, partly in cloth and tools. The cloth is so poor that a shirt made from such material does not last much longer than the time required to earn it. As a result of this system, the Chaná and Chiriguano, like their fellow-citizens in the rubber regions in northwestern Bolivia, sink into debt slavery.

/301/ It is to be hoped that the large projects initiated by the engineer Hermann in San Ignacio on the Río Piraiseyo will improve the Indian wage situation generally. If he will pay better than others, all the Indians will come to him, and the other employers will have to increase their wages.

[1 वा]

CHAPTER VII.

The Chiriguano (I).

Ethnographical research among the Chiriguano. The Chiriguano country. The tribal name. Physical appearance. Dwellings. Fire-hearth. Granaries. Theories as to the origin of the practice of erecting buildings on piles. Peoples. Household furniture. Dress. Modes of dressing the hair. Face-painting. Ornaments. 8-00

During our journey from Tarija to Gran Chaco we came into touch with the Chiriguano Indians, and on the march, as well as during our stay in the Chaco-Andean border region, I was successful in getting together a small but valuable ethnographical collection from these Indians. It is in connection with the publishing of the most important type specimens of this collection that I consider it suitable to give a brief description of the Chiriguano mode of living. Only in one or two cases, where I have arrived at results diverging from those of other students, have I found it necessary to enter into fuller details. 114

Mention of the Chiriguano tribe has, already in the 15th and 16th centuries, been made by a number of writers, and it is especially in Franciscan mission literature, earlier as well as later, that much valuable information may be found as regards this tribe.[1] Among the literature on the Chiriguano that had been produced prior to our journey, it may be that the books written by Corradi[2] and Serrano[3] are those that best repay perusal, and of works subsequently published, those by del Campana[4], Lehmann-Nitsche[5], Outes[6], Nino[7] and Nordenskiöld[8] are especially valuable. 113 114

[1] A very full list of works dealing with the Chiriguano is to be found in Nordenskiöld (11) and (18).

Ce 101 or Tapyi /Tapii/, it was not possible from what they said to ascertain with which of the tribes known to ethnology they C [101] can be identified. The Chiriguano call themselves "Mbya." If the Izozó were a part of them, they would have called them- Ce 101 17 selves by this name. No doubt they are Chané and that part of the latter which once had their homes in the Izozó River region, taking the name of this river for their own. Their culture, as demonstrated by the objects I collected among them, confirms this opinion. There are some differences between the objects collected among the Izozó and the Chiriguano in Machareti, either with regard to the decorations of the baked clay vessels or with regard to the making of the nets. But in principle it is not possible to decide whether these differences C 171 might not be only local differences. In general the culture of 172 the Chiriguano was diffused in this way throughout the tribes 128 successively subjugated by them, which is why it is proper to 648 deal below with the aspects of the culture of the Chiriguano of Machareti together with that of the Izozó.

C Ce 101 17

Influences on the Culture of the Chiriguano and Izozó, Taken from Historical Data

C Ce [197] At the present time the Chiriguano and Chané form a cultural entity which can be designated as the culture of the Chiriguano, because the Guaraní language of the Chiriguano came to be the common language of the whole group. The Izozó also belong to this ethnic entity. Thus it is necessary to consider this entity /4/ as being formed of completely different tribes. It is also necessary to conceive of their culture as the product of the fusion of very heterogeneous cultural elements. Nordenskiöld deals with this question in one of his books (1)

C Ce [113]

themselves from the oppression of their old masters, forming their own separate towns in the midst of their former masters (18).

18. Father Alejandro Corrado in the year 1883. In Moreno II, p. 254.

In addition, the final insurrection of the Chiriguano in the year 1890 was put down by the Bolivians; and for that reason the situation of the Chané was not modified, and so it is that the explorer Erland v. Nordenskiöld found them still under the same conditions (19).

175
648

Having described above the history of Chiriguano relations with the ancient Peruvians and the other Indian tribes, we have yet to deal also with their relations with the whites, that is, with the Spaniards or Bolivians, who little by little occupied their territory. We must stress in the first place the fact that the first whites who came to their territory and to the adjacent llanos were not any novelty to them, since even before their emigration the Chiriguano had met these people in their native land between the upper Paraná River and the Paraguay. Because of the initial attitude of the Guaraní on meeting the conquistadors, it is evident that both parties had the same aim, that of getting rich from the wealth of the rich lands of the west, of which they had heard. In order to attain

G1
C

648

/10 cont./ through the influence of the missions and through both violent and peaceful means of the Spaniards and, later, by the Bolivians, conterminous with the Chiriguano, little by little most of the Chiriguano came over to their side, so that the power of the Chiriguano tribe, in another time so strong and invincible, was weakened (40). Thus it happened that in

C.
Gi
[113]

40. José Cardúz: Las Misiones Franciscanas entre los infieles de Bolivia /The Franciscan Missions among the Infidels of Bolivia/. Barcelona, 1886. From Moreno II, pp. 248 and 249.

1875 the inhabitants of the neighboring provinces were able to give a final blow to the last segments of independent Chiriguano, subjugating them completely and obliging the defeated factions who refused to submit to disperse into other lands, some of them taking refuge in the Chaco among the Toba and Tapieté (40) /see footnote 40 above/. Nevertheless, this was not the final fight between the Chiriguano and the whites, as Cardúz supposed in 1885. A part of the Chiriguano in 1890 attempted one last rebellion against the Bolivians. About 5,000 Indians gathered on the Boynove plain near Curuyuqui, fought for a whole day against the Bolivians, who were assisted by some thousand Indians of the same tribe. At nightfall the heated battle had not yet been decided, but in the /11/ night the Indians lost their spirit in the face of the superiority of modern arms and left their trenches (41). Also,

41. Nord. 1, p. 168.

after this defeat one of the caciques, named Cayahari, preferred to take flight rather than surrender to the Bolivians. They say that he settled in the area of a large lake far from the whites (42).

42. Nord. 1, p. 161.

/11 cont./

C. Gi 175 178 167

The preceding historical sketch has shown that we can ascertain the history of the Chiriguano by means of numerous documents over a period of 400 years, up to that epoch so important for their future fate and culture, during which they emigrated from their native country and settled in a distant region. In this new country they found completely different conditions of life. All three factors by which all human life and all human culture are influenced and conditioned, nature, social state, and the spiritual culture of the ambient, were different in the new surroundings, and for that reason during the four centuries of their history they had to modify their primordial culture, which they had brought from their native country.

C 178 [126]

The products of their present-day culture, dealt with in this publication by means of the ethnographic collection that I brought from Machareti and Toledo, must be regarded as the result of numerous and different interacting factors. Some of the products of the old culture were kept in a fairly primordial form up to today; others were modified, either being perfected or in some cases degenerating. Many were completely lost because of the modified circumstances, and some were added as a result of the assimilation of outside cultures.

C. Gh 177 174 C

As we have already said, the question of the influences on Chiriguano culture has been extensively dealt with by Erland Nordenskiöld (43). While the Chiriguano received relatively

Tucumán. Vol. I, No. 3 (cited in what follows as Métraux I), pp. 299 and 300.

/12 cont./

C Chiriguano and Chané no longer exist. "The physiognomy
C of the latter was completely identical to that of the former" (45).
144
[177]

45. Moreno II, p. 254.

C In addition to anthropological measurements made on
114 four Chiriguano by Ten Kate (46), Robert Lehmann-Nitsche
141
C
[113]

46. Ten Kate. Herm.: "Matériaux pour servir à l'antropologie des indiens de la République Argentine /Materials for use for the anthropology of the Indians of the Argentine Republic/." Revista del Museo de la Plata. Vol. 12. La Plata. 1904.

in 1906 had the opportunity at the San Pedro de Jujui sugar mill to take the anthropological measurements of 40 Chiriguano men and ten women, who had come from Bolivia to work at that mill. Entitled "Estudios antropológicos sobre los Chiriguanos, /Pl. III-IV appear here/ /13/ Chorotes, Matacos, y Tobas (Chaco Occidental)" (47), Lehmann-Nitsche has

C
[113]

47. Anales del Museo de La Plata, Vol. I, No. 2, (Second Series). Buenos Aires, 1908.

published the results of these measurements, together with measurements of other Indians, and added to that publication in the first 12 plates Chiriguano types photographed by Carlos Bruch. In addition to the somatic measurements, determination of skin color, eye color, and hair color and form have
C been published by Lehmann-Nitsche. Thirty-six of the 40
166 Chiriguano men stated where they had lived, and from this we know that these people had come from various regions of
C Chiriguano territory to the San Pedro sugar mill. There were
[167] some who had come from the northern regions, and one had come from the city of Santa Cruz de la Sierra. Others had come from the south of Chiriguano territory, for example, from the town of Carapati, located considerably to the south of the Pilcomayo River. There are named 13 Chiriguano

[Text Continues on P. 30]

/13 cont./

166 towns from which one man had come from each one. From Charagua, Parapití, and Carapati two had come from each one, four from Ingre, five from Santa Rosa, and eight from Machareti. Unfortunately, the native soil of the Chiriguano women was not stated, and it is only said that they came from Bolivia.

141 The average height of the Chiriguano men measured by Lehmann-Nitsche is 163.4 cm., and the height of the Chiriguano women measured is 151.7 cm. This average height of the women measured is not a little less. The average height of the eight men from Machareti was only 161.8 cm., and that of the two men from Parapití only 158.1 cm. But the average height of the four men from Ingre was 169.15 cm. The tallest of the Chiriguano men measured, who had a height of 178.6 cm., had come from Ingre, and the shortest, with a height of 153.5 cm., from Machareti. The smallest woman (between 35 and 40 years old) was only 143.0 cm., and the tallest, 158.0 cm. These numbers show us that the height of different Chiriguano individuals is quite variable. Among the Chiriguano measured by Lehmann-Nitsche, the number of those who came from the same region is too small to be able to make exact deductions about the differences in height of the Chiriguano of the various regions in order to be able to clearly demonstrate the somatic influence of mixture with other tribes.

14 The photographs of Chiriguano types published by Lehmann-Nitsche show great variations among the different features and bodies, which corresponds to the fact that the present-day Chiriguano are the product of a mixture of various ethnic elements.

113 114 142 Good photographs of the Chiriguano of the southern part of their territory can be found in the publication of von Rosen, Ethnographical Research Work during the Swedish Chaco-Cordillera Expedition, 1901-1902 (48). Erland von Nordenskiöld

48. Stockholm. 1924.

113 /13 cont./
114 has published Chiriguano and Chané types (49).

The Territory of the Chiriguano

C
131 Concerning the location and extent of the territory of the Chiriguano at the time of their independence, that is, from the beginning of the 16th century to the second half of the 19th century, we have Moreno's detailed studies in two places in his work already cited many times above, the titles of which are: "Las tierras de los Chiriguanos /The lands of
C [101] the Chiriguano/" (50). According to Moreno (51), the

50. Moreno II, pp. 79-126 and pp. 235-254.

51. Moreno II, p. 236.

Chiriguano--Chiriguano /14/ of the Cordillera in contrast to the Itatines-Guarayus and the Piritaguaris also often called Chiriguano in the literature -- from the time of the Conquest until they lost their independence inhabited the same territory, that is, the western spurs of the Andes from south of the Pilcomayo up to the lands which extend on both sides of the
Ce Guapay. The Chané, who formerly had a large well-populated
13 territory, "although they formed several partial migrations,
[648] remained in great number subject to the conquering Guaraní within the region which these latter had converted into their impregnable abode" (52). In 1883 Father Alejandro Corrado

52. Moreno II, p. 249.

/14 cont./

131 without our having any information on their stopping place. Some Chorote live in the territory of the Chiriguano, near Yacuiba, and also, without counting the missions, the whole territory has been penetrated by whites and mestizos.

[563] [797]

131 174 According to these data given by Nordenskiöld, the territory of the Chiriguano, after their definitive subjection by the whites and up to the present time, has remained the same as that which they had at the time of their independence, except, it would seem, that they have come down more into the valleys and do not now live, as was stated in the 16th century documents, on top of the inaccessible mountains, which, as natural fortresses, offered them a secure refuge during their expeditions.

Towns and Houses

361 177 The arrangement of the towns and the form of the houses of the Chiriguano are not at the present time the primordial ones, and they have probably passed through two different transformations, one after the other, first under the influence of the architecture of Inca culture and later the architecture of the whites. /15/ According to the Annua de la Compañia de Jesús Tucumán and Peru, of the year 1596, the Chiriguano towns were composed of only a few houses that were large enough to house as many as 100 persons. In his "Descripción breve de toda la tierra del Perú, Tucuman, Río de la Plata y Chile /A Brief Description of all the Land of Peru, Tucumán, Río de la Plata, and Chile/," Father Lizarraga (56) describes the Chiriguano

36 34 62 [113]

towns in the following way: "The largest of the towns is one of five houses: the common number is three; but they are very long, more than 150 paces, with a two-sloped roof with posts in the middle, upon which the framework is constructed, and one kin group /parentela/ lives between one post and the next one."

880 next one." Garcilaso de la Vega (57) describes the large houses
342

57. Vol. II, p. 281. According to Métraux I, p. 331.

of the Chiriguano in the same way: they build a very large dormitory, and inside as many alcoves as there are residents, and so small that there is no room for anything but persons. Through detailed descriptions and sketches, we are familiar with the construction of the towns of the ancient Guaraní of the Tupinambas on the eastern coast of Brazil (58). Four or

361 342 171 712

[113]

58. According to De Bry. Métraux, A.: La civilisation matérielle des tribus Tupí-Guarani /The Material Culture of the Tupi-Guarani Tribes/. Paris, 1928.

five long, rectangular houses were built a short distance from one another around a quadrangular or pentagonal plaza, and the whole town was fortified by a defensive wall. We also know that the ancient towns of the Chiriguano had such defensive constructions through information from the year 1618, when Ruiz Diaz de Guzman found such a fortification of a Chiriguano town near the Pilcomayo River, which consisted of "two concentric walls of stone and of wood" (59). According

361 712

361 342 171

59. Moreno II, p. 252.

to Serrano (60), the Guaraní towns of the ancient Province of

[113]

60. Antonio Serrano: Etnografía de la antigua provincia del Uruguay /Etnography of the Ancient Province of Uruguay/, Paraná, 1936, p. 125 /the second number of this figure is questionable, being barely discernible in the original text/.

Uruguay consisted of only four to eight large rectangular houses.

/15 cont./

342 171 "In 1627 the Jesuits found near Yapeyú a Guaraní aldea with four houses in which some 100 Indians lived. They found identical dwellings in San Ignacio and nearby regions. These houses were quadrangular and extremely long, often in excess of 50 meters."

361 177 178 Even during the time of their independence the Chiriguano had departed from the primordial construction of their towns, which had served in the first place for defense, since at the end of the 18th century Viedma describes their houses as "a few small ranchos made of cane" (61).

● [113] 61. Viedma, Francisco de: Descripción de la provincia de Santa Cruz de la Sierra /Description of the Province of Santa Cruz de la Sierra/. Colección Angelis, Vol. 3, Buenos Aires, 1836, written 1793, p. 181. Cited by Nordenskiöld.

I.C. 357. Chiriguano storehouse in Machareti (Fig. 16).
I.C. 358. Chiriguano boys in front of their rancho in Machareti (Fig. 15).

361 [197] [363] [177] The Chiriguano town of Machareti was built in its present form by Franciscan missionaries, with wide, parallel, and right-angled streets, following the common form of old Spanish colonies, since their construction is not a product of the indigenous Chiriguano culture. But in parts, the houses and [343] primarily the maize storehouses built on posts, correspond to the houses of other Chiriguano towns, on which we have information from Erland Nordenskiöld and Eric v. Rosen (62).

62. Nord. 1, pp. 173, 176. Nord. 2, pp. 1-3. Eric v. Rosen, op. cit., pp. 191 and 192, Figs. 188-192.

343 /17 cont./ Not could it be that they adopted this from
[177] the whites, because in those regions they have never used houses built on posts. Neither do we have any indications
[176] that the ancient Peruvians had such houses. It is very unlikely that the Chiriguano settled in their new territory might have invented the construction of such houses, because the nature of their territory did not render such a form of construction necessary. In South America we find houses built on posts
343 171 almost solely in regions exposed to floods. Thus we mainly find them in the coastal regions of the northern part of the South American continent, and they appear to the south of the Amazon River only in a relatively narrow zone in the center of the continent including Chiriguano territory. According to Marban in 1676 (71), the Mojo had houses built on posts and

• [113]

71. Marban, Pedro: "Relatión de la Provincia de la Virgen del Pilar de Mojos /Report on the Province of the Virgen del Pilar de Mojos/," Boletin de la Sociedad Geografica de La Paz, Bolivia, 1898, p. 132. According to Nordenskiöld.

doubtless such house constructions were quite useful in those marshy and often flooded regions. In addition Nordenskiöld during his travels (72) found one of these houses serving as a

72. Nord. 2, p. 3.

storehouse among the Chacobo, who live north of the Mojo not very far away. Some of the Quichua /Quechua/ houses located between the Chaparé River and the Cochabamba River had been built on posts, but Nordenskiöld himself does not consider this architecture to have been primordial among them. Of the Chaco tribes who have storehouses built on posts Nordenskiöld mentions the Matako /Mataco/. I found such storehouses in the Matako town near Linares, but many of them also in the Churupí installations in Esteros. Nordenskiöld in his publications on the Churupí, whom he calls the Ashluslay, does not

C 343 171 /17 cont./
mention the existence of such storehouses among these Indians, and thus we must suppose that the Chorupí adopted this style of house construction only recently and probably from the Matako, with whom they have many contacts. /18/ To complete the data on the spread of houses built on posts, I shall also mention my observations on my expeditions of 1901 and 1910 to the Guató (73). Inside many houses, under the roof

C 343 171

G8 343 (352) (114)

73. Max Schmidt: Indianerstudien in Zentralbrasilien /Indian Studies in Central Brazil/, Berlin, 1904, p. 178.

C 68 (113)

and using long horizontal poles, these Indians build a platform which serves for storing various things. In this special arrangement of the Guató in building their houses, we find the rudiment of the true houses built on posts, and this is motivated by the great floods to which they were exposed even when they had been built in places higher than the marshy lands.

G0 (182)

We should not consider houses built on posts as a product of the primordial culture of the Chaco tribes. It leaves us the only center of its propagation the zone in the interior of the South American continent which we have mentioned, the center of the ancient culture of the Arauco /Araweki/ of these regions, the territory of the Moje. The Chané, who were later subjugated by the Chiriguano and incorporated into their community, also belonged to this Arauco culture. We must thus surmise that houses built on posts, like those we still find today among the Chiriguano and some of the Chané, first originated in the Chané culture and later passed to the Chiriguano when the cultures of these two tribes were fused into a single one.

C 343 174 171

No doubt the special construction of these storehouses has a different purpose today among the Chiriguano and the Chané than it had in the beginning. According to Nordenskiöld, the Chané of the lower Paraguay River, which is a typically marshy region, do not have such houses, while they are common among the Chiriguano and also among the former who live on solid ground not exposed to floods. Their purpose

Painting and Deformations of the Body

C
Ca
291
302
192

As the use of clothing has increased among the Chiriguano and Chané, the custom of painting or tattooing the body has naturally lost importance and the remnants of such customs are too few to be able to say what they were in the past. Nor do we have data on this. I often saw Chiriguano and Izozó women and girls paint themselves with urucú, making colored spots on their faces. According to Nordenskiöld, men and women sometimes paint their faces, as well as their bodies, with red paint (102). Nordenskiöld also found tattooing on

found it among the women in the valley of Caipipendi (105).

105. Nord. 2, p. 85.

The latter used for that the leaves of a plant that they call "tajú" (tayú = lapacho).

Ce 301 304 174 Gi 301 172

With respect to body deformations we can suppose that it was once a common custom among the Chané and Chiriguano to wear a "tembetá" in the pierced lower lip. Of the Guaraní of ancient times it has been stated that the men had this tembetá, and the custom is confirmed by prehistoric finds (106).

106. Cf. Antonio Serrano, op. cit., p. 122.

C Ce 301 174

The form, material, and dimensions of these tembetá were varied and varied regionally. What was the shape of the tembetá that the Guaraní had when at the beginning of the 16th century they emigrated to the spurs of the Cordillera? We do not know. Neither do we know whether or not the Chané had the tembetá when they were enslaved by the Chiriguano. We can assume that the metal tembetás of the Chiriguano and the Chané in their present form have their origin in the period after their contacts with the ancient Peruvians, /24/ since they did not know the technique of working metal and even today most of their tembetás are made by nearby mestizos or whites, who make them to their taste. According to Chomé's (107)

/29 cont./

Because of this change the implement for plucking hair, consisting of small tweezers, formerly very common, has naturally lost a great part of its importance today, and similarly, in its transformed state as a chest ornament, it is rarer. I found such tweezers among the Mataco and the Churupí. Unfortunately I did not succeed in acquiring such tweezers or the corresponding chest ornament, called "boivera" also by the Chiriguano. Nordenskiöld describes these tweezers in detail (131),

131. Nord. 2, pp. 81 and 82.

and he adds that the Chiriguano also use small sticks of cane to pluck out hair.

C
412
301
171

The form of these tweezers made of metal corresponds to that of the tweezers known through finds made in the burials of the ancient Peruvians. Today these tweezers are normally made of any piece of tin plate or sheet iron, which, when provided with a cord, they use for chest ornaments, besides their original purpose. This custom of using tweezers as a chest ornament was very common among the ancient Peruvians. Among the latter's necklaces there are many that, apart from other things, consist of silver tweezers. It was customary among the ancient Peruvians that these enlarged tweezers, unsuitable for their original purpose, be transformed into a pure and distinctive ornament. The Museum of Ethnography in Berlin has such ornaments in the form of depilatory tweezers, made of copper, silver, or gold, in great number, one example of which is 52 centimeters in length (132). Therefore I suppose

C
301
[174]

C
[113]

132. Cf. Max Schmidt: Kunst und Kultur von Peru, Berlin, 1929, pp. 83, 369, 397, and 399.

we must deduce that the Chiriguano custom of using as a chest ornament a silver ornament in the form of one of those tweezers is due to ancient Peruvian influence. There are several specimens of the "boiveras," now rare and doubtless most of the time carefully kept from the view of the whites, in

/29 cont./

301 [439] European museums. These are not made by the Chiriguano themselves, but by their mestizo neighbors and sold to the Indians. The external form is still that of tweezers, much enlarged. But the boivera of today, discounting its size, also cannot be used for plucking hair because the two parts /30/ of its lower edge have been soldered. The fact that the decoration of the surface is not still primordial is explained by the fact that the Chiriguano are not the makers of these ornaments.

291 Clothing and Adornment

From the 16th century we have the brief description of the Chiriguano by Bishop Lizarraga (133) where, among other

[113] 133. Lizarraga: "Descripción et población de las Indias /Description and population of the Indies/." In Moreno II, p. 101.

things, it is said: "They go about naked or at the most sometimes have a short shirt /camisatilla/ down to the navel." We can assume that this statement by the Bishop as of that time refers only to the Chiriguano men, because it is likely that by the time of their immigration the Chiriguano women were wearing a garment which covered their genital organs, as we know the Guaraní women of the ancient Province of Uruguay did (134). It is likely that this garment had the same form as

174 291 [191]

134. Serrano, op. cit., pp. 123 and 124.

the "tipoy," which is a garment in the form of a poncho without sewing and which even today is very common among Chiriguano and Chané women, as well as among various other Indian tribes of South America.

/35 cont./

526 Nordenskiöld did not see the Chiriguano of the Sierra play the game in which the ball is hit with the head, but he did hear it said that formerly they had played this game, called "bondi" by them, and that, like the Chané, they had
526 171 used solid rubber balls (153). In my work published in this

153. Nord. 2, p. 104.

journal (154), I have already mentioned that, according to the

[113] 154. Revista de la Sociedad Cientifica del Paraguay, Vol. III, No. 6, pp. 116 and 117.

Litterae Annuae of 1589 (155), the game with a ball hit with

155. Page 434. According to Nordenskiöld.

the head was also played by the Itatines-Guarayús and undoubtedly with a hollow rubber ball, because it is described there as being very light. In 1791 Eder (156) mentions this game

[113] 156. Eder, Franc. Xav.: Descriptio provinciae Moxitarum /Description of the province of the Mojo/, 1791, p. 41. Cited in Nordenskiöld.

with a ball hit with the head for the Moxos /Mojo/, who not only used white, hollow rubber balls, but also used dark, solid ones. Several authors, older ones, and more recent ones, for example, Fernandez and de Orbigny, mention this game among the Chiquito (157). Nordenskiöld on his travels saw it

157. Nord. 2, p. 104.

played in addition to the Chané, by the Huari (158).

/48 cont./ Eric V. Rosen has also shown numerous Chiriguano vessels in drawings in his work already cited (219).

219. V. Rosen. Figs. 218-225.

Métraux describes and shows by drawings a great number of Chiriguano baked clay vessels (220).

220. Métraux 1, pp. 370-374; pp. 382-428; Plates 16-19 and 24-60.

A publication by Felix F. Outes deals particularly with Chiriguano ceramics (221).

C
[113]

221. Felix F. Outes: La ceramica Chiriguana /Chiriguano Ceramics/." From the Revista del Museo de la Plata, Vol. XVI (second series, Vol. III), Buenos Aires, 1909, pp. 121-136.

C
Ce
126
415

Because formerly in the museum of the Sociedad Cientifica del Paraguay we had only four baked clay vessels and a piece of a handle from the Chiriguano, which Doña Maria F. de Casati collected among them and presented to the museum, I had a special interest in filling this gap. With some effort I managed to acquire from the Izozó in Toledo 41 Chiriguano vessels, and from the Chiriguano in Machareti, 55 of them, and with rather more effort I managed to bring them back whole and with their designs in good condition through the long trip to Asunción.

These baked clay vessels collected by me also show great variation in their form and ornamentation. But these diverse variations can be reduced to several groups, according to the purpose for which they were intended.

C
Ce
415

The Chiriguano and Chané baked clay vessels may serve very different ends:

1. To cook foods and liquids.
2. To fry /fritar, literally "to frit"/ foods.
3. To steam maize meal.
4. To carry and keep water.

/54 cont./

C
Ce
283
323

point out here a difference between the baked clay whorls of the Izozó and those of the Chiriguano with regard to their manufacture. The whorls of the latter are made of pieces of clay from any broken vessel, by filing them round and perforating them in the center, while the whorls of the Izozó consist of a small disk with different variations in form, also perforated in the center, but made of baked clay especially for that purpose.

C
Ce
323

Concerning the pottery technique of the Chiriguano and the Chané, we are well instructed by the data given by Nordenskiöld, S. Linné, Métraux (236), and Campana (237).

[113]

237. Campana (Doménico del), "Notizie intorno ai Ciriguani /Information concerning the Chiriguano/," Archiv per l'antroopologia e la etnologia, Florence, Vol. 32 (1902), p. 382.

C
Ce
323
114

Especially noteworthy among these is the description of the manufacture of baked clay vessels by the Chané on the Itiyuru River, which Nordenskiöld studied in its entire procedure. In the book written by Linné, entitled The Technique of South American Ceramics, we find, in addition to the systematic arrangement of the observations made by Nordenskiöld among the Chiriguano and Chané, important data on the results of chemical analyses and microscopic observations which Linné made on the vessels of these Indians. According to this information, the procedure for manufacturing these vessels is the following:

C
Ce
323

The first condition for the manufacture of baked clay vessels is the availability of suitable clay which has sufficient plasticity so that the vessel can be modeled and fired without being broken. Only a clay with special qualities can meet

C
Ce
323

/54 cont./

these two requirements. Generally it is necessary to correct the defects of the available clay, fixing it by the addition of other substances. Thus the Chiriguano and Chané add to the clay pieces of crushed baked clay. The Chiriguano women in Tarapayu like to use as such an additive, which they call "takupe," pieces of baked clay of ancient origin which they find in great number in their territory and which substance also contains, according to microscopic investigation, pieces of baked clay added to the clay (238).

C
Ce
[113]

238. S. Linné, op. cit., p. 36, Fig. 2, and p. 70. Nordenskiöld, Erland: Forskningar och äventyr i Sydamerika /Research and Adventure in South America/, Stockholm, 1915, p. 34. Nord. 1, p. 284.

From the quality of the substance of a baked clay vessel of the Chané of the Parapití which is in the Göteborg museum, it turns out that these Indians also add sand to the clay, in addition to pieces of crushed baked clay (239). By microscopic

C
114
323

239. S. Linné, op. cit., p. 33.

analyses of sections of vessels, Linné was able to demonstrate /55/ that pieces of baked clay were added to the clay of the Chiriguano. As a result of these analyses, he points out the following: "Microscopic section analysis of Chiriguano ceramics have shown the materials to contain, besides small quartz grains and larger grains of other minerals, particles of the same colour as the ground-mass, but with distinct outlines. These are due to ground potsherds. There are also some very dark particles, as well as lighter ones, and they, too, are potsherds. The variation as to colour is due to the vessels often in the firing, becoming quite differently coloured in their outer and inner layers" /cited in English/ (240).

The spindles that I obtained from the Chiriguano and Izozó are the type of spindle, very common among the Indians of South America, that Nordenskiöld calls "Bakairí type" in contrast to the "Bororo type," this nomenclature being based on the first description of these two types of spindles by Carl von den Steinen, who found them among the Bakairí /Bacairi/ on the one hand and among the Bororó on the other (258). In contrast with the

Spinning among South American Indians/,
Göteborg, 1910.

"Bororo type," the "Bacairí type" of spindle is held in a vertical position when used for spinning and has a small enlargement in the form of a knob at the upper end of the stick. In spinning, the prepared thread winds around the upper piece of the stick. The material of the Chiriguano and Izozó whorls is baked clay (that of the Chiriguano, pieces of broken baked clay vessels, filed), wood, or, rarely, among the Chiriguano, stone.

Ce
[32]

C
Ce
283

From the measurements mentioned above, it seems that the Chiriguano whorls usually have a rather larger diameter than the spindle whorls of the Izozó. The longest stick in the collection (from the Izozó) measures 54.5 cm.; the shortest (from the Chiriguano), 25.5 cm.

As I have already mentioned, all the sticks of the Chiriguano and Izozó spindles are fitted at the upper end with an enlargement in the form of a knob. Most of the spindle sticks in addition have an enlargement in the lower part, directly under the place where the whorl is put, so as to prevent the whorl from coming down the stick when the spindle is in a vertical position. Many spindles have a wrapping of cotton or raw wool directly under the whorl in order to make the whorl secure.

The form of the whorls shows many variations. I have already mentioned that the Chiriguano whorls are generally larger than those of the Izozó. They are also more uniform. The two sides of the baked clay of the Chiriguano are simply flat and smooth, which results from their origin as pieces of broken baked clay vessels to which the Chiriguano give the form of a disk by filing them and which they perforate in the center. The stone whorls of the Chiriguano /60/ and most of the wooden whorls also show the same form. But among the latter there are also some (cf. Fig. 87 /see p. 147/) which are similar to the more complicated forms of the Izozó whorls, although they differ from the latter in their greater size.

Ce
283
[171]

Among the Izozó whorls only two have two flat sides like the Chiriguano whorls. The other Izozó whorls, not only those of baked clay but also the wooden ones, show great variation in

/61 cont./

000 GO 285 171 824 GO 285 [824]

of other tribes. For example, the Guató Indians make mats similar to the mat collected among the Chiriguano, as well as baskets similar to one type of basket from the Izozó, from the large pinnate leaves of the acurí palm (Cocos schizophylla Mart.). The stem or stems of these, from which go the leaflets that form the plaiting, form the upper edge of the mat or baskets. With regard to the caranday palm, it is necessary to detach the leaflets from the stem in order to place them in the position necessary for plaiting them with one another. Therefore the upper edge is formed like a braid to which the leaves are attached in order to be able to proceed to plait from this rudiment. The lower edge is also formed like a braid, which joins the free ends of the strips and terminates in two ends, one at each /62/ side, which project beyond the side edges of the mat. The mat is plaited in such a way that one strip passes two of the other group each time. The decoration is made up of simple stripes parallel to the upper edge of the mat.

C Ce 285 531

The small flat baskets of the Chiriguano and Izozó are, in general, similar in form and dimensions. These are plaited with strips of cane and, at their outer edge, have a wooden hoop. Like the mat which has been mentioned, they are plaited in such a way that one strip of one group always passes two strips of the other group, and therefore the surface shows the same ornamentation, which consists of parallel stripes and is typical of all objects plaited in this way. In this ornamentation of the flat baskets there is one difference in that on some of them the entire surface is always filled with parallel lines, all going in the same direction (cf. Fig. 546 /see p. 157/), while the decoration of most of these small baskets consists of concentric squares (cf. Fig. 92 a and b /see p. 157/) formed by the combination of four surface units, two of which show parallel lines in the direction vertical to that of the parallel lines of the other two units. With regard to the details of the formation of such decoration by the technique itself, I refer to my publications regarding this matter (262).

C
285
[126]

The three sieves that I obtained from the Chiriguano correspond to the flat baskets described above with respect to their exterior form and to the rudiment of the plaiting. They differ from the latter only in that their strips are a certain distance apart and in that one strip of one group always passes only one of the other group, with the result that the ornamentation of the surface consisting of parallel lines which is shown in the little baskets is not produced. These sieves are also provided with handles like the flat baskets of the Chiriguano. A sketch of a Chané sieve shown by Nordenskiöld shows that these Indians also use such sieves (263). Flat baskets and sieves analogous to

285
291
294
[177]

The technique of the Chiriguano hat (I. A. 554) is not original, but no doubt was received from the whites and perhaps was directly taught to the Indians in the missions. For us the technique of this hat is without interest, except for the fact that this technique is also applied by the Izozó to the making of a type of basket, a specimen of which is shown in Figure 98b /see p. 158/. The manufacture of the hat begins at the center, and the strips, the beginning of which is plaited, are augmented by the addition of other strips. See Figure 99 /see p. 158/. The style of plaiting is like that of all the other objects of this kind among the Chiriguano and Chané, so that one strip of one group always passes two strips of the other group.

Ce

Ce
[285]

C
285
177 /62 cont./

The technique of the small bag I. A. 512, which has a cover and corresponds in form to a modern cigar case, is of no interest to us, because this is a product of modern manufacture.

C
Ce
285
178 Baskets I. A. 551 (of the Chiriguano) and I. A. 677 (of the Izozó) are of special interest because they represent the product of a new era in which the primordial devices of the technique have been forgotten and therefore they have lost the typical forms of the products of those techniques. The making of this

C
285
171 type of basket, which is widespread among the Indian tribes of South America, begins with the making of the bottom and ends at the upper edge of the basket where the free ends of the strips are /63/ fastened. If we compare the structure of the bottom of these Chiriguano baskets with the structure of corresponding baskets of other tribes of South American Indians, such as with the structure of the baskets of the Bacairí on the tributaries of the Xingú River (Mato Grosso, Brazil) or of the tribes of the Rio Negro, our attention is drawn to the great difference with

C
285 respect to the conformity of the work. In my above-mentioned publications (265) I have described this kind of basket in more

C
[113]

265. Max Schmidt: Indianerstudien, loc. cit.; and Die technischen Veraussetzungen, pp. 157 and 158.

detail, and I have demonstrated that the special design which appears in two variations on the bottom of most of the baskets of this kind that are not yet degenerate is consistent with the technique, because only a bottom decorated in this way can be a proper beginning in order to form the walls of the basket. Moreover, there is the difficulty that for the fabrication of the four walls of one of these baskets one needs twice as many strips as the number of the free ends which come out of the plaited square or rectangle which forms the bottom of the basket.

C
Ce
285 Therefore, the Indians who still know exactly how to plait these baskets plait in the beginning a flat rectangular piece twice as large as the projected bottom of the basket. Then the four edges of this rectangle are folded upward, in this

/78 cont./

C 273 removed from the pot, chewed up and well mixed with saliva, is then mixed back in with the rest. Then it is strained and ferments in large open pots, at moderate heat. By means of C [412] [237] large wooden spatulas or mammals' shoulder blades fitted with wooden handles, the mash is stirred in the pot. We find a more detailed description of this process in the publication by Métraux (287).

C /80 cont./
534 edge, puts forward against Nordenskiöld's deductions his opinion
174 that the ancient Peruvian objects of this form might originally
177 have been flutes and that they might have been used only ex-
ceptionally, in the event of necessity or only secondarily, as
C balance beams. Among the objects of this kind in the ancient
[114] Peruvian collection of the museum in Berlin so many specimens
C clearly show that they are balance beams that I cannot say that
[177] I agree with this opinion by V. Rosen (301). We must agree

C
[113]

301. Cf. Max Schmidt, Kunst und Kultur von Peru /Art and Culture of Peru/, p. 99, fig. p. 544, N. 8-10.

with V. Nordenskiöld's opinion that these wooden objects used by the ancient Peruvians as balance beams may have been accepted by the Chiriguano, not as balance beams, because the Chiriguano did not have the need to weigh anything, but as flutes. We must mention that with this kind of flute, open at both ends, two different sounds can be produced, depending upon whether the lower hole is left open or is closed with the finger.

The two Chiriguano flutes made of cane have six holes for varying the sound and one hole, at one side, for the mouth.
C Cf. Figure 39a /see Fig. 34a, p. 89/. Nordenskiöld, who shows
Ce such a flute in a drawing (302), is of the opinion that the
534
177
171

302. Nord. 2, Fig. 36 A.

Chiriguano and Chané received this kind of flute from the mestizos or whites, because such flutes provided with a hole at one side for the mouth do not exist among the other Indians of South America or among the ancient Peruvians.

/295/ Preface

114 121 In the chapters to follow, I propose to publish part of the results obtained in the course of the expedition that I undertook in the Bolivian and Argentinian Chaco in my capacity as director of the Institute of Ethnology of the University of Tucumán.

114 [101] This expedition took place from February to June, 1929. Its itinerary was the following: Having left Tucumán, I went by railroad to La Quiaca where I stayed for several days, making observations on the more or less half-breed natives of the region. From La Quiaca I went to Tarija, where I remained longer than I might have wished because of the suspicions my trip raised at the time of the Paraguayan-Bolivian conflict.

114 101 103 After a 15-day stop I left Tarija to reach the Chiriguano tolderías of the upper Pilcomayo. I crossed the village of Santa Ana, then the Alta del Cóndor, the Narvaez River, the post of San Diego, passed five kilometers from San Luis (Entre-Ríos) to stop at the Cuesta de San Simon, where I found the first Chiriguano. Once having crossed the Cuesta de San Simón I quickly reached the Salado River, then the Chiriguano villages of Timboy (Saladito). [126] It was there that I made my best acquisitions of pottery and where I collected the oldest objects. The inhabitants [178] of these rancherías, who live relatively far from the highway from Argentina to Santa Cruz, have preserved the traditions and culture of their ancestors better than their racial brothers have. From Saladito I reached the village of Itasiti and then Salado Grande, [361] in order /296/ to reach the Pilcomayo at the confluence with the Salado. There, the Chiriguano villages are large and numerous. The most interesting are those of Ñawirenda, Ibopeytí, and Yumbía.

After stopping for some time in this place, I continued my trip toward Huacaya and the mission of San Pascual de Boicovo.

In one day I went from Boicovo to Cuevo, going by way of the mission of Santa Rosa.

[199] [178] From Cuevo on I was in the mission of Ivu, which is without doubt the one where the old Chiriguano customs have undergone the fewest modifications.

/296 cont./

114 101 105 From Cuevo I left for the northwest toward the Paraguay River region. I crossed this river near Pipi. After stopping in that village, I followed an Indian path which led me to Caraguatá, to the home of my good friend Captain Kamapadyó. I spent a week with him and left him only to explore the whole Caipipendí valley, visiting all the Indian villages one after another. At Caipipendí itself I made fruitful excavations and collected interesting myths.

The limit of my trip toward the north was the little city of Charagua.

I devoted the last part of my trip to more or less long stays in the Franciscan missions of Tarairí, Tigüipa, Macharetí, and Ivo.

Before going back to Argentina I made an excursion into the Igüembé valley as far as the village of Mauri.

115 102 The last two weeks of my expedition were devoted to the study of the Chané Indians who live near Aguaray in the Salta Chaco (Argentine Republic).

Previously I had been obliged, for various reasons, to stay at Oran for a month. I took advantage of this to make collections among the Ashluslay Indians who come there for the sugar-cane harvest.

In this volume I shall publish only the results of my expedition which bring new facts and details to light. Therefore the chapters I devote to the Chiriguano must not be considered as exhaustive study of their culture, but simply as a contribution. Chiriguano culture has been the subject of four important works, two of which are by ethnographers of great authority (1). /297/

1. Nordenskiöld (6, 7, and 10) and Rouse (1) /the underlined numbers following an author's name refer to the boldface numbers in the bibliography/. Campana's monograph on the Chiriguano, which I shall often have occasion to cite, is only a recompilation and reorganization of the manuscript notes left by the Italian missionary, the Reverend Father Dominic Giannichini. This work is excellent in many respects. As for the book of the Reverend

/TXT cont./

Father Bernardino de Nino. It is only a translation of Campana's article, filled out with copious borrowings from Cowdrey's work. Nevertheless the Reverend Father Bernardino de Nino added many very interesting details to the texts that he reproduces, which make consultation of his *Etnografía chiriguana* indispensable.

My aim was to complete the work of my predecessors and to get together for the Museum of Tucumán a collection which would be truly representative of the last of the cultures which formerly flourished within the limits of the old *gobernación* of Tucumán. My Chiriguano collections, along with those collected by Nordenskiöld, are, I believe, the most complete ones from this region that exist in the world. They bear witness, I hope, to the richness of this area from an ethnographic point of view, a richness which has been left unexploited and which will disappear in a few years.

May these pages demonstrate that every culture is a whole complex, so varied, that no ethnographer can study all its details in the course of a single trip. It is not useless to go back where others have preceded you, for, whatever their merits may have been, the material cannot be exhausted in one time.

There remains the paying of a debt of gratitude by thanking Doctor J. B. Terán and Doctor J. Heller, who, as rector and vice-rector of the University of Tucumán, gave me the means to bring about this trip. The new rector of the University, Doctor J. Prebisch, granted me the sizable funds which publication of the results of this expedition required and supported constantly the *Museo d'Etnologia* of my Institute. I am eager to make known to him here how grateful I am.

I wish to express my thanks again to all those who helped me in the course of my trips first and foremost the Franciscan missionaries who gave me generous hospitality and helped me as much as possible; my debt is particularly great to the Reverend Father Jocundo Ferrari, thanks to whom I was able to carry out without damage the transportation of my collections from the upper Pilcomayo to Cuevas; to Father Angiuoni who received me so frequently in his Ivo mission. Neither do I wish to forget Fathers

/[illegible] cont./

Luis Martelli, Dionisio Polverini, Juan Nicolai, and Honorato Cattani, who backed me up on various occasions. The Reverend Father Enrique Biagini did me a service for which I was very grateful by committing me to the care of all the missionaries of the Chaco.

The prefect of Tarija, Colonel Núñez del Prado, facilitated my trip /[illegible]/ by giving me a safe-conduct which was particularly useful to me in dealing with the authorities of eastern Bolivia. This man, courteous and intelligent, has just died on the battlefield. I wish to salute his memory with gratitude.

My companions Messrs. Bury helped me during my whole trip and rendered invaluable services which I remember gratefully, as well as the important aid given me by Messrs. Attié of Tarija.

I received cordial hospitality from Mr. Bonardi of Nancarwinza and from Mr. Vicente Costantini, whom I thank here.

Mr. Alberto Tonejón of Ibopeyti showed himself to be a host full of intelligence, and his intervention on my behalf with the Indians was very useful to me.

I should show myself ungrateful and unjust if I did not here express all I owe to the Indians themselves, whose reception, once the first mistrust was dissipated, was always so cordial, so generous. Here I should like to cite the name of my old friend, Captain Kamapadyú, of Caruruí, who was a courteous and kind friend to me and who made my stay in the Caipipendí valley so pleasant. Some day may I come back to my Chiriguano friends with mules loaded with knives, cloth, and beads, and thus fulfill the wishes they expressed so often to me.

C G 175 484 /313 cont./ The exploration of Alvar Núñez Cabeza de Vaca, continued by his lieutenant, Francisco de Ribera, is a second example that shows very well that the excursions of the Guarani did not constitute exceptional deeds that were extremely dangerous to accomplish.

Having arrived at a certain distance from the spurs of the Andes, the Guarani entered the territory of the Chané Indians.

It was in one of these numerous warlike ventures of the Guarani that the Portuguese adventurer Alejo García took part with several other comrades.

C G 175 169 484 [162] I am convinced that the 2,000 (according to Díaz de Guzmán, p. 26) Guarani whom this adventurer accompanied as far as Peru formed only one of the numerous bands of warriors of this nation who, each year, from every point of the Guarani territory, used to cross the Paraguay River, then the deserts of the Chaco.

C G 114 175 169 484 174 Ruy Díaz de Guzmán, who reports this event, sees things in too simple a light. A migration is not made at one time nor in one year. That of the Guarani lasted perhaps several decades, without, however, necessarily speaking of centuries. Twenty or thirty years must have sufficed for the nucleus of the Chiriguano nation to form between the upper Pilcomayo and the Guapay River. The penetration of the Guarani into /314/ the Chaco took place in a rather chaotic and incoherent fashion. The conquistadors were continually meeting on their route Guarani groups who, for one reason or another, could not succeed in joining their brothers established beyond the Chaco. These Guarani, who blazed the trails followed by the invaders, were valuable guides for the Spanish adventurers, and they were the ones who led them to Peru. For long years there were uninterrupted communication and incessant coming and going between Paraguay and the eastern slope of the Bolivian Andes.

C G 175 169 648 484

C G 175 721 726 I [726] [701]

/314 cont./

for they returned, fleeing." /Translated from the Spanish./

They agree /Plate IV appears here/ /315/ on the essential fact and on the approximate date of the event. This coincidence between traditions whose sources are so different and which have been collected independently from each other in regions as far apart as this leaves absolutely no doubt about the purely historic nature of this invasion. Nordenskiöld (5, pp. 70-77) in the course of his last trip into the Chaco (1913-14) was able to study the ruins of the small forts of Cuzco-Toro (today Incahuasi), which always stand at the edge of Chiriguano country. By their style they belong to the Inca period. Nordenskiöld (7) and I had thought that García's expedition was the first in date that the Guarani had launched toward Peru. In reality, other Guarani emigrations preceded it by several years, as Gandía (2, p. 30) (1) succeeded in /316/ establishing.

C 114 175 721 726 I [712]

C G 114 175 167

E G 175 167 721 726

1. Gandia (2, p. 30, note 1) cites various passages taken from old, reliable documents which seem to indicate that Garcia's expedition had been preceded by other previous migrations which, starting from Paraguay, had ended up in the establishment of Guarani groups beyond the Chaco. Thus the Tarapecoci recounted to Francisco Ribera how in ancient times, before García, the Guarani had come to plunder and massacre them.

Ce [648] [567]

A Relación anónima /Anonymous Account/ of 1545 (pp. 310-311) reports in these words the remarks of some Chané Indians who were questioned by Alvar Núñez Cabeza de Vaca at the time of his expedition on the upper Paraguay: "among the people found there are certain yndios /Indians/ who are from the interior country, those of the chane people

[Text Continues on P. 36]

/315 cont./

C G 175 648 Ce 175 648 567

/fn. 1 cont./ said chanes each pueblo had its name, although all were one race; asked how they came to speak guarany and where he knew the said garçia, he said that the reason he spoke goarany was that in times past, before garçia came from brasil /Brazil/ to the said guaranys, there was a great gathering of said guaranys in the port called ytatyn, in order to go to search for the metal, and that passing through their land at night they came upon their houses and killed many of them and took their women and children and brought them to the said port of ytatyn, and while they were slaves of the said goaranys in the said port, the said garçia passed through there, with whom he and two other brothers went in search of said metal with the said guaranys; asked if he went and traveled with the said Garçia until he returned, he said yes; asked how far the said garçia had gone and where he got the metal that he carried, he said that he had gone as far as the race that they call payçunos, and that the chanes and the said payçunos gave him the said metal and that he had returned from there because he learned that a race called çorocotoquis were having a great gathering against the said garçia and those who went with him, and he said that they returned to get more xrisptianos in order to return with them for the said metal ..." /translated from the Spanish/.

C G 175 129 114 167

This testimony and some other indications corroborate Gandía, who in this study gave evidence not only of vast erudition but also great sagacity. There is nevertheless one point on which I do not agree with him. The documents alluding to the migration of the Guarani all speak of it as a recent event whose details were

/315 cont./

G
114
127
175
167

/fn. 1 cont./ still present in everyone's memory. Even if we accept Garcilaso's version and make that event go back to the reign of Tupac Inca Yupanki, it is still no less certain that it could only have taken place in the last decades of the 15th century. It is indeed at this time, according to Balboa, that the emperor Tupac Inca Yupanki would have reigned. (See Nordenskiöld, 6). In this case the first Guarani migration would have preceded García's trip by about 50 years. Why then does Gandía, who himself gives us this figure, consider it more probable that this invasion took place more than a century before the Conquest? When I personally submitted to Mr. Gandía the reservations I had on the subject of the date he was assigning to the establishment of the Guarani at the foot of the Andes, he answered that he had taken as a basis for this evaluation a passage from Lozano (Descripción chrorográfica...) and Mendiburn (Diccionario Histórico Biográfico del Perú...). According to the latter the Inca Yupanki would have died in 1453. I shall reply to this objection by stating that the evidence of Lozano, who was satisfied to copy Garcilaso, has no value; and as for Mendiburn's calculation, I do not grant him any credence.

One single fact remains certain in this controversy: The Guarani had begun their migratory movement toward Peru some years before García's adventurous trip.

G
175
167
[114]

/316/ establishing. Neither was Alejo García's expedition the determining cause of the great migration of which Díaz de Guzmán (p. 29) speaks thus:

"Following these events (García's trip) the Indians of the Province of Paraguay met together with their caciques and

/319 cont./

000 there, for the Indians are excellent farmers. In the course of
E the war with these populations the Indians of his tribe, he
G added, destroyed and depopulated numerous villages, but
175 doubtless they had already rebuilt them. He was asked
167 whether there were large rivers and springs along the way. He
[721] answered that he saw rivers, but that they did not have much
water; however, there were other very deep ones, springs,
lagoons, game, deer and tapirs, fruits and honey. He was
E asked whether at the time his people made war on these tribes
G he had seen any who had silver and gold. He said that in the
[721] villages they pillaged there were many silver and gold plaques,
/320/ labrets, ear ornaments, bracelets, crowns, axes, small
vessels; and that it was all taken away from them when they
were put to rout. Those who escaped were able to take along some
silver plaques, beads, labrets; but the Guaxarapo stole them
when they tried to pass through their territory and killed them.
Those who settled in the bush had a few, and he had heard it
said that at the present time it was the Xaray who possessed this
silver. He declared he had seen the Xaray, when they war
upon the Indians, take out silver plaques which they had
carried away and plundered in the interior lands."

G Against this bundle of proofs attesting to the recent
E character of the Guarani migration, what is the value of
175 Garcilaso de la Vega's vague affirmation (Vol. II, pp. 279-
648 281) which some people want to oppose to it? According to
[167] this kind narrator, the Inca Yupanki would have undertaken
the conquest of the Chiriguano country for the virtuous purpose
of converting them to the good natural religion of the Peruvians.
The Chiriguano would have been veritable monsters, feeding
on human flesh, uniting by chance, living without fire or law,
burying the bones of their dead in caves or in the hollows of
trees. In a word, except for anthropophagy and the mention
• E4 of the maloca (1), there is nothing in the picture of the
132
175

1. The description Garcilaso (Vol. II,
p. 281) gives us of the large house of the
Chiriguano is perfectly exact and very

E

C 175 342

interesting: "they make a very big dormitory and, within it, as many small rooms as there are residents, and so small that they do not have room for more persons, and it is enough for them, because they do not have furniture, nor do they have wearing apparel and hence they go about naked." /Translated from the Spanish./ These facts agree on every point with those of the Relaciones geográficas, etc. (Vol. II, Plate CIV) and of Lizárraga (Vol. I, p. 259) on the same subject. The Guarani, just like the Tupinamba and other Tupi tribes, lived in maloca, gigantic halls capable of containing more than 150 persons and which often in themselves formed the village. The existence of this type of dwelling among the Chiriguano in the 16th and 17th centuries constitutes new proof for the recent character of their migration. In the 18th century we find them already in possession of the small rectangular house which they still have now and where one single family lives. (See Métraux, 2, p. 51.)

C [114] [113]

C [171]

C 114 127 175

novelist Garcilaso which might allow one to suppose that he really knew who the Chiriguano were. As for this conquest by the Inca, it would have been barely an attempt at conquest... Garcilaso confuses the Chiriguano with all the tribes of the eastern slopes of the Andes whom he had vaguely heard mentioned. Let us note that he is the only one to attribute this expedition to the Inca Yupanki, while the other chroniclers, better informed, are satisfied to say that the Inca Yupanki made an expedition against the Antis, probably around Cuzco. Unfortunately the vogue this pleasant writer enjoyed at a time when the history of America was still in limbo bluffs some modern critics into believing him, and they go so far as to prefer one of his unwarranted affirmations to the serious /321/ and precise evidence of chroniclers who get their information at first hand and from reliable sources.

C 114 127 175 648 [101]

175 /332 cont./ Permanent
[31] villages were there under the command of hereditary caciques.
[361] The middle course of the Parapití formed their boundary to
[621] the east. In the 18th century the Chiriguano constituted the most important and remarkable nation of the western Chaco.
161 The statistics concerning them vary a great deal: the figures, given with their usual exaggerations, vary between 41,000 and
[114] 15,000 warriors. The Chané are included in this number, which completely removes all value from these statistics." (Kersten, pp. 68-69.)

131 Today the boundaries of the Chiriguano have stayed
[178] about the same. But even though they inhabit a territory whose extent has varied little, their situation has none the less
[162] undergone great changes. Several thousand half-breeds from Tarija, Santa Cruz, and Chuquisaca have settled inside this area that we have defined. A Chiriguano frontier no longer exists, but only remains of villages and small groups which still mark
161 the former extent of the tribe. On the other hand, the num-
131 ber of Chiriguano has diminished terribly and is diminishing each day, so that a few years from now the true habitat /333/ of the Chiriguano will be contained between the Parapiti and the Pilcomayo and will be reduced to the former Franciscan missions and to several valleys of the Precordillera, such as those of Caipipendí and Igüembé (1).

114
174
131

1. Some historians not well informed about the ethnic geography of South America have claimed that in the 16th century the Chiriguano lived well beyond the boundaries I have indicated. One of them (Dr. Fulgencio Moreno) went so far in this direction that he attributes to the Chiriguano the possession of a large part of northwestern Argentina and pushes this fancy to the point of locating them almost as far as in the province of Córdoba. Mr. Coni in an excellent monograph, documents in hand, has done good justice to these bold allegations and has demonstrated that these hypotheses were without foundation.

/333 cont./

C
G
172
131
[114]

The archeological arguments of those who believe in a vast extension of the Guarani into Argentina rest on the occurrence of burials of adults in urns in the provinces of Salta and Jujuy. Recently I conducted excavations in several pre-Hispanic cemeteries of this region (Candelaria department, Salta prov.), and I was able to satisfy myself that the peoples who left us these great necropolises had nothing in common with the Chiriguano from a cultural and anthropological point of view. The funerary urns I brought to light are entirely different from those of the ancient Guarani, and the funerary furnishings include no piece which could be attributed either closely or distantly to the Guarani.

T-G
[764]

Burials of adults in urns is not in any way characteristic of the culture of the Tupi-Guarani Indians, and, I might say, even the opposite. Already in 1905 Outes (1) in a very well-documented monograph had proved that the cemeteries of Rosario de Lerma and San Pedro de Jujuy, which Boman (1) considered as Guarani, in no way constituted proofs of a Guarani migration into northwestern Argentina. Nordenskiöld (10, pp. 184-189) and myself (Métraux, 2, pp. 271-276) have resumed study of this question, and our results entirely confirm those of Outes (1). Therefore, as much from the historic as from the ethnographic point of view, boundaries other than the ones I have indicated could not be assigned to the ancient Chiriguano.

/333 cont./

Chapter II

Agriculture

241 The Chiriguano, like the Guarani and the Chané, their ancestors, are excellent farmers, and the working of the soil represents their principal occupation and their great concern.
243 For them corn is of prime importance; it constitutes the basis
[273] of their diet, for it enters into the preparation of most of their dishes and in addition gives them their preferred drink, chicha or kãwi.

[132] The sandy lands of the western Chaco and its climate,
[134] hot and dry a great part of the year, but also rainy during the summer months, seem to be particularly suitable for this grain. I have never seen such beautiful fields of corn anywhere. The ears are large, well filled out /334/ with kernels, and extremely tasty. The Bolivian half-breeds and settlers who are coming in greater and greater numbers to take the place of the Indians devote themselves like them to the growing of corn, which, with cattle-raising, is their main resource.

● 114 My trip to the Chaco, which took place from the month
243 of February to the month of June, did not give me a chance to
[101] be present at the sowing which is done at the beginning of the rainy season. For many details I shall therefore be forced to
[127] refer to Corrado (pp. 42 and 48), Campana (pp. 96-98), Nordenskiöld (2, pp. 181-184, and 10, pp. 23-24), to Nino (pp. 237-241), and Rosen (1, p. 205).

241 When a Chiriguano wishes to cultivate a new piece of
243 ground for himself and his family, he scours the environs of his village looking for a spot which may suit him and which is, in addition, easily irrigable. This condition is generally fulfilled by the lands at the foot of a hill or rising ground. The rain water which pours down there assures them of fertility.

/339 cont./
276 consumption was limited (1).
756
[824]
[113]

1. Father Giannechini (Diccionario Chiriguano-Espagnol, etc., pp. 169-170) gives us very interesting details on this topic. Formerly, says he, tobacco was reserved for magicians and adults. He states that even today where its use is most widespread it is cultivated on only a very small scale. The Chiriguano do not have the patience to let it ripen and dry it over the fire in order to be able to smoke it.

[249]

When they were called to a sick person, the medicine men used to put themselves in a trance by smoking ever so much. By this means they discovered the author of the illness and gave him battle.

[755]

We shall see farther along (p. 76) the role of tobacco in the magical ceremonies intended to make rain fall.

[789]

243 At harvest time I visited the lands cultivated by the
221 Indians of the Cururutí region in Caipipendí valley. From the
[114] end of February to the month of April, the Indians rarely spend the day at home. Most of the time they go to settle down in their fields, leaving the village as soon as the corn begins to ripen, not to return until the /340/ end of the harvest. The house of the absentees is made safe from all foreign intrusion by thorn hedges which they raise all around or only in front of the door. The latter can also be closed by a cot or bedstead, which they put up against it and anchor solidly (Fig. 6).[1]

[351]

243 This temporary migration of the whole population of a
221 village to the fields sometimes made my job as a collector rather
123 difficult. It /Fig. 7 appears here/ often happened that I found myself in nearly empty villages. The rare Indians who had remained there refused obstinately, and rightly, to sell me the objects which interested me, if they belonged to an absent person.

[421]

[1] [Fig 6 appears on p. 69-- Analyst]

/356 cont./

252 no preparation other than constant stirring in order not to be burned. This food takes the place of bread for the Chiriguano, who like to munch these crunchy and appetizing kernels. They provide themselves with it when they go on a trip.

Atipíi pounded in a mortar and passed through a sieve gives atši, a brownish flour which has an excellent taste. Atši is also prepared differently: kernels of corn are reduced to a flour which is roasted in a terra-cotta roaster or in a wide potsherd. According to Nino (p. 246), the name atikúi would be given to the kernels of roasted corn made into flour after being put through a sieve and ground until pulverized. The same missionary reserves the term atši for roasted flour obtained from the residue left by kernels which have been treated in the following way: after letting them soak in water all night, they are poured into a sieve the next morning. When the water has drained off, they are pounded in a mortar. This flour is now sifted, then roasted; cooked in water, it is the dish the Chiriguano call muintí or huinti. Atši then would be made with the residue from the muinti flour, which is ground again, then roasted like it, but first mixed with salt or pimento. I [122] have often eaten roasted corn flour which the Indians told me was atši, but I could never tell that it was seasoned. The Chiriguano give the name abatikure to the corn bran.

This is how muintimimo is prepared: kernels of corn are /Plate XIII appears here/ /357/ put to soak all night. The next morning they are ground and sifted in an urumpé (sieve with very fine mesh). The flour is poured into a muitero [415] (Plate XIII, 1 and 2). This utensil is a terra-cotta basin whose bottom is pierced with holes like a skimmer (1). The flour is

[191] [114]

1. Linné (2, Map 1, p. 23) has given us the distribution of vessels with perforated bottoms throughout America. The enumeration he makes of them is very complete; yet it lacks mention of La Rioja in the Argentine Republic where Boman (5, p. 17) discovered fragments of vessels whose bases were entirely perforated like a sieve.

[Text Continues on P. 104]

/362 cont./

262 The Chiriguano call kumanara a leguminous plant, wild,
[252] which resembles the yuca and which can serve as food after being boiled. They resort to it only when pressed by hunger. The word designating this plant has a strange resemblance to
[192] the name of the batata in the Quichua dialects of Ecuador and northern Peru (Rivet, 3, pp. 583-590). It is perhaps a question of a Quichua word introduced into the Chiriguano language to designate a plant of which they did not have the equivalent in their original homeland. The case is nevertheless rare, and one can wonder if it is not a simple coincidence.

[222] Neither do the Chiriguano look down on honey, although they
[171] do not seek it with the passion of their cousins, the Kainguá. What I tasted among them was contained in thin honeycombs having the consistency of cardboard. It had a pleasant taste.

222 Any Indian who goes in search of honey (ei) must not make
784 his intention known to anyone and, if he is asked where he is going, he must answer: "To look for wood." If you do not take
[176] these precautions, the protecting spirit of the honey is warned of your plan and hides the honeycombs he guards (Diccionario Chiriguano-Español, etc., p. 86).

222 The missionary Corrado (p. 43) assures us that grass-
114 hoppers, cicadas, the larvae of bees are that many delicious
[252] dishes for the Chiriguano. He adds that these insects are roasted. Nino (p. 247) reproduces the statements of his predecessor and completes the list of strange foods by adding /363/ ants, lizards, leaves of the cucurbitaceae, melted tallow, etc. Personally I
[171] have never seen the Chiriguano touch these dishes strange to our palates, but I am all the more inclined to believe these two missionaries that the tastes they indicate are actually those of the Indians in other regions.

262 Already in the 16th century the Chiriguano passed as snake
252 lovers, even of poisonous species. They cut off the head and tail, skinned them, and roasted pieces of them on live coals. They used to eat them with pimento. No doubt the Spaniards con-
[178] fused snakes with iguanas, which even today the Chiriguano justly like (Lizárraga, Vol. I, p. 260).

/366 cont./

273 126 It is not so easy as one thinks to observe in detail the preparation of kāwi, and I am still at a loss to describe the stages in their exact sequence. This difficulty is due to the fact that kāwi is prepared over several days (generally three or four), and it is /Plate XV appears here/ /367/ difficult to be on the spot all the time so as not to miss any detail. Besides, as different families do not begin to prepare kāwi at the same time, confusion results; and it is hard to know at what point of the operation one finds oneself. Apparently I am not the only one to have come up against this obstacle, for it is enough to read the various descriptions devoted to this important occupation to become aware that they are far from agreeing.

[147]

273 462 At the moment when the water is at the boiling point in the big vats, the burning pieces of wood and the live coals are scattered, and the corn flour is poured in, being stirred vigorously so that it will not form lumps. While this operation is performed, other women have pounded fine a certain quantity of corn, sifted it, winnowed it to rid it of any impurity, then roasted it in a large potsherd. As this flour is taken off the fire, the women chew part of it and spit this into a calabash. This paste impregnated with saliva is called temišu. According to Nino (p. 248), the Indian women mix the temišu with the corn broth which is cooking in the vats and with which they fill a pot. The woman who busies herself with this mixture (umopirai) allows it to fall back in from a certain height "to give it sweetness."

[412]

[123]
[114]

Kāwi is too respected a drink to be drunk in any old way. Etiquette requires one to comply with certain rules if the honor of participating in a drinking bout is done you. I sometimes had a chance to be invited to these festivities, and on such an occasion I was able to make the following observations which I am setting down just as I noted them in my field notebook: The men are seated in a circle on chairs or benches. The women squat behind them, on skins spread out on the ground. The kāwi is brought in vessels shaped like bulls, and one of them is put down at the feet of the "captain." The girl who has brought it fills a small calabash and offers it to the "captain," who empties it. Next he serves me and gives the vessel back to her. He does the same with my neighbor, then with several of the guests. Then he hands the calabash to his wife and goes to sit down. The latter serves the rest of the men present.

[554]

A second vessel, brimming over with kāwi, is put this time before another Indian who perhaps is held in some esteem. He drinks first, then busies himself with his companions. Two large calabashes are then given over to the women, and from that moment on, the distribution no longer seems to follow any order. Men and women drink and serve their neighbors without obeying any rule of decorum other than not to forget other people. They acquit themselves perfectly in this duty of politeness, and nobody is neglected, not even the very small children, who take alarming quantities of kāwi.

/378 cont./

412 The specimen I am publishing here was still giving good
114 service to its owner, who gave it to me with regret and only
171 for a large sum of money. The presence of the eared ax among
178 the modern Chiriguano invalidates the allegation of Nordenskiöld (14, p. 120), who places it among the cultural elements which have completely disappeared in South America. It survived
[181] thanks to the prodigious conservatism of the Indians. I am convinced that several of the objects whose disappearance is attested to by Nordenskiöld will perhaps be found in some tribe now living, when we have more abundant ethnographic material from South America than we now have at our disposal.

412 Another very interesting peculiarity of this ax is the bent
171 shape of the handle, to which the blade is securely fastened with leather thongs. The distribution of the bent-handled ax has been traced by Linné (2, p. 202). Few tribes of South America have continued to use it up to our day. They are: the Colorado of Ecuador, the Tukano /Tucano/, Tariana, and other tribes of the /Plates XXII and XXIII appear here/ /379/ Caiary-Uaupés, the Tehuelche, and the modern Quichua /Quechua/. Among the Indians of the Caiary-Uaupés the tool lost all practical value and finally became a simple dance accessory (Koch-Grünberg, 2, Vol. I, Fig. 225, p. 350). /Fig. 51 appears here./

The bent ax has been found archeologically in Peru (Chuquitanta; Marquez Valley near Lima) and in Casabindo in La Puna de Jujuy (Argentine Republic). The specimens from Peru are designated as being hoes, which is possible. However, I shall call attention to the fact that the Chiriguano specimen from Caipipendí is exclusively a carpenter's instrument, which the Indians use for cutting the pieces of wood from which they make their furniture or weapons. /Fig. 52 appears here./

Figure 51 shows how modern axes of the simple neolithic ax type can be hafted exactly like their stone prototypes. The similarity of this ax to the stone ones used up to today by the Guayaki extends to the somewhat arched shape of the handle and to its slightly swollen upper end (La Hitte, Plate IV, 9).

/380 cont./

296 177 171 spread among the Chiriguano recently for it has not yet spread throughout the territory they inhabit. The Chiriguano who live far removed from the half-breed or Indian populations of the Cordillera are not "coqueros," and only rarely does one meet among them some old man who accepts a quid of coca.

296 171 302 114 Ivu is the last point toward the east and north where I could distribute my supply of coca to advantage. Nordenskiöld (10, pp. 85-91) sought to demonstrate that the custom of blackening the teeth went along cheek by jowl with that of chewing coca and derived from it. As a matter of fact, this habit has a very marked western distribution and follows the zone of coca cultivation.

296 [824] The Chiriguano mix each quid of coca with the ashes reaped from a tree (ulala) whose scientific name I do not know. These ashes (tanimbo), which corresponds to the llicta of the Quichua, are contained in a small leather bag.

296 439 804 Coca is a luxury commodity which the Quichua Indians or half-breeds come to sell to the Chiriguano. To avoid all argument and all fraud on the part of unscrupulous sellers, the Chiriguano have recourse to balances of their own making. They fabricate them with /381/ two calabashes cut in half to serve as scales (Figs. 54 and 55). The balance with scales was in [199] use in pre-Hispanic times /Fig. 54 appears here/ in the ancient Inca Empire (see Nordenskiöld, 16) and so I believed at first that among the Chiriguano it represented a survival of /Fig. 55 appears here/ the Andean influence, whose importance we shall see further on. Among the Chiriguano, however, this object is designated by the Spanish name /382/ mbalanza, which seems to indicate that they borrowed it from the half-breeds. The latter and the Quichua use them in their commercial transactions, but especially for weighing the precious coca. Perhaps it was the same in prehispanic times. There is nothing to prove that only metals were weighed, as has been supposed with respect to these ancient scales.

296 177 For weights the Chiriguano use old Bolivian silver coins and express measures according to the old Spanish system. By a tacit convention a coin worth two modern sous is the equivalent of one ounce.

/382 cont./

804 The Chiriguano measure the cloth which Syrian peddlers
439 come to offer them with varas, that is, a stick about 80 centi-
[177] meters long, the length of the ancient Spanish vara. This instrument has been borrowed from the Bolivian half-breeds.

Chapter VI

121 ## Art among the Chiriguano and Chané Indians

To Professor Félix F. Outes.

The artistic sense of the Chiriguano is manifested in pottery decoration, pyrography, and wood carving.

We shall study these three activities one after the other.

Pottery Technique

114 The Chiriguano pottery technique has been studied briefly
323 by Campana (p. 54), following Father Giannechini's notes, and by Outes (3, pp. 122-123), who adds some details communicated to him by the naturalist Holmberg to the ones he took from Campana's work. Nordenskiöld (1 and 10, pp. 142-147) completed on many points Campana's brief survey, so that I myself shall have few new things to note.

317 The clay used by Chiriguano potters comes from beds
323 well known to the Indians, where they go from time to time to lay in fresh supplies. It is enough to see old vessels full of earth around a hut to know that a woman lives there still
[439] practicing the ancestral industry. Where adequate clay is lacking, pottery is imported. Thus in the Tigüipa mission all the vessels in use were made in Macharetí.

323 In order to be used the clay must be degreased with powder /383/ coming from potsherds. Fragments of old vessels are ground in a mortar until, after being put through a sieve, they give a fine powder which is kneaded for a rather

/387 cont./

C 323 386 The name tarawirisi is also given by the Chiriguano to objects resembling loaves of bread kneaded by hand which are composed of a resinous material mixed with wax. According to the explanations given me by the Indians themselves, this

C 417 415

Fig. 86. Forked tree-trunk serving as a shelf for putting vessels on. (After a Bench by the author.)

C 323 386 substance is taken from a mimosa. After being sprinkled with boiling water, it is kneaded and dried in the sun. Its color is yellow or red, but after firing it becomes black.

I could not learn whether this black glaze was applied over a layer of black paint or spread directly on the walls of the vessel. In every case the designs made by this process are much less regular than the ones drawn with a brush.

C [126] C 5 126 323 386 My collections of pottery, which consist of nearly 300 pieces, do not contain any glazed specimen. Nordenskiöld (p. 144) assures us that the Chiriguano and the Chané of the Parapití coat their yambui with a sort of gum called tarawiri, a word which, except for one syllable, is the same as the one designating the resinous substance we have just been considering.

/400 cont./

415 191 192 12. The ornithomorphic vessel of Figure 13 seems to have come from the hands of the ancient potters of the Isla de Tilcara who, several centuries ago, used to make analogous pieces, without a doubt servilely imitated by the Chané and the ancestors of the Chiriguano (see Debenedetti, 3, Figs. 139-141, p. 191). Boman (2, Vol. II, p. 786, Fig. 190) also publishes a bird-shaped vessel, perhaps of the *pava del monte* (*Penelope obscura*, Vieill.?), found not far from the present-day village of Humahuaca and which, in addition to its general appearance, has in common with our specimen

415 531

Fig. 13. Ornithomorphic vessel. Chiriguano. Metals: pink and green. Prov.: Tarairí. (1/3 nat. size.)

415 191 192 from Tarairí designs painted on the sides which represent the wings and tail.

The Chiriguano Indians of the Caipipendí valley and the Ivo mission still like to serve chicha in vessels to which they give the appearance of a bird (FIGURE 7-Fig. 8 [illegible]-shaped vessels have been discovered in the Quebrada de Humahuaca (Debenedetti, 6, p. 97, Fig. 14, and Otilio Bregante, Fig. 132, p. 147). Perhaps these are the prototypes of the present-day Chiriguano specimens. Why suppose that these receptacles had solely ritual usage, as Mr. Debenedetti thinks, when we see the modern Chiriguano make an entirely similar use of them?

415 [illegible] (193) (192) (191) (114)

by me in humble cabins whose owners were certainly not [illegible], but poor devils who had the luck to have a mother or grandmother who was an expert potter. If the criterion of Dr. Debenedetti were admissible, the crude pottery and the fancy vessels which can be bought in every Chiriquí or Chiriquano village would be products of two different civilizations. In reality the fancy pottery is used on feast days for drinking chicha; and the other, more humble in appearance, is adapted to daily needs.

PA
415
531

Fig. 86. Dish from Tilcara and decorated with red volutes triangles on a white background. (1/5 nat. size [illegible].)

PA
531
[illegible]

Besides, the volute triangle is more frequent on the [illegible] Tilcara (Debenedetti, [illegible]). In addition to the triangles cited, [illegible] others must be added (Debenedetti, [illegible], Fig. 56, p. 366; Fig. 36, p. 432; Fig. 40, p. 704; Fig. 46, p. 802; Fig. 165, p. 719; Fig. 165, pp. 719-[illegible]). A vessel from Alfarcito in the same Quebrada bears a triangle with volute on the inside rim of the neck (Debenedetti, [illegible], Fig. 15, p. 79).

/427 cont./

which preceded Inca culture. If one compares the present-day pottery of the Chiriguano with that of the Quicha /Quechua/ of Cuzco, certain analogies will appear, but they will be neither abundant nor conclusive enough to establish a direct filiation. Aryballoes are missing or rare, ornithomorphic dishes seldom found, etc.; on the contrary, we have seen how multiple and close the ties are between this pottery and that of the Chincha-Atacama period. Chiriguano pottery, in relation to that of Cusco, is in a situation analogous to that of northwestern Argentina: on an Andean but original base, influences from Cusco have been superposed. This Inca action on the Chicha is attested to even today by /428/ the presence among the Chiriguano of footed vessels of the purest Inca type and apodal ones of the same origin. Arising from the same influence, one may add certain decorative motifs, with which I have already dealt.

Arawak and Amazonian tradition is scarcely represented, except by footed bowls (compoteras), vessels with a ribbed belly, those with a body in the shape of a truncated cone and a subspherical belly, and perhaps by some motifs (T-shaped figures, Plate XXXVIII, 1).

The conclusion of this chapter will be: there exists today and for some years to come a civilization which, closely related to that of the Chicha, continues an art earlier than that of the Inca but influenced by them. May this fact make archeologists cautious!

Chapter VII

Calabashes

The second art in which the Chiriguano excel is pyrography and engraving on calabashes. When pottery-making was an essentially feminine activity, pyrography was the province of the men. Nordenskiöld (5, pp. 233-236) thinks, completely wrongly it seems to me, that pyrography is of Andean origin. He advances in support of this opinion the advantages that knowledge of metal offers to this art. Nevertheless, the populations of the

/429 cont./

531 171 On almost all the calabashes in my collection pyrographed designs alternate with incised motifs. Perhaps it is the same with the calabashes of the Andean region. Judging from the ex-
• [114] cellent photographs which Boman (2, Vol. II, Plate LXXVI) gives us of them, and from /430/ the specimen from the Calchaqui valley which I am publishing here, this scholar erroneously considers them as having been entirely pyrographed. When a Chiriguano incises a design with a knife on a calabash, he is always careful to fill the engraved lines with ashes to make them stand out. At first sight this process may be confused with true pyrography.

415 531

a b

Fig. 85. a and b. Engraved calabash. Only the rim has been lightly pyrographed. On one side (a) is seen a feline animal (jaguar or puma), on the other (b) a fox (?) and a bird. Prov.: Masaví (Igüembé Valley). (About 1/2 nat. size.)

531 A single glance at Plates LXI-LXXI allows one to realize that pyrography and engraving on calabashes do not obey such rigid stylistic rules as pottery. These calabashes differ very much, and there are scarcely any motifs that seem to be preferred to others. To what is this diversity due? I believe it artificial; and I am convinced that formerly this art followed precise norms, in a word, that in times past there was a true style of pyrography and engraving on wood. How would one explain otherwise that precisely the most beautiful pieces in my collection are at the same time the oldest and the most similar to the Andean prototypes (Plate LXI, 1 and 2; LXII, 1 and 2; LXIV, 2; LXVIII, 2 and 3, etc.)? Let us not forget that

291

Fig. 96. Knitted wool cap (ankaitu). Prov.: Nawirenda. This headdress is a unique piece and it may not be Chiriguaro. (1/3 nat. size.)

[114]

/444 cont./

285 (1, Fig. 134, p. 122) obtained from some Chorotí who were
[114] camping near Tatarenda. I share the opinion of this explorer, who considers this object as of Chiriguano origin.

In spite of its simple and archaic character, basketry in
[171] wicker work is rare in South America. According to Nordenskiöld (10, p. 171, and 11, p. 198), it is found among the Araucan, Yurakare, Atsawaka, Tambopata Guarayú (Chama), Yamiaka, and the Indians of Guiana, in particular those of the Roroima region.

/468 cont./

412 171 At La Paya, Ambrosetti (6, Fig. 254, p. 484) discovered combs cut out of a small wooden board and some composite combs. Instead of simply recording the coexistence of two different types of combs /Plate LXXXVII appears here/ /469/ in the same place, a very natural phenomenon by reason of the heterogeneous character of the culture of La Paya. Ambrosetti puts forth the strange hypothesis that these combs served for carding wool, without taking the trouble to inquire whether this instrument was known in pre-Columbian times.

303 322 462 412 The making of combs, like all wood carving, is an essentially masculine job.

412 174 The table on Plate LXXXVII indicates my idea of the morphological evolution of the different forms of combs which I have collected.

Chapter XII

Furniture

352 [114] Since the diverse cultural elements which constitute the furniture of the Chiriguano have been completely studied by Nordenskiöld (10, pp. 8-22), I shall limit myself to mentioning them here, insisting only on several details. /Fig. 124 appears here./ /See p. 338./

[342] Let us enter a Chiriguano hut. The door we open is a kind of screen of reeds or a cowhide hardened in the sun. Daylight penetrates the interior through this opening. The only important [513] piece of furniture is a wooden cot (Fig. 125), a kind of bedstead generally occupied by two persons between whom one or two children come /470/ to slip in somehow or other. Nor do the Chiriguano hesitate to sleep on the ground on an oxhide, which they spread out in front of their house. On the upper Pilcomayo, in nearly all the huts one can /Fig. 125 appears here/ /See p. 339./ see one or two hammocks which serve either as seats during the day [286] or as cradles for small children. Their technique, that of the [177] double thread (Doppelfadentechnik), continues an old Guarani

[Text Continues on P. 338]

/484/

412 However, these awls are too abundant in each village for their use to be only sacred. It is probable that the Chiriguano use them as a simple tool for solely secular purposes.

[172] At Tilcara, Debenedetti (2, Fig. 176, p. 232) discovered specimens made of deerhorn identical with our Chiriguano examples.

824 757 8. I have in my collection seeds whose virtues are multiplet they are an excellent remedy for skin eruptions, ulcers, and toothaches.

9. For stomach-ache the Chiriguano recommend the absorption of particles of wood (mboipinda).

232 [824] 10. Certain seeds (of a graminaceous plant?) when crushed give a paste or powder with which they treat animals whose sores are attacked by worms.

11. When cows' hooves tend to work loose, they bathe them with fragments of limestone (itakwi).

757 237 12. Fat extracted from a cow's foot is an effective ointment for cases of rheumatism.

13. The beak of the toucan is said to enjoy great medicinal properties. They grate it and drink in water the powder which comes from it (Campana, 111).

Stitches in the side and dysentery are treated with a piece of armadillo shell burned, ground, and dissolved in water, which the patient drinks.

757 [114] In the Diccionario Chiriguano-Español y Español-Chiriguano etc. (passim) and Nino's book (pp. 288-290) is found many a very interesting piece of information on the pharmacopoeia of the Chiriguano. I shall summarize them in order to complete my own observations.

757 164 1. The oil which floats on kiwi, when it is done, is a good remedy for headaches.

2. Salt, ground and drunk mixed with the urine of a small child, quiets stomach pains.

[824] 3. Rheumatism is doctored by applying on the ailing part a branch of ulala (Tankawina) from which the thorns have been removed and which has been heated.

/488 cont./

757 The explorer Eric von Rosen tried to demonstrate that
114 some objects found in northwestern Argentina are clyster tubes or nozzles. Nordenskiöld is also of this opinion. As for me, I am all the more tempted to adopt this hypothesis because I could not otherwise explain the presence of this instrument
757 among the Chiriguano. No Tupi tribe, as a matter of fact,
171 with the exception of the Omagua on the upper Amazon,
174 seems to have resorted to enemas in case of illness; at least not one of the numerous travelers who gave their attention to these Indians mentions the operation among them. There is no doubt that the Chiriguano borrowed this curative method and the corresponding instrument from the nearby Andean peoples. We know that the Quichua /Quechua/ gave each other enemas, as is proved by the discovery of a leather syringe in a pre-Hispanic grave of the Ollachea Valley in eastern Peru (Nordenskiöld, 14, Fig. 74, p. 188). (To be continued.)

000 /The bibliography, pp. 488-493, is omitted in the translation; see the foreign text. The following "Table of Contents" appears at the end of this volume of the Revista, along with the tables of contents for the other articles in the volume. The lists of plates and figures which follow the table of contents in the translation were made up from the captions and are not part of the original text./

/598/ Studies on the Culture of the Chiriguano Indians

typical *Inca* designs. At Caipipendi (pl. 41, *top, right*), near Charagua, he found a *Chiriguano* cemetery consisting of large, corrugated urns, identical to modern *Chiriguano* chicha jars, covered with smaller jars. Near the surface was found a vessel with incised decoration which has no resemblance to any modern *Chiriguano* ware. The same site yielded a small pot with thin incisions and two suspension holes. 172

SOURCES

Short descriptions of the *Chiriguano* appear in the early literature. Garcilaso de la Vega's picture of *Chiriguano* culture is on the whole quite inaccurate, but for a few details. Díaz de Guzmán (1914), Barco Centenera (1836, 1912), and Lizárraga (1909) speak briefly of *Chiriguano* culture, but the earliest firsthand account of it is Father Choné's letter (1819 b). Tamajuncosa's report (1910) about the state of the missions at the end of the 18th century is also an interesting document. Weddel (1853), who visited the *Chiriguano* in the middle of the last century, published a few notes about their culture. The best sources are the reports and books written by the Franciscan missionaries, Cardús (1886), Corrado (1884), and especially Campana (1902). Nino's (1912) much-quoted book is based in great part on Campana's monograph. 113 114

Nordenskiöld dedicates several chapters of his "Indianerleben" (1912) and of "Forschungen and Abenteuer" (1924 a) to the *Chiriguano* and *Chané*. His data are accurate though somewhat superficial. Great stress is placed on the economic life and the material culture, but social organization and religion receive only cursory attention. However, the collection of *Chané* and *Chiriguano* myths is fairly large and of great interest. Nordenskiöld made a comparative analysis of *Chiriguano* material culture in one of the volumes of his ethnographical series (Nordenskiöld, 1920). More minute details about *Chiriguano* artifacts may be found in Eric von Rosen's (1924) luxurious publication based on a collection he made among these Indians at the beginning of the century.

Several aspects of *Chiriguano* history and material culture were studied in some detail by the writer (Métraux, 1930 b), who also published new *Chiriguano* myths (1931 a) and two sociological essays (Métraux, 1931 b and 1935).

Several monographs deal with *Chiriguano* pottery, which is today one of the best in South America. (Outes, 1909; Nordenskiöld, 1920; Métraux, 1930 b; Paulotti, 1942.) Recently, Max Schmidt (1938) again published and described *Chiriguano* artifacts and techniques.

Knowledge of *Chiriguano* religious and social life is meager and is limited mainly to Campana's monograph (1902) and to observations made by Nordenskiöld (1912) and the present author (1930 b) at a time when aboriginal *Chiriguano* culture was already decadent. The Paraguayan-Bolivian war accelerated its breakdown and little of it now survives.

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10
Chane SF8

The migrations, wars, and the religious conversion of the *Chiriguano* have been the subjects of many historical monographs. The most important of these are by Corrado (1884), Serrano y Sanz (1898), Dominguez (1918), Gandía (1929 a, and b), Métraux (1930 b), Coni (1925), Moreno (1929), and Finot (1939). The Jesuit missionary work among the *Chiriguano* has been described by Lozano (1941) and Muriel (1918).

CULTURE

SUBSISTENCE ACTIVITIES

As today *Chiriguano* and *Chané* share in the same culture, the following data may apply to both tribes.

Farming.—The *Chané*, conquered by the *Chiriguano*, were proficient farmers who, though practicing a tropical type of agriculture, were probably acquainted with many of the methods of cultivation of the Andean area. The *Chiriguano* adopted their traditions. The new habitat of the *Chiriguano* did not offer the same resources for hunting and fishing as had their homeland. Therefore, these Indians depend on farming to a larger extent than any other *Tupi-Guarani tribe*. The basis of their livelihood is maize, of which they have 11 varieties, all related to those of Paraguay. Then follow in order of importance: Pumpkins, beans (11 varieties), sweet potatoes, sweet manioc, peanuts, and some Barbary figs (*Opuntia* sp). Sweet potatoes were grown on a large scale by the *Chané* of the Parapeti River.

These Indians also raise cotton, tobacco, urucú, and, in the Parapeti region, reeds for arrow shafts (*Arundo donax*). Plants of the Old World adopted by the *Chiriguano* include melons, watermelons, oranges, sugarcane, and sorghum.

Chiriguano men clear the fields and surround them with a tall fence as a protection against the inroads of wild or domesticated animals, a task which is considered to be particularly strenuous. They also till the soil, but at harvest time they are assisted by the women and children. The latter, armed with slings, drive away the parakeets and other birds which prey on the crops. Nordenskiöld (1912, p. 183) observed that among the *Chané* of the Itiyuro region, large maize fields were tended by men while pumpkins and beans were raised by the women.

Collecting wild food.—When their crops fail, the *Chiriguano* subsist on the same species of pods and fruits as those collected by the Chaco Indians: Algarrobo, tunca, mistol, caraguatá, and other plant foods.

Hunting.—Hunting is a very secondary economic activity, at least in modern times. Peccaries, which are the main game animal, are hunted with specially trained dogs and killed with bows and arrows or with clubs. Rheas, which are abundant in the Chaco plains, are caught with bolas. Pigeons are captured with clap nets. Special arrows with two points are used for hunting yacu birds (*Penelope* sp.).

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10 ●
Chane SF8

The shamans (ipaye) enjoyed considerable prestige. When invited by a village to assist its inhabitants in some predicament, they were received with marks of great respect and were lavishly entertained. They served the community as rain makers and as doctors. In the latter capacity, they treated patients or protected the whole village against epidemics. Their curing technique followed the usual South American pattern of blowing and sucking the sick person. They retired to small cabins to communicate with spirits. Blowing tobacco smoke played a large part in the shamanistic ritual. The medicine men were expected to discover the evil charms that threatened the individual or the community as a whole. Shamans were often put to death for their failure to bring rain or to dispel an epidemic. Old women were often called to cure diseases which required the administration of drugs.

During carnivals, which, under the Bolivian influence, have become a period of wild rejoicing, young men wearing masks (pl. 44) of soft wood amuse the spectators by their antics and tricks. As the best masks are those carved by the *Chané*, it is likely that the clown interludes are survivals of dances by masked persons representing nature spirits or ghosts, such as are performed by many *Arawak* tribes. The *Chané* and *Chiriguano* masked characters collect food and depart amid the tears of old people.

MYTHOLOGY AND FOLKLORE

Cosmogony.—The Sun is a man and the Moon is his wife. In the evening the Sun enters a river which he follows until he rises again. An eclipse of the Sun or of the Moon is caused by the attack of a "purple" or "yellow" jaguar. Everybody then makes as much noise as possible to frighten off the celestial feline.

The appearance of the Pleiades, which the *Chiriguano* call "a swarm of bees," announces the harvest season. Their yearly course serves also to reckon time. The *Chiriguano* identify Scorpio with a fenced field, in the center of which is the miraculous spade of Aguaxe-tampa. In the black skies near the Milky Way (the road of the rhea), they see a celestial ostrich (rhea), the head of which is the Southern Cross. The Magellanic Clouds are the ashes of a fire built by a couple who went to the sky. (See Lehmann-Nitsche, 1924.)

Folklore.—Most of the *Chiriguano* folklore recorded by Nordenskiöld (1912) was obtained from a *Chané* of the Parapeti River region. The collection of myths and tales made by Métraux (1930 b) in *Chiriguano* villages shows that both groups, in spite of their different origin, share substantially in the same folklore. Certain motifs in the *Chané* version, however, have not been recorded among their ancient *Chiriguano* masters, and may well be *Arawak* traditions which have survived among them. An example is the theme, which is well known in the Guianas, of the

/xii cont./

arms of the Delegation and the forts. which they know how to burn frequently: the Tapiete continually threaten the farthest outposts and all their personnel. because the cannon and bayonet are powerless to civilize and to implant in the iron breast and crude heart of the savage /xiii/ humanitarian ideas. philanthropical ideas. because the cannon destroys. it does not civilize.

121 [119] I shall not concern myself with these tribes in the course of my pages: a book could be written about all of them. studying their origin. their customs. their relations with the other tribes and even with the whites. their relations with invisible or imaginary beings. their language and their deeds. but I renounce this arduous task and concentrate upon the Chiriguano race. which was conquered by the missionaries of Tarija long before South American Independence and later by the fellows of the Colegio de Potosí from the year 1870 through a region closed to trade and civilization.

The first thing I shall do in the course of these lines is to set down a description of the Chiriguano region. after which will follow: the origin of the tribe or race. language. statistics. physical and moral character. religion. political organization. the people. customs. imposition of the tembeta /lip plug/ on the males. fasting on the maidens. sicknesses. wars. usage. gatherings. and. finally. death and mourning. I shall try to make this little work pleasant and for that reason I shall allow myself to insert an occasional fable which was formerly held to be a fact and which even today is taken as such in certain regions.

Word to the Reader

•114 This little work. which some will call not only useless but also a waste of effort is now born. but perhaps others who like to study races will find it useful for Ethnography. despite the fact that it is inadequate to give a perfect idea of the race among which I have lived since the year 1888.

Before beginning this third work I have tried to acquire some knowledge. I am not the first to write about these Indians: I have been preceded by D'Orbigny. Pelleschi. /xiv/ Manegazza.

/xiv cont./

114 the Franciscans Conrado, Cardús, Martarelli, Giannecchini, and Señor del Campano, etc. But in Bolivia no complete work is known. notes or pages by authors definitely worthy of every respect and very competent hardly exist, nor have explorers witnessed all that they have written about, from which have come errors which would certainly have been avoided if the reports had not been made so hastily.

121 124 With all possible calm, patience, and unlimited time, I have set out to talk with the oldest and most knowledgeable Indians, who have explained some points to me, corrected certain others, and made me add still more; but I have already said that with my writing I do not pretend even to equal the luster of those who have preceded me. I shall only give more extension to the ideas which have been set forth by others, ideas which in the majority have been confirmed by the Indians to whom I have addressed myself.

Finally, I must state that since the Chiriguano are in contact with the mission Indians, and these, both old and new, exist in considerable number, I shall add by way of conclusion, after having finished what I have proposed to do, a chapter concerning the heathen Chiriguanos, the neophytes, or new Christians, and the method that the Missionaries use to reduce them religiously and civilly, and the effort required to maintain them in the Catholic faith.

121 128 Everyone will understand that, in order to avoid confusion, this small work will be divided into chapters, and the chapters into sections, for greater clarity and so as not to tire the reader. Certain terms that I must print here by necessity will be written in the Chiriguano language with their corresponding explanation, so that each one may understand the impact of the language. I could also formulate some general propositions with the corresponding Spanish, but the nature of this somewhat voluminous book does not permit it, nor is it necessary, because /xv/ there are various small handbooks which have been printed in this Republic of Bolivia.

/xv cont./

121 Lovers of Ethnography are asked to overlook as much as they can the faults that they will find; rather I pray that they will only note the facts which I set down with all candor and exuberance. With the remarks that precede I am going to begin.

San Buenaventura de Ivo, May 20, 1911.

Father Bernardino de Nino, Missionary, O. F. M.

/Page xvi is omitted in the translation./

/xvii/ Foreword

•114 Je prends mon bien partout
où je le trouve.

The Reverend Father de Nino, Franciscan Missionary of the Colegio de Propaganda Fide of Potosí, has honored me by charging me with the presentation to the public of the book which today sees the light, the preparation of which we have already announced in several numbers of the Boletín of the Repartición Nacional under our administration.

A very special reason compelled us to accept such a pleasant task: it provides for us, and for the scientific interest of the country, valuable collaborative material which is brought us by the learned Missionary whose intimate knowledge of the Chiriguano Indians, among whom he has lived as a catechist for many years, is indisputable.

There likewise weighed heavily upon our mind another powerful reason for welcoming the Etnografía Chiriguana with deserved applause: we had in mind the fact that in 1914, by an arrangement arrived at in London at the close of the sessions of the XVIII International Congress of Americanists it was decided that the meeting of the XIX was to be in Washington and this City of La Paz, as was done with the XVII, which held its sessions in commemoration of the Argentinian Centennial of 1810 in Buenos Aires, finishing in Mexico City.

We had to prepare ourselves for the session which was to be /xviii/ held in Bolivia, and this suggested to us the idea that the worthy work of the Reverend Father de Nino might be dedicated

/xviii cont./

●114 in the nature of a homage, which its author has done, to the XIX International Congress of Americanists.

It is generally believed that knowledge of the flora, fauna, geology, and export products are quite enough to carry out the work of colonization. Technicians and engineers can be sent in to go over a region in every respect and thus sketch an exact picture of its sources of wealth; meanwhile the human element, that essential element, will just as many times have been overlooked.

The opinion that we propound will be the same one that will be formed by the Americanist reader who reads with the careful study it deserves the missionary's important book with which we are concerned. Undoubtedly the catechist's living there, with daily observation of the neophytes of his reduction, permitted penetrating more intimately into the nature or soul of the beings in his charge. Anyone who reads the very numerous details and facts observed and set down in the present book, we do not doubt, will say that we are right. Can an exploring naturalist, a geographer, observe all that the Reverend Father de Nino relates to us? We believe that the wise perspicacity of a D'Orbigny could not very well see into a face hidden from him.

So it was when the same eminent explorer whose name we have just cited, in his studies of Moxos and Chiquitos, always had recourse to the printed and manuscript sources that the Fathers of the Society of Jesus had left us until their banishment in 1767.

What has most interested us in dealing with the modern Americanist science is the subject dealt with by the author: Chiriguano Ethnography, which is to say, the study of the primary material with regard to their language, practices, customs, traditions, beliefs, etc.

Very serious propositions have been adduced on questions which, among uncivilized races, are frequently hidden,/sic/ are an arcanum. Mr. Tarde has said quite correctly: "That which is unseen among primitive people, as among ourselves, is often more essential to take into consideration than what is seen. Thus, what is normally not seen among them, because

/xix cont./

114 it is an impenetrable secret, is what is related to their internal relations, what is going on in the depths of their hearts." Thus, in support of our judgment of the book by the Reverend Father Bernardino de Nino, we have the opinion of the Reverend Father Proberger, who says that "all the missionaries of the Congregation of Cardinal Lavigerie, who preach the Gospel in the region of the Great African Lakes, unanimously state that only after a stay of many years in the midst of those groups of Negroes is it possible to penetrate the mentality and, above all, the psychology of those uncivilized tribes. It seems, thus, that the expansion of civilization to new countries is not possible without the prior study of such peoples, that is, without ethnography."

This science dates from yesterday, being, in its form and in its field of concentration, legitimately called an American science, whose centers of study are the societies such as the "Smithsonian Institution," and others of the American Union. Our Hemisphere is a fertile field for investigation, in which remain remnants of primitive peoples, like the Chiriguano branch with which Father de Nino deals.

To the intelligent contributions which we have previously received from other illustrious Franciscans, the Reverend Fathers Rafael Sanz, Nicolás Armentia, and Fernando de M. Sanjinés, whose works on history, geography, explorations of our rivers, linguistic ethnography, etc., we have published, there is added today the valuable work which we are presenting to the public and which will certainly be appreciated to a high degree by the members of the Congress of 1910.

Now all that is left for us to do, as we have done for the Missionaries Sanz and Armentia, is to set down, although briefly, /xx/ some biographical information about the Reverend Father Bernardino de Nino.

This wise observer of everything concerning the Indians of the reductions which have been in his charge was born August 7th, 1865, in Abrazos Aquilanos. He took his elementary education in his native country, Palacio Peligno. From there he went on to pursue advanced studies and other

/xx cont./

subjects in the Episcopal Seminary of Sucre, where he received the four minor orders initiating him for the priesthood. He entered the Franciscan Order, putting on the habit of a novice in 1886. In 1891 he was ordained a priest and then embarked for our country.

It was in 1893 that he was assigned to the reductions of Chiriguano Indians.

In 1901 he was elected Prefect of Missions, and when the period of six years had elapsed, during which he opened the Missions of the Parapiti Grande, he was elected Vice-Prefect in the year 1907.

The fruit of what he had observed in his career as a catechist began to be known in 1905, with the publication of New Chiriguano /Chiriguano Infant/, to be used in the teaching in the schools of Neuquyrou.

Next, in 1908, he undertook a greater task, writing the continuation of the "Historia de las Missiones de Paraí."

From 1909 to 1911 he wrote the Ethnografía Chiriguana, which is now being published.

In 1911 he made an inspection of the Missions of Tarija, during which he wrote "Ensayo histórico de las Missiones de Paraí" /Historical Essayes of the Paraí Missions/, by order of the Most Reverend Father Commissioner and Delegate General, Father Wolfgango Priewasser, in order that this document might be published in the Archivo Franciscano, which is in the process of being published.

In 1911 he was elected Delegate of the Commissioner in Bolivia for Missions, Convents, and Schools, a post which he held for nine months.

At present, since May, 1915, we have counted /xxx/ on his assistance, entrusting him with editing "Guía del Chaco," which he has studied for such a long time and which is unfamiliar to the general public and deserves to be known.

The aforementioned "Guide," presented by us to the Minister of War and Colonization, will be published very shortly, in accord with the authorization which we have requested.

/cont./

114 This will not be the last thing which we may receive as a contribution from the Missionary Fathers, inasmuch as we expect another addition which we have requested of them: the arts and vocabularies of the native languages of Bolivia which are still spoken by the tribes reduced by the Colegios de Propaganda Fide. Such matters are very fundamental and of primary importance to Americanist investigation, and already, with the support of the distinguished Director of the Museum of La Plata, we have made known the languages of the Yaracaré, Lecos, Tacana, and Cavineño, more of the same are being needed.

We shall leave it to the public to make a judgment on the work which we are presenting to it, not doubting that there is much to learn in it if we wish to know about the life and manner of being of the Indians who dwells in the remote regions of the Republic, on our frontiers with the neighboring States.

La Paz, December 1, 1912.

Manuel Vicente Ballivián /Illustrations appear here./

824 /16 cont./

[114]

I am going to make a brief list of some trees and plants which I know, without pretending to be a botanist, a subject I have not studied. I shall only say that I have learned it through experience and careful reading: when describing certain plants, I shall also make note of the use made of the bark, root, leaves, and branches of some.

ACACIA BALSAMICA. -- This is the quina-quina, under which name it is known here in Chiriguano country, a tall, straight tree, whose wood is ideal for building because the wood borer does not damage it: it is much used here in the construction of upper roofs, especially for the braches or trusses on which the roof frame is to rest. It is plentiful in Cordillera Province and even in Acero Province.

/17/ ACACIA SAPONARIA. -- This tree is large and its wood light, perhaps even lighter than cedar, but it is of less value: it is whitish and much used for making doors and windows, but the main use to which said wood is put is in saddleries to make pads for saddles. The seeds are similar to monkey ears and are good for washing clothes and to keep the skin of the face free of blemishes: here it is known by the name "tundoy."

[342]
[492]
[296]
[515]

ACACIA AMARILLA /A. monliformi/. -- It is a medium-sized tree of rather lightweight hardwood, for which reason drawers or wash basins and yokes for oxen are made with it. It is no good for making fire, because it smells when it burns from which it gets the Chiriguano name "Tatano," fire that smells: the wood is yellow.

[372]

ACACIA ASTRINGENTE. -- There are many groves of trees of this class here and there: it is the most abundant tree, the wood is good for small joists because the wood borer does not eat it: the bark contains much tannin, and it is the wood most used for tanning hides by both Indians and whites: the latter call it ubil and the former "Cangas."

[342]
[281]

ACHIOTE. BIXA ORELLANA. -- This is cultivated in fields and gardens, grows to a height of two and a half meters. Its leaves are dark green: it produces abundant fruit in a sort of pod covered with bristles and filled inside with fiery red seeds which are what makes the little tree highly valued. They serve as food coloring, and the Chiriguano paint their faces

*136 "Cavadiuno" and which others want to be the nimrono; it is
*825 certain that this small creature, which gets into dwellings, does not go after man, but if it is disturbed and cannot get away, it bites.

The sight of alacranes /a kind of scorpion/, scorpions, and centipedes, which are called "Apesus" in Chiriguano, causes horror; they are not abundant, but they are found in every
• [114] section. Their bite does not seem to be fatal, but one which stung me in the armpit through my woolen underwear did not let me sleep for a whole night, in spite of the ammonia which I took and put on the barely perceptible wound.

*136 Vinchucas /a natural bug like the bedbug/, cockroaches, and a moth which eats paper are loathsome, especially the first two, which are numerous in inhabited places, stink, and dirty all the clothes and the whitewashed walls of buildings. The way to kill them is to destroy the proboscis or long beak, and then they cannot live. They are quite running. In the dark they will first approach a person who is in bed, give him a prick, and then retire to see if he moves or is awake. If the person gives no sign of life, they approach and suck the blood until they are satied. Nevertheless, the small ones are the most bothersome and can cause fever or sickness. They multiply naturally, depositing their eggs anywhere, and the young hatch by themselves. At first the eggs are white, and when the young are about to come out, they become red. Cockroaches abound in certain living quarters where they find food. They even eat the eyebrows and eyelashes of people who are asleep; they lay their eggs in the walls. If these are white-washed, they pull off the whiting and cover their little nests with it. /sic/ out of which can come up to 50 little ones, which ones start to run. The moth only bothers books and papers and is a nuisance for people who have them. Its color is silvery, and I do not know the principle of its multiplication. The vinchucas are black, the cockroaches the color of coffee, and
*[825] none of the three is poisonous. In Chiriguano the vinchuca is called "Tinthoro," or "long nose."

/110 cont./

some explorers and travelers, after having happily concluded their investigative labors, have set down in their reports that the Chiriguano Indians have changed greatly in physique since the whites or Creoles entered their territory, but nothing could be less exact than this. Clandestine unions between Christian men and Chiriguano women have been quite rare, and even rarer are legitimate unions through Catholic marriage, from which generally comes propagation and change in races (7).

> 5. In 30 years of missionary life I have blessed but four marriages between Christian white men and Chiriguano neophytes.

If Señor del Campana states that for a period of 46 years the Chiriguano have maintained themselves without change, on the basis of photographs taken in the year 1880, which were placed at his disposal by Professor Mantegazza, and those which the missionaries of Pimal and Tarija sent in 1890 to the Turin Exposition, among /111/ which was a skull collected by the author of this work in the fields of Carayupa and sold by Señor Guanechiri to the Florence museum, what can be said by some missionaries who have grown old and who are growing old among these Indians and who know the race in old men and in young boys, in old women and in decrepit, before and after the white Christians were introduced to number?

In my judgment the said change does not exist, because an occasional isolated case, an occasional family, where the mixture of the two races has taken place, cannot be adduced as proof that the physique of the race has varied greatly. Travelers and explorers pass through a region rapidly; they can devote little time to the study of a race, and consequently their written reports, worthy of all respect, are somewhat exaggerated, as were those of the Spaniards

/111 cont./
who conquered Mexico and Peru (1).

1. Guillermo Robertson. Historia de América desde el descubrimiento hasta antes de la Independencia /History of America from the Discovery to before Independence/. Travelers exaggerate their stories in order to attract more attention.

There are extensive areas where mixture of the two races was frequent, but it must be pointed out that in these areas the children of such have ceased to be Chiriguano, both because of the Spanish language, which they now speak perfectly, and the color, which is completely different: it is no longer parchment, as Father Cardo states, but a skin which is up to a certain point fine and velvetlike, so that for this class of persons who descend from white and Chiriguano the appropriate name is mestizo and not Chiriguano, and consequently the physical characteristics of the race have not changed. In these same areas families which have kept pure Chiriguano blood are not rare, and these families, or the individuals which make them up, have the same characteristics as other Chiriguanos, without any noteworthy difference (1).

1. From the left bank of the Parapiti River northward this radical change is taking place, making the race disappear.

On the contrary, in the great Chiriguano centers, such as all the missions and a few other areas outside of them, the physique of the native has not changed at all. As a rule their stature does not reach one meter and 70 centimeters in men, and rare are the women who reach 1.60; the hair is black, glossy, and coarse, and very vigorous in

/121 cont./

Love for the Home

574
152

When someone has been away from his town for a long time and returns, he is received with much love. He enters his house without saying a word, and if he arrives at night, to the question of "Who is it?" he merely answers "Checo," "It's me," and then those in the house begin to cry or give shrieks of joy which may last for five minutes, and soon they give him something to eat and the
• [114] questions and answers begin. I witnessed this without being seen one night in Parapiti at the San Antonio Mission.

152
591
169
186

It is not rare that once in a while a smaller or greater proportion of Indians temporarily leave their town, either because of scarcity or in order to avoid the anger or ill will of the cacique. They then go away with considerable unhappiness, and they go into exile like Hagar /122/ with her son Ishmael when they were ordered out by the patriarch Abraham. They cry as they leave, they cry along the way, they cry upon arriving in the land that receives them, where, in spite of the good reception which has been prepared for them by other people, they do not find peace, and they always sigh for their home.

When they decide that in their former dwelling place things may have changed, or that the cacique who is responsible for their misfortune and exile may have disappeared from among the living, they return (1). In Yvu, where

> 1. The Indian Cayuguari, because of a crime committed in Macharetti, fled with a group of Indian friends and relatives, settled quite far away to the northeast of Caranda'iti, and, as the cacique whom he offended is still alive and as furthermore Cayuguari began a life of cattle rustling, he never returned to his town.

the war of Curuyuqui (1892) occurred when the San Buenaventura Mission was founded, all those Indians who had taken part in the uprising were wandering about in

/130 cont./

776 What I am going to set down here will cast some light on this subject and will enlighten the intelligence of the studious man for its investigation.

124 776 From conversations with the true Chiriguanos it is impossible to form any idea of the supreme being that they accept. I say true Chiriguanos, by which I mean those who have had almost no contact with missionaries or whites. Today it is difficult to find one of these. Yet despite this, if one should ask the old people who live far from the missions, "Who made all that we see?" they answer, "Quia ndipó?" Who can it be? "Who created us?" They answer: "Ti! Ndicuaá á?" What do you mean? Do you not know? And they give a purely material explanation, as happened on an exploration and trip that I made several years ago in the company of other missionaries south of the canton or town of Huacaya, where I talked with an old cacique who had taken part in the war of 1875 against Igüembe and who, after the pacification, preferred to live outside the mission and planned to die there, because he is convinced that Indians who live in missions die earlier, just as, according to him, all of his companions from Boicovo have already died, which is not true, because they still are alive there, as old as he is (1).

790 179 829 114

> 1. The Indians have had and will continue to have the false and erroneous idea that baptism makes those who receive it die, because it is administered to men and women who are in immediate danger of death, and hence those who are old do not wish to be baptized when they are enjoying good health.

192 In the Chiriguano language we find the word Tunpa, which means "superior being" or "marvelous being." When for the first time they saw a large clock with its "tick, tock" and the pendulum making the hands move and giving energy to the hammer to strike the hours with its little bell or wire string, when they saw for the first time the photographic camera which reproduced the image of one or more of them, the clock and camera were Tunpa for the Chiriguano. They applied this word to both things.

/132 cont./

793 purpose, thought up another supreme effort, making fall from the heavens torrential rains, Iporu (2), in order to destroy the Chiriguano

[192]

2. I means water, and its pronunciation is gutteral and nasal; poru means to lend oneself /prestarse/; thus, Iporu is explained literallyt he lent himself to water /se prestó agua/.

race completely inundating all men in the waters.

He would have succeeded in destroying all the Chiriguano, but they in extremity and perhaps by advice from the true God, Tunpaete, found a large gourd, Choguao, put in it two small human beings, children of the same mother, male and female, cuimbae, cuña, and they let the little vessel float on the surface of the water.

The rain continued to fall in all its force. The waters rose over the surface of the land, rising to great heights, and drowned all the Chiriguano except the children in the Choguao, or large gourd, who were saved from the catastrophe. Later it ceased raining, and the waters dried up again, leaving a thoroughly filthy mud. The children came out of their receptacle, without which they would have died of cold and hunger.

It can be easily understood that the fish and their kind did not perish in the waters of the Iporu, and thus for a long time these had to be the food of the two human beings, but how to cook them, when even fire had disappeared? Before this happened, there was another compassionate being who did not permit the total loss of this good element. This being or second cause was the Cururu, toad (3).

[192]

3. The word Cururu should not be confused with Curu, which means mange. From Curu comes Cururuyuqui, salt which cures mange. The pacifiers of the war of 1892 wrote incorrectly Cururuyuqui.

[114]

/153 cont./

756
278

and does not know how to do it goes to the sorceresses, pays them, and obtains it.

This seems to be a fable which in itself does not merit any importance, as indeed it is not given any by Father Giannecchini, who does not deny it in his writings, as Señor del Campano states. Poison exists among the Chiriguano. They do not extract it from chamico, which is a species of datura, nor do they extract it from other plants or herbs. The sorcerers reveal nothing; the young people do not know about it, and the few old people who are alive only tell what has been said above. Be that as it may, this is a belief of the tribe, and as such I have told it.

Lunar Eclipse

82.1 One night while waiting for a lunar eclipse, I found myself in conversation with the cacique Anduari of the mission of San Buenaventura de Ivu, and I was reminded of something which I remembered regarding this phenomenon which was about to occur on the moon. Chiriguano towns are true bells during an eclipse, because of the shouts, cries, whistles, and every warlike instrument which they use to make noise. When I came to the missions, /154/ the war of Curuyuqui had just happened, and when I heard so much and such an extraordinary hubbub on the night of an eclipse, I believed that it was a new uprising, as was also believed by the inhabitants of Cuevo, who came out armed to find out the cause of so much noise (1).

[114]
[648]

301
533
114

1. The Italian professor Mantegazza states that the Chiriguano, in order to whistle loudly, take out the tembeta or button which they have in their lower lip. This is incorrect and denied by all; what the renowned anthropologist refers to must be a special case, since they cannot even drink without the button.

/155 cont./

993 S21 As the Chiriguano had predicted, the jaguar very soon began to put into practice in the heights of the moon its natural inclination to kill and eat defenseless beings. Its peaceful, compassionate, and defenseless liberator lost itself marvelously to its voracity, and the tiger attacked it, but the moon came crying to the inhabitants of the earth, to the Chiriguano, calling them to its defense, if they did not wish to remain eternally in the dark (1).

1. If the eclipse is total, they believe that the jaguar has swallowed the moon whole; if it is partial, this is because it did not have time to swallow it.

The Indians, despite the bad deed that the moon had done against them, and more for their convenience than out of compassion, came out of their towns en masse, some with drums others with whistles, and others with the horns of cows and bulls; they frightened off the Yagua rapih, yellow jaguar, who out of fear of the Chiriguano, remembering what had happened to it, desisted from its intention, and since then, every time a lunar eclipse occurs, they do the same thing. The fabulous belief passes from the old to the young, from grandfathers to grandsons.

● 114 S21 On a bright moonlit night the missionary was sleeping peacefully in the Ivo mission, and the moon was obscured by a total eclipse. This was during the month of June in 1909. The missionary did not know the language, and I was absent. The [191] children, who spoke a little Spanish, in their desire for the missionary to see the phenomenon of the eclipse, awakened him with a great uproar, shouting to him: Jaguar is eating moon (2).

2. They say nothing of the eclipse, total or partial, of the sun, doubtless because it occurs very rarely; the old people have but an obscure idea of this phenomenon.

/156 cont./

361 or five Chiriguano tribes at that distance. The only large town that I found on my travels is Mombirai, which is joined to Chuvari guazu on the left bank of the Paraguay. I know Cuirimandi, where I often slept; the Indians are many, but they live in different places, forming groups of 15 or 20 families (7).

[114] [62]

797 619 361

2. The beautiful Sara Ibna Miaim was formed by bringing together into a single town more than ten small tribes which voluntarily, with their caciques, moved to the place given them by the missionary. In Tumbá there are three small tribes a very short distance apart.

Attributes of the Cacique

622

Just as in a family there is the authority of the father who governs it, or, should he be absent, that of the mother, who looks after and cares for the proper /155/ rearing of the children so that they may grow properly and not commit disorders or start fights with one another, thus also in every town or tribe there is a Tubicha, great one, whom I shall call cacique, so that my readers may understand that the Great One is a person of authority and prestige. The attributes of the cacique are multiple: when an epidemic has broken out or is about to break out in the tribe, it is he who seeks out the governor to dispel it. If the tribe is suffering a drought, he goes to the master of the rain, who is another sorcerer (1).

[231] [243]

1. In each tribe there is but one cacique; many caciques are under a regional cacique who can dismiss the lower ones.

[262] [273]

At the time of planting, while the people of the tribe sleep or rest in their houses, he goes out to the small plaza or in front of his house and, walking about, holds forth to the town, encouraging it to sow sufficient maize so that when it is ripe there

/187 cont./

301 buy in the store, so active since the founding of the missions.
302 The Chiriguano with his vigorous head of hair and his red Yapicuana
[199] /188/ walks very proudly and shows off both things at feast
in the presence of his companions (1).

[199]
[114]
[121]

1. An interested party once said that the mission in Yumbía had no purpose because the Indians were civilized. I am sure that this is not true, because the explorer who wants to learn the old customs of the Indians can study them better there than anyone else today. There they wear long hair, the tembeta /lip plug/, and balaca, or band, from childhood.

291 To cover the head they do not all wear a hat. The latter
294 is woven by them themselves with palm leaves. Carandai;
285 they bring them from the places where they are abundant, Carandaiti, pull out the whitest shoots /cogollos/, take them to their houses, then string them one by one on a long cord, which they make of the same palm, tying them to each other. They hang them there and the action of the air whitens them much more. Then they divide each leaf of three or four shoots into leaflets no larger than 2 1/2 centimeters and begin to weave at the crown, where they form a cross with these leaflets, which they then keep weaving, and, as one ends, they add another, and when the work reaches the edge or brim, they trick the ends in so that the hat will not come undone, pull strongly, cut off the ends, and a round hat has been finished.

Others form long strands one centimeter wide and sew them to one another with cotton thread, and these hats are imperfect
292 cones lined with black or red cloth. They are used by older
554 Indians, those of importance, caciques and sorcerers (?).

291 2. The Quichua /Quechua/ always with his cap,
302 the Chiriguano is abandoning the custom of
304 long hair, the lip is pierced for the tembeta in
178 few places now, and the straw hat is being

/196 cont./

301 Indian youth who cannot sport a bead necklace make them out of shell, Yetita, which is abundant throughout the region.

[321] /197/ The pieces are flat and round like a small button. They make a hole in the middle and string them one by one, making a knot in the string in order to separate them. Since the shells are white, a necklace on a Chiriguano's black neck is like a fly in milk (1).

[562] 1. The shell necklace is worn solely by men. I checked carefully and saw that they alone wear it. I have several of them that I found in a grave which was uncovered by the rain.

301 562 For men there is another necklace of beads, Ndamicha; a string of these with a large one in the middle, Ndamicha ichi, mother of the beads, is valuable. The ndamicha even comes mounted in the hole of the tembeta, which then is valuable and is called Ndamicha-tembeta, tembeta with bead.

• 114 301 562 It seems that the explorer and expeditionist Tonar is not completely correct when he says that these necklaces are made of coralline, malachite, etc. The Indians do not tell where they come from. Perhaps with careful analysis it could be learned what type of material they contain and which animal produces them naturally, such as the coralline. What is beyond doubt is that today's explorers do not give them the value that they would have if they were true pearls. The former value of beads among the Indians themselves was, as I have said, conventional. The same gentleman is not entirely correct when he states that the Chiriguano women wore shell necklaces. Perhaps they were used by the Tapiì women, where he stayed for a long time in his efforts to see Olympus from Inazo.

301 562 Women's necklaces are abundant and are of different forms and colors. Some are round and black, Mboinu, companion of beads, others red and curly, Mboichanchi, curly beads, and others long and black, Sebadilla. There is also no lack of women who in addition to the above-mentioned ornaments place around their necks a string of silver coins, all of the same size.

/214/

753 had asked for her as his wife, a proposal which had not been
754 accepted: but it must be noted that the Indians attribute every death to sorcery.

765 The loss of this child was greatly mourned by relatives
[964] and others, and her parents, who loved her very much, burned all of the clothes and things that she had, in addition to having buried with her the best and abundant clothing which her father had just brought her from the Argentine Republic. The girl had three donkeys which had been given to her by her father. They sold them in order not to see them any more, in order not to be reminded of their late daughter each moment and immediately weep.

855 I have related this event so that my readers may know
765 that the Chiriguano love their children whether male or female, so that they may see the grief they feel, and so that they may know that in case of hydrophobia the medicine which I administered to the girls Ana and Delina is a good remedy: after the last fever they are now completely well (1).

• 114

1. If some new missionary or other reader may not know of it, let them now know that ammonia drunk as drops in water and placed on snake bites and bites of other poisonous animals or insects is very efficacious. In ignorance of having been bitten by a spider, I suffered the consequences for seven months and got well as soon as I applied ammonia to it. For another bite I used ink very efficaciously: it is enough to paint the bitten part with it.

Deformed Children

845 It is not easy to ascertain why the Chiriguano kill their
849 children who are born deformed. Some writers have stated
732 that they do it so that all will be valiant warriors, but this reason is not satisfactory because deformed women are not found either, and certainly women are not good for war.

/[illegible]/

304 [illegible] 881 same operation, because he never takes one alone. There must always be two, four, six, eight, or ten (?).

[801] 2. In a town of 30 or 40 families there was usually never any lack of boys of the same age. The number of the boys to be pierced should never be an odd number: superstition and nothing else.

304 [illegible] 881 The boys appear for the operation on the designated day, led by their fathers and mothers. Meanwhile, other curious persons gather there, men, women, boys, and girls, to see [985] [114] and /[illegible]/ attend this solemn act, which, as I have learned, is not preceded by any day of fastings; thus what certain writers have said in this regard is wrong, as is the rest that refers to the person who does the operation, for whom the qualification of being an [illegible], moreover, is not required for the imposition of the tembeta.

Before beginning the operation the surgeon authoritatively addresses those who are to be men, telling them to be valiant and strong in their pain, without letting their moans be heard or crying, because these are not the signs of a brave man, of a man who wears the tembeta, which is the sign of virility, of [195] a man who must be able to face the dangers of war. Finally, he orders them that it is time to give up the [illegible], [illegible] in their answers, and in its place he orders them to replace it with [illegible].

When this brief and eloquent discourse is over, the first boy stretches out on the ground or on a cot, and in order to give himself courage he says in a vibrant voice, Che ravi tayicutuca, may I be the first to be pierced, words which are greeted by the gathering with jubilation and at the same time with wonder, since they already know the pain that he is going to suffer (1).

[195] [193] 1. The Chiriguano Indian also uses the imperative to order himself, that is to say, his verbs still have the first person of the imperative mood, which indicates considerable arrogance.

/300 cont./

[304] [297] [304] Then the one doing the operation looks among his implements for the string with which he takes the exact measurements so that the hole will be in the middle and above the [304] [313] [301] [114] [301] [301] [301

Ro Mission M-3 (1893-1911) 1912 SF10 Chiriguano SF10

/The text/

If the missionary goes into the forest and goes among the heathens in the name of Christ, he teaches them to love him and to know him, and, like his divine Master, he is compassionate toward the afflicted and toward those who are suffering. Like him, he does not close his ear to one who asks for charity, but divides what he has with the hungry, dresses the naked, and, when he has nothing else, at least has soothing words to console the sad. This is the life of the missionary, which, by great effort and much perspiration, is gradually transforming the places and the hearts of the inhabitants of this region, into which civilization has come through him. Oh, how the Supreme Government and the inhabitants of Bolivia should appreciate him, both of them, because of his work of moral and political civilization! But even should men not recognize this, his eternal reward will be greater (2). /Illustration appears here./

1. The work of the missionaries is greatly appreciated in Europe. Some governments exempt them from military service and give them free passage on ships and railways. This is even done by the anti-christ of Catholicism. The missionary of San Buenaventura de Ivu /the author/ has been exempted from military service by the Italian Government.

C 121 122 /313 cont./

If the Supreme Government and the friends who have helped me in this first edition continue to provide me with their considerable support, I plan to return to the region, to make better studies, to get certain data about the other tribes, to get views and panoramas with photographic cameras, and then bring out a second, more polished edition.

C 131 [114] Since, however, through my nomination as a Corresponding Member of the Geographical Society of this city of La Paz, I am making studies appropriate to this science, I shall set down in these pages the approximate geographical degree occupied by the known tribes which populate the extensive zone of the Bolivian Chaco.

The Chiriguano Indians are numerous from 18° 50' to 22° latitude south of the Paris meridian and from 65° to 66° 50' west longitude. However, small groups can be found at 17° 20' latitude and other groups at 22° 25' toward the south of present-day Yacuiba (?).

> 2. I follow the Paris meridian in placing the tribes because in the body of the work I have used the same to indicate the location of the Cayuguari Indians.

C 121 /314/ The reader who has accompanied me as far as these lines will have quite a clear idea of the Chiriguano Indians, their language, customs, and beliefs, and consequently I have nothing to add with regard to them, because this would be a repetition of what I have said. I shall say something about the others, so that Bolivians and foreigners may know the Indians with whom they are to deal.

Tapúi or Isoseños

Ce 161 131 The Tapúi Indians are as many as 2,000 between children and adults; they occupy both banks of the Parapiti River at 19° and 19° 50' latitude and 62° 20' to 65° longitude from the Paris meridian.

Introduction.

In Part I of this work I sought by a new method to analyse the material culture of two Indian tribes the Chorotí and Ashluslay. In the introduction to the aforesaid work I explained the method employed. In Part II I have sought by the same method to make an ethno-geographical analysis of the civilisation of two other Indian tribes. These are the Chiriguano and Chané, who dwell in the southeastmost part of Bolivia and northernmost Argentina. The Chiriguano are Guarani Indians, while the Chané are Guaycuruan Arawaks[1]). They thus belong to two of the most important tribal groups in all America. Their civilisation is already well known, thanks to the missionaries who have worked and still work among them. Their works are referred to in the bibliography. The most important are those by Cordado and Nino. Dez. Campana wrote a monograph on the Chiriguano based on information supplied by missionaries. We also find mention of the Chiriguano in many older works. The information they give on of their manners and customs is unfortunately scanty. It is, indeed, only in Lozano, Cardiel, Viedma, Lozano and one or two of the Lettras anuas that we find any useful matter.

Serrano y Sanz wrote an excellent work on the post-Columbian history of the Chiriguano. Otten has written about their pottery. Lehmann-Nitsche has dealt with their physical anthropology. Works on their languages have been published by several missionaries. I visited these

[1]) Vide Stromberg (8).

C
1194

Indians in the years 1908, 1909 and 1913, and spent in all 2 to 3 months studying them. In my book «Indianliv» I gave a popular account of them as I got to know them during the Hemmorch expedition in 1908 and 1909. In my last book of travel «Vandringar och äventyr i Sydamerika» there is some information about the Chiriguano. I have brought home to Sweden from the Chiriguano and Chané about 1500 articles which are now in the Etnografiska Museum of Stockholm and in the Gothenburg Museum. In the Geographical Review I wrote a short article on the migrations of the Chiriguano Indians.

C
CC
1227

C
CC
12
194

A close study of the Chiriguano and Chané civilisation by the ethno-geographical method affords points of special interest, since their mode of life is rather well known, and we are able to trace their history back to the beginning of the 16th century. I have also collected archaeological material from their region. At first I was minded to give an account of this, too, in the present work. I decided, however, that it would be better here only to mention individual finds by the way, and to leave the archaeological material for another publication in which I shall be able also to publish certain archaeological finds made in other parts of Bolivia. This for purely practical reasons.

C
CC
121

I will here endeavour to make clear how the Guarani-speaking Chiriguano's and the Guaranised Chané' civilisations are compound, what culture-elements they have got from the Whites and from the Mountain civilisation in the west, what each brought to the common stock and what they possibly obtained from other quarters.

In this analysis of Chiriguano and Chané manners and customs, I do not intend properly to examine the question as to whence these Indians came to their present abodes. Broadly speaking we know that already. Respecting the Chiriguano migrations there are historical documents extant which evidently show that it was not until the beginning of the 16th century that these Indians conquered

C
175
6-02
1-17

the tracts they now occupy.[1] They drove out or subjugated the original population, which consisted chiefly of Chaco Indians. They made slaves of a great number of them and acquired a great number of women.

The Chaco are, as was mentioned, Arawaks and all indications point to their having come from the north or north-east, where they have large numbers of kindred. It will be found that the present investigation confirms this. A matter of particular interest in this connection is to see how have two peoples belonging to the most important groups of tribes in all America made adaptations to their mode of life when they had emigrated to places with strange natural conditions. Again, it is worthy of note how their civilization was transformed and the influence of the Incan age civilization in the west and eastwards under the influence of the White. Further we shall see what they have, under their new conditions, been able to preserve of their original civilization. We shall gain insight into the way in which the civilization of two Indian tribes was transformed under the influence of other peoples and new natural conditions.

As in Part I, I deal chiefly with the material side of Chaco Indians' life. Or rather, everything in their life which

1. [illegible]

2. Strange, having his opinion on Cabeza and Ayrumana, he assumed that the Chiriguano invaded the Inca Indies earlier than the beginning of the 16th century. But even if his assumption is correct, Chaco Indians had to an destructive then. This is evident from the accounts of the invasion in the 16th century, when the Chiriguano appeared, what was everywhere an original story. Yet do we know whether by Chiriguano the Inca did not mean barbaric tribes of the Chaco in general, and not any particular tribe. In these parts Chiriguano probably corresponded to the signification that Chaco had in the district of Cuzco, where it meant all sorts of barbaric Indian tribes east of the Andes. The Chiriguano that Cabeza de Vaca and Ayrumana speak of need by no means have been Tupinambá Indians. I have already pointed out (Characteristics 13) that Cabeza's description of the Chiriguano is absolutely irreconcilable.

the earth-plastering of huts is here an original Indian
idea. I have attempted to indicate on a map the distri-
butions of huts with earth-plastered walls, but I refrain
from publishing it because, in the majority of cases, I can-
not ascertain whether the Indians learned from the Whites
to plaster their huts. Huts with earth-plastered walls
are found among the Indians around Rosario in Gui-
ana[1] and among the Ipurí in Colombia. The Indians at
Urquiñí used to have such huts, and Orbigny[2] mentions them
from the Chiquito etc. Earth-plastered mortise huts are
also common in the Kurgan valley in Siberia.

The Chaná on the Río Uruguay, but not those on the
Río Paraná, and the Chiriguano have outer-huts on piles.[3]
Occasionally the huts and dwelling-house are combined in
such wise that the people live on the ground-floor and store
their maize on the first above. During my travels I have
only once found on piles among the Bitaco-Colmay (one
only), Matacos Vejos, and the Chorotis (one only). Some
Guaicurú huts between the Río Chaqueo and Cochabamba
are built on piles. I scarcely think these are original, how-
ever.

Jimenez Lemoyne has written a treatise on pile-
buildings all over the world. He mentions there their oc-
currence among several tribes in northern S. America, which
are shown on the map below. The village on piles from
La Plata mentioned by Lemoyne after Hervas is, of
course, not Indian; nor are the huts from the Argentine

[1] Im Thurn.
[2] Orbigny (a), P. 99.
[3] Guasco P. 159. Cardenas, P. 308.
[4] Orbigny (a) P. 99.
[5] Clearly Lehmann (P. 109) speaks of the main-huts of the Chiriguano: «Los dormitorios en el hablo, «ano fuera, los equidos [illegible] que [illegible] de [illegible] (pieza o un cuarto [illegible] de [illegible] de [illegible], [illegible] de [illegible] de [illegible]).»

Fuegan in which the corn is stored to protect it from bears.

The above-mentioned village and bears I have, therefore, left out of my map. FRITZ SCHMIDT[1]) mentions pile-buildings from other tribes too.

FRITZSCHE[2]) has also collected numerous statements relating to the occurrence of pile-dwellings in S. America from the works of older writers.

The table and map, which follow show the distribution of pile-buildings in S. America according to LEMANN, FRITZSCHE and FRITZ SCHMIDT, together with some additions and corrections.

On the accompanying map I have merely indicated those which were certainly to be of Indian origin. Those mentioned at the end of the 15th century, as well as those from the 16th are no undoubtedly. I am convinced that the pile-buildings of the Chaná and Chiriguano are genuinely Indian, as nowhere in this region do the Whites possess such bears. Their geographical distribution leads us to presume their genuinely Indian origin, as also that they are a culture-element which came to these Indians from the swamps of Mojos, and that they here are an Arawak culture-element too. The use of pile-buildings on hard ground is quite comprehensible to me, as they offer great advantages, whether used for bears or dwelling-houses. The idea must have come, however, from some marshy tract or from a sea-coast where the inhabitants were dependent on ebb and flood tides. In the cases where a people employ pile-buildings on hard ground which is not liable to floods, it is due, as a rule, to conservative ideas — the mode of building to which they were accustomed in their former dwelling-places has become indispensable.

The notion that the pile-buildings employed as barns are here of different origin from those used as dwelling-houses, is unlikely. There is nothing in the geographical distribution to support this idea.

Outside their barns the Chiriguano and Chané have ladders consisting of logs in which steps have been hewn.

Bananas are not cultivated. Among the Chané at the Rio Parapiti the sweet-potato is the most important cultivated plant. Of the plants mentioned, the sugar-cane, the melon, the watermelon, the fig, the orange and the millet are not American. All those cultivated plants which have been introduced by Europeans are of slight importance to the Indians. I have never seen mandioca cultivated, but I have heard that it is to be met with in the fields of these Indians. As a staple food of the people it is of no importance here.

Iron spades bought from the Whites are the tools employed nowadays. Very occasionally one still sees wooden spades. In Part I I have published a map of the geographical distribution of the spade.

The spade in S. America is evidently a western element of culture, i. e. the idea of fitting on a more or less broad blade to the lower part of the digging-stick is plainly derived from the western area of civilization.

Whence the Chiriguano got the idea of the shapely handles I do not know. They are too shapely for the art to have been derived from the Whites. They have obviously a long evolution behind them, and it is very probable that they had their origin in the Mountain area of civilization.

Hoes with iron blades occur. The Indians have got them from the Whites. I have not seen any primitive hoes, although we are here on the border of the area of distribution of the genuine American hoe[2]).

The Chiriguano and Chané use a small implement for removing the corn from the corn-cobs which I have described in Part I. P. 32.

171

In a weighty article E. von Rosen (3) has criticised my opinion that the pellet-bow was possibly brought from India to S. America by Portuguese sailors in post-Columbian times. He is quite correct in the statement that the thick part in the middle of the bow is not for strength-

Fig. 7. Slings.

A Chané, Rio Parapitl. 1/12. R. M. P. 293.
B Detail of A. 1/2.

ening but is merely for better grip. This holds concerning both the Asiatic pellet-bows and some of the American. This contrivance is practical but not indispensable. It is certainly not little toy-bows alone that have not got it. It is quite wanting on the pellet-bows of the Choroti, Ashluslay, Tapiete, Mataco and Yuracáre. Presuming that the pellet-bow in S. America is of Asiatic origin, it is evident that the Indians who first learnt the use of the pellet-bow

StNordenskiöld E-5,4 (1908-1909, 1913) 1920
SF10 Chiriguano SF10
Chane SF8

Ee 411 177 171* 114

from the Portuguese have kept its Asiatic shape, while the tribes that received it later have made pellet-bows more like their usual bows.

Von Rosen puts forward the supposition that the S. American pellet-bow may be an imitation of the European crossbow. This is supported by the fact that the pellet-rests on some S. American pellet-bows (fig. 8) and the pellet-rests on some European crossbows are very similar. This similarity is extremely noteworthy. Still, I deem it unlikely that Indians should have hit on the use of pellet-bows because they had seen Portuguese crossbows — especially as I am not aware that the Portuguese in S. America used bullets for their crossbows. In any case the pellet-bow in S. America would be a post-Columbian culture-element.

C [192]

It is quite true that some Indians, e. g. the Choroti and Ashluslay have their own words for pellet-bow. But it is a common thing for some Indian tribes to have coined words to denote objects introduced by Europeans. On the other hand, it never happens that the Indians that still speak their own language lack native words for objects which are plainly pre-Columbian with them. It is therefore of primary importance for the settlement of the question as to whether the pellet-bow was introduced in post-Columbian times to note the fact that several tribes lack native words for the pellet-bow, calling it »bodoque».[1])

C Ee 177 411 171*

The Chané call it »boroque». I am not acquainted with any Chiriguano name for it. A circumstance that speaks in favour of the pellet-bow being a post-Columbian culture-element is the fact that these bows are unknown in Peru, in Central America, and in Mexico, that is to say, in the cultural zones proper. There are not many of the elaborate culture-elements in S. America that have been unknown to

the most civilized tribes and only known to the tribes east of the Andes. This applies especially to those cultural elements that are of little or no importance in the struggle for existence. The pellet-bow is the only weapon of any importance which, as far as is known, was unknown in all the seats of higher civilization in America. If the pellet-bow is an original American invention, it must have been invented by a comparatively uncivilized tribe.

C
Ce
441
*171

The pellet-bow is nowhere in S. America of any great importance as a hunting weapon. The heavy hand of necessity has never spurred the Indians into making an invention of this kind.

C
Ce

*171
114

FRIEDERICI has pointed out to me in a letter that in MARTYR »De orbe novo» there is a statement about bows from the coast of Venezuela used by boys for shooting with pellets of clay or wax. This is plainly the same statement as GOMARA's that I quoted in Part I. MARTYR's statement is in the Eighth Decade, where he complains, that his memory was beginning to fail him. I believe there must be some misapprehension on MARTYR's part, and that the pellets in question were arrows with thickened heads of wax or wood. MARTYR cannot refer to pellets thrown by hand, as he plainly speaks of bows. It is not likely that wax pellets were used for clay pellet-bows, but, on the other hand, it is not at all unusual that arrows used in play should have thickened wax heads. Arrows of this kind have been brought from the Ijca in Colombia by BOLINDER. The pellet-bow is mentioned neither by missionaries nor by any modern authors as occurring in Venezuela or any other part of northern S. America. It is extremely unlikely that this desirable toy weapon should have existed there at the beginning of the 15th century and then entirely vanished. Such an isolated occurrence would be most peculiar and unusual.

C
Ce
441
*[171]

The clubs (fig.9) that I have seen among the Chiriguano and Chané have not always clearly defined heads like those of the Chorote and Ashluslay.

my travels. Though rather an extensive collection, it is quite insufficient for comparative researches.

The bird-nets used for hunting, occasionally found among (4) the Chiriguano, are of great interest (fig. 13 and map 4). I have not seen hunting nets elsewhere. Bird-nets are mentioned by several writers from the Alakaluf. These Indians and the Chonos were also acquainted with seal-nets. The statements in literature about these nets are to be found in COOPER'S[1]) excellent work. CREVAUX speaks of hunting nets from (4S) the Miraña[2]). UHLE[3]) mentions finds of the kind in Atacama. JOYCE[4]) speaks of nets that were used for hunting deer and birds on the coast of Peru. He depicts a very interesting earthenware vessel found at Trujillo representing a deer-hunt in which the huntsmen used the throwing stick and the hunting net. COBO[5]) speaks of bird-nets from the Inca. PALOMINO[6]) mentions nets used for deer-hunting from Chuquimayo in northern Peru. Hunting-nets are also mentioned by ORTIGUERA[7]) and by the author of Jornada de Omagua y Dorado[8]) from the Aruaquinos on the Amazon. From what OVIEDO Y VALDES[9]) says, the Indians also used hunting nets on the Rio Orinoco. GOMARA[10]) mentions nets from Cumaná in which ant-eaters were caught.

SUAREZ DE CEPEDA[1]) in his most interesting treatise on the Colima-Indians in Columbia, tells us that they tried to catch comets, which they imagined to be birds, with nets which they placed in their fields. This seems to prove that these Indians knew the use of bird nets. CASTELLANOS[2]) states that the Indians in the valley of the Patia (in southern Columbia) tried to catch the Spaniards' horses with nets. Most all of these authors who speak of the hunting net belong to the sixteenth century. This should give those who are doing work like mine some food for reflection. It proves how perfectly indispensable this old literature is as a means of learning the ethnology of the S. American Indians. *How imperfect a map of this kind would have been without the old literature!* One may ask why hunting nets are so scarce now. This is apparently owing to the fact that in most places where hunting nets have been in use the Indians have lost their original civilization. The above authors not having given us a detailed description of the nets, we do not know if they resemble those used by the Chiriguano. We are not even always told what was caught in these hunting nets.

The deer-nets used on the Peruvian coast were of course considerably larger than the nets used here. Their shape also was quite different. The Chiriguano nets are clap-nets and are used in the following way. The net is spread on the ground at a spot where there are plenty of pigeons. The pigeons are decoyed with maize to settle between the two halves of the net. A string runs from the net to a fowler

Tools.

C 412 [1114]

With the exception of bone awls the Chiriguano Indians of to-day have no genuinely Indian tools. Bone awls which I have already dealt with in part I very rarely occur among the Chiriguano. I omitted to mention this in the German edition of Part I.

VIII.

Fire-making.

C 372

Once only have I seen a Chiriguano Indian making fire by wood friction. He had forgotten his matches. Flint-and-steel are also seldom seen among these Indians now-a-days. In my collection there is a cotton-plaiting, in a wooden pocket from the Chiriguano. The Indians use such for tinder when striking fire with flint and steel. The idea of this was of course obtained from the Whites.

C [1177]

Schmidt-Schiffd E-Br (1908-1909, 1913) 1920

Chane SF8

and from the Ashluslay, Guarayú-Pauserna, Siriono, Guarayú (mission) Gorocotoques, Mojo, Carios-Tupinambá, Quichua, Parexi-Kabiši, Chiquitos, Guarani in Paraguay, Xarayes, Guayaná and Payaguá, Occasionally they occur among the Mataco as well. BARBOSA RODRIGUES mentions the tipoy from the Tembé. Judging by LANGE's photographs the Ararandeuara girls seem to wear small tipoys in ordinary hammock technique.

C Ce 171* 291

Those from the Quichua do not, however, correspond to others whose style we know, for the former used to be open on one side and only seem to have been sewn up under the influence of European ideas of modesty. Consequently I was rash in concluding that the tipoy was an original feature of western civilization, as I did in the first part of this book. Most likely it is of quite a different origin.

C Ce [114]

When the Chirignano and Chané women used the tipoy as a garment, they did not, as we shall see below, get the idea from the mountains or from the Whites. It is, however, certain that the Whites and at an earlier date the Mountain-culture Indians may have influenced them to make the tipoy longer and more »seemly». Contact with other people wearing clothes has made it fashionable to be clothed.

My attempts to investigate the distribution of the tipoy in northern S. America has caused me a lot of trouble. Descriptions of Indian apparel by early authors are, unfortunately, not as detailed as might be desired. OVIEDO mentions a woman's dress »saya» from the region of Lake Maracaibo, woven without seam »sin costura», which may have been a tipoy.

C Ce 291 114 171*

In a narrative of PEDRO TEXEIRA's journey up the Amazon[1]) we read that almost every tribe goes naked, the men completely, the women above the waist, covering the rest

of the body with a garment resembling a »pampanilla». This may mean the tipoy, but also something else[1]).

As MAX SCHMIDT[2]) has pointed out, the Paressi make their tipoys and their bearing-bands (to carry the children) in exactly the same way. The bearing-bands used by these Indians are identical with the tipoys in both shape and material. They differ from the latter only in being somewhat longer in proportion to their width. STADEN[3]) speaks of the »typpoy» as a garment. In an anonymous early description, also from the coast of Brazil, printed in PURCHAS[4]), the bearing-band is called »tupiya». The same word is thus used by the Guarani-speaking Indians on the coast of Brazil both for the bearing-band and the female dress. In some parts the same article has, indeed, been used both as a bearing-band for children and a woman's garment. According to BARBOSA RODRIGUES[5]) it would seem to be so among the Tembé Indians. The bearing-band does not occur among the Chiriguano and Chané; they carry the child cradled in the tipoy.

Chane SF8

C
Ce
291

Both men and women among the Chiriguano and Chané have sandals which, however, they seldom wear. In Part I of this work I have given an account of the geographical distribution of sandals in S. America. Obviously sandals are a cultural element which the Chiriguano and Chané have got from the area of civilisation in the west.

C
Ce
[177]

A pair of sandals with fastenings differing from the usual kind are depicted here. A sandal with very similar binding but of another shape is described and depicted by ERIC VON ROSEN[1]) in his recent, splendid work.

Ee
[114]

The Chiriguano and Chané wear girdles which as a rule are woven, though they are sometimes made of leather. As I pointed out in Part I, the woven girdle belongs to the western cultural elements and the leather belts to the southern. The leather girdles worn by the Chiriguano and Chané are provided with pockets and sometimes ornamented with coins, and are consequently imitations of the gorgeous cincture worn by the Argentine gauchos. NINO[2]) is of the same opinion, and he points out that they are called »bosa» (from the Spanish word »bolsa»[3]) owing to their being provided with a pocket.

C
Ce
291
177

As already mentioned in Part I the woven »head-band» or frontlet also belongs to the dress of the Chiriguano and Chané-men. The frontlet is certainly a western culture-element.

Ee

Chiriguano and Chané shirts and ceremonial tipoys are of native make and are often dyed blue with indigo. The frontlets are blue or red. Chiriguano and Chané women wear a kind of hair-band with tassels which they most likely learned to make in the missions.

C
Ce
301

The back is somewhat concave enabling it to rest conveniently on the chin-bone. The front is round and flat and does not project beyond the lip. The metal is hollowed at the front and filled with wax, in which are fastened green or blue stones or glass beads of the same colours. In a grave at Caipipendi I found a tembeta of wood of the shape here described, in which a round piece of green glazed earthenware is inserted. For every-day use both the Chiriguano and Chané sometimes have lip-buttons of wood which are shaped like flat wooden cylinders. The Chané usually have smaller lip-buttons than the Chiriguano. Cardus[1]) mentions lip-buttons of resin among the latter Indians from the 18th century.

Ce
[195]

C
Ce
301
171

I make no attempt here to show on the map the distribution of lip-boring in S. America.[2]) As was mentioned, it is very considerable. The idea of inserting stones or beads fastened with wax in the tembeta is almost confined to the Chiriguano and Chané.

C
Ce
177
114

It might almost be suspected that they got this idea from the Whites, who now have an extensive manufacture of metal tembetas in order to sell to the Indians. This is not the case, however, for SCHMIDEL writes of the Karkhokhies (Gorocotoques)[3]) who dwelt in N. W. Chaco: — »Pero sus mujeres tienen un canutillo asegurado à los labios en el que meten ellas una piedra verde ó gris«. Of what material this »canutillo« was, we are not informed. In Chili[4]) a tembeta of stone has been found with a cavity in which possibly another stone or the like had been set.

C

Stained Teeth.

It was already related by VIEDMA[1]) that the Chiriguano stain their teeth. I have seen Chiriguano women in the Caipipendi valley stain their teeth a blackish blue with the leaves of a plant called «tajú». LASCH has made a study of the custom of staining the teeth among S. American Indians. He speaks of this custom from Cumaná, quoting GOMARA, according to which author the women stained their teeth at the death of their husbands.[2]) He further mentions that this custom prevails among the Miraña,[3]) the Piro,[4]) the Goajiro[5]) and the Arawaks[6]) in Guiana. To this I can, as shown by the map and table below, make several additions. 302 171 [Ks]

[1]) P. 181.

[2]) I have looked through all available editions of GOMARA in order to find this statement, but in vain. What I have been able to find about stained teeth in GOMARA P. 205—206 I give here. [104]

«Préciance de tener muy negros los dientes, y Ramas mujer al que los tiene blancos, como en Cariaua . . . . Hacen negros los dientes con zumo ó polvo de hojas de árbol, que llaman ahí los cuales . . . . . a los quince años, cuando comiençan á levantar la cresta toman estas yerbas en la boca, y traenlas hasta ennegrecer los dientes como el carbon; dura despues la negrura toda la vida.»

[6]) » MARTIUS (1). He writes. T. 1, P. 691, «Schwärzung der Zähne, die GOMARA, Cap. 73, von den alten Cumaneern angiebt soll hier auch vorgekommen sein.» This statement seems so vague, that I have not indicated it on the map. As far as I know it is not confirmed by other authors writing on the same Indians.

[531]

The Chiriguano, as well as the Chané at Rio Itiyuro, have elaborate pottery of richly varied shapes and often beautifully ornamented. The Chané at Rio Parapiti have plainer pottery. The development of the ceramic art in the various tribes I got to know has differed greatly. The Chima and the Tambopata-Guarayo who are pretty certainly identical with them, are the only Indians I visited who have no earthenware vessels. The pottery of some tribes is a work of art, while others only make the most necessary household utensils. This is not necessarily connected with the tribe's state of civilization generally. Thus in several respects the Yuracáre stand as high as the Chiriguano but the former have very poor pottery; the latter highly developed pottery. If such peoples were studied archaeologically, the former would yield hardly any remains while the latter would yield many beautiful specimens. Wrong conclusions might then be easily drawn as to the stage of civilization of the two tribes.

C
Ce
171
415
323

Below will be found indicated how many different types of earthen vessels are found among the tribes I visited. It will be seen that the Chiriguano and Chané (Rio Itiyuro) have by far the largest number of shapes of earthen vessels.[1]) This is simply due to their having experienced such

C
Ce
[114]
[126]

[1]) On entering a Chiriguano or a Chané hut, one sees a lot of earthen vessels of which the majority are unpainted. All the vessels of various shape and ornamentation which I have collected are from several hundred Chiriguano and Chané huts. It is a selection out of many thousand vessels which I have made and it shows how pottery varies within the tribes. In most Indian huts there will be found but a small number of different types. Unless we bear in mind that the collection is a selection, it leaves the impression that the pottery of these Indians is of much more varied shape than is really the case. What I remark here of my collection of pottery holds good of nearly all collections in ethnographical museums. When we see a cupboard full of various articles from an Indian tribe, we must not think that all these things are used by every family in the tribe. It is properly a collection of all the different objects used by a large number of individuals.

Chané at Rio Itiyuro. This may be owing to their poverty.[1]) Maize-beer does not flow so abundantly there as it does among the Chiriguano and the Chané at Rio Itiyuro. The finely painted vessels are intended for festivals, and it is especially on those occasions that one sees double pitchers and other types reminiscent of mountain-culture pottery. The Chané at Rio Parapiti dwell rather remotely, at a considerable distance from the culture-area in the west. Their calabashes, too, are more plainly ornamented than those of the Chiriguano and the other Chané. This may be due partly to poverty and partly to their isolated habitation.

---

[1]) I regret that I did not study the question of the supply in different places of good clay suitable, for earthenware. Where the clay has to be brought from afar, it is unlikely that the pottery will be highly developed.

113
114
128
102

To this bibliography several maps have been added which ought to prove useful from many points of view. *The maps indicate the territories concerning which the authors quoted in parts 1 and 2 made their investigations.*

The first map shows the literature from 1498—1600, the second from 1600—1700, the third from 1700—1800, the fourth from 1800—1900 and the fifth from 1900—1920. We find a separate map of the archæological literature. Several important works are unfortunately missing which I have not been able to study. It is difficult and expensive work to collect the literature on the S. American Indians. Not the least difficult of access are certain works printed in S. America during the 19th century. For my ethno-geographical studies I have of course read a number of books without finding anything to quote from them and consequently they are not mentioned here. I desired especially to show the merits and demerits of the maps of the distribution of the cultural elements here published. The maps of the authors' names show us the districts from which I have no material at all and those from which I only have the material of older authors, or only of modern writers.

Some authors have not travelled in the territories they have written about, but have drawn from the works of several other authors. The most remarkable existant work of this kind is COOPER's excellent work on all that has been written about the Indian tribes in southernmost S. America. If there were many such compilations, it would not be difficult to draw up maps of the distribution of the various cultural elements.

From the map that indicates about which districts the archeological treatises are written, we can see, even though

some names are missing, what immense territories in S. America are still entirely unexplored archeologically.

The bibliography includes some authors whose names will not be found in the maps, i. e. FRITZSCHE and PATER SCHMIDT, great as their services to the ethnography of S. America have been. This is because they have written comprehensive works dealing with the ethnography of the whole continent, and not with any particular part of it.

When I have quoted from several works by the same author, these are numbered 1, 2, 3, etc. in the bibliography. The same work has the same number in the First and Second Parts of my own book.

When I left the Chorotí and the Ashluslay at the end of July, 1908, I proceeded by way of Tacuiba to San Francisco on the /131/ Rio Pilcomayo. San Francisco was a mission station which the Franciscans had had among the Chiriguano, but which (Fig. 76 appears here) has now been abandoned. Not far from it live the Tapiete Indians, among whom I spent a week in August, 1908.

/132 cont./

earings with real "diamonds," rings with "sapphires," or other 123
fine things, which she could then show off at the next drinking bout. 439

There are always two villages in these mission stations, 437
one for the heathens, one for the Christians. I myself always felt 361
more comfortable in the former, and this not only because more 797
fine, old things were to be collected there, but also because the people there were friendlier, more tactful, and more polite in their behavior. The mission children were importunate and impudent.

Near Macharetí there is a large basin-shaped valley through 133
which flows a little brook that probably swells to a roaring river after a violent tropical rain and disappears in the wilderness of the Chaco. Quite near the mission it leaves the handsomely dissected [135]
mountain, where small petroleum springs trickle out everywhere in the crevices of the cliffs. Then it flows through a hilly landscape that gradually turns into the vast flat area of the Chaco. The vegetation in these regions is not very luxuriant. The woodland, when such is present, is sparse, low, shrubby, and monotonous. The fields seem to produce abundant harvests, the drought seldom too long. These regions are often devastated by huge 137
swarms of locusts. I have seen these destructive animals cover the 241
woodlands like large, reddish-brown clouds. 731
136

From Macharetí we went by way of Itatiqui, a very interesting 114
Chiriguano village in an arid region, to the Río Parapití.

The latter comes from Pomabamba and Sauces, from the 133
/133/ mountains of the Quichua /Quechua/ Indians. After it has left these, in the rainy season, it is a roaring stream overflowing its banks. In the dry season it carries little water. The Río Parapití also ends in the Chaco. During the rainy season it is lost in the swamps, in the dry season it disappears in the fine sand. If the Río Parapití parades on the maps, as the southernmost tributary of the Amazon River, this is only empty boasting on its part. The woodlands along the Río Parapití consist mostly of 137
bushes and low, fine-leaved trees, caraguata, and cacti.

/153 cont./

In the dry season the wind heaps large dunes along the banks of the river. After it has left the mountains, it does not receive a tributary. The Rio Parapiti is very wide, but never deep. During the driest period its bed is transformed into a sand desert where the wind plays with the fine river sand. When it storms, the sand is swept across the bottom of the river. If one wishes to cross it on such days, one may perhaps not get his feet wet, but he must shield his eyes. C 133 132

The Rio Parapiti is rich in fish, but the fish are tiny. The banks are quite fertile, but inasmuch as they are flooded during the rainy season, the harvests are easily lost. Often in the dry season everything is wasted by the scorching droughts. The locusts, too, hawk about in these regions and leave behind in their own unappetizing bodies a poor substitute for what they have destroyed. C 13

On the Rio Parapiti, high up in the mountains, live the Quichua Indians, then come the Chiriguano, beyond them, near the river, the Tapiete, also called Yanaygua, then the Chané, and finally, in the unknown wilderness, the Tsirakua Indians. C 101

My first visit on the Rio Parapiti was paid to Father Carmelo, who had a small mission station there among the Chiriguano. I became very fond of this monk; /154/ he had such confidence-inspiring friendliness. He is one of the missionaries who are needed here, people who desire and are able to sacrifice themselves for others, who show an equally great friendship toward all. C 114 797

I now continued along the Rio Parapiti to Isiporenda on the north bank of the river. The Tapiete live opposite Isiporendo. I shall later describe a visit that I made to them. C 114 T [31]

At Isiporenda I met the first Chané, or, as they are called here, Tapuy. I then visited most of their villages. I made the acquaintance especially of some of their storytellers, of whom Batirayu, the nephew of the last great chief, Aringui, became my good friend. Ce 114 [101] [538] [123]

From the lower Rio Parapiti I proceeded by way of Charagua, a village inhabited almost exclusively by whites, to the Caipipendi valley, where I stayed with the Chiriguano chief Taruiri. C 114

/154 cont./

One might be surprised that a person would want to live in this treeless valley, where one finds only salty, dirty water, but in the Caipipendi valley one need not drink water, for here the maize yields magnificent harvests and there is never a shortage of maize beer. The inhabitants of the Caipipendi valley are wealthy, and if there is famine in other regions, the Indians come from afar to these kinsmen, in order to barter their valuables for maize.

For the collector, too, it is a magnificent valley. We found silver ornaments, silver bowls, finely carved musical instruments, and many other rare articles in this ethnographer's paradise. Stone axes, ruins, diggings /Grabfelder/ of various peoples prove that the Caipipendi valley has long been highly prized by the Indians.

The water has cut deeply into this valley. In the rainy season it probably rains there too.

From Caipipendi I returned over the mountains, through a /155/ valley famous for its hot springs and its beauty, to Charagua, to continue then along the Andes in the direction of Santa Cruz de la Sierra.

It was October, 1908. Not quite a year later, in July, 1909, I again visited the Chaco, after extensive river journeys far beyond, on the border of Brazil. In another book I shall describe these journeys on large, navigable rivers and through virgin forests whose luxuriant green is overpowering.

From Santa Cruz de la Sierra I returned, as was said, to the Chaco in July, 1909. I then traveled first of all by way of the Rio Grande to the Rio Parapiti, chiefly to visit my friend Batirayu.

The Rio Grande is the southernmost tributary of the Amazon River. It comes from the highest mountains of the Andes and flows past Sucre, a city that has long contended with the city of La Paz for the rank of capital of Bolivia. When it emerges from the mountains, it is a roaring, mighty river. Farther down it has an extremely changeable, very little known course. North of Santa Cruz de la Sierra the Rio Grande receives the Rio

/157 cont./ One old woman who was supposed to know Chané very well said she would teach me after she had reached the realm of the dead. Since the Indians in this happy place are not bothered by whites, and not by ethnographers either, the promise of the old woman was not very friendly. Ce 124 197 123 Ce

The Chané use their old language for many expressions that are abusive, for example, karitimisóyti, which they translate as son of a w---e. An invitation to coitus is called pocóne. There are also songs in their /158/ old language, for example, siparakinánoyé, siparakinánoyé, siparakinánoyé, tonéya, tonéya, tonéya, which they did not know how to translate. 195 197 Ce [533] C

From the Rio Parapiti I again visited the Chiriguano chief Taruiri in the Caipipendi valley, where I sought to buy as many old ornaments and other valuables as possible. Besides Taruiri I also visited another chief, Yumbay, an old worthy who was always embracing me and saying: "I am Yumbay." /Fig. 77 appears here./ "Yes, the great, mighty Yumbay," I chimed in, which made the poor reduced fellow feel very flattered. 114 126 C [123]

From the Caipipendi valley I went by way of Pipi to the mission at Ivu. This lies in an arid, lonely region with little water, near several huge mountains, and the life there must be dreadful. When smallpox was very prevalent in the region, Father Bernardino successfully prevented the disease from spreading into the mission by vaccinating all the Indians living at the place. Father Bernardino is a truly unselfish human being, a genuine missionary. As a result of the vaccination, no one in Ivu died of smallpox, whereas the sinister disease raged frightfully among the whites a few miles from the station. It almost served them right. If anyone died of smallpox, the corpse was laid on a table decorated with paper flowers and a crucifix. Around this the other swine would get drunk and /159/ continue to drink obligos (1) until they were finally lying on the table. C 797 164 [114] [133] [312] C [964] C [273]

1. If a person drinks obligo with another, the latter must drink up. C [576]

/159 cont./
In the village of Cuevo alone 60 out of 200 persons died within 114
a short time. I visited the 140. They were as gay as ever. [64]
Spirits and beer were consumed in quantities. [65] [273]

Father Bernardino was never given credit for this work, but 797
rather the medicine men, who had bewitched the sickness so that 756
it would not come to Ivu. The white colonists, too, occasionally
had the medicine men come in order to /Fig. 78 appears here/ drive
away the sickness. They did not believe in the vaccine either.

With Ivu as the starting point, I made a trip into the 114

415
531

Fig. 77. Clay vessel made by the
wife of the Chiriguano chief Maringay.
1/6.

Igüembe valley, in order to visit the Chiriguano chief Maringay. 114
It was a charming ride on horseback up on the high crests and [133]
down into deep valleys, through an often grandiose, colorful
landscape. These valleys are poor in forests. Only in a well- [137]
protected ravine in which a brook trickles forth is the vegetation
luxuriant.

I soon became very good friends with old Maringay. The 123
old man was conservative, clung to the old customs, and felt 157
that the Indians should be on good terms with the whites, but 178
should preserve their old habits and customs unchanged. His 643
village was extraordinarily interesting and very rich in old, fine ~~000~~
things.

/159 cont./

things. The ceramics /160/ which I found there belong among 323
the very best that I saw among these Indians (Figs. 77 and 78).

From Maringay I returned to Ivu by way of the mission station 361
of Santa Rosa. It has a wonderful location. Like an old fortress, 797
it is built on a narrow hill. Below it, in long rows, lie the [114]
grayish-brown Chiriguano huts surrounded by low woods of [342]
Mimosaceae, cacti, small algorrobas, and other fine-leaved [137]
trees. This woodland is seldom so dense than one cannot easily
get out of it without a bush knife. When I was in Santa Rosa, 132

415
531

Fig. 78. Clay vessel made by the wife of the Chiriguano chief Maringay. 1/7.

it was the dry season and everything was burned up. Here too, 132
however, rain probably entices the green out of the dry earth.
Sometimes the rain is so long in coming, however, that the [731]
Indians do not get any maize and that means -- hunger.

From Santa Rosa one looks far out over the mountains and 133
across the great plain of Boyuovis, over the country that was 648
the native land of the Chiriguano, where, at Curuyuqui, they
fought their last battle with the Christians, who assume the
right to rob all weaker peoples.

After my excursion to Maringay I left the land of the 114
Chiriguano and Chané and paid my second visit, already
described in this book, to the Choroti and Ashluslay.

/161 cont./

In the wilderness of the Chaco there still lives a Chiriguano chief, Cayuhuari, in whose village no white man has been. It is said to lie on a big lake. Large herds of horses and cows graze there, and the maize granaries are always full. The Indians are rich there, because no whites are there. At least so it is said. 173 361

Cayuhuari, who has lived in the Chaco since the uprising in 1890, has an abducted white woman as a daughter-in-law. It is said that, with the Toba, he visited the sugar factories of northern Argentina. He had his daughter-in-law with him. The owners of the factory offered to rescue her from the Indians. "I do not want to leave them," she said. "With them I have my children." This answer honors her. 563

The manners and customs of the Chiriguano Indians have been described by several authors (4), mostly missionaries, /162/ 797 114

4. We find most of the literature cited by Domenico del Campana: "Notizie," etc., loc. cit. /"Notizie intorno ai Ciriguani (Notes on the Chiriguano)," Arch. per L'Anthr. e la Etn. Firenze, 1902. Page 61./ [113]

so that we know more about them than about the Choroti and the Ashluslay.

A part of what I have reported about these Indians is not new, though seen in a new light. Nevertheless, various things, especially concerning religion, differ from the descriptions of the various missionaries. What I have gathered here is from the Chané, and the missionaries know the Chiriguano best.

What I do not like in the various descriptions of the Indians by the missionaries is that they seem to be striving to paint their shortcomings in colors that are all too faint, so that their own "civilizing work" may seem as important as possible. The missionaries seem to me to be unable to describe the religion of the Indians objectively.

6: Nordenskiöld--15 E-5 (1908-1909) 1912 SF10 Chiriguano SF 10
S-Am. Indians 53

/162 cont./

C 1140 797

When I read how the missionaries describe their own conquest of the land of the Chiriguano Indians, it does not please me to hear only about the courage of the former and the brutality of the latter. I do not deny that the missionaries were brave, but I admire more the love of freedom and the courage of the Chiriguano Indians. If it became too difficult for the monks, soldiers almost always came to their aid. The Indians yielded to the missionaries not only as a result of the "religion of love," but as a result of bullet and lead. The path to the one soul-saving church was not infrequently soaked with blood.

/163/

Chapter Ten

From the Land of the Chané and Chiriguano Indians

Indians as Geographers

S 823

Is there a single habitable place on the South American continent which has not been discovered by the Indians?

I venture to answer "no" to this question. We find Indians on the highest peaks of the Andes, there are Indians in the dry scrub forests of the northern Chaco, Indians rove about in the deep virgin forests of eastern Bolivia, the inhospitable islands around Tierra del Fuego are inhabited by Indians, in former times many Indians lived on the pampas of Argentina.

What a vast period of time these people required to discover every brook, every pool, every cliff, every grove on the South American continent. For four hundred years the white man with all his resources has sought to explore South America, and yet much more than one usually believes is still unexplored. He is acquainted with all the large rivers and trade routes in the interior of South America, but there are still vast regions that the foot of a white man has never trod. The Indians know every cranny, or at least have known it.

/171 cont./ 000 C 648

on the Rio Parapiti make raids on the Tsirakua Indians. The Ashluslay also maintain, as my interpreter told me, that /172/ the Toba chief Taycolique, during his invasion of their territory in 1909, had several Chiriguano with him. Ce

Batirayu said that in former times the Chané brought home the heads of their slain enemies and set them up on the plazas of the villages during festivals. 727

Ce 415 531

Fig. 82. Clay vessel of the Chané. 1/4.
Rio Parapiti.

/173/ Chapter Eleven

From the Land of the Chané and Chiriguano Indians

Everyday Life in the Chané and Chiriguano Huts

Ee 361 184 114

As a rule, I felt very comfortable in the huts of the Chané and Chiriguano. The life in these villages is exactly the same. If one describes one village, he has described almost all of them.

Ee 364 [162]

Like all the other Indians whom I visited south of Santa Cruz de la Sierra in Bolivia, these Indians live in villages. Some of these villages are quite large and inhabited by several hundred persons. Often many villages lie close together. The huts, as a rule, lie around a market place on which sweetsop trees are occasionally planted for shelter in the rainy season. The market places serve as playgrounds and meeting places. The huts, in contrast to the round Choroti and Ashluslay huts, are square, and their doors, facing the village, are set in the gable. They are made of cane or wooden slats, with roofs of grass. Not infrequently they are plastered with earth.

Ee [137]

Ee 342

/208 cont./

Ce 551 untranslatable. Not infrequently a nickname is added to this name. Thus, for example, the Chané chief Boyra (Boy-snake) was called yúruhuasu, which means big-mouth. Indeed, old Boyra was a talker who had a great weakness for everything that was a bit indecent.

Ee 862 163 Ee 847 Mothers nurse for an unusually long time, and it is several years, as a rule, before they have another child. Perhaps the woman also aborts the fruit of her womb occasionally, like the Choroti woman, so that the family will not become too burdened.

E 163 In the mission station in Ivu I tried to gather statistics about the number of surviving children in 127 Chiriguano marriages and found that in ten marriages there were no children, in 27 one, in 35 two, in 29 three, in 13 four, in 9 five, and in 4 six. These figures, however, are quite uncertain. Nevertheless they show that here, as among many other Indian tribes, there is a sort of two-children system.

C 847 ●114 C [113] Corrado (2) maintains with certainty that infanticide occurs

2. Corrado: El Colegio Franciscano De Traija y sus misiones. Quaracci, 1884. Pages 526-527.

among the Chiriguano. It is done in desperate cases among us, too, and therefore the example cited by Corrado means nothing. C 847 The question is: does /209/ infanticide and abortion occur as an institution accepted by the tribe, as among the Choroti? /Fig. 110 appears here./

E Ee 868 857 The Chané and Chiriguano children, as has been mentioned, are brought up in freedom. They spend their childhood playing. Gradually the child begins to help its parents in small matters, for example, in carrying water and wood, tying up /210/ the domestic animals, fishing, etc. The girls learn spinning, weaving, making clay vessels, brewing maize beer, etc. from their mothers. They learn everything by imitation. The boys pursue small birds around the village and in this way learn the use of weapons. The children accompany their parents to fish and to till. The boy

C 165 /215 cont./
President Belzu in Sucre. The latter governed between 1848-1855; thus, 100-year-old Maringay is obviously not more than about 80. An 80-year-old Indian is therefore the oldest of his tribe.
C 145 Among the Indians one almost always sees /Fig. 112 appears here/ that the one who has grown-up grandchildren is very frail and senile and stands at the brink of the grave. Indian men and women mature very rapidly, but also age quickly. At 50 the Indian is an
[114] old man, at 70 a so-called centenarian. Im Thurn (1) likewise

1. Im Thurn, op. cit., p. 190.

believes that the Indians do not grow old. /216/ He thinks that they seldom reach an age older than 40 or 50.

C 142 Maringay's hair was slightly gray. There are some Indian men and women whose hair is almost whitish yellow, but they are rare (Fig. 112). I never saw a bald Indian. When they are older, [145] [164] their faces are deeply furrowed. Not infrequently they become blind in old age, less often deaf.

Ee 142 515 Among the Choroti and Ashluslay the appearance of old people is often frightening; they are dirty, emaciated, and bleary-eyed. This is not the case among the Chané and Chiriguano. These Indians know how to grow old in beauty, and even the old people keep themselves nice and clean.

Ee 756 If the Chané or Chiriguano Indian becomes seriously ill, the medicine man is sent for, as among other Indians.

The Chiriguano and Chané distinguish between two kinds of medicine men, whom they call "ipáye" or "ipáyepótchi." The Ee [754] former are good and lift the spell; the latter are able to lift the spell and to bewitch.

C 756 797 I once jokingly asked a Chiriguano whether Father Bernardino in Ivu was an "ipáye" or an "ipáyepótchi." The Indian answered dutifully, an "ipáye." The position of the missionary among the Indians is that of medicine man; he assumes their power and their influence.

C Ee 756 177 In the preceding I said that the whites in the vicinity of Ivu sent for an Indian medicine man to drive away smallpox.

c /293 cont./
539 South America. Since, however, this is not the proper place
171 for comparative studies with regard to the legends collected by me, I have contented myself with only presenting the material.

c 539 As we have seen, we learn to understand some of the religious conceptions of the Indians from the legends. They are also interesting from the viewpoint that a whole assortment of little features from the life of the Indians is reproduced. They give us a glimpse into their imaginative life.

c 539 Only the content of the legends collected by me, not
114 the form, is usable as research material. I hope that the
126 native South American ethnographers in particular will add to the collection made by me and also write down the legends in the original languages. In order to be able to do this, however, a complete /294/ mastery of them will be necessary. The best method would be to let the Indians tell these legends into a phonograph.

c
Ce
824 The Indians and Natural Phenomena.

Ce
[773] In one of the Chané legends the story is told of how
c Yahuéte, the two-headed jaguar, was on the point of de-
Ce vouring the moon. Maringay called Yahuéte "Yahuaróhui."
[776] These Indians explain eclipses of the sun and moon by saying
Ce that the sun and moon are attacked by Yahuéte. The Choroti,
[171] too, as has been mentioned, speak of a predatory animal that
[776] attacks the sun and the moon.

If one wanders with an Indian through forest and meadow on a starlit night, the starry sky is his compass and his watch. He will point to Orion or some other constellation and show how much farther it will move before one arrives.

Ce
824 He does not give names to many constellations, but he knows them all. The Chané call the part of the Milky Way nearest the Southern Cross "yándurape," that is, ostrich-way; the Southern Cross, along with a few adjacent stars, is

CHAPTER VII.

The Chiriguano (I).

Ethnographical research among the Chiriguano. The Chiriguano country. The tribal name. Physical qualities. Dwellings. Pile-built granaries. Theories as to the origin of the practice of erecting buildings on piles. Fireplaces. Household furniture. Dress. Modes of dressing the hair. Face-painting. Ornaments.

During our journey from Tarija to Gran Chaco we came into touch with the Chiriguano Indians, and on the march, as well as during our stay in the Chaco-Andean border region, I was successful in getting together a small but valuable ethnographical collection from these Indians. It is in connection with the publishing of the most important type specimens of this collection that I consider it suitable to give a brief description of the Chiriguano mode of living. Only in one or two cases, where I have arrived at results diverging from those of other students, have I found it necessary to enter into fuller details.

Mention of the Chiriguano tribe has, already in the 15th and 16th centuries, been made by a number of writers, and it is especially in Franciscan mission literature, earlier as well as later, that much valuable information may be found as regards this tribe.[1] Among the literature on the Chiriguano that had been produced prior to our journey, it may be that the books written by Corrado[2] and Serrano[3] are those that best repay perusal, and of works subsequently published, those by del Campana[4], Lehmann-Nitsche[5], Outes[6], Nino[7] and Nordenskiöld[8] are especially valuable.

[1] A very full list of works dealing with the Chiriguano is to be found in Nordenskiöld (11) and (12).

[P. 190 is blank]

142 To me, the Chiriguano seemed to be of better physique than both the Puna and the Chaco Indians, and their cast of features, as a rule, to be less rough-hewn than those of the above-mentioned tribes. Herma ten [141] Kate has taken anthropological measurements of four Chiriguano men, [127] whose average height was determined at 160.1 cm.[1] Lehmann-Nitsche, who has made anthropological observations of 50 Chiriguano (40 men and 10 women), is my authority for the data I have grouped together in the subjoined table.[2]

The Chiriguano; some physical data.

Sex	Average height, cm	Shape of skull	Colour of skin, Luschan's scale	Colour of hair, Fischer's scale	Iris, by Martin's scale
Men.....	163.4	Dolichocephalic — mesocephalic	Majority 22	Majority 4	Majority 3—4
Women.....	151.7	Dolichocephalic — mesocephalic	Majority 18	Majority 4	Majority 3—4

142 The Chiriguano complexion is, accordingly, brown with a tint of yellow; the iris is dark brown, the hair black, coarse and lank. The growth of hair on face and body is very scanty.

361 The Chiriguano are not a nomadic people, but live in permanent villages, some of which are the abode of only a few families, whilst others contain [114] several hundreds of inhabitants. At Ibitibi I was studying a Chiriguano village that, according to the Indians, was inhabited by about 300 people. This village was situated on a plain surrounded by wooded mountains (fig. 188). The huts formed a large circle, with the chief's hut in the centre. In the open space between the chief's hut and the rest, there were growing some close-foliaged trees (probably of the Bignoniaceæ [574] family), affording much-needed shade. In earlier literature it is stated that the Chiriguano used to build a hut for strangers in the middle of the [609] village plaza.[3] In many of the Chiriguano villages I visited, the huts were scattered about without any perceivable order.

342 The huts are rectangular and with ridged roofs. (Figs. 188—192.) The walls either consist of perpendicular sticks, of tree-branches or reeds,

[1] Ten Kate (1), p. 26.
[2] Lehmann-Nitsche (1).
[3] Nordenskiöld (12), p. 2.

174 342 or a district threatened with flooding through rainfall or the flowing in [114] of the oceanic tide. In my opinion, however, this has usually not been the case.

342 343 According to my thinking, it is the fear of predatory animals that has given rise to the pile-construction idea. Those granaries built on pole-825 supports, that are so commonly met with in widely different countries, 174 have, we know, as a rule been constructed for the express purpose of furnishing protection against noxious animals, such as lesser carnivora, [171] rodents and insects. As an example, the »njalla» of the Lapps is built

361 342 343

Fig. 192. Part of a Chiriguano village. To the right a pile-barn. Ibitibi. Bolivia. Photo. E. v. R.

342 as a protection against wolverines[1], and many of the native tribes of 343 Africa erect their food depositories, or grain bins, on pole-supports to 825 make them safe against mice and white ants.[2] Both the Balenge people, 171 who inhabit a fairly arid country, and the Babisa, who live on the edge 174 of the Bangweolo swamp, build their corn bins on piles.[3] As the Babisa often build their huts on a platform of beaten clay[4] (not piles, it will be noted) as a protection against the annual heavy floodings of the rainy season, this will naturally give rise to the supposition that the Babisa

[P. 196 is blank]

experiment carried out at Rockelstad in the summer of 1919[1], the »stone-age men» soon found themselves compelled to build a »lave» so that the goats should not damage such foodstuffs and implements as had to be kept outside the hut.[2] 342 343 825 171

It is my belief that the »lave» has also supplied the idea of building dwelling-houses on pole-supports. Wherever people in a certain stage of civilization have found themselves settled on solid ground, they have had need of raised food-platforms, partly for keeping their foodstuffs safe from damage on the part of domestic as well as noxious animals, partly for the purpose of drying, smoking or roasting the food (see pp. 38, 47 and 48). If such a people, living on the edge of a lake or a swamp, had wished — for defensive purposes or some other reason — to build their dwelling-huts or other buildings in the water, then, if the bottom of the lake afforded good holding for piles, such buildings would have been constructed in the same way as the food-platforms or pole-supported granaries previously employed on firm ground (compare fig. 28 with fig. 115). Where the people in question has been lacking in sufficient skill to construct large pile-buildings in the water, or if the lake bottom was unsuited to this mode of construction, then huts were built on rafts or quagmire islands, after the manner of the swamp dwellers of Alvastra and Bangweolo.[3] 174

The furnishing of the Chiriguano huts is exceedingly plain. The fire-place, which forms a very necessary heating centre at night during the cold season, consists of a few stones serving as supports for the cooking pots. There is no hole in the roof for letting out the smoke, which has to find its way out through the doorway or through fissures in the walls. As a rule, the food is generally cooked on a fire outside the hut (fig. 189). 354 [252]

Bedsteads of the type seen in fig. 190 are to be found in nearly every hut. These bed frames are made of laths or reeds, and are covered with skins. Nordenskiöld states as his opinion that the idea of these bedsteads has not been borrowed from the civilization of the whites.[4] In the analytical treatise he has written upon this question he adduces conclusive arguments for his opinion, as it seems to me. In Central Africa, one finds bedsteads that are very similar to the Indian ones,[5] and that certainly have not 352 114 [171]

352 [114] been imitated from the Europeans. The Chiriguano also sleep in hammocks [171] made of cotton yarn, and on reed mats and skins spread on the ground. [513] Stools for sitting on I have not observed among the Chiriguano. They do, however, possess such articles of furniture,[1] which, however, must be of 353 considerable rarity. Along the walls of the hut will be seen an orderly 415 array of cooking and roasting pots, water pitchers, and pots for maize [531] beer, arranged in rows, often of exceedingly beautiful shape and with painted decoration (figs. 217—225). From wooden hooks in the roof are hanging bunches of maize cobs, pumpkins or other foodstuffs; arrows, bows, and other gear. From the roof there are also suspended clay bowls (figs. 224 and 225), used as repositories for smaller articles of value. Clothing, ornaments, and such like, are also stored in large clay jars placed on the ground. As bowls there are also used the scaly skin of armadillos, and calabashes (fig. 226).

[352] [291] [302] [411] [415] [237] [824] 354

Fig. 194. Man and young woman. Chiriguano. San Luis, Bolivia. Photo. E. v. R.

Outside every hut there is, as I mentioned, a fireplace which is generally used for cooking the food, unless the weather makes this im- 356 possible. The huts, as well as the open spaces between them, are kept particularly neat and clean. They are swept every day, and the sweepings are burnt. The huts are practically always free from vermin.

291 The Chiriguano m . nowadays generally wear shirt and trousers of [177] European cut (fig. 194). The poncho shirt is, however, still to be met with among this tribe[2], but only very rarely, and I have never personally

Longbows. Chiriguano. Bolivia. About 1/1.

On the left wrist they wore a small piece of wood as a protection against the blow of the bowstring.[1]

Curiously enough, the present-day Chiriguano type of bow does not seem to have been exhaustively described by anyone; not even in Schmidt's account of South American bow types,[2] otherwise so exact, is there any mention of the Chiriguano bow. The reason for this may very likely be found in the circumstance that these weapons are said to be of rare occurrence nowadays, and that such few specimens as are still being made, are mostly used as toys and on that account typologically degenerated. Twenty years ago, when I travelled through a part of the Chiriguano country, the bow was, however, not so rarely seen as a hunting weapon as now, and I collected the seven specimens now reposing in the ethnographical section of the Riksmuseum at Stockholm. Beside these, there are two Chiriguano bows brought home by Baron Nordenskiöld, one of which is a toy bow. Two other toy bows that have been brought to Sweden by Nordenskiöld belong to the Gothenburg Museum. This forms the material from which I have compiled the following description of the Chiriguano type of bow.

By their string-fastening arrangement the Chiriguano bows differ from the Chaco-Andean bow types, which latter as a rule have no neck-shaped bow-end projections for the string. On the other hand, all Chiriguano bows that I have studied, even the toy bows, have neck-shaped ends for fastening the string, a circumstance indicating that the Chiriguano bow is no acquisition from Chaco-

411
[226] two barbed prongs made of some hard wood (figs. 213 and 214). The arrow in fig. 210, which has only one prong, is used both in hunting and
[824] for fish-shooting. The Chiriguano also use fish arrows pointed with a number of cactus spines.[1]

The fish spear has in later times become a very scarce implement with the Chiriguano. The only specimen obtained, as far as I know, is the one brought home by me, and now belonging to the Rikamuseum in Stockholm (figs. 215 and 216). Erland Nordenskiöld, who has compiled
[114] a map of the distribution of the fish spear in South America, has been kind enough to inform me that the only mention he has come across in the literature, concerning its occurrence among the Chiriguano, is to be found in the account of the Viceroy Francisco de Toledo's unsuccessful expedition against these Indians.[2]

The fish spear I came upon among the Chiriguano in the neighbourhood of San Luis, has a 260 cm long shaft, made of some light kind of wood, very free from knots,[3] at one end of which two barbed wooden prongs are lashed on by means of a thin leather thong. The full lengths of the prongs are, respectively, 32.1 and 31.5 cm, and they project 20.0 cm from the shaft. One of the points has, however, been of a somewhat greater length, but has got blunted off. Both points have seven barbs on their outer sides. To ensure a perfectly firm fastening of the prongs, the fore end of the shaft has been wrapped with a piece of cloth, and over this the prongs have been lashed on.

323
I have already enumerated the various kinds of Chiriguano household
[462] furniture. Among them, clay vessels hold a very important place. The Chiriguano are clever potters. It is only the women, though, who work at this industry.

In fig. 217 we see a potter's workshop, with a number of finished and unfinished pieces of earthenware. At the hut entrance is sitting a woman, who, with a piece of stick, is giving a finish to a large pot, which has been built up of rolls of clay, and is still unburnt.

[126] In figs. 218—225 I have reproduced some typical Chiriguano clay vessels that I collected at Aguayrenda. These vessels are particularly well made. The peculiar rim warts seen on the hanging vessel in fig. 225,

---

[2] Acosta (I), Part I, Chap. XV.
[3] Unfortunately, during its transportation home, the handle was, unknown to me, cut into two parts.

[P 216 is blank]

323 counterparts of which are found on many ancient Peruvian clay vessels, have been more fully described by me in »En frågagen värld».[1] The cord, by which this vessel was suspended passed round the edge, and then upwards, between the points of the rim warts. At each wart a hole has been pierced through the rim of the vessel, but these perforations are so very small that they cannot very well have been used for fixing any string by which to hang up the vessel.

Besides the clay pots here reproduced — often graceful of shape and beautifully painted — there are also plain, unpainted clay vessels for cooking and other kitchen purposes. Chiriguano ceramics are of an exceedingly great variety as to form, and many of the shapes are identical with those of clay vessels found in ancient Indian graves and in the ground of ancient dwelling-sites in those regions of the Andes that border on the present Chiriguano country.

824 Next to clay vessels, bottles and bowls made of calabash may be said
415 to predominate among the household furniture of the Chiriguano. The bowls are often provided with pokerwork ornament (fig. 216).

273 On festivals — and also usually, though not always — the Chiriguano drink an intoxicating liquor (»chicha», in Chiriguano: »cangui»), which they prepare from maize. In
[415] large wooden mortars the maize is
[531] pounded to flour, which is poured into large clay vessels filled with water. This mixture is made to boil, and when it has cooled down, lumps of chewed maize dough are put into it to produce fermentation. These masticated mouthfuls of maize are usually allowed to dry in the sun, before use, and are then frequently spread on a
[114] bedstead (fig. 190). This method of preparing maize beer naturally

273
(114) sentiment one as particularly disgusting, and therefore, after I had got to know how the brew was made, I could never again bring myself to drink this beverage, which in itself is rather palatable. As I have already mentioned, an intoxicating liquor is also made from the fruit of the algarrobo tree. The beer made by the Chiriguano is very highly prized by them. But, on the other hand, it does not appear that tobacco is used

171

using whistles of this type.[1] Nordenskiöld has advanced a theory as to the origin of the Sorice whistle, which is highly interesting. On the ground of the similarity of construction that this type of whistle has to a balance beam shown in fig. 119, with its cords for weights and load still in preservation, found in Peru, Nordenskiöld is of the opinion that the Sorice whistle is probably the beam of a balance, but that its original use has been forgotten.[2] By blowing, in play, into one end of such a balance beam, a tone was produced. This way of whistle-blowing gradually became widespread and popular, and, eventually, whistles were manufactured that were of a construction similar to that of the balance beams of the ancients. More and more the balances ceased to be used as such, and finally it was altogether forgotten that the whistle had been made as a copy of the balance beam.

534
171
174
114

On my first acquaintance with this theory of the Sorice whistle having originated from the balance beam, it seemed to me so well grounded that I accepted it.[3] But afterwards I quite changed my opinion in this question, for reasons set out below. The ancient Peruvian balance referred to by Nordenskiöld is undoubtedly of a very unpractical construction. Like the Sorice whistle, the balance beam is *bored through from end to end*, and provided with *two holes, close together, for its suspension*. Even if in rough and primitive weighing there may occasionally be a certain advantage (a saving of time) in using a balance that is not too sensitive, suspending a balance from two

174
114

points of support, in the way shown in fig. 229, is unsuitable, as it would enable the holder of the balance to influence, with an imperceptible movement of his hand, the balancing of the beam. Another point which strikes me as peculiar, is, that the string by which weights and objects for weighing are suspended, should be made to pass through a hole that runs the whole length of the longitudinal axis of the beam. A perforation of such a length obviously represents a good deal of labour, which, moreover, in the case of a balance beam, would be quite unnecessary. Surely the simpler plan would have been to fix a string through a small hole at each end of the beam.

Fig. 230. Ancient Peruvian wooden whistle(?). 1/4. From Nordenskiöld. One end of the tube has been stopped up, possibly on account of the whistle having been found too hard-blown with both ends open. All other known Old Peruvian objects of this type have *both ends open.*

The above were my reasons for beginning to form the opinion that the Old Peruvian balance, fig. 229, had been rigged up to do duty as a makeshift. A proper balance not being at hand, a tubular whistle, fig. 230, was pressed into service. In this way the ancient Peruvian balance, fig. 229, would — if my theory is correct — simply prove to be *a whistle that had been provisionally fixed up as a weighing instrument.*

Fig. 231. Old Peruvian scale. From Hamy.

It is not impossible that this way of hastily improvising a balance — rather a dull one, admittedly, but usable for *rough weighing* — was not infrequently employed. When I acquainted Nordenskiöld with my theory as to the constructional purpose of the balance reproduced in fig. 229, he had the great kindness to send me all reproductions of Old Peruvian balances that were in his possession. Three of these retain the cord by which the beam was suspended (the poising cord), and *in these three, this cord is fixed through a hole in the centre of the beam,* fig. 231. Two of the balances are provided with cords on which to hang the weights and the objects to be weighed. *These cords are not taken through the full length of the balance beam, but attached to it by means of holes bored*

in each of the lower corners of the beam ends, fig. 231. From the illustrations representing the rest of the Old Peruvian balances it cannot be seen in what way the poising and weight cords were fixed. The balances in question have, however, been published in Hamy's grand work, Galerie américaine, and from that work I have therefore endeavoured to gain information concerning this matter. There is only one balance, one without weight cords, that has been given a detailed description, and regarding this, it is stated that the beam, at its centre, has *a vertical perforation* (for the poising cord), and that the lower corners of the beam ends are each pierced with a slanting hole (»les angles inférieurs sont aussi perforés mais obliquement»).[1] If one or more of the balances reproduced had been of a different construction in this detail, the fact would no doubt have been noted in the text.[2] From what I have adduced above, it therefore follows that the illustrative material, which Nordenskiöld so chivalrously submitted for my criticism of his theory, most essentially enhances the probability of my opinion that the unhandy Old Peruvian weighing apparatus shown in fig. 229, is an improvisation of a whistle which, as I aimed at proving in a separate monograph, belongs to a type of open whistles which is widely distributed over the American continent.[3]

As mentioned, the Chiriguano live in villages, and it is only exceptionally that one comes across isolated huts. Each village is under the authority of a headman, or chief.

Both sexes marry at an early age. Monogamy is the rule, but well-to-do men, and chiefs, may be found who have several wives. When a girl menstruates for the first time, her hair is cut short (fig. 194), and she is kept shut up in a hut until her hair has grown long again, after which she is considered marriageable. When a boy attains to puberty, a hole is made through his lower lip, and a wooden plug is put into the hole. Subsequently this is exchanged for a bead-studded »tembeta» (figs. 194 and 197). Marriages are celebrated by feasting, when large quantities of maize beer are consumed. The women pass through childbirth easily, and therefore do not require many days of nursing after the child has

C
114 In addition to my ethnological studies and preparations for the coming journey, I attended to the commission of the Paraguayan Red Cross to deliver clothing, goods, and wool among the Izozó Indians, who at the time were in great need. Provided by the Chaco Command at the fort of López de Filippis with two trucks, drivers and helpers, and the necessary provisions, I continued my journey on August 26, heading toward the Pilcomayo River. Beyond Corrales we met the first Indians: they were the Churupí /Chulupi/. In Moreno too, which we reached in the afternoon, almost at nightfall, there were some Churupí who had moved from Muños to this place.

[126] On August 27 I arrived at the mission of the Oblates of Immaculate Mary near the fort of Esteros, where these fathers received me in the most friendly manner and provided their most extensive assistance to my studies of the Churupí Indians who were domiciled in or near the mission. They gave me a large ethnological collection of objects of the Churupí Indians, which they presented to the Museo de Historia y Etnographia of The Sociedad Cientifica del Paraguay.

A 25 kilometers from the mission at Esteros, I continued my
M 114 journey on September 5 as far as Linares, where I found a num-
M ber of Mataco Indians, who in part lived in a town some seven
[361] kilometers from Linares and in part had come from the other side of the Pilcomayo River to Linares.

C /2/ On September 9 I left Linares and on the next day
A 114 arrived in Guachalla, from where I visited the Churupí camp
A /tolderia/ about seven kilometers away.
[361] On September 11 I left Guachalla for the fort of Cururenda,
C where I had the occasion to see the Chorote /Choroti/ Indians,
CI 114 who were living in a camp some three kilometers from
CI Cururenda, as well as some Toba and Mataco, who came
[361] from the other side of the Pilcomayo to Cururenda.

C On September 15 I continued my journey as far as Oruro,
T 114 in the environs of which I visited the Tapieté. My escort,
T Lieutenant Cabello, who knew these Indians well, took me to
[361] their two camps, one of which is 15 and the other 32 kilometers from Oruro.

C On September 19 I left Oruro, and passing through
114 Capirendá and Carandayty, in the company of Lieutenant
Díego Corvalan, I arrived in Machareti, where I remained
from September 21-25. Since Machareti is a Chiriguano
town, I had a good chance at this place and at the end of my
journey, to observe this interesting Indian tribe.

Beginning my return on September 25, I passed in succession through Capirendá, Carandayty, López de Filippis, and
C Puerto Casado, arriving in Asunción on October 8.

[122] Thanks to the great help of the military authorities, it was possible for me to pass through large areas of the Paraguayan Chaco during the relatively short time of two months, to get acquainted with a large number of native tribes of the Chaco, to take photographs of these tribes, and to make up vocabularies
000 of their different languages. Outside of the Toba, whom I met

C 114 /2 cont./ outside of the Toba, whom I met only in passing, I got to know on this journey the Chiriguano and the Izozó, who, like the former, speak a dialect of the Guaraní language; the Tapieté, Churupí, Mataco, and Chorote. All of these Indian tribes are not unknown in ethnological literature. On Chiriguano history we are oriented through old documents from even the first years of the Spanish conquest, and we owe to the Franciscan missionaries, who have taught among them for a long time, quite important ethnological publications. The Churupí have been studied minutely under the name Ashluslay by Erland Nordenskiöld, and the Oblates of Immaculate Mary in Esteros and Lake Escalante are striving intensively to make ethnological investigations. I have proposed to deal with all of these tribes systematically. This survey will be made on the basis of the results of my journey, and I begin in this first publication with the Chiriguano and Izozó.

General Information

C Ce 114 361

As I said in the introduction to this work, I first met the Chiriguano in Machareti and the Izozó in the area around the fort of Toledo and in the fort "15 de Agosto," several kilometers from the former two.

C 361 [632] [797]

Figure 1[1] presents a view of Machareti, a Chiriguano town created in its present form by the Franciscan mission. When the Paraguayan army retook Machareti, it had already been abandoned by the Padres, and now a Chiriguano, in the role of commissioner /comisario/, is the chief of the town, there also being a few caciques. The houses, more or less in the form of modern ranchos (cf. Figs. 14 and 15 /see p.40 /), are on both sides of wide streets which run parallel and at right angles, as in most of the towns of the former Spanish colonies. When I was present in Machareti, there was great need /3/ among these Indians because of the severe drought which had ruined their plantings, which were some distance from the town. At the side of the ranchos are often found deposits which were structures of native houses built on sticks. Although

C [342] [363] C [731] C [342] 000

C 144 [177]

Chiriguano and Chané no longer exist. "The physiognomy of the latter was completely identical to that of the former" (45).

45. Moreno II, p. 254.

C 114 141 C [113]

In addition to anthropological measurements made on four Chiriguano by Ten Kate (46), Robert Lehmann-Nitsche

46. Ten Kate. Herm.: "Matériaux pour servir à l'antropologie des indiens de la République Argentine /Materials for use for the anthropology of the Indians of the Argentine Republic/." Revista del Museo de la Plata. Vol. 12. La Plata. 1904.

in 1906 had the opportunity at the San Pedro de Jujui sugar mill to take the anthropological measurements of 40 Chiriguano men and ten women, who had come from Bolivia to work at that mill. Entitled "Estudios antropológicos sobre los Chiriguanos, /Pl. III-IV appear here/ /13/ Chorotes, Matacos, y Tobas (Chaco Occidental)" (47), Lehmann-Nitsche has

C [113]

47. Anales del Museo de La Plata, Vol. I, No. 2, (Second Series). Buenos Aires, 1908.

published the results of these measurements, together with measurements of other Indians, and added to that publication in the first 12 plates Chiriguano types photographed by Carlos Bruch. In addition to the somatic measurements, determination of skin color, eye color, and hair color and form have been published by Lehmann-Nitsche. Thirty-six of the 40 Chiriguano men stated where they had lived, and from this we know that these people had come from various regions of Chiriguano territory to the San Pedro sugar mill. There were some who had come from the northern regions, and one had come from the city of Santa Cruz de la Sierra. Others had come from the south of Chiriguano territory, for example, from the town of Carapati, located considerably to the south of the Pilcomayo River. There are named 13 Chiriguano

C 166

C [167]

[Text Continues on P. 30]

/13 cont./

166 towns from which one man had come from each one. From Charagua, Parapití, and Carapati two had come from each one, four from Ingre, five from Santa Rosa, and eight from Machareti. Unfortunately, the native soil of the Chiriguano women was not stated, and it is only said that they came from Bolivia.

141 The average height of the Chiriguano men measured by Lehmann-Nitsche is 163.4 cm., and the height of the Chiriguano women measured is 151.7 cm. This average height of the women measured is not a little less. The average height of the eight men from Machareti was only 161.8 cm., and that of the two men from Parapití only 158.1 cm. But the average height of the four men from Ingre was 169.15 cm. The tallest of the Chiriguano men measured, who had a height of 178.6 cm., had come from Ingre, and the shortest, with a height of 153.5 cm., from Machareti. The smallest woman (between 35 and 40 years old) was only 143.0 cm., and the tallest, 158.0 cm. These numbers show us that the height of different Chiriguano individuals is quite variable. Among the Chiriguano measured by Lehmann-Nitsche, the number of those who came from the same region is too small to be able to make exact deductions about the differences in height of the Chiriguano of the various regions in order to be able to clearly demonstrate the somatic influence of mixture with other tribes.

14 The photographs of Chiriguano types published by Lehmann-Nitsche show great variations among the different features and bodies, which corresponds to the fact that the present-day Chiriguano are the product of a mixture of various ethnic elements.

113 114 142 Good photographs of the Chiriguano of the southern part of their territory can be found in the publication of von Rosen, Ethnographical Research Work during the Swedish Chaco-Cordillera Expedition, 1901-1902 (48). Erland von Nordenskiöld

48. Stockholm. 1924.

113 /13 cont./
114 has published Chiriguano and Chané types (49).

49. Erland Nordenskiöld: Forskningar och äventyr i Sydamerica /Inquiry and Adventure in South America/. Stockholm, 1915. Ills. 14-16; 20 and 31. Nord. I. Figs. 75, 76, 79, 87, 106, 110, 111, 112, 116, 132, and Pl. 18-2 /the second figure of this number in the twenties is illegible/.

The Territory of the Chiriguano

C 131 Concerning the location and extent of the territory of the Chiriguano at the time of their independence, that is, from the beginning of the 16th century to the second half of the 19th century, we have Moreno's detailed studies in two places in his work already cited many times above, the titles of which are: "Las tierras de los Chiriguanos /The lands of C [101] the Chiriguano/" (50). According to Moreno (51), the

50. Moreno II, pp. 79-126 and pp. 235-254.

51. Moreno II, p. 236.

Chiriguano--Chiriguano /14/ of the Cordillera in contrast to the Itatines-Guarayus and the Piritaguaris also often called Chiriguano in the literature -- from the time of the Conquest until they lost their independence inhabited the same territory, that is, the western spurs of the Andes from south of the Pilcomayo up to the lands which extend on both sides of the Ce 13 Guapay. The Chané, who formerly had a large well-populated [648] territory, "although they formed several partial migrations, remained in great number subject to the conquering Guaraní within the region which these latter had converted into their impregnable abode" (52). In 1883 Father Alejandro Corrado

52. Moreno II, p. 249.

/14 cont./

Ce 131 still writes that the Chané were found scattered among the Chiriguano located among the last spurs of the Andes (53).

53. Moreno II, p. 254.

C 131 [114] Even after losing their independence, the Chiriguano inhabited more or less the same territory. Having known personally only Machareti out of the territory of the Chiriguano, I here refer to the data of Erland Nordenskiöld, who came to know them in the years 1908, 1909, and 1913 and personally traveled through most of this territory, spending up to four to five months altogether in the study of the Chiriguano and the Chané (54).

54. Nord. 2, p. XII.

According to Nordenskiöld (55), the territory of the

55. Nord. 2, pp. XIV and XV. Cf. Métraux I, pp. 332 and 333.

Chiriguano extends from the region near Santa Cruz de la Sierra in the north to near the Bermejo River in the south. Now the Rio Grande can almost be taken as the northern limit of their territory. This is the land located between the boundary C Ce 131 of the Andes and the great plain of the Chaco, in the valleys of which the Chiriguano, and in part the Chané live. It can be said that this territory is inhabited wherever there is the necessary water, although it may be no more than enough for and their domestic animals to drink. The Chiriguano inhabit that territory contiguously, while the Chané today live in territories separated from one another. Thus some of them are on the Itiyuro River in Argentina, some are in Caipipendi, some on the lower Parapití River, and others near Itaú, south of the Pilcomayo River. Outside of the territory of the Chiriguano C 131 which has thus been circumscribed, a few Chiriguano now live [167] in the Santa Rosa Valley north of Santa Cruz de la Sierra, and a few fled to the Chaco after the last broken revolt in 1890, without our having any information on their stopping place.

C
Ce
291

/33/ One special feature of these tipoys of the Chané-Izozó and also of the Chiriguano in comparison with all the tipoys that we know from other tribes is their great size, and we can doubt that these tipoys were so large in past times.

Ce
[114]

The indication by Viedma (144) that the Chiriguano women

144. Viedma, op. cit., p. 134. According to Nordenskiöld.

wore only a piece of cloth around their hips implies the opposite answer. I shall concern myself with the manufacture and the decoration in the chapters on the technique of weaving and art.

C 301 [126] /33 cont./

Ring (moãkaregua) in the Collection

I.A. 1321. (Chiriguano.) Gift of Father Ayala Solis. Diam. 2cm.

Finally I shall mention here a ring obtained by Father Ayala Solis from the Chiriguano and donated by him to the Museo de Historia y Etnografía del Paraguay. The ring was made of metal from a cartridge shell.

Ce 291 The cacique of the Izozó shown in Figure 12 wears sandals (Chir.: mbipása. Izozó: pãapá). Generally the men and women go around barefoot. But both sexes use sandals if they are to walk on stony or thorny ground (146).

146. Nord. 1, p. 203. Nord. 2, p. 69, Fig. 23. V. Rosen, op. cit., p. 207.

C 291 17 The region of distribution of the sandal in South America leads us to assume that the Chiriguano did not first receive this item from the whites, but earlier, and that it came from the culture of the ancient Peruvians (147).

147. Cf. Nord. 2, p. 69.

Treatment of Illnesses and Burial

Ce 743 Ce [114] C [114] C Ce 756 171 In the Indian settlement in Toledo there was arranged a small hospital in which the sick Izozó were receiving medical treatment. For that reason I did not have the chance to make investigations among them about the native treatment of the illnesses of these Indians. Nor did I have the chance to make such investigations in Machareti. Therefore, I refer to the investigations /34/ Nordenskiöld and Métraux made on this subject (148), and I wish only to

148. Nord. 1, pp. 216 and 217. Métraux 1, pp. 480-488.

mention here that among the Chiriguano and Chané, as among

/38 cont./

Because the ancient Peruvians raised various breeds of dogs, we can assume that the Chiriguano received the dog as a domestic animal from the ancient Peruvians. We can assume the same with regard to the duck, which was also raised by the ancient Peruvians. Therefore I do not include the duck among the domestic animals that these Indians received from the whites, as Nordenskiöld does. We do not know whether the Chiriguano in times past might have raised the llama. From the fact that guanacos exist in the territory located between the Parapití and the Rio Grande, we can deduce that the raising of that other species of Euchenia might have been possible in that country.

The Chiriguano very early received such European domestic animals as the horse, the ass, the cow, sheep, goats, hogs, and chickens, which they captured in great quantities in their continual raids on the Spanish settlers. In 16th century documents there are repeated complaints about the extensive stealing of livestock by these Indians. Today the Chiriguano and Chané do not have many horses, and they have never had the /39/ pronounced character of a nation of horsemen. The true weapons of war were formerly a long bow and arrows which were also long, which cannot be used by a mounted horseman, in addition to which their homes were formerly in the hills in regions which the Spaniards could not enter on horseback. In certain parts of their territory the raising of cattle has some importance (181). More general is the raising of sheep, pigs,

181. See Métraux I, p. 340.

and chickens. Today one sometimes also finds among them guinea hens and turkeys (182).

Ceramics

C
Ce
445
114

The great development of ceramics among the Chiriguano and Chané, the very great variety of forms of their diverse vessels and their ornamentation have long excited the interest of ethnologists. Nordenskiöld, who gives the number of variations in the forms of the vessels of these Indians as more than 50, has published a great many of them in outline and also presents the ornamentation of many of them in sketches (218). Eric v. Rosen has also shown numerous

218. Nord. 1, Figs. 77; 78; 82; 92; 113; 117; 121, and Plate 19. Nord. 2, Figs. 38-48.

C
415
114

/46 cont./ Eric V. Rosen has also shown numerous Chiriguano vessels in drawings in his work already cited (219).

219. V. Rosen. Figs. 218-225.

Métraux describes and shows by drawings a great number of Chiriguano baked clay vessels (220).

220. Métraux 1, pp. 370-374; pp. 382-428; Plates 16-19 and 24-60.

A publication by Felix F. Outes deals particularly with Chiriguano ceramics (221).

C
[113]

221. Felix F. Outes: La ceramica Chiriguana /Chiriguano Ceramics/." From the Revista del Museo de la Plata, Vol. XVI (second series, Vol. III), Buenos Aires, 1909, pp. 121-136.

C
Ce
126
415

Because formerly in the museum of the Sociedad Cientifica del Paraguay we had only four baked clay vessels and a piece of a handle from the Chiriguano, which Doña Maria F. de Casati collected among them and presented to the museum, I had a special interest in filling this gap. With some effort I managed to acquire from the Izozó in Toledo 41 Chiriguano vessels, and from the Chiriguano in Machareti, 55 of them, and with rather more effort I managed to bring them back whole and with their designs in good condition through the long trip to Asunción.

These baked clay vessels collected by me also show great variation in their form and ornamentation. But these diverse variations can be reduced to several groups, according to the purpose for which they were intended.

C
Ce
415

The Chiriguano and Chané baked clay vessels may serve very different ends:

1. To cook foods and liquids.
2. To fry /fritar, literally "to frit"/ foods.
3. To steam maize meal.
4. To carry and keep water.

/54 cont./

C
Ce
283
323

point out here a difference between the baked clay whorls of the Izozó and those of the Chiriguano with regard to their manufacture. The whorls of the latter are made of pieces of clay from any broken vessel, by filing them round and perforating them in the center, while the whorls of the Izozó consist of a small disk with different variations in form, also perforated in the center, but made of baked clay especially for that purpose.

C
Ce
323

Concerning the pottery technique of the Chiriguano and the Chané, we are well instructed by the data given by Nordenskiöld, S. Linné, Métraux (236), and Campana (237).

C
Ce
[113]

[113]

237. Campana (Doménico del), "Notizie intorno ai Ciriguani /Information concerning the Chiriguano/," Archiv per l'antroopologia e la etnologia, Florence, Vol. 32 (1902), p. 382.

C
Ce
323
114

Especially noteworthy among these is the description of the manufacture of baked clay vessels by the Chané on the Itiyuru River, which Nordenskiöld studied in its entire procedure. In the book written by Linné, entitled The Technique of South American Ceramics, we find, in addition to the systematic arrangement of the observations made by Nordenskiöld among the Chiriguano and Chané, important data on the results of chemical analyses and microscopic observations which Linné made on the vessels of these Indians. According to this information, the procedure for manufacturing these vessels is the following:

C
Ce
323

The first condition for the manufacture of baked clay vessels is the availability of suitable clay which has sufficient plasticity so that the vessel can be modeled and fired without being broken. Only a clay with special qualities can meet

/54 cont./

C
Ce
323

these two requirements. Generally it is necessary to correct the defects of the available clay, fixing it by the addition of other substances. Thus the Chiriguano and Chané add to the clay pieces of crushed baked clay. The Chiriguano women in Tarapayu like to use as such an additive, which they call "takupe," pieces of baked clay of ancient origin which they find in great number in their territory and which substance also contains, according to microscopic investigation, pieces of baked clay added to the clay (238).

C
Ce
[113]

238. S. Linné, op. cit., p. 36, Fig. 2, and p. 70. Nordenskiöld, Erland: Forskningar och äventyr i Sydamerika /Research and Adventure in South America/, Stockholm, 1915, p. 34. Nord. 1, p. 284.

From the quality of the substance of a baked clay vessel of the Chané of the Parapití which is in the Göteborg museum, it turns out that these Indians also add sand to the clay, in addition to pieces of crushed baked clay (239). By microscopic

C
114
323

239. S. Linné, op. cit., p. 33.

analyses of sections of vessels, Linné was able to demonstrate /55/ that pieces of baked clay were added to the clay of the Chiriguano. As a result of these analyses, he points out the following: "Microscopic section analysis of Chiriguano ceramics have shown the materials to contain, besides small quartz grains and larger grains of other minerals, particles of the same colour as the ground-mass, but with distinct outlines. These are due to ground potsherds. There are also some very dark particles, as well as lighter ones, and they, too, are potsherds. The variation as to colour is due to the vessels often in the firing, becoming quite differently coloured in their outer and inner layers" /cited in English/ (240).

Nets in the Collection That Are Made with Loops and without the Use of Knots

I. A. 555-566. Net for carrying loads (Chirig.). Lgth. 0.93 m. 1.80 m.
I. A. 567. " " " " " " 1.15 m. (Figs. 134 and 143.)
I. A. 568. " " " " " " 1.20 m. (Fig. 144.)

286
284
415
482

From the Chiriguano I obtained several nets for carrying burdens, which are made without using knots, by connecting the thread in the fashion illustrated by Figures 143 and 144 and which is common among many tribes of the Chaco, as happens among the Tapieté, Matako /Mataco/, Toba, Chorote /Choroti/, and Churupí /Chulupi/.

The great number of nets that I acquired from the Izozó are made with knots without exception, and we must therefore assume that these Indians are not familiar with or do not use the technique of making nets with simple loops and without applying knots, and that this technique, called "Schlingtechnik" in German, is used only by the Chiriguano or a part of them. Nordenskiöld does not mention this technique among the Chiriguano, and in the synoptic outline in which the several techniques of making nets are illustrated the Chiriguano are not mentioned in Column 5 among the Indian tribes which use the technique of making nets without applying knots. Of the burden-carrying nets made of caraguata thread that I acquired from the Chiriguano, ten are made without knots being applied, by the technique called "Schlingtechnik," and only seven by applying knots by the technique called "Knotentechnik." We can therefore assume that this part of the Chiriguano at least uses the technique of making nets without applying knots, although this opinion is contrary to that of Nordenskiöld, who says (278) that

286
284
114
177

278. Nord. 2, p. 116.

all of the nets made by this technique found among the Chiriguano and the Chané were acquired from the Chaco Indians.

C /80 cont./
534 edge, puts forward against Nordenskiöld's deductions his opinion
174 that the ancient Peruvian objects of this form might originally
171 have been flutes and that they might have been used only ex-
ceptionally, in the event of necessity or only secondarily, as
C balance beams. Among the objects of this kind in the ancient
[114] Peruvian collection of the museum in Berlin so many specimens
C clearly show that they are balance beams that I cannot say that
[179] I agree with this opinion by V. Rosen (301). We must agree

C [113]

301. Cf. Max Schmidt, Kunst ünd Kultur von Peru /Art and Culture of Peru/, p. 99, fig. p. 544, N. 8-10.

with V. Nordenskiöld's opinion that these wooden objects used by the ancient Peruvians as balance beams may have been accepted by the Chiriguano, not as balance beams, because the Chiriguano did not have the need to weigh anything, but as flutes. We must mention that with this kind of flute, open at both ends, two different sounds can be produced, depending upon whether the lower hole is left open or is closed with the finger.

The two Chiriguano flutes made of cane have six holes for varying the sound and one hole, at one side, for the mouth. Cf. Figure 39a /see Fig. 34a, p. 89/. Nordenskiöld, who shows
C such a flute in a drawing (302), is of the opinion that the
C
534
177
171

302. Nord. 2, Fig. 36 A.

Chiriguano and Chané received this kind of flute from the mestizos or whites, because such flutes provided with a hole at one side for the mouth do not exist among the other Indians of South America or among the ancient Peruvians.

/88 cont./

Ee 531

Figure 33b, which corresponds, as does also the form of this flute, completely to ancient Peruvian models. Also, the surface of the Chiriguano cane flute L.A. 494 (cf. Fig. 34a /see p. 88/) shows some incisings.

One of the tattooed decorations is shown in a drawing by Nordenskiöld, who found it on a woman's arm (310).

310. Nord. 1, Fig. 108.

Social Conditions among the Chiriguano and Chané

Ee 114

With regard to the social conditions among the Chiriguano and the Chané-Izoné, I am unable to add to the few data which we know on this subject because the situations in which I found myself when with these Indians were not appropriate for such investigations.

Ee 115 122 125

/89/ Among the Izoné whom I found in Toledo there were some who were designated as cacique. To one of these, who spoke Spanish perfectly, I owe the vocabulary of the Izoné language which I wrote down. I met the Chiriguano only in

Ee 114 197 622

Macharetí, where they had lived for a long time under the supervision of the missionaries and, at the time of my trip, under the chieftainship of one of their own fellows who exercised the functions of a commissioner /comisario/. Two other Chiriguano Indians whom I met in Macharetí were identified as caciques.

Ee 129

In order to complete my statements about the Chiriguano and the Chané-Izoné, I must make a resumé of what we know from the literature regarding the social conditions of those Indians, referring to Moreno's statements, which are based on old documents, as well as those of v. Nordenskiöld, which are based upon his own investigations.

Ee 170 642 643

Naturally, many of the old Chiriguano and Chané social institutions have been lost since they lost their independence from the whites. Also, the power of the great caciques has diminished appreciably since they have been dependent on the whites. When Nordenskiöld

/340 cont./

Property is a sacred thing among the Chiriguano, and the nearest relatives cannot dispose of their belongings without their formal consent.

At the time of my stay in Caruruti. I once asked my old friend "Captain" Karnapadyú to take me to his field. He was very

Fig. 7 Mill for grinding sugar cane at the Ivu mission. (Photo. A. M.)

towhed by /Plate VI appears here/ /341/ the interest that my wish implied and in an instant showed himself ready to do the honors.

His field was about 700 meters from the village on top of one of the cliffs which border the "quebrada" /ravine/ of Caruruti. Access to it was by a steep path across fallen rocks. The entrance to the field was closed by a hedge composed of tree trunks and thorny shrubs which we climbed over with the help of an Indian-style ladder, that is, a thick branch with deep cuts for steps.

[Text continues on p. 94]

/341 cont./

241 115 ladder, that is, a thick branch with deep cuts for steps. Captain Karnapadyú's chacra /cultivated clearing/ was about 200 meters by 70 meters in size. At the edge stood a small wooden hut covered with straw.

The "Captain" began by showing me some manioc plants and had me cross a large square sown exclusively with beans and gourds /citronilles/. The corn fields came next. They were divided in two by a second hedge formed of trunks and thorns. Squash /courges/ grew between the rows of corn. After the maïzal /field of corn/ followed a second expanse covered with beans, squash, and melons, which Karnapadyú told me belonged to his daughter. Here and there rose several stalks of sorghum. A new cornfield was opposite the

241 532 322 237

Fig. 8. Mask (tovaraanga) carved out of a calabash and provided with hair and eyebrows of horsehair. It was hung up in a planted field where it was serving as a scarecrow. Prov.: Caruruti. (1/5 nat. size.)

241 115 [322] [415] [824] first, and another cabin rose at its edge. In both of these properties the only plants cultivated for their manufacturing value were the cucurbitaceous ones from which the Indians make their cups and bottles.

Next, on the opposite cliff, I visited the chacra of another Indian of the same village. A steeper and more difficult road than the first led to it. The plantation was lower down a hill on which a little hut was perched. These fields were almost solely covered with corn among whose stalks grew squash. As before, the maïzales were preceded by plantings of beans and squash.

/345 cont./

241 The Chiriguano are proud of the extent of their fields.
●115 "Captain" Karnapadyú made me walk over all of his, emphasizing its size and the abundance of its produce. Another Chiriguano, after taking me along across all of his plantations, without sparing me one plot of ground, told me as he was bringing me back, with an air at the same time proud and questioning: "Guapo yo" /I am enterprising/. I answered that he was indeed very "guapo." He seemed flattered and happy.

243 The father clears his daughter's field, which represents for
593 her a kind of dowry. The son-in-law must then take care of
583 it, do the sowing and reap the harvest (1). My guide Cipriano
606

[585]

1. Corrado (p. 155) states that young married couples live at the expense of their parents and that they do not cultivate any chacras nor build a house before having a child.

complained bitterly about his son-in-law, whose laziness had obliged him to harvest his daughter's corn himself.

Chapter III

Cooking and Food

Food Resources

433
224 I have eaten meat only very rarely in Chiriguano vil-
178 lages, and I have never had a chance to taste a piece of game. It is not that this latter has disappeared from the region, exterminated by man, but the Chiriguano do not take the trouble to pursue it. In former days they were enthusiastic hunters, like nearly all the Indians of tropical America. When they were expecting guests for a drinking feast, the men went out into the bush and during 15 to 20 days got a good supply of the flesh of the peccary, deer, nandu, pigeon, armadillo,
[251] chuña /a wading bird/, and even parrot. To preserve it they dried it in the sun without salt (Nino, pp. 249-258).

/462 cont./

Chapter X

Masks

532 The handsome masks, whose description I shall give
796 further on, are worn during the carnival festivities. Difficulties
[122] with the Bolivian authorities kept me from arriving in the Chiriguano villages at the time when they were taking place. When I finally found myself among my Chiriguano friends, they had emptied the last vats of kāwi and were /463/ in their
[126] normal state. Thanks to the closeness of the feast I was able
[241] to collect the masks published here; ordinarily they are destroyed or used in the fields as scarecrows.

115 My host, Mr. Alberto Torrejon, who lives at Ibopeytí on the upper Pilcomayo in an Indian village, gave me some very interesting details about the ceremonies and merrymaking in which he had just participated. I transcribe them as given.

796 At my approach of any festival, the carnival, for exam-
775 ple, the first act consists in causing the souls of the dead to flee.
789 If this precaution is not taken, the widows and relatives of the deceased will have to abstain from taking part. For the purpose of purifying the air, a drum is beaten, and the whole family /Fig. 120 appears here/ which has lost a member weeps and shouts. When the spirits have cleared out, the drum, in a joyful rhythm, gives the signal for merrymaking.

796 The festival is opened by a man and a woman who, with a stick decorated with flowers in hand, advance toward the middle of the square, followed by all the inhabitants in a long chain. When they have arrived at the middle of the area extending between the huts, the couple plants this sign, thus giving the signal for the festival.

[535] The chain breaks up and small groups form to dance in a ring. Their dance consists in advancing and retreating in triple time to the sound of flutes and drums.

/476 cont./

123 Drawings. On Plates XCI-XCIII, one can see gathered to-
126 gether a certain number of drawings executed for my sake by
532 Chiriguano Indians. In order to obtain them I first approached several old men, who refused with an outraged air as if I were
123 asking them to do a thing beneath their dignity. A small boy
126 of 12, Consito, two young men, Asensio and José Miguel, and
115
532

524

Fig. 136. Indian executing the mobile string figure called "culo de caballo /horse's rear end/.

123
126
115 a girl, Iwawasei, showed themselves willing to cover the pages
532 of my album with all kinds of sketches.

Consito did not have to be begged: I was proposing to him a game not only pleasant but fruitful, and he had soon filled two pages (Plate XCI, 1, 2, 4, 9; Plate XCII, 2, 4; Plate
115 XCIII, 1, 3, 10). Asensio, my faithful friend, also gave me
123 complete satisfaction. He was a curious individual, and I keep
126 a particularly vivid and congenial memory of him. He was 25 to 30 years old and was conspicuous because of his extraordinary
[322] activity and ingenuity. At any moment of the day he could be seen busy cutting or carving a piece of wood which then

[See pp. 355-357-- Analyst]

/476 cont./

115 123 126 [322] [463] became an ingeniously conceived tool or still oftener a musical instrument. Asensio used to make violins which on first sight appeared to have come from a European factory. It goes without saying that he was the recognized carpenter of the village and the great provider of household articles. When Asensio had understood the purpose which had brought me to his home, he transformed his hut into a workshop for ethnographic objects; and I owe it to his enterprising spirit that I was able to collect many a piece, today no longer in use, which he reconstructed for me.

At the time when I was in his village, Asensio had received big orders for flutes for the coming Easter festival, [532] and I had a good time watching him work. Once an instrument was finished, he would embellish it with engraved animals.

115 126 532 The material on which Asensio (see Plate XCI /see p.355/, 5, 7,, and Plate XCII /see p.356 /, 3, 6) incised his figures exerted an indirect influence on the pencil drawings he drew in my notebook. They stand out by their angular character, but also by their clearness.

José Miguel (see Plate XCI, 8; Plate XCII, 1, 5, 7, 9; Plate XCIII /see p. 357 /, 2, 4, 6, 8, 11, 12), whom Ascensio's example had encouraged, asked me to give him the notebook and pencil, and he made me a whole series of drawings which, although rather light and uncertain, sometimes are not lacking [177] in a certain movement. José Miguel had traveled to Argentina: the train and the automobile (which he drew from memory) attest well to his admiration for the /477/ marvels of "Progress" (Plate XCII, 7, 8). Thank God his modernism had not made him forget his mythology, and he was able to draw for me a mythical episode which is to be seen on Plate XCIII, 12, A, B, C: the blue jaguar (yaguarowi, personification of the spots on the moon) is preparing to devour the moon and the sun.

123 126 532 When I had finished with the men, I wanted to have several feminine drawings, imagining that the women would lend themselves willingly to this game since they are the recognized artists of the tribe. All, unanimously and to my great surprise, refused to do it, shouting in the middle of gales of laughter: Aikuaá "I Can't do iT, I don'T Know how."

/477 cont./

000 laughter: Aikuaá "I can't do it, I don't know how." Only one,
123 a girl, Iwawasei, allowed herself to be persuaded by the promise
126 of a spool of thread. Her awkwardness was not feigned, as I
115 was able to see from the beginning, seeing the embarrassed air
532 with which she took the pencil. Once ready to draw, inspiration was suddenly lacking. She stopped short until I had pointed out a vessel to her to copy. Since her confusion only grew greater, she asked Consito, the small boy who made my first drawings, to help her. He drew the vessel on Plate XCIII, 10, which she began conscientiously to reproduce in series. I protested, and then she made me a horse and on this horse's back a man and a child, then a woman (Plate XCI, 3 and XCIII, 7). I am not very sure that all the drawings she told me she had made were hers, for when my attention was diverted by a visit, she had Consito secretly help her.

532 The drawings the Chiriguano executed for my sake recall not
171 only those of our children but approximate appreciably those which have been collected in various regions of South America, notably among the tribes of the Negro River (Koch-Grünberg, 1); the Taulipang and the Makuši (Koch-Grünberg, 3, Plates 28-32, pp. 128-161); the Indians of the upper Xingú (Steinen, 2, Plates III-IV), (Max Schmidt, 2, Figs. 245-247, pp. 396-398); the Choroti and the Ashluslay (Nordenskiöld, 2, Figs. 63-66, pp. 130-132); the Kaingua (Ambrosetti, 2, Plates I-III, pp. 674-682), etc.

There could be no question of making a comparative study of these drawings, so uniform is their style. The only details which are worth being brought together are those denoting similar psychological characteristics and yet these common traits are not characteristic of a primitive mentality. I should scarcely have to point out the fact that in drawing a woman, a Kaingua Indian proceeded exactly as did two of my Chiriguano artists (Plate XCI, 3 and 7): he began by representing the woman naked, then dressed her.

/128 cont./

121 exist, even among savages, since it could be said that, just as there is no people without God, neither is there a people that does not show Him homage in some way.

771 124 As far as the Chiriguano are concerned, I have tried to find out with special care, constancy, and assiduousness what religion they profess and what type of worship they render to their divinities. But all my efforts have been in vain. This is no doubt due to their state of ignorance as a result of their savage life.

[115] I have asked the oldest men of the tribe about their religion, and I have only received vague and insufficient answers on every point, thus being unable to form any idea, even an approximate one, of the religion which they profess. It is beyond doubt true, however, that the Chiriguano have some religion, since they recognize a superior being. They admit the immortality of the soul, rewards and punishments in the other life, and they preserve certain Biblical traditions which would have no explanation if they did not believe in a god and perhaps in the Jehovah of the Holy Bible, or God, Creator of all things (1).

776 775

[805] [171] [192]

1. The Chiriguano, like the Hebrews, count the months by moons, and they have other very similar customs. It is very notable that they also have some Hebrew words.

577 771 /129/ The Chiriguano must have a moral code, that is, natural law, perhaps augmented by some traditional precepts, since they admit rewards for the good and punishment for the bad.

The law, to the extent that it is imperative, comes from the same God, but only religion serves as its base, and this teaches men that it is an unavoidable duty to submit to the precepts of the Supreme Legislator, under penalty of falling into grave punishments conceived by Him.

From what has been said, it can be understood as a logical consequence that the Chiriguano do profess some religion, even though this might not be known.

/135 cont./

000 Revelation teaches us that legions of angels were lost because of an error or the grave sin of pride and passed into the category /136/ of the condemned or demons. Faith, reason, and common sense teach us that perverse men who die in their perversity are separated from good ones, as evil-doers are separated in this world by being imprisoned in jails. Divine justice demands punishment for the perverse, who, like condemned persons, pass into the category of lost spirits and as semblance of the demons, God allowing this, and they can appear to those of us who live here in the world to detain us along the way of sin or to warn us about it.

776 787 Under this concept it is not repugnant even to common sense to admit the probability that the Chiriguano do see the Aña, demon or evil spirit. Sacred history speaks of visions and apparitions; profane histories cannot combat them, but rather they relate innumerable facts of demoniac apparitions which have appeared by means of spiritualism. It is not strange that such a thing should happen among the Chiriguano. Doubtless it is incredible that it should be so frequent. They say that they see the demons at every moment of the night, whenever there is no fire or light, but this is a puerile worry, and due to fear and fright in some and to ignorance in others (1).

[372] [789] 1. In all the houses of the true Chiriguano there is always a fire burning at night for the principal end of keeping away the evil spirit or Aña.

773

Beliefs Relative to the Creation

• [115] Before going on I am going to relate what was told to me by the cacique Anduari of the San Buenaventura de Ivu Mission, who, in order to increase his income, is a sorcerer or witch doctor for the Indians and some whites in a wide area. According to the account that follows, the human race, or the Chiriguano, was destroyed twice. The first time and its restoration have already been seen. The second occurred in the following way (2).

[585] [777] 2. Anduari gave his account in the presence of his

/154 cont./

773 821 [115]

I asked Anduari the cause of such an uproar, and he told me the following story. The jaguar had sworn to destroy the Chiriguano, as had also the Aguara-Tunpa. The Tunpa, who knows everything and always compassionate toward them, told this to his relatives, who are in the sky and who are called Güirayohasa, the constellation of the Pleiades. These relatives then informed those who were in danger, and they took the precaution of hiding themselves.

Nevertheless, two of the most valiant Chiriguano, in order not to be in continual fear, prepared to put an end to the jaguars. They went out into the countryside, made themselves two long swords of soto wood, and thus armed, they found out where the jaguars drank water. They hid, watching for the arrival of their enemies in order to slay their leader.

They did not have to wait long; when all of them came by and when the leader put his head down to drink from the spring of crystalline water, one of the Chiriguano delivered a great blow on his head with the sword, separating it from the body; with the utmost facility the rest of them fled in several directions, and the head, jumping, disappeared from their presence.

It was pursued by both warriors, but the head prayed to the moon, which it encountered on its way, and the moon took pity and hid it in its breast, and when the warriors arrived and inquired about the jaguar's head, the moon answered in all calmness that it knew nothing and had seen nothing. Naturally they had no faith in its words, and they went away from there, saying to it that one day the tiger would be seen and everyone would know who it was (2).

2. When the chief of the jaguars disappeared, the latter were finished and there was calm, the Indians being able to go out once more without fear to their tasks in the fields.

When the young men were far away, the moon rejoined the jaguar's head to its body, and it lived, but it no longer wished to live on earth /155/ for fear of its enemies, preferring to remain with its liberator, reviver, and benefactor, but later it made its ferocity known.

Ce 539 /271 cont./

been poisoned, and he died. Aguaratunpa found him dead. He said he wanted to bring him to life again. Aguaratunpa took a plant, "ihuahuasu." With this he beat him. He leaped over him, first directly over his body, then from head to tail.

The brother came to life again and said: "I slept a long time." -- "You did not sleep, you were dead," said Aguaratunpa. The latter sent his brother to heaven (2). When it thunders,

2. Ara = vault of heaven, universe.

Aguaratunpa's brother is going for a walk.

C 539 [115] About the Son of Tatutunpa and How He Rescued His Mother.

Told by the Chiriguano Indian Yambási on the Rio Grande.

In a house there was a girl, Inómu, who had never had a husband. In front of the house there was a great drinking bout. Aguaratunpa, Tatutunpa, and Dyori were there. The parents of the girl took her along and set her on the ground where people were busy drinking maize beer. Aguaratunpa thought that Inómu was very pretty. Tatutunpa thought so too. "I shall make the girl pregnant," he said and started to dig. Aguaratunpa stood in front. Tatutunpa dug himself into the earth and up under the girl (3).

3. Modified.

When Tatutunpa was finished, he crawled out again and told Aguaratunpa what he had done.

"I want to try too," said Aguaratunpa and crawled into the passageway. He had not gone far when he got stuck. Tatutunpa seized him by the tail and pulled him out.

/286 cont./

539
[115]

The Man Who Burned Up Añatunpa.

Told by the Chiriguano Indian Yambási on the Rio Grande.

When people gathered honey, Añatunpa (1) would find

1. It is not said here which añatunpa is meant.

them and devour them.

Once there was a man who gathered honey. Then Añatunpa came and asked what he was going. "I am gathering honey," said the man. "Continue," said Añatunpa. When the man had gathered enough, he killed him and tossed him to Dyóri, who devoured him and even licked up the blood. Añatunpa killed many people in this fashion.

A man had gone out to gather honey. The /287/ toucan (1)

1. Rhamphastus.

said to him: "If Añatunpa comes, ask him to carry you to his house and kill you there."

While the man was gathering honey, Añatunpa came. "What do you want?" asked the man.

"I want to eat you up," said Añatunpa.

"Do not do that here, but carry me to your house instead and eat me there," said the man. Añatunpa now took the man on his neck and carried him to his house.

"Break off branches and build a fire on Añatunpa's neck," said the toucan. When Añatunpa went through the thick /Fig. 130 appears here/ brush, the man broke off twigs and branches and carefully lighted a fire on Añatunpa's neck.

"If you come to a low branch, cling to it!" said the toucan to the man. This he did. Soon Añatunpa noticed that there was burning on his neck and he started to run. The fire grew. His hair caught fire, and soon Añatunpa burned up completely and died.

/287 cont./

The Man Who Killed Añatunpa.

539 [115] Told by the Chiriguano Indian Yambási on the Rio Grande.

Añatunpa devoured all the human beings that he could catch. A man came along who was carrying wood to Añatunpa's cave. "Come, let's play!" said Añatunpa.

/288/ "What kind of a game?" said the man.

"You shall give me a blow on the forehead with an ax, and if I do not die, I shall hit you," said Añatunpa.

Añatunpa stood up straight, offered his forehead to the man, and the latter hit him directly in the middle of it. Since Añatunpa's forehead was as hard as iron, this did not affect him. Añatunpa now gave the man a blow on the forehead, killed him, and tossed

291 177 531 301

Fig. 130. Silver pin for fastening the tiru. The form Indian, the ornamentation Spanish. Chiriguano. Parapiti, 1/3.

539 him to Dyóri, who devoured him.

On another occasion another man came to Añatunpa's cave. Añatunpa proposed the same game to him. Then a fly, "Mbéru," called to him not to hit him on the forehead, but in the nape of the neck. When Añatunpa, with eyes closed, stood up to receive the blow, the man went behind him, struck him in the nape of the neck, and Añatunpa fell down dead. Dyóri asked him how he was able to kill Añatunpa. The man told him what Mbéru had said.

"Very good," said Dyóri.

Ce
539

/290 cont./

in the nostrils. The fox sneezed, wiped his nose, and said: "Can the mosquitoes not leave me in peace just when I am dreaming about the jaguar's wife and daughters with whom I slept!"

/291/ Now the jaguar tickled him a little more strongly, and the fox woke up. The jaguar prepared to seize him.

The fox hunched himself up, and when the jaguar hesitated before seizing him, he jumped to the ground with one bound and started running as fast as he could. The jaguar ran after him. Finally the fox grew tired, however, and the jaguar caught him and swallowed him. The fox came to life again in the stomach of the jaguar. The latter threw him up. The jaguar devoured the fox again, but again the latter came to life in his stomach and was thrown up again. Once more the jaguar devoured the fox, who again came to life, etc.

C

[115]

When the Turtle "Carumbe" Killed the Jaguar.

Told by the Chiriguano Indian Yambási.

Once there was a great drinking bout. Aguaratunpa, Carumbe, and "Taturapua" (the ball armadillo) were there. The little son of the turtle was crying. When they asked him why he was crying, he said he wanted to have the claws of the jaguar to play with. The wife of the turtle told her husband he should fetch the claws of the jaguar so that the little one could play with them.

/291 cont./

539 The turtle set out and came to a "samuo" trunk with large, sharp thorns. He stool there and waited for the jaguar. In the distance he could hear his howling. The jaguar came closer, still howling, and found the turtle at the foot of the tree.

"What are you doing here?" said the jaguar.

"I am playing," said the turtle.

"What are you playing?" said the jaguar.

"I climb up the samuo and then I roll down," said the turtle.

"Let me see," said the jaguar, who had a desire to devour the turtle.

/292/ The latter climbed the trunk up to the crown and rolled down without injuring itself. This amused the jaguar, and the turtle had to climb up again. Once more it rolled down without injuring itself. The jaguar wanted to try it too. He climbed up and rolled down, but tore open his entrails on the thorns and died.

The turtle took home the claws of the jaguar as playthings for his little son.

The Love Story of the Hummingbird.

•[115] Told by the Chiriguano Indian Yambási.

There were two girls who heard Chinu (hummingbird) play the flute. He played so beautifully that one of the girls said: "I want him as my husband." She went to the hummingbird and slept with him.

"Let us go into my house," said the hummingbird. When they got there, it was so small that there was no room for the girl. She therefore went back to her village.

In the evening the hummingbird came to the edge of the village and played the flute, in order to lure her. The girl listened and said: "It is the hummingbird who is playing." But she did not go back to him. Every evening the hummingbird

[Title page]

/295/ Preface

114 In the chapters to follow, I propose to publish part of the
12 results obtained in the course of the expedition that I undertook in the Bolivian and Argentinian Chaco in my capacity as director of the Institute of Ethnology of the University of Tucumán.

114 This expedition took place from February to June, 1929.
[101] Its itinerary was the following: Having left Tucumán, I went by railroad to La Quiaca where I stayed for several days, making observations on the more or less half-breed natives of the region. From La Quiaca I went to Tarija, where I remained longer than I might have wished because of the suspicions my trip raised at the time of the Paraguayan-Bolivian conflict.

114 After a 15-day stop I left Tarija to reach the Chiriguano
101 tolderías of the upper Pilcomayo. I crossed the village of Santa
103 Ana, then the Abra del Cóndor, the Narvaez River, the post of San Diego, passed five kilometers from San Luis (Entre-Ríos) to stop at the Cuesta de San Simon, where I found the first Chiriguano. Once having crossed the Cuesta de San Simón I quickly reached the Salado River, then the Chiriguano villages of Timboy
[126] (Saladito). It was there that I made my best acquisitions of pottery and where I collected the oldest objects. The inhabitants
[178] of these rancherías, who live relatively far from the highway from Argentina to Santa Cruz, have preserved the traditions and culture of their ancestors better than their racial brothers have. From Saladito I reached the village of Itasiti and then Salado Grande,
[361] in order /296/ to reach the Pilcomayo at the confluence with the Salado. There, the Chiriguano villages are large and numerous. The most interesting are those of Ñawirenda, Ibopeytí, and Yumbía.

After stopping for some time in this place, I continued my trip toward Huacaya and the mission of San Pascual de Boicovo.

In one day I went from Boicovo to Cuevo, going by way of the mission of Santa Rosa.

[197] From Cuevo on I was in the mission of Ivu, which is without
[178] doubt the one where the old Chiriguano customs have undergone the fewest modifications.

/296 cont./

114 101 103 From Cuevo I left for the northwest toward the Parapiti River region. I crossed this river near Pipi. After stopping in that village, I followed an Indian path which led me to Cururuí, to the home of my good friend Captain Karnapadyú. I spent a week with him and left him only to explore the whole Caipipendí valley, visiting all the Indian villages one after another. At Caipipendí itself I made fruitful excavations and collected interesting myths.

The limit of my trip toward the north was the little city of Charagua.

I devoted the last part of my trip to more or less long stays in the Franciscan missions of Tarairí, Tigüipa, Machareti, and Ivu.

Before going back to Argentina I made an excursion into the Igüembé valley as far as the village of Masavi.

114 124 The last two weeks of my expedition were devoted to the study of the Chané Indians who live near Aguaray in the Salta Chaco (Argentine Republic).

Previously I had been obliged, for various reasons, to stop at Oran for a month. I took advantage of this to make collections among the Ashluslay Indians who come there for the sugarcane harvest.

In this volume I shall publish only the results of my expedition which bring new facts and details to light. Therefore the chapters I devote to the Chiriguano must not be considered an exhaustive study of their culture, but simply as a contribution. Chiriguano culture has been the subject of four important works, two of which are by ethnographers of great authority (1). /297/

1. Nordenskiöld (2, 5, and 10) and Rosen (1) /the underlined numbers following an author's name refer to the boldface numbers in the bibliography/. Campana's monograph on the Chiriguano, which I shall often have occasion to cite, is only a recompilation and reorganization of the manuscript notes left by the Italian missionary, the Reverend Father Doroteo Giannechini. This work is excellent in many respects. As for the book of the Reverend

/291 cont./

121 114 Father Bernardino de Nino. It is only a translation of Campana's article, filled out with copious borrowings from Corrado's work. Nevertheless the Reverend Father Bernardino de Nino added many very interesting details to the texts that he reproduces, which make consultation of his Etnografía chiriguana indispensable.

121 126 My aim was to complete the work of my predecessors and to get together for the Museum of Tucumán a collection which would be truly representative of the last of the cultures which formerly flourished within the limits of the old gobernación of Tucumán. My Chiriguano collections, along with those collected by Nordenskiöld, are, I believe, the most complete ones from this region that exist in the world. They bear witness, I hope, to the richness of this area from an ethnographic point of view, a richness which has been left unexploited and which will disappear in a few years.

121 May these pages demonstrate that every culture is a whole complex, so varied, that no ethnographer can study all its details in the course of a single trip. It is not useless to go back where others have preceded you, for, whatever their merits may have been, the material cannot be exhausted in one time.

122 There remains the paying of a debt of gratitude by thanking Doctor J. B. Terán and Doctor J. Heller, who, as rector and vice-rector of the University of Tucumán, gave me the means to bring about this trip. The new rector of the University, Doctor J. Prebisch, granted me the sizable funds which publication of the results of this expedition required and supported constantly the Revue d'Ethnologie of my Institute. I am eager to make known to him here how grateful I am.

114 122 I wish to express my thanks again to all those who helped me in the course of my trip: first and foremost the Franciscan missionaries who gave me generous hospitality and helped me as much as possible; my debt is particularly great to the Reverend Father Jocundo Ferrari, thanks to whom I was able to carry out without damage the transportation of my collections from the upper Pilcomayo to Cuevo; to Father Angrisani who received me so frequently in his Ivu mission. Neither do I wish to forget Fathers

/707 cont./

Luis Marinelli, Dionisio Polvorini, Juan Nicolai, and Donovano Cattinari, who backed me up on various occasions. The Reverend Father Enrique Ragini did me a service for which I was very grateful by committing me to the care of all the missionaries of the Chaco.

The prefect of Tarija, Colonel Nuñez del Prado, facilitated my trip /708/ by giving me a safe-conduct which was particularly useful to me in dealing with the authorities of eastern Bolivia. This man, courteous and intelligent, has just died on the battlefield. I wish to salute his memory with gratitude.

My companions Means. Barry helped me during my whole trip and rendered invaluable services which I remember gratefully, as well as the important aid given me by Means. Anzé of Tarija.

I received cordial hospitality from Mr. Benardi of Ñancarvinza and from Mr. Vicente Constantini, whom I thank here.

Mr. Alberto Tarvajón of Ibopeyti showed himself to be a host full of intelligence, and his intervention on my behalf with the Indians was very useful to me.

I should show myself ungrateful and unjust if I did not here express all I owe to the Indians themselves, whose reception, once the first mistrust was dissipated, was always so cordial, so generous. Here I should like to cite the name of my old friend, Captain Kamapadyó, of Caruruñé, who was a courteous and kind friend to me and who made my stay in the Caipipendí valley so pleasant. Some day may I come back to my Chiriguano friends with mules loaded with knives, cloth, and beads, and thus fulfill the wishes they expressed so often to me.

Introduction

121 For anyone who wants to verify experimentally, if I may say so, the value of the methods which are being adopted in modern ethnography, for anyone who wishes to judge the factors which condition the formation and evolution of civilizations, there is no better field than the study of the Chiriguano Indians.

We know where they came from, the period when they formed a new nation, the populations with which they mingled or were in contact, the influences they underwent and their duration, and finally we are acquainted with the vicissitudes of their history: in a word, we can be present at the formation and development of this people from their origin to their present decline, an experience unique in South America, rare perhaps elsewhere, and in any case rich in instruction.

Adaptation to the environment, borrowing of new cultural elements, abandonment of traditions and techniques, somatic and linguistic changes, so many problems that the Chiriguano civilization poses and that the historical documents and the collections permit solving or at least clarifying.

122 123 Chiriguano culture is composed of elements of different origins, borrowed from tribes which had only a little in common with one another. It involves an old Guarani substratum, transformed and entirely renewed by the contribution of the Arawak culture of the Chané, which itself had been enriched and modified by the influence of the Andean populations of present-day southern Bolivia. A common environment and long proximity allowed many a technique and industry of the primitive Indians of the Chaco to be adopted and assimilated by the Chiriguano. The importance of this third component is minimal.

/299 cont./

177 An analysis of Chiriguano culture (see Nordenskiöld, 10,
178 pp. 196-213) makes manifest the heterogeneity which the history of the tribe caused to be suspected a priori. The pottery, basketry, weapons, and furniture almost constantly present disparate characteristics in which are expressed this play of influences, this intermixture of races and ideas of which the present-day culture of the Chiriguano is the product.

/300/ The ethnographer feels all the more at ease in his analysis when at every step history confirms or invalidates the findings to which his comparative work leads him. Thus he walks on firm ground, and the results he has acquired in this particular domain will justify his method when he uses it to solve problems whose data are less complete.

181 The Chiriguano, in more than one respect, deserve to hold a preponderant place in the ethnography of South America. They have played an important role in the history of Bolivia, Paraguay, and Argentina; their civilization has been brilliant and has maintained itself intact almost until our time; besides, they are remarkably endowed from the point of view of character and intelligence. To these qualifications they add that of having built up their civilization, so to say, before our very eyes and of offering to science a field where it moves with some sureness.

In order to understand the point of view I have tried to put forward in this introduction, it is indispensable to know, in its main lines, the early history of these Indians.

Chapter I

000 Historical Outline of the Formation of the Chiriguano Nation

/Eight lines of poetry in Spanish, from Barco Centenera, La Argentina, pp. 185-186, are omitted in the translation./

121 My intention is not to recount the history of the Chiriguano
175 from the 16th century to today insofar as we can know it from official documents and chronicles. This work has been done and generally well done (Corrado; Kersten, pp. 66-69; Serrano y Sanz; Nordenskiöld, 7 and 8, pp. 45-58; Gandía, 2, pp. 25-56 and id., 3, pp. 161-196; Church, pp. 206-227; Mujía, etc.).

/300 cont./

C 174 121 and id., 1, pp. 161-196; Church, pp. 206-227; Mujía; etc.). I shall limit myself to tracing here, in their main lines, the characteristics of the great Guarani migration which ended in the formation of the Chiriguano tribe.

C 101 174 [199] The Chiriguano Indians belong to the Tupi-Guarani linguistic family. A branch separated from the great Guarani nation or, more exactly, a swarm separated from the whole group of tribes of Paraguay and southern Brazil called Guarani, they came to establish themselves at the foot of the Andes at the end of the 15th and the beginning of the 16th century after crossing the Chaco plains.

G 174 167 439 [197] /301/ The causes of this great movement, which swept along so many thousands of Guarani toward the frontiers of the Inca Empire, are explained by the singular attraction which metal objects, clothes, in a word everything that can make life easier and more beautiful, exerted and continue to exert on the Indians. The Guarani of Paraguay and the Tupi of the Brazilian coast had known for a long time about Peru and its riches. From there they used to receive bronze instruments and ornaments of silver and sometimes also of gold (1). At the same time as these objects,

1. On the trade relations between the peoples of the Andes and the tribes of the Chaco, Paraguay, and Brazil, cf. Nordenskiöld, 9, pp. 255-259.

confused descriptions reached them of these mountain peoples, so strange, who lived in stone huts, had "deer with long hair" at their service, and who decorated their persons with brilliant jewels. G [487] Bronze axes, necklaces, bracelets, breastplates, diadems, and goblets of silver reached them by a trade route whose exact position is unknown, but which probably used to pass through the northern Chaco. Ce 175 437 439 The Chané /Chane/ who lived in direct contact with the populations of the Inca Empire and traded with them, played the role of brokers, and with them as middlemen these tools and ornaments reached Paraguay, passing from hand to hand (2).

2. Hernández, p. 322: "They were asked of what race are those who have the silver and the

/301 cont./

175 435 439 /fn. 2 cont./ gold and how they contracted for it and it came into their possession; they said that the payzunoes, who were a three-days' journey from their land, gave it to their men in exchange for bows and arrows and slaves which they took from other races, and that the payzunoes get it from the chaneses and chimenoes and carcaraes and candirees, who are other Indian peoples who have it in great quantity, and that the Indians contract for it, as was said." /Translated from the Spanish./

175 101 Before going into the regions of the "true metal," the Spanish conquistadors made numerous inquiries in order to become acquainted with the tribes among whom they might find the coveted riches. Thanks to this precaution, we have several lists of the native tribes of eastern Bolivia who lived in contact with the Andean peoples. The most complete of these ethnographic nomenclatures is the one that the valuable Relación de Domingo Martinez de Irala gives us /the following quotations are translated from the Spanish/: "He said that on the left-hand side, which is to the west, there are many races found among the sierras and about which he has information; they are called; turubones, and ayguas, and chanes, and tucoas and ceucoçes, and turucoçes guaracis, and xaraes, and that above them, on the same side, there are some of his race of carioe"; (pp. 339-340).

"Asked if he knew or had heard said what race has the said metal, he said that he knew only that the races of the goacamas, and turubones, and xacosy, and garpidic, and huetari, and oadris, and oape, and suacheaguy, and oetary, and asua, and naga, ahuagu, and chanes, and sy, and sycosy, and decoxy, have some sheets, and these races are from the one side of the river and from the other, but that those who

/301 cont./

101
175

/fn. 2 cont./ have more are the ayguas; asked if he had seen it, he said that, yes, he had seen their many sheets, but that they are their enemies and sometimes go to war against them; asked who gives them the said metal, he said that he had heard it said that a race which is called vntig from the interior country and who get it, from hand to hand, from the payçunos; asked who makes the doublets /rropetas/ that the said principal wore to appear, which were of cotton, he said that they and all the other Indians named above make them for their clothing; asked if the said ayguas are on banks of the river and on what side, he said on the left-hand side, thus, the west one; asked what food they have, he said maize and mandioca and mandubys and some fish, and other things that they plant; asked if he knew or had heard what Indians are the true masters /señores/ of the metal, if the payxunos or others, he said that he did not know and he had heard that the one who has it is the said ayguas" (pp. 341-342).

"He named among those who were near the river other races from the left side, that is, where the sun sets, called chane, and quiguaracoxi, and chemechalcosy, and maçuacuri, and xaquidy; asked who these chanes are, he said they were like them and spoke caryo" (p. 342).

"Asked if he knew which races are the true masters of the metal, he said that he knew only that he had heard it said that they are the chanes, and payçunos, and carcaras, and they are the ones who have the white metal" (pp. 344-345).

"Asked what races are the masters of the metal, he said that many races have metal, especially the payçunos and guariguari, and çorocotoqui, and cherotono, and turopecoçi, and pane, and

/301 cont./

101 175

/fn. 2 cont./ tipeono, and maracaono, and corocotoçe, and xamaracoçe, and çemeono and carcaras, but that the true ones who take out the metal are the canires and chemaos" (p. 348).

"Asked if he knew what Indians have the said metal, he said that he knew only that he had heard it said that the Indians that they call chibivno and payçuno, and chamoroono, and guaycuno, and carcara, and corotocoty, and maya, and cocey chane, and that the entire route is populated and that the slaves who absented themselves when those of ytatyn killed the chanes have already returned to their old seats" (pp. 351-352).

Curiously, a century later in the regions in question, except for the Chiriguano and the Chané, we find none of the tribal names mentioned in the 16th century by the Guarani interpreters. Would these innumerable tribes have disappeared? [178] That does not seem very likely, for up to our times this region has not undergone change from an ethnic point of view. The solution of this problem is given to us by this same Relación (p. 350). These names of nations only designate Chané subtribes, as the Chané chief questioned by Irala (id., p. 351) explains very well: "the said cheroçe said that they took three days to his country and he knew the route very well because he had been raised there and up to now had not heard news from his country, but now he knew that he wanted to go there with the said captain and that, if he desired, he would go then, and that his race is many, and, even though they are chanes, all are called by a name for each part, and for this reason they are called çeritocoçe, and from the last houses of his race to the çorocotoquys they take three or four days, and

Ce 101 175

/301 cont./

/fn. 2 cont./ from the çorocotoquys to the payçunos two, and near them are the çurumanos and ximeonos, and from there they take a four or five days' journey to the carcaras who are the masters of the metal, and together with them are the camires who similarly are the masters of the metal." Naturally the "maya" concerned in some of these lists are the Mbayá /Mbaya/ of the Guaikurú /Guaicuru/ family.

G 174 177 648 169

/302/ This infiltration of objects probably lasted a very long time before the Guarani had the idea of going themselves to get them at their source. Notions about the Inca Empire, at first vague and uncertain, must have become more precise little by little and must have increased their desire to know with their own eyes the fabulous men and countries which produced so many beautiful and strange things. We must imagine the attitude of the Guarani Indians toward the populations subject to the Inca as being /303/ in every way similar to that of their descendants, the Chiriguano, and the present-day small tribes of the Chaco with respect to the white men. There are still tribes who have never seen them, but who already possess iron objects whose importance in the struggle for life they appreciate fully. I have in my collections two Tsirakua burins whose points are of iron, and yet these Indians have never seen a white man and probably have scarcely heard of them. If there is a chance to be able to approach without danger half-breed or creole villages, they will do it. Thus it is that we have each year a temporary migration of thousands of Indians toward the ingenios (sugar mills) of Argentina. Among the numerous tribes which make their way toward the sugar-cane plantations, there are perhaps many who had never had any direct contact with the white men to whom they are going in order to seek an easing of their lives and an improvement in their material conditions. By leaving for the Chaco and the Andes, the Guarani thus obey the same aspirations as these poor Tšawanko (Chiriguano) whom one meets in autumn on the highways which lead to Argentina.

Z [126 412 177]

G 177 221 464 169

C [167]

/303 cont./

on the highways which lead to Argentina. If the Guarani invasion was brutal, it is because they felt powerful enough to try to take possession of the coveted riches by force. Not long ago the Chiriguano did not hesitate to attack the farms of the creoles if they profited by it or if a wrong had been done to them.

We must remember also that the Guarani were warlike; used to overcoming neighboring tribes, they did not draw back at the prospect of distant expeditions and besides were endowed with a spirit of adventure, which has caused them to be called the "Phoenicians of South America." At the beginning of the 16th century the Guarani were in the full swing of expansion; the crossing of the Chaco was not going to stop them.

The first Guarani who crossed the Chaco and came home again richly clothed, adorned with metal ornaments, doubtless aroused the same attitude which is felt toward any modern Chiriguano who comes back to his village after six months' stay in Argentina. One should see them then, dressed from head to foot, booted and spurred and prancing about proudly on a more or less emaciated horse. Question them about their recollections: with pride they will tell you about their love affairs, will allude to their bloody brawls, and will express their admiration for all the surprising things they have seen. They will talk to you especially about their gains, for they left in order to have knives, axes, heads of cattle. It is those assets which have given them "face" and improved their existence, and the acquisition is clothed in all the charms of adventure and a trip to the land of wonders (1).

1. On the attraction that Peru exerted on the Guarani Indians and on the trips the latter made toward the Cordillera, see the texts cited by Gandia (2, p. 32, notes 1 and 2). This is why the Guarani insisted very strongly that Irala lead them to the land of the Indian "masters of the metal."

In a letter from Martín González (1556) quoted by Gandia, it is said that at Asunción "there are many Indians who have gone, come

/303 cont./

177 181 167 there two or three times with their children and wives, through here in front of this city, by a river which would be two leagues from here, which goes to the city of the Plata, and near the river the Indians from here are settled and more throughout the cordillera, and they say that they are not a hundred leagues from here.

"Also these carios have gone there to the sierras and come by another river, which is up to forty leagues from here, this lower Paraguay, which is called the Ypití; and thus likewise carios villages are there in the sierras, near this said river, which goes, according to what those who come from Peru say, to near the city of the Plata." /Translated from the Spanish./

167 177 797 /304/ The migration of the Guarani toward the west goes on today in a not very apparent form but with a certain regularity. It is probable that the secularization of the Franciscan missions, which will bring in its wake the impoverishment of the Indians and will render their fate more miserable in their present homeland, will have the result of accelerating this exodus.

174 167 Were there no other motives than the desire to pillage or trade which might formerly have led the Guarani to the land of metal?

Apparently not. But every ethnic phenomenon is complex in its causes and effects, and trying to explain it by one single factor is an attempt always superficial and subject to caution. The work of the historian, like that of the ethnographer, is to separate all the elements which have combined to produce the facts which traditions and chronicles record.

[721] Granted that the Guarani migration had as its direct cause the taste for pillage, the singular attraction which Peru exerted on the Indians of the forests; but was there not also some obscure belief, some mystic aspiration which might have played its role in this great collective adventure? Along with the definite ambition to conquer was there not mixed the memory of some old myth which might have contributed to launching this movement? I think so.

Tupi-Guarani SL6
Tupinamba S09

T-G /304 cont./
773 All the Tupi-Guarani tribes, the northern as well as the
[184] southern ones, knew in the 16th century and still know a myth about a "Land without affliction," where men live always young and immortal, where everything grows without effort, where game falls by itself under the hunter's arrow, in a word, a kind of earthly Paradise where the great civilizing God has withdrawn after effecting his "transformations" in this world below and giving
T-G manioc to men. The dead will join him if they are buried according
[775] to the proper rites and if they have won out over all the ordeals which await them on the road to the Beyond. The salient feature of the "Land without affliction" is that it can be reached without necessarily going through the door of death: pious and bold men can go to live there on condition that they take the right road, are worthy of it, and know the rites. Powerful magicians have always had access to it, /Plate I appears here/ /305/ and their example has given rise to the hope that entire tribes would be able to reach it also if they were led by medicine men perfectly in-
T-G formed about the location of this earthly Paradise. From the 16th
175 century on we can follow tribes in their quest for this promised
167 land and see them undertake vast migrations to get there: some
773 took place toward the east, that is, toward the ocean; others toward the west in the direction of Peru (1).

1. On the Tupi-Guarani migrations in search of the "Land without affliction," see Métraux, 1, pp. 6-22. I have analyzed the myths about the "Land-without-affliction" and studied the mystical movements these beliefs instigated in a chapter of my book on the religion of the Tupinamba (see Métraux, 3, pp. 201-224).

Ta Let us cite as a reminder the migration of the Tupinamba,
175 who in 1539 went up the Amazon to arrive in about 1549 in
167 Chachapoyas province in Peru; the two migrations which had as their scene of action northern Brazil, in 1570 (?) and 1609, and whose religious nature is undeniable; finally, always for the coast of Brazil, the wanderings of these Tupinamba, who, having

[127]

Tupinamba S09
Guarani SM4
Tupi SN7

Ta /305 cont./
175 left in about 1600, arrived ten years later on the middle course
167 of the Amazon on the island of the Tupinambarana after staying at the sources of the Madeira not far from the Andes. The last
G in date of these ethnic movements of mystical origin is the one
175 which led the Apapokúva-Guarani /Apapocuva/ from the frontier
167 of Paraguay to the coast of Brazil and which lasted more than a century, from 1810 to 1912.

Ti The vague knowledge that the Tupi of the Brazilian coast had
175 about the marvels of the Inca Empire explains the trek toward
167 the west of some of these migrations. Having arrived at the sea-coast and seeing that it was impossible to reach the "Land without affliction" in this direction, it is possible that the Tupi began to look for it in the other direction, as did several groups of the Apapokúva-Guarani not long ago. The prestige of the Inca civilization doubtless must have influenced their decision, and in many cases they certainly tended to merge it with that mythical land where they wanted so ardently to go.

Ti If I risk this hypothesis, it is because of the impossibility of
[174] explaining otherwise this rush toward Peru which took place in the 16th century among certain Tupi tribes of the coast of Brazil.
Ta Such a point of view is not too bold, for otherwise how could one
174 justify the eagerness displayed by the Tupinamba to reach Peru
175 after going up the Amazon in the effort they made in 1539 to
167 enter the "land of immortality and eternal rest"? How can one
773 explain why the Tupinamba came a century later to settle temporarily on the upper Madeira near the Andes, when they too were pursuing the chimera of the "Land without affliction" (2)?

2. When I was concerned with this migration (see Métraux, 1, pp. 22-24), I had believed, on the strength of Acuña, that the cause had been the desire to escape the tyranny of the Portuguese. Nevertheless I was not surprised to learn later while reading Heriarte's book (pp. 41-42) that these Tupinamba had undertaken this long exodus to seek the "Land without afflication." The passage in question is of the greatest interest and must be

Tupinamba 509
Guarani SM4

/305 cont./

Tg 174 175 167 773

quoted in its entirety: /see the foreign text for the passage quoted in Portuguese/.

Something had to /306/ push them toward the west and determine the choice of their itinerary; the mirage which was attracting them was the one which was to cost the lives of so many Spaniards later on. It is a matter of the "great tidings" of this mysterious country abounding in riches, located beyond the forests toward the setting sun, and which the Tupinamba certainly likened and then merged with the "Land without affliction" about which the old myths told.

G 773 173 175 127

In the same period an analogous tendency to identify the country of the Inca with the one where the culture hero lived can be noted among the Guarani of Paraguay.

There is a very interesting, but seldom cited text which shows very well how the Guarani pictured the Inca Empire at the beginning of the 16th century. By comparing it to what we know of the myths of these same Indians, we shall be able to draw many a curious parallel, and I hope by this means to demonstrate that the Guarani believed they saw in the Inca their culture hero, Candire.

The document in question is found in the Relaciones geográficas de Indias (Vol. II, pp. LXXXIII-LXXXVII), where it comes under the following title: Relación general que se tomó en pública forma y se envió autorizada al virrey en la provincia de los Xarayes, que es en 17 grados sobre el rio Paraguay, 250 (leguas) de la Asumpcion, donde habia llegado el general Nuflo de Chaves con 150 hombres, con órden é intento de poblar en ella, y despues, por la relación que tomó paso adelante /General account which was put in published form and, authorized, was sent to the viceroy in the province of the Xaraye, which, at 17 degrees, is above the Paraguay River, 250 (leagues) from Asunción, where General Nuflo /Nufrio/ de Chaves arrived with 150 men, with orders and intent to colonize in it, and afterwards, by the account that he took further measures/.

/306 cont./

773 193 175 [648] The Spanish, addressing the Uratuvere, who formed a small Guarani colony in the region of the Xaray /Xaraye/, declared to them that they had come to bring them iron, to chastize the bad ones and to reward the good ones. To that the latter answered "that they were very pleased since they had very much wanted to see us in their lands, and that through us they would learn the days and God would not be offended with them and would give them more fruits on the land, and that their chief, Candire, had so wished it." /Translated from the Spanish./ The account continues in these words: "He had asked them where he was and why they called him Candire. He said that he was dead, and as for the reason for the name, he said that in times past his father was called Caya, who united the other neighboring peoples and entered among the Ortugueses /Pl. II appears here/ /307/ and among the Ontes, until he arrived at the towns of Paicocoro, the chief cacique, and the towns of Paiçuri, and he asked for the Candire who is master of the true metal and of all good things." /Translated from the Spanish./ At first sight one sees in this passage an obvious contradiction which can only be explained by the difficulties the Spaniards had in understanding their interlocutor: Candire on the one hand, is represented as a powerful Guarani chief who led them in a migration, and, on the other, he is a personage, "master of the true metal and all good things," in the quest of whom this same Candire left! Let us look further and try to disentangle this confusion. The country where Candire lives is depicted as having "deer with long hair" from which clothes are woven; gold and silver are found there, as well as a yellow metal which smells bad and with which tools are made (copper and bronze). Several lines farther on the Guarani informant declares that in the Sierra de Acharagua there exists a river from which yellow metal is taken: "Asking what Araraguagua (sic) is, they said that it is a very large sierra that continued far, and that one part was delimited by a very large lake, and that in the other part was a very large population of people who had only one chief, who was lord of all, who was called Candire; and that in the latter's presence all joined to

sing with instruments of true metal, in the form of big reeds, which made a good sound (these are the Guarani rhythm sticks); and they had others they played with the mouth. He had shown him a trumpet; they said that that chief, Candire, took his father's name, because in that land he killed many candires, who killed all the other people who had left with his father." /Translated from the Spanish./

The country of the Candires is the one where God put all the good things of this world; gold abounds there, one finds there fortresses defended by ditches. The Candire warriors are clothed, their battle-axes are of metal and their shields of gold and silver. In the interior is found white and yellow metal, etc. The land of the great Candire is located, geographically, beyond the Guapay River; to go there one crosses the land of the Timbu, of the Baure (Mbaure) who receive golden objects from the Candires. Near the land of the Candire live the Chiriguano and other Candires, Guarani and, moreover, relatives of the Uratuvere, who gave this information to Nufrio de Chaves.

It is obvious that the land of the Candires is none other than Peru (1). In the great Candire we have no trouble recognizing

1. In the commentaries of Alvar Nuñez Cabeza de Vaca (Hernández, pp. 288 and 322), it is likewise a matter of the Candires as a people whom we can also identify with some Inca tribe.

the Inca. But why this merging of Candire and a Guarani chief /308/ and then the idealizing of this personage? Finally, what is this migration in search of the great Candire? The key to the problem is furnished us by another text from a slightly later period (1589) which concerns the Guarani of Itati, emigrants into the province of Santa Cruz de la Sierra, that is, among the ancestors of the present-day Guarayú /Guarayu/ and Pauserna. It is a matter of a Jesuit Annua littera (see Métraux, 5, p. 924), in which much is said about these Indians, designated by the name of Itatines because of their country of origin. The anonymous

G 773 /308 cont./
173 Jesuit, author of this letter, tells us that Candire is their god.
175 Actually, even today, Candir has a place among the culture
GU gods or great gods of the Guarayú. In a fragment of Guarayú
[776] mythology published by Cardús (p. 76) Candir appears at the
[773] beginning of the world in the company of Mbiracucha (Viracocha), Zaguaguayu, Abaangui, and Tamoi. The creation of the Negroes is attributed to Candir.

G There is nothing extraordinary in seeing the Inca decked out
177 with the name of a Guarani god or culture hero. Confusion must
773 have been produced there analogous to that provoked nearly everywhere in South America by the arrival of the white men. As we know, the latter have almost always been merged with the culture heroes. In the same way that the Tupinamba and Guarani saw in the first Spanish or Portuguese the descendants of the culture god or hero, it is possible that the ancient Guarani pictured Peru as the mysterious region to which the Great Ancestor had withdrawn; and in the sovereign of that empire they doubtless believed they recognized the culture hero himself, Candire.

G All those who know the Indians of tropical America from
167 having seen them will have no difficulty in picturing these mi-
174 grations of the Guarani toward the Andes.

G When an enterprising chief with his "soldiers" succeeded
[721] in crossing the Chaco and making some fruitful raid among the Chané, nothing else was needed for the news to spread from mouth to mouth upon their return and arouse everywhere the de-
G sire to imitate him and the hope of similar gains. In each
174 village the affair was discussed, the chiefs talked in the even-
167 ing around the fire or at the time of the great collective drink-
721 ing bouts, and the young men dreamed of obtaining, in their
[177] turn, silver ornaments, bronze axes, and the long woolen shirts in which those who had come back from the land of the Candir dressed. Here and there people decided to leave in the good season to try their luck. The inhabitants of several villages took counsel together to set the date of departure and they prepared for it slowly. The women busied themselves with the provisions, roasted corn and made flour of it or grated manioc which they transformed into cassava bread. Others prepared corn beer for the feast which would precede the departure.

/309/

174

721

Contingents from several neighboring villages combined, probably in order to face together the perils of the road (1).

1. In the course of the survey he conducted on the Paraguay River by order of Governor Alvar Núñez Cabeza de Vaca, Martínez Irala had the chance to question some Guarani near Puerto de los Reyes, one of whom gave him the following information, which throws light on the manner in which these migrations took place: "asked if there are some houses of his race ahead of them, he said that, yes, there were five or six principals; asked if they go for the metal to the sierra where they extract it, he said that they are not accustomed to go there because they are few and have enemies nearby, but those of the last houses go sometimes and he went there once; asked how much time it takes from here to where the metal is, he said that it takes five moons; asked with whom he went for the said metal, he said that in the past many principals from paguay and Indians from the port that they call ytatyn came, and, passing through a land called ytapua, which is a four-day trip from the last houses of his race, those of the said house going in search of said metal, they met on the way and went together and came to a house of Indian slaves, enemies of theirs, and that from there they returned with all their men and also some of those from ytatyn, and the others went on, and I have heard it said that they took the said five moons to get to where the said metal was ..." /translated from the Spanish/ (Relación de Domingo Martinez de Irala, pp. 349-350).

/309 cont./

174 If they were under the authority of a powerful chief, the expedition
169 gained in cohesion and number. In no case must one see in
721 these migrations a national movement carried out according to
619 a pre-established plan and involving the whole group of Guarani tribes simultaneously. These Indians, like all in tropical America, have never had a very clear consciousness of their unity, and, even in the face of a common danger, the idea never occurred to them that similarity of language and culture might create a bond of solidarity among them. All the more reason why this individualism of the group or tribe was to manifest itself with particular acuity when a simple pilleging expedition was afoot.

174 The columns of Guarani warriors who penetrated into
721 the Chaco bush doubtless included only a few women. The
169 men advanced, walking in single file, bows and arrows in hand,
22 while several girls followed behind with baskets full of pro-
262 visions on their backs. If these ran out, the men hunted along
[411] the way or fished in the rivers, such as the Pilcomayo if they
[482] were following its course. When game or fish were lacking, they gathered fruit: palm cabbage, algarroba pods, and chañar fruit were there, which provided a substantial diet, but it was still necessary to choose the season when they were
[825] ripe, in order to travel. They watched the flight of bees in order to find honey, and they did not scorn certain insects or
169 their larvae. The problem of water was the only serious one:
721 it was solved by collecting what the caraguatá leaves held at
174 the base: they sucked the root of certain tubers (the /310/
271 sipóy (1) of the northern Chaco) and quenched their thirst at
824
[139]

1. This is a Bignoniaceae or Begoniaceae (?). This plant has the appearance of a liana whose bulb is full of fresh water. (Diccionario Chiriguano-Español y Español-Chiriguano, p. 192).

the small ponds encountered on the way.

/310 cont./

Sometimes too they stayed several months in a spot which appeared fertile in order to sow manioc and corn, waiting for it to grow before continuing the march. García, in the course of his long expedition, had left five of his men with a tribe so that they could provide for the feeding of his band on his return (7).

7. Relación de Domingo Martínez de Irala, p. 340: "asked how many days it seems to him that they might count on to get here by the route of the said García, he said that he does not know, but that it seems to him that he would know the land and that the route is very wide and big; asked if there were food on that route he said yes, and that much of the food that they have is manioca, and corn, and gourds, and mandioca, and that said García left five of his slaves along the route with a certain race, in order that they might have food for him when he returned;" /translated from the Spanish/.

The going was slow, for it was necessary to clear a path in the thicket; and this job, difficult for white men armed with machetes, must have been even more so for the Indians in pre-Hispanic times. With their stone axes, their clubs, and fire, if there was no danger in lighting one, they opened up a path which the rear guard and other expeditions followed. Besides, the Guarani, accustomed from childhood to life in the great woods, certainly had that astonishing lithness which allows their descendants to slip into the thickest copses, avoiding branches and thorns (3).

3. Hernández, p. 300: "He said (a Guarani is speaking) that he went over that route a long time ago, and when those of his race would pass through, they went along opening the route and cutting trees and clearing the land, which was very brambly, and that it seems to him that

/310 cont./

those routes would already have closed up again with forest and grass ..." /translated from the Spanish/.

From time to time there were skirmishes with the Gustkuri, Samuko /Zamuco/, or Matako /Mataco/ Indians, but for the Guarani, who for a long time had been used to fighting the wild Indians of the Chaco, these combats did not take them by surprise. They contented themselves by attracting the least possible attention by avoiding setting fire to the bush or simply making too much smoke.

None of the details I have just given is the fruit of my fancy. In order to describe these migrations it has been enough to recall the scenes I witnessed among the descendants of these ancient Guarani and to glean some facts from the chronicles or documents in which are recounted for us the crossings of the Chaco made by the Guarani before or during the Spanish conquest. Does anyone want some examples? I take them from the commentaries of Alvar Núñez Cabeza de Vaca and from the Relación de Domingo Martinez de Irala.

/311/ This has to do with the entrada which Governor Alvar Nuñez Cabeza de Vaca made into the Chaco in search of a way to the country of the Chané. "The Guarani Indians whom the governor took along lived on what the Governor had them given out of the reserve provisions and on honey which they drew from the trees. They also procured some game for themselves by killing peccaries, tapirs, and deer, which seemed to be abundant in that land; nevertheless, since the band who came with him were numerous, they made noise and put the wild animals to flight, which made the hunting not very fruitful. Spaniards and Indians also ate the fruit of wild trees, of which there was a great quantity ... they took advantage likewise of the fruit of the palm trees which abound in this region. They do not eat dates, but are satisfied to break their pits. The inside is round and like a sweet almond. The Indians make a flour of it, which is an excellent food; they also eat the palm cabbages, which are very good." (Hernández, p. 303.)

G /311 cont./
175 Elsewhere (Hernández, p. 241): "The Spanish, taking
484 with them as guides some Indians and several individuals who said
648 they knew the way, walked for thirty days across deserts
[262] where they suffered very much from hunger and thirst, to such
G a degree that some Indians died ... they returned eating wild
[271] thistles all the way. For something to drink they extracted
the juice from these thistles and other weeds."

G "Aracare ... ordered them (the Guarani who were ac-
[721] companying a Spanish expedition into the Chaco) to set fire
to the prairies they were crossing, which was the equivalent
of warning the enemy Indians whose territory they were going
through to come and bar their way and kill them. They did that
against the custom and discipline observed by those who make
expeditions in this country and against the practice of the Indians
themselves." (Hernández, p. 228.)

A Guarani from Puerto de los Reyes, who had taken part
in an expedition to look for metal, reported to Irala "that he
had heard it said that they took five moons before reaching
the place where the metal was, and he added that the ones
from Itatin who lived more than a hundred leagues lower
asserted that they took no more than three months and claimed
that they made this trip in five months since they had to pass
so close to the spot where their homes were. He said that what
he was claiming was the truth, but that the duration of this
trip was due to the fact that they often stayed to eat in regions
which appeared fertile and that during the time he was with them
they stayed in one place three months and that this was why
it took them so long." (Relación de Domingo Martinez de
Irala, p. 350.)

G Against the frequency of these warlike expeditions of the
175 Guarani, there /312/ will be raised the objection of the
167 insurmountable obstacles the Chaco presents, the unprecedented
721 difficulties the Europeans had in trying to cross it, the bloody
C sacrifices all the expeditions risking it must have made. I
167 shall reply by reporting the account of a contemporary migra-
tion made to me by my old friend and host, "Captain" Taruirí
of Caipipendí. Some years ago, old Taruirí, having learned

167 [464] /312 cont./Some years ago, old Taruiri, having learned from some Chiriguano that Brazilians were "cariñosos," that is, generous, had the idea of going to their country to find work, for which he hoped to be well paid. He banded together with 45 other Chiriguano before whom he held out the glittering fortune which awaited them in the country to the east. With this adventurous spirit and boldness which characterize the Guarani, they did not hesitate to take off toward the unknown. They first passed through Chané territory and followed the course of the Parapiti to the desert. There they rushed boldly into these unexplored regions, dried-up expanses, which separate the Izozoc from Chiquitos. They were all armed with bows and arrows to defend themselves from a possible attack by the Tsirakua, the tracks of whose squared-off sandals they often [271] [824] saw in the sand. No water, of course, but only sipóy roots, which permitted them to stand the thirst. After 12 days of walking, this band arrived at Chiquitos, then from there reached the Paraguay River and Corumbá. Taruirí was not a little surprised to find brothers there, "that is," he explained to me, "people who spoke my language, badly it is true, but who nevertheless made themselves understood." When I inquired discreetly as to the success of his business over there, Taruirí answered, shaking his head and in a tone shot through with sadness and disillusionment: "All that was only a lie," todo era engaño.

Taruirí does not know and will never know that by doing this he accomplished an exploit that would be the pride and glory of an explorer. For him, it was a question of a simple trip, scarcely longer and more arduous than the one he undertook in the past to go to Argentina.

173 539 648 484 Does anyone want other modern examples of their spirit of adventure and of that ease with which the Guarani move about? I transcribe as such the curious tale told to me by the Indian Cipriano from the Ivu mission, who, confused as he may be, refers to definitely authentic facts:

C 173 539 648 484 C [643]

/312 cont./

In olden days numerous Paraguayans emerged into our territory near the Izozoc and they went to fight on the side of the Guarayú and Santa Cruz. From there they went on to Cochabamba. They gave battle over there, then went to Oruro. Their colonel was killed. They scattered in every direction. One of them came to Macharetí where the "Capitan grande," Mandepona, was. The latter told Cipriano, who was then a young man: "Let us go to Paraguay." Mandepona had given this Paraguayan ten "soldiers." Cipriano did not want to go with them. The ten went down the Pilcomayo and arrived at a village near Paraguay. /Plate III appears here./ /313/ A soldier richly decked out with silver, with a horse whose harness was of the same metal, came to meet them to examine them. The Paraguayan they were escorting went to speak with this soldier, but the others did not hear what they were saying. While these two were talking, they saw the Toba arrive with a piece of cloth between their legs and their chests and arms painted with charcoal. The Toba asked them where they were coming from and where they were going. The Chiriguano answered: "To visit you." The Toba refused to allow them to continue on their way, although they were only one league from Paraguay. As an excuse they told them that they were in the act of making war. The Paraguayan rode behind the soldier, and the ten Chiriguano returned to Macharetí.

The first part of this story seems to be a modern adaptation of Alejo García's adventure. I do not know what event could have given rise to this legend, which, had it been true, would have been very much to the taste of the Paraguayan government. As for the trip of the ten Chiriguano from Macharetí, it has the appearance of being wholly authentic.

C 175 648

The crossing of the Chaco is a less difficult undertaking for Indians than for white men. Formerly these trips from the Andes to Paraguay must have been facilitated by a greater density of the native population. It is enough to recall the relatively easy trip of Juan de Ayolas going from Paraguay to the country of the Chané and coming back without having to cope with any particular obstacles. The exploration of Alvar Núnez

[Text continues on P. 30]

CG /313 cont./ The exploration of Alvar Núñez
175 Cabeza de Vaca, continued by his lieutenant, Francisco de
484 Ribera, is a second example that shows very well that the excursions of the Guarani did not constitute exceptional deeds that were extremely dangerous to accomplish.

Having arrived at a certain distance from the spurs of the Andes, the Guarani entered the territory of the Chané Indians.

It was in one of these numerous warlike ventures of the Guarani that the Portuguese adventurer Alejo García took part with several other comrades.

CG I am convinced that the 2,000 (according to Díaz de
175 Guzmán, p. 26) Guarani whom this adventurer accompanied
167 as far as Peru formed only one of the numerous bands of warriors
484 of this nation who, each year, from every point of the Guarani
[162] territory, used to cross the Paraguay River, then the deserts of the Chaco.

CG Ruy Díaz de Guzmán, who reports this event, sees things
114 in too simple a light. A migration is not made at one time
175 nor in one year. That of the Guarani lasted perhaps several
167 decades, without, however, necessarily speaking of centuries.
484 Twenty or thirty years must have sufficed for the nucleus of the
174 Chiriguano nation to form between the upper Pilcomayo and the Guapay River. The penetration of the Guarani into /314/ the

CG Chaco took place in a rather chaotic and incoherent fashion.
175 The conquistadors were continually meeting on their route
167 Guarani groups who, for one reason or another, could not
648 succeed in joining their brothers established beyond the Chaco.
484 These Guarani, who blazed the trails followed by the invaders, were valuable guides for the Spanish adventurers, and they were the ones who led them to Peru. For long years there were uninterrupted communication and incessant coming and going between Paraguay and the eastern slope of the Bolivian Andes.

C G /314 cont./
175 167 Making a critical study of Alejo García's story would be to follow paths already traced out and, besides, to leave the province of ethnography. This episode of the Conquest, so closely mingled with an ethnic phenomenon, appears today as a major event whose repercussions on the development of the Provinces of the Río de la Plata were considerable.

C G Alejo García's expedition is distinguished from the pre-
175 167 721 726 I 726 ceding ones by its scope. Not content to raid the Chané, the Guarani Indians who formed this column had the audacity to attack the Inca fortresses of Cuzco-Toro and, after taking them by storm, to penetrate as plunderers into the provinces under the authority of the Peruvian emperor. The invaders crossed the frontier between Mizque and Tomina and advanced 40 leagues into the interior. Near the villages of Presto and Tarabuco, not far from Chuquisaca, they were stopped by the Charcas Indians, according to Díaz de Guzmán, by troops raised in the
C G [727] Kontisuyu, according to Peruvian chronicles. The Guarani withdrew in good order, without abandoning the conquered booty.

I [712] Huayna Capac, following this invasion which took place during his reign, had the destroyed forts restored and put strong garrisons in them.

C G The Guarani invasion into Tahuantinsuyu is reported at the
175 721 726 same time by the chroniclers of Paraguay and those of Peru (1).

I 726 701 C G [291] [266]

1. Sarmiento de Gamboa, pp. 109-110: "While Guayna Capa was occupied in this war with the Cayambi's, the Chiriguanas, a mountain people, naked, and who eat human flesh and have a public slaughter house for it, joined together and, coming out from the harshness of the mountains, entered the land of the Charcas, which had been conquered by the ingas /Incas/ of Piru /Peru/. And they fell on the fortress of Cuzcotutyo, where the inga had a large garrison of frontier troops against the Chiriguanaes. And as they suddenly sallied forth, they entered the fortress and killed them all and among those of the land,

/314 cont./

they caused great destruction, robberies, and deaths.

"This news went to Guayna Capac in Quito, who received it with great sorrow and immediately sent a captain of his, named Yasca, to Cuzco to form an army, and with it he was to go to wage war on the Chiriguanaes. The captain left for Cuzco, taking with him the guacas /huacas/, Catiquilla of Caxamarca and Guamachuco and Curichaculla of the Chachapoyas and the guaca Tomayrica and Chinchaycoaha with many of the guacas' own men. And he arrived in Cuzco where he was very well received by the governors named Apo Hilaquita and Auqui Topa Inga, and, forming his army, he left Cuzco for the Charcas. And on the way he took many troops from Collao, with which he came to the Chiriguanaes and waged cruel war and took some of them prisoner, whom he sent as specimens to Guayna Capac in Quito, so that he might see the strangeness of that people. And Captain Yasca rebuilt the fortresses which were there, and, putting in them the necessary garrison, he returned to Cuzco, where he dismissed the troops, and each one went back to his land." /Translated from the Spanish./

Santa Cruz Pachacuti, p. 304: "And at this time (of the Inca Huayna-capac) there came the news that the Cheriguanaes had come forth to take the lands of the ynga, which news upset the ynga, and so he sent the most experienced captains for the conquest of the Chiriguanaes, with 20,000 Chinchaysuyo men." /Translated from the Spanish./

Balboa, p. 105: "But this fiesta was interrupted by the news from Cusco that the Chiriguanes, a cruel and brave people, had killed the garrisons of the frontiers and leveled the whole country as far as Chuquisaca and its surroundings. Guayna-Cápac was disturbed by this news, disguised his grief as much as he could, and called to command his army a man full of bravery and intrepidity, named Yasca, whom he ordered to punish this aggression. Yasca departed from Tumibamba at the head of the best of the ingas soldiers; moreover, he had orders to recruit from Caxamarca on all the men that he found, in order to wage the war which he was going to undertake; and in order to arouse their valor he ordered each nation to bring with it the great Guaca of its country, which is an idol besides, and to which they very frequently come. He arrived at Cusco with a large army made up of different nations; through all parts the governors welcomed him with affection and gave him great honors. Provided with everything that he might need and his army augmented with the best men from Collao, he continued on his way with the utmost speed in pursuit of the Chirihuanas; many battles were joined, without any victory declared by either of the two armies. Nevertheless Yasca took some prisoners, whom he sent to Quito. He repaired the damage that the enemies had done in the country, and he left a new garrison in the fortresses and on the frontiers; afterward he returned to Cusco, where the governors rewarded the soldiers who had distinguished themselves and permitted them to return to their countries, taking their Guacas, or idols." /Translated from the Spanish./

/314 cont./

for they returned, fleeing." /Translated from the Spanish./

They agree /Plate IV appears here/ /315/ on the essential fact and on the approximate date of the event. This coincidence between traditions whose sources are so different and which have been collected independently from each other in regions as far apart as this leaves absolutely no doubt about the purely historic nature of this invasion. Nordenskiöld (5, pp. 70-77) in the course of his last trip into the Chaco (1913-14) was able to study the ruins of the small forts of Cuzco-Toro (today Incahuasi), which always stand at the edge of Chiriguano country. By their style they belong to the Inca period. Nordenskiöld (7) and I had thought that García's expedition was the first in date that the Guarani had launched toward Peru. In reality, other Guarani emigrations preceded it by several years, as Gandía (2, p. 30) (1) succeeded in /316/ establishing.

C G 114 175 721 726 I [712] C G 114 175 167 C G 175 167 721 726

1. Gandia (2, p. 30, note 1) cites various passages taken from old, reliable documents which seem to indicate that Garcia's expedition had been preceded by other previous migrations which, starting from Paraguay, had ended up in the establishment of Guarani groups beyond the Chaco. Thus the Tarapecoci recounted to Francisco Ribera how in ancient times, before García, the Guarani had come to plunder and massacre them.

Ce [648] [567]

A Relación anónima /Anonymous Account/ of 1545 (pp. 310-311) reports in these words the remarks of some Chané Indians who were questioned by Alvar Núñez Cabeza de Vaca at the time of his expedition on the upper Paraguay: "among the people found there are certain yndios /Indians/ who are from the interior country, those of the chane people

The most significant of these texts is the one we find in the Relación de Domingo Martinez de Irala, pp. 346-347. Irala was at Puerto de los Reyes on the Paraguay River when "on the brigantine where he was, there came a principal with three other yndios /Indians/ who spoke the guarani language just like the guaranis themselves; the said principal said that he is called theroçe, and one yndio of those who came with him, who was small in body, said that he was called xagoani and the guaranys called him maraana; without being asked anything, he said he had lived and had been a slave without pay /esclavo de gracia/, that the yndios named him maratya and called him by the two names; he and the said principal and all his house were not from the said port and they were the ones that were called chanes; asked through the said languages why they were called chanes, he said they were of the race of the chanes who were in the interior land and who are called çeritocoçi and that thus among the

/315 cont./

C G 175 648 Ce 175 648 567

/fn. 1 cont./ said chanes each pueblo had its name, although all were one race; asked how they came to speak guarany and where he knew the said garçia, he said that the reason he spoke goarany was that in times past, before garçia came from brasil /Brazil/ to the said guaranys, there was a great gathering of said guaranys in the port called ytatyn, in order to go to search for the metal, and that passing through their land at night they came upon their houses and killed many of them and took their women and children and brought them to the said port of ytatyn, and while they were slaves of the said goaranys in the said port, the said garçia passed through there, with whom he and two other brothers went in search of said metal with the said guaranys; asked if he went and traveled with the said Garçia until he returned, he said yes; asked how far the said garçia had gone and where he got the metal that he carried, he said that he had gone as far as the race that they call payçunos, and that the chanes and the said payçunos gave him the said metal and that he had returned from there because he learned that a race called çorocotoquis were having a great gathering against the said garçia and those who went with him, and he said that they returned to get more xrisptianos in order to return with them for the said metal ..." /translated from the Spanish/.

C G 175 127 114 167

This testimony and some other indications corroborate Gandía, who in this study gave evidence not only of vast erudition but also great sagacity. There is nevertheless one point on which I do not agree with him. The documents alluding to the migration of the Guaraní all speak of it as a recent event whose details were

/315 cont./

G 114 127 175 167

/fn. 1 cont./ still present in everyone's memory. Even if we accept Garcilaso's version and make that event go back to the reign of Tupac Inca Yupanki, it is still no less certain that it could only have taken place in the last decades of the 15th century. It is indeed at this time, according to Balboa, that the emperor Tupac Inca Yupanki would have reigned. (See Nordenskiöld, 6). In this case the first Guarani migration would have preceded García's trip by about 50 years. Why then does Gandía, who himself gives us this figure, consider it more probable that this invasion took place more than a century before the Conquest? When I personally submitted to Mr. Gandía the reservations I had on the subject of the date he was assigning to the establishment of the Guarani at the foot of the Andes, he answered that he had taken as a basis for this evaluation a passage from Lozano (Descripción chrorográfica...) and Mendiburn (Diccionario Histórico Biográfico del Perú...). According to the latter the Inca Yupanki would have died in 1453. I shall reply to this objection by stating that the evidence of Lozano, who was satisfied to copy Garcilaso, has no value; and as for Mendiburn's calculation, I do not grant him any credence.

One single fact remains certain in this controversy: The Guarani had begun their *migratory movement toward Peru some years* before García's adventurous trip.

G 175 167 [114]

/316/ establishing. Neither was Alejo García's expedition the determining cause of the great migration of which Díaz de Guzmán (p. 29) speaks thus

"Following these events (García's trip) the Indians of the Province of Paraguay met together with their caciques and

/316 cont./

G decided to make an expedition and go back to the region where
175 Alejo García had gone. When they had summoned many Indians
167 of this province, they started going by bands and tribes. The
Indians from below, the ones from the Paraná, followed the
G course of the Araguay River, which is, as I have said, the
131 Pilcomayo. These are the Indians who today live on the
175 borders of the Corregimiento de Tarija: the Indians who lived
167 in the region of Asunción entered on the right of the Paraguay
River in the direction of Caáguazú. The Indians of
Jeruquisaba and Carayazapera who were living higher up on
the river left it near San Fernando. The latter are the ones
who today are established on the Guapay River /317/ 20 leagues
from the city of San Lorenzo, government of Santa Cruz da la
Sierra."

G In the commentaries of Alvar Núñez Cabeza de Vaca
(Hernández, pp. 299-301), it is a question of another migra-
175 tion which does not appear to have any relation to that of
167 García, which was several years later. I shall quote this passage
648 in its entirety, for it illustrates well certain vicissitudes of this
great ethnic movement: Alvar Nuñez Cabeza de Vaca had sent
a Spanish detachment to the Xarayes Indians to try to confer,
with them as intermediaries, with a group of Guarani Indians
who had settled a short time before in their neighborhood.
The emissaries failed in their attempt, for Xaray and Guarani
were irreconcilable enemies. By way of consolation, the
Xaray cacique had put them in touch with a Guarani Indian,
married to a Xaray woman, who had lived among them for a
long time. "This Indian, who belonged to the Guarani race,
had been in the villages of the interior of the lands and /318/
knew the roads which led there." The Guarani was invited to
accompany the Spanish detachment and, interrogated before
the Governor by interpreters, he declared "that he was a Guarani,
originally from Itatí /Fig. 1 appears here/ on the Paraguay River:
that in his youth his people summoned and made a great levy
G of Indians of all the land and went toward the land and the
[721] villages of the interior. He himself had gone there with his
[726] father and his relatives to make war on the natives of this region.

175 They took from them the gold and silver plaques and orna-
167 ments they had. As soon as they arrived at the first villages
727 they began to make war on the inhabitants and to kill many
726 Indians. Many villages were laid waste and the inhabitants withdrew toward the interior. Then all the tribes of this land joined together and marched against his people, put them to rout, and caused great carnage. The others fled in various directions and the enemy Indians followed them, barred their way, and massacred them all. Scarcely 200 were able to escape out of all those who had left and who were so numerous that the fields were covered with them. He himself was among those who escaped. The greatest number of escapees stayed in the bush through which they had passed and settled there, for they had not dared retrace their steps for fear that the Guaxarapo, Guato, and other tribes would exterminate them. He himself had not wanted to live with them and he left with those who decided to continue their march. On the way they were seen by Indians who assailed them at night and killed them all. He had hidden in the thickness of the copse and, slipping through the underbrush, he had arrived in the country of the Xaray, who had taken and adopted him for a long time. Finally, since their fellow-feelings were mutual, they gave him a woman of the tribe as a wife. He was asked whether he had any recollection of the route he and his people
C had taken to go into the interior. He answered that it was a
175 long time ago that he had taken this route and that then the
167 people of his tribe cleared a passage for themselves by cutting
484 trees and cleaning out the underbrush with which this land was
467 covered. He supposed that since that time brambles and weeds must have overrun the path. He had not gone there any more, nor had he been to see it again. Nevertheless, it seemed to him that if he began to follow it, he would be able to continue; and that this route began near a rounded mountain which could be seen from Puerto de los Reyes. He was questioned also on the number of days necessary to reach the first of these villages. He said that, according to his recollection, one could get there in five days and great provisions would be found there, for the Indians are excellent farmers.

/319 cont./

there, for the Indians are excellent farmers. In the course of the war with these populations the Indians of his tribe, he added, destroyed and depopulated numerous villages, but doubtless they had already rebuilt them. He was asked whether there were large rivers and springs along the way. He answered that he saw rivers, but that they did not have much water; however, there were other very deep ones, springs, lagoons, game, deer and tapirs, fruits and honey. He was asked whether at the time his people made war on these tribes he had seen any who had silver and gold. He said that in the villages they pillaged there were many silver and gold plaques, /320/ labrets, ear ornaments, bracelets, crowns, axes, small vessels; and that it was all taken away from them when they were put to rout. Those who escaped were able to take along some silver plaques, beads, labrets; but the Guaxarapo stole them when they tried to pass through their territory and killed them. Those who settled in the bush had a few, and he had heard it said that at the present time it was the Xaray who possessed this silver. He declared he had seen the Xaray, when they war upon the Indians, take out silver plaques which they had carried away and plundered in the interior lands."

Against this bundle of proofs attesting to the recent character of the Guarani migration, what is the value of Garcilaso de la Vega's vague affirmation (Vol. II, pp. 279-281) which some people want to oppose to it? According to this kind narrator, the Inca Yupanki would have undertaken the conquest of the Chiriguano country for the virtuous purpose of converting them to the good natural religion of the Peruvians. The Chiriguano would have been veritable monsters, feeding on human flesh, uniting by chance, living without fire or law, burying the bones of their dead in caves or in the hollows of trees. In a word, except for anthropophagy and the mention of the maloca (1), there is nothing in the picture of the

1. The description Garcilaso (Vol. II, p. 281) gives us of the large house of the Chiriguano is perfectly exact and very

/320 cont./

C 195 342

interesting: "they make a very big dormitory and, within it, as many small rooms as there are residents, and so small that they do not have room for more persons, and it is enough for them, because they do not have furniture, nor do they have wearing apparel and hence they go about naked." /Translated from the Spanish./ These facts agree on every point with those of the Relaciones geográficas, etc. (Vol. II, Plate CIV) and of Lizárraga (Vol. I, p. 250) on the same subject. The Guarani, just like the Tupinamba and other Tupi tribes, lived in maloca, gigantic halls capable of containing more than 150 persons and which often in themselves formed the village. The existence of this type of dwelling among the Chiriguano in the 16th and 17th centuries constitutes new proof for the recent character of their migration. In the 18th century we find them already in possession of the small rectangular house which they still have now and where one single family lives. (See Métraux, ?, p. 51.)

C [illegible] 195

C [illegible] [101]

novelist Garcilaso which might allow one to suppose that he really knew who the Chiriguano were. As for this cliquent by the Inca, it would have been barely an attempt at conquest... Garcilaso confuses the Chiriguano with all the tribes of the eastern slopes of the Andes whom he had vaguely heard mentioned. Let us note that he is the only one to attribute this expedition to the Inca Tupanki, while the other chroniclers, better informed, are satisfied to say that the Inca Tupanki made an expedition against the Antis, probably around Cuzco. Unfortunately the vogue this pleasant writer enjoyed at a time when the history of America was still in limbo bluffs some modern critics into believing him, and they go so far as to prefer one of his unwarranted affirmations to the serious /321/ and precise evidence of chroniclers who get their information at first hand and from reliable sources.

/22: cont./

In 1550 during the expedition made by Domingo Martínez de Irala from Paraguay to the slopes of the Andes, 150 Guarani Indians out of those he had with him as auxiliary troops mutinied when they learned that they were in the vicinity of Chiriguano Indians "who are of the same nation." They deserted in order to go and join them. In 1540 the same thing had already happened (Díaz de Guzmán, p. 142).

The Guayayú and the Pauserna are brothers of the Chiriguano and, like them, came from Paraguay at a recent date to settle in eastern Bolivia. Nordenskiöld (7), without giving any proof, correlates their migration with that of the Chiriguano and fixes its date at the beginning of the 16th century. The Guayayú would have been none other than the descendants of those Guarani who, having left northern Paraguay, would have gone obliquely toward the northwest in their trek toward the setting sun. I myself shared this opinion for a long time, until my attention was attracted by an episode in the history of the conquest which obliged me to recognize my error, at the same time permitting me to solve the problem of the origin of the Guayayú.

The Itatin, known nowadays by the names Guayayú and Pauserna, actually came from Itatin province in Paraguay (1):

> 1. The former province of Itatí in Paraguay extended to the south of the Apa River, formerly the Corrientes River.

but it is not a question of a migration in the usually understood sense, and their establishment in eastern Bolivia was later than that of the Chiriguano.

Nuñez de Chaves, going from Santa Cruz de la Sierra to Asunción in 1562, stopped among the Itatin and plotted with the chiefs of this tribe to transplant the Indians of this region beyond Paraguay. The project was carried out the following year when the Governor of Paraguay, Vergara, and Nuñez de Chaves organized the famous exodus toward Peru. While passing through the country of the Itatin, Nuñez de Chaves raised

Guarayu SF11
Guarani SM4

G4 175 163 648

/321 cont./

2,000 to 3,000 Indians "who left their fatherland to go to settle in foreign territory... When these Indians arrived at a place 30 leagues from Santa Cruz de la Sierra, they settled there and called it Itatin, thus alluding to their native province. They stayed there and immediately began to sow." (Díaz de Guzmán, p. 207)

Some years later these same Itatin assassinated Nufrio de Chaves, who had come to their villages to accompany Felipe de Carceres and the Bishop of Asunción, Francisco Pedro de la Torre, who was going back to Paraguay. It is strange that these Indians killed the man who had made them change their fatherland and found a new nation between Xaray /322/ and Santa Cruz. Some say that this murder had revenge as its motive; others, the violence of Nufrio de Chaves, who addressed severe admonitions to the caciques. However that may be, the Spanish avenged the death of this conquistador by massacring guilty and innocent with their usual ferocity when a weaker people was concerned. On the return trip, Carceres and his band had to fight the Itatin of Paraguay, who harassed him and often put them in a difficult situation. (See Díaz de Guzmán, pp. 207-215; Groussac, pp. 294-314 and Gandía, 2, pp. 134-140.)

G 169 131

It was the Spanish then who transplanted the Itatin to Bolivia. It is not impossible that several Guarani groups were already established in the country, having come either from Paraguay or from regions occupied by the Chiriguano.

G4 131

The recent date of the settlement of the Itatin between the San Miguel River and the Blanco River explains a passage from an Annua littera (see Métraux, 5, p. 918) of 1589 where allusion is made to the pain of a woman who dies without avenging herself for the slap she had received from a Spaniard 20 years before in Paraguay. That takes us back more or less to the year of Nufrio de Chaves' trip to Peru, thus to 1564. If the Itatin followed the Spaniards willingly, it is because the previous migrations of the Guarani had familiarized them with these regions and made them consider such an expedition as an easy and normal thing. By accompanying the Spaniards they were imitating their neighbors and going near their relatives.

G4
175
642

/322 cont./

Thus, it is in 1564 that the Guarayú nation was formed.

G
175

167

In emigrating to the foot of the Andes, the Guarani had to win their present territory from populations who, like them, had formerly come from the basin of the great rivers of tropical America.

Ce
[101]

In spite of the similarity of their original habitats, the Indians dispossessed by the Guarani were superior to them in civilization. The Chiriguano even today scornfully style them tapii, that is, "enemies," but they call themselves Chané, and it is by this name that they appear in history from the first half of the 16th century.

Ce
101

197

The Chané, hard-working farmers and past masters in the art of pottery, belong to the great Arawak linguistic family.

A
181
174

The role of the Arawak in the development of civilization in South America has been considerable. Unfortunately, lacking any work of synthesis (1), it is still difficult to

A
[114]

1. Max Schmidt's thesis (1) on the Arawak contains some interesting facts. It should be redone because its documentation is completely insufficient. Max Schmidt took almost no notice of the old literature.

appreciate the true value of /323/ the civilizing work they accomplished in swarming over a great part of the continent. It is possible, if not certain, that they were propagators of cultural elements borrowed from the peoples of Central America rather than original creators. Nevertheless, wherever they settled they formed centers of civilization whose radiance is undeniable. In the whole region east of the Andes where ceramics of fine quality flourished or still flourish, one can suspect the existence or influence of an Arawak tribe. Is proof wanted? On the banks of the Amazon, from the mouth to the tributaries of its upper course, one finds at each step remains of a pottery with great richness of ornamentation and varied forms; wherever the spade has brought these remains to light, history attests to the presence, present or past, of an

A
181
172

A /323 cont./
181 Arawak tribe. The culture revealed by the excavations in the
192 Mounds of eastern Bolivia (Mojos) is clearly Arawak; and it would be unjust to forget that the Taino of Cuba and the Antilles were also relatives of our Chané, whose name is less illustrious. To this list are joined almost all the archeological remains of Guiana, the modern ceramics of this same region, those of the upper Amazon and of the upper Xingú, all three of which have as artisans or as inspirers the Arawak Indians. There is nothing impossible in the idea that the curious zoomorphic appliques of the lower Paraná may be as many remains of an ancient Arawak or "Arawakized" population (see Métraux, 4, pp. 181-183).

A According to a hypothesis developed by Max Schmidt (1),
174 the migration of the tribes of Arawak speech probably never
433 had the violent and rapid character of that of the Tupi, for
169 example. The Arawak would have advanced slowly in pro-
241 portion to their economic needs. Hoe farmers, they constantly
311 had to have new lands to cultivate. By ceaselessly clearing fields which they abandoned once they were worn out, they ended up by covering that vast geographic area which goes from Guiana to the Bolivian Andes.

A In each region the passing through or the settling of the
169 Arawak was a blessing. The Arawak brought with them if not
174 agriculture at least the knowledge of new edible plants, weaving,
648 and, as we have said, ceramics of superior type. Unfortunately
A for them, the Arawak, Indians who were generally not bellicose,
[181] were in many a place made subject to crude but more warlike populations. In the Antilles it was the Karib /Carib/ who subjugated or drove them back; in the Guianas, again the Karib; the Guaikurú /Guaícuru/ in the northern Chaco; and finally, at the foot of the Andes, the Chiriguano.

Ce The Chané belong to the Moxo-Mbaure branch of the
197 Arawak family. They separated from the other tribes of this
174 subgroup at an unknown date, and, abandoning the basin of
167 the Mamoré and the Guaporé, they /324/ slipped along the Andes as far as the northern Chaco, stopping only south of the
ooo Pilcomayo. The extreme limit reached by this migratory wave

Ce 167 361 /324 cont./ The extreme limit reached by the migratory wave is marked by the Chané villages of the Itiyuro River and by those of the Aguaray (Salta Province, Argentine Republic). Describing an immense arc of a circle above the northern Chaco, part of the emigrant tribes streamed out toward Paraguay and Brazil.

Ce Ga 101 105 "The Arawak Indians of the Chaco, whom linguists have recognized as closely related to the other Indians of this family, are known in the 18th century by the name of Chané and Guaná. The appellation Guaná has been reserved for the ensemble of the eastern Arawak groups and that of Chané for the western tribes. Like the Chiriguano, they make a very clear contrast with the other small tribes of the Chaco, and this antithesis is so strong that at first sight they look like an element that was implanted there. They are sedentary and pacific; and insofar as they have not been forced to abandon their ancestral customs, they live in villages solidly defended by palisades and devote themselves to the intensive cultivation of the soil. They know how to spin cotton and, like all the Arawak peoples, are remarkable potters. They do not practice infanticide and are not polygamous. The Jesuits hold them in high esteem, for they do not have idols.

Ce Ga 648 [131] "The two Arawak tribes of the Chaco, the Chané in the west and the Guaná in the east, used to live, the first in the interior of Chiriguano territory and the others in the domain of the Mbayá. They were both subject to these Indians and they depended on them entirely. This state of subjection varied according to the place. The condition of the Chané with relation to the Chiriguano was that of slaves to masters, of prisoners to conquerors. Among the Mbayá, the relations between the Guaná and their neighbors did not have so clear-cut, so brutal a nature.

Ga [621] "The Guaná appear sometimes as vassals and protégés of the Mbayá, sometimes as their allies. They are grouped into little closed communities, nearly independent. The bellicose Mbayá had the custom of taking a wife preferably from among their Arawak or Chamakoko subjects, and this explains the fact that the Mbayá wives and children spoke a different language from that of their husbands or fathers. Schmidel already

/324 cont./

Ce 6a 648 cites a people of the Zchennte (Chané) in whom by reason of their geographic situation we must see the Chané-Guaná: 'They are vassals and subjects of the Mayaiess (Mbayá) as with us the peasants are subject to their lords.' We also have no trouble in recognizing the Chané in the Queanaes (Guaná) whom Alcide d'Orbigny mentions, according to an old account, as having been subjugated by their neighbors the Chiriguano and obliged by them to cultivate their fields. In the 18th century the Chané, as prisoners of war of the Chiriguano, had been quartered /Plate V appears here/ /325/ like slaves in villages called Chané after them. When Lozano declares that the Chiriguano call their slaves Chané, an ethnic value must be given to this phrase. The state of subjection of the Chané in relation to the Chiriguano is explained in the linguistic sphere by the name which the first used to give to the second: cheya, 'my master,' the Chané used to say when addressing the Chiriguano, and the latter called the Chané tapii, 'my slave.'

Ce 175 648 567 727

"The little we know about the Chané who live in the lost regions of the northern Chaco is connected exclusively with the activity of the Jesuit and Franciscan missionaries of the Collège de Tarija. The first evangelized the Chané in the 17th century at the same time as the Chiriguano; and in 1714 they formed with them a doctrina /Christianized Indian village/ in the vicinity of Santa Cruz. It was called San Juan de los Porongos and in 1767 was under the authority of a parish priest. It was only with great difficulty that the Chané could be assembled, in 1767 and 1789, into the two missions of Asero and Iti. We learn from a report by Father Pedro Bartolomé addressed to Francisco Aguirre that the Pilipili mission in 1789 was made up of Chané Indians whose racial brothers were living mingled with the Chiriguano on the borders of Chuquisaca and Santa Cruz. Viedma, who visited the missions in 1786, found in the villages of the Parapití Chiriguano and Chané who were living together, united under the authority of the Franciscan missionaries. The activity of the missionaries among the Chané naturally was to have as a consequence a rupture of the bonds

of subjection which attached them to the Chiriguano: as a matter of fact, in the 18th century great social transformations took place and little by little they tried to free themselves from their servitude."

There is little to add to this account by Kersten (pp. 69-71), so clear and exact. However, I should like to complete it by quoting some texts of the 16th century which illuminate the drama of which the Chané had been the victims since the end of the 15th century.

The war of extermination made by the Guarani on the Chané dates from their first migrations to the country of metal. Thus it was that the Chané who, as we have seen, recounted to Irala the great exodus of the Guarani of Itatí before García's expedition, was taken along by the latter as a slave on the banks of the Paraguay. The Guarani, passing through his country at night, had attacked the homes of his people and taken women and children as captives. Later, this Chané was a member of García's expedition. Upon the death of the latter, the Guarani got ready to kill him to devour him as they had done with his companions and several women. He was able to escape and take refuge among the Guaxarapo (Relación de Domingo Martinez de Irala, pp. 347-348).

In an account that a Guarani gave to the same Irala about the expedition in which he had taken part to go to the country of metal, he speaks of the /326/ Chané exactly as the Chiriguano will do a century later: "They fell," says he, "on the houses of slave and enemy Indians." This term "slaves" applied to the Chané characterizes well the relations the Chiriguano had with them until not long ago (Relación de Domingo Martinez de Irala, p. 330). In the middle of the interview a Chané challenged our Guarani to ask him whether he had been present when the people of Itatí destroyed his tribe. When the Guarani inquired who he was, he replied: "I am the chief of the slaves of whom you speak, and, taken prisoner at the time you say, I lived with these Guarani until the moment when I went away and came here. The land you speak of is mine. Why do you not tell the truth to the Christians who are asking for nothing else but the way to

Chane SF8

go in search of metal? The aforesaid Indian answered: "They do not understand that I am only telling them that they can go to the country of the Chané in nine days." While they were speaking with this Indian, the aforesaid Cheroçe, chief of the Chané, was conversing with a woman of his tribe who as a girl had been kidnapped by these Indians whose chief had taken her as his wife. She said that it was correct that from the last houses of the aforesaid Guarani only four days were required to go as far as Ytapua and that from there, according to what Cheroçe claimed, one could go to his country in three days. He knew the way very well, for he had been brought up over there, but up to the present he had had no news of his country. (Relación de Domingo Martinez de Irala, p. 350.)

These facts prove that well before García's adventure the Guarani raided the Chané territory and were already beginning to make slaves of its inhabitants.

C G 175 567 72

"When Guarani bands arrived on the slopes of the Andes, each one tried to occupy as strong a position as possible on the most craggy points. From there they began to make pitiless war on the natives of the region, treating them with such cruelty that they spared nobody and made their fodder of the unfortunates they captured. They made themselves so fearsome that numerous villages submitted to them without violence. With the slaves they took to serve them and with all the women by whom they had children they populated these frontiers, each one choosing the region which seemed best to him. These Indians are the ones we call Chiriguana in Peru today; they originate from the Guarani. They never went out from this country, either because of the great hardships and risks of the road or in order to keep in their power this land which they found consonant with their nature and taste. It is indeed very fertile, with large and marvelous valleys which are warm rather than cold; and it is crossed by deep rivers coming from the neighboring province of Charcas. In possession of this land, they made numerous /327/ warlike expeditions in it, ruining the plains to the north, the south, and the east. They killed more than 100,000 Indians. In the beginning they used to eat them in the feasts and drinking bouts which they celebrated, but

C G [266] [439]

/327 cont./

they have not done it any more for some years and sell them to the Spanish for the shoddy goods the latter give them in exchange. Indeed, they consider it more profitable to sell them for objects they need than to eat them. Their cupidity is such that there is no year when they do not go out to make war in the plains, with great trouble and at the risk of their lives, solely to procure prisoners. Among these Indians there are some individuals so rich that in addition to clothes of cloth and silk they have silver dishes, a service which costs as much as 500 marcs. Without counting a great number of horses saddled and bridled, with good harnesses, and all kinds of weapons which they owe to the thefts and plundering they do in the course of these unjust and pernicious wars. Up to the present no one has been able to bridle their cruelty or stop the disorder and insolence of these people. They have committed many offenses and lacked respect for the royal Power, taking up arms against Francisco de Toledo, who was viceroy of this kingdom. Besides, they have killed and stolen from the Spanish and have inflicted outrages of all kinds on them, depopulating villages, killing and pillaging the fields and farms of the vassals of His Majesty who live on these frontiers of Tarija, Paspaya, Pilaya, Tomina, and Misque, and the government of Santa-Cruz de la Sierra." (Díaz de Guzmán, pp. 30-31.)

"The Chiriguana (sic) live near these valleys (Tomina and Lagunilla) in warm mountains covered with trees where horses can scarcely walk. They are not natives of this country but foreigners come from Río de la Plata. The language is the same and does not differ from it in any way... The Indians toward whom they are most hostile inhabit a province behind these mountains, a very flat land lacking water, which is called Llano de Manso or the province of the Chané. These Chané are inoffensive people but of good tendencies, of a more congenial appearance and a better nature than the Chiriguana. The latter have eaten more than 60,000 of them, and I do not believe I am saying very many, for these plains were very heavily populated. At present there are only a few Indians, and as they have no one to defend them, these

/327 cont./

brutal people butcher them. The Chané are so subject to the Chiriguana that it is enough for them to see a Chiriguana to sit down without resisting, allowing the Chiriguana to do what they like with them. The Chiriguana take them along like flocks of sheep. They eat the ones they want and use the others for work in their houses and fields. If they want to eat one, they only tell him to go and wash in the river and he does it without talking back. He comes back naked: the Chiriguana command their children to take bows and arrows, and the poor Chané tries /328/ to escape the arrows without, however, daring to flee from the spot until he dies riddled with arrows, to the great joy of all who look at him. They cut him in pieces and eat him either grilled or roasted, with corn and much ají /peppers/. For war they use Chané who they think are brave and robust. They treat them according to their barbaric customs and put them in front of themselves: if they do not fight well, they kill them with arrow shots from behind." (Lizarraga, Vol. I, pp. 259-260.)

Last year, going from Cuevo to Igüembé, I had taken a Chiriguano guide who spoke Spanish fairly well and who had lived among the Chané in childhood. He told me in his own way about these wars of former days. His involved narrative recalls that of the Spanish monk. Later I sojourned for some time among the Chané who in their turn alluded to their fights with the Chiriguano and to the cannibalistic customs of the latter. "The Tapuí are not the Ava. In times past they used to fight against the Ava." The Ava used to take the women and keep them in captivity. They used to marry the captives. From the sons of the Ava issued the Tapuí, they are sons of the women they carried away. The Chané are sons of the captives. When the Chané talk together, it is with words that one does not understand. Formerly the Karai (Whites) used to fight the Ava around Cochabamba. The Karai pursued them to the lower part and left them in Paraguay. The Paraguayans are sons of the ancient Ava. In olden days the Ava used to eat the Tapuí when they made war against them. "The Ava used to eat us," the Chané would say, "and that is why we detest them."

/328 cont./

The Chané confirmed to me the sayings of my informant and assured me that the Chiriguano used to eat them in times past (1).

1. Matienzo (pp. 166-167) expresses himself on the subject of the Chiriguano and the Chané in almost the same words as Lizárraga: "In the land there is a province of the Charcas and close to the city there are some immigrant Indians who are said to be chiriguanaes, warlike people, very cruel, indomitable, and they eat human flesh, live in the cordilleras, have no occupation other than fighting and killing and eating Indians and using them as slaves; they go out at night to plunder on the plains which are near the cordilleras, where some Indians subject to their sovereignty live, and they seize them by the thousand and two thousands and eat them and have others to fatten for eating, and others to serve as slaves; these Indians, out of fear of the chiriguanaes, fled from their land, which had some very beautiful and fertile valleys, thirty and forty leagues from the city of the Plata, and went to some plains and deserts which were customarily deserted because of the lack of water; they live entirely on yucas and cariooms, are more than eighty thousand, etc." /translated from the Spanish/. The deserts under discussion here and where the Chané took refuge are none other than those of the lower Pilcopití where numerous Chané now live, in spite of the poverty of this arid region.

It is not at all surprising that the Chiriguano have kept alive the memory of their struggles with the Chané. These ended only in the last years of the 18th century. In 1745 we see the

Ce /328 cont./
175
148
Ce
[1921]

Chané of Santa Cruz province coming to ask for aid and protection from the Chiriguano who were tracking them down; in 1798 the Chané of the Itiyuro were still making incursions against the Chiriguano of the region of Itáu and destroyed that mission almost completely. (See Corrado, pp. 98 and 225; Tamajuncosa, p. 211.)

Ce /329/ The Chané tribe did not succumb to these hecatombs
648 or to slavery. It was able to maintain itself on two points of
178 its former territory: on the Itiyuro and the Parapití. Several
131 villages whose density is rather great still exist there. The
Ce Chané of the Itiyuro still number about 1,500. They all live
[162] in Argentine territory in the province of Salta. I do not have
[101] any statistics for the Chané population of the lower Parapití, but I know these Indians are still numerous there.

Ce Today the Chané are not distinguishable from the
191 Chiriguano by their material culture or their language. They
[101] speak Guarani, but use certain locutions and certain words which
C the Chiriguano say they do not understand and which are perhaps
[197] so many vestiges of their ancient Arawak speech. They have
Ce kept the latter as a secret language. Nordenskiöld (2, p. 157)
[198] was able to collect a short vocabulary of it among the Chané of the Parapití. As was supposed a priori, it is certainly an Arawak dialect closely related to Moxo-Mbaure.

Ce The modern Chané are no longer slaves, but their early
648 condition is still manifested in their relations with their former
186 masters. The Chiriguano always regard them with a certain
C scorn and a protective air, to which the Chané respond with
[186] open animosity. A Chiriguano would feel offended to be called
C Chané, and a Chané Chiriguano. The name by which the
[101] Chiriguano designate the Chané is always Tapii.

Ce Even if historic traditions or ethnic facts were not in agree-
192 ment to prove the existence in the western Chaco of an Arawak
167 population, archeology alone would suffice to teach it to us. At Tarupayu, Nordenskiöld (5, pp. 40-41) brought to light pottery

/329 cont./

C 172 167 [177] clearly Arawak by its technique and many a detail of its structure. It dates from an epoch when the Chané, newly come to the foot of the Andes, had not yet undergone the Andean influence of the populations of the Bolivian south (Chicha, Atacama, etc.).

C 181 171 When they arrived among the Chané, the Guarani had a civilization nearly identical with that of their racial brothers, the Tupinamba of the Brazilian coast, whose ethnography is so familiar to us, thanks to the old French and Portuguese chronicles. They differed little from their present-day cousins, the Kaingué /Caingua/ of Brazil and Paraguay, who are independent but impoverished Guarani.

C 177 181 Upon contact with the superior Chané civilization, the Guarani adopted it as it was, introducing, however, some cultural elements of Paraguayan origin. From this fusion of the two nations was /330/ formed a center of acculturation which we can designate as Chané-Chiriguano civilization.

C 177 It is through the medium of the Chané that so many aspects of Andean civilization still characterize Chiriguano culture. For how could we otherwise explain so strong an effect of Andean civilization on the Chiriguano at the time when that civilization was failing and disappearing, at least partially?

C 177 178 The Chané, on the other hand, established for centuries near the Chicha and other Indians of the south of mountainous Bolivia, have, thanks to their trade relations, submitted to the attractions of the Andean civilization which has infiltrated among them, as among the other tribes of the Chaco, in the form of toilet objects, jewels, artistic motifs, games, words, and vices. It is these multiple contributions which give the Chané culture this Andean appearance which strikes every ethnographer used to the peoples of Brazil. But, having come from the great forests of the Amazon basin, these "Quichuaized /Quechuaized/" Arawak have faithfully kept until today furniture and utensils which betray this origin and tie them directly to their faraway relatives of the Guianas. The Chané civilization was and still is a mixed civilization formed of elements from different sources and often of opposing nature.

/330 cont./

C 177 The Chiriguano adopted this civilization of a superior type with all the more ease by reason of the numerous affinities it offered with their own. The whole Amazonian and Guianan side of the Chané civilization was composed of industries, techniques, and practices with which the Chiriguano, having come from the tropical regions of America, from a country of great forests and rivers, were already acquainted in part. Thus, for example, the Guarani, upon arriving among the Chané, found again the hammocks, grain sieves, mortars, baskets, and weapons to which they were accustomed.

C 177 The contribution of the Chané consisted of the very cultural elements they had received from the Andean peoples, that is, clothing (camisetas, headband, etc.), the liking for silver ornaments, some artistic motifs, certain pottery forms, etc., things which were scarcely beginning to filter into [323] Paraguay. The influence of the Chané was decisive in the sphere of pottery.

C 177 The civilizing action of the Chané upon the Chiriguano had as agent the Chané women whom the Chiriguano captured and married. The Guarani had certainly taken along with them only a small number of girls. They themselves were few in number at the beginning, 4,000 according to Lizárraga (Vol. I, p. 260). In uniting with the Chané women whom they carried [161] off by the thousands, they renewed with their blood all the feminine aspects of their industry. It is the women, for example, who make /321/ the pottery: a man would not be able to engage in it without losing prestige. So we see the pottery of the Guarani undergo important modifications and change completely. Today pottery is their glory: and of their ancient ceramics they have kept only the humble pots or the brewing vats for chicha. In spite of their decline the Chané have maintained their traditional superiority in this art, and they continue to produce vessels which, if they are not comparable to those of the past, are often very beautiful.

Chané SF8
Guarani SM4

/301 cont./

The pernicious and corrupting influence of the white men, which makes so many ravages among the poor Chané, has at least spared their pottery industry. They still manufacture considerable quantities of vessels which they sell to the other Indians and to the whites. As clever business men they complied with the taste of their new clients, and the motifs with which they decorate the pieces they export are as hideous and gaudy as the ones which ornament half-breed or creole textile fabrics or baskets.

Moreover, we can understand historically certain phases of the transformation of the culture of the Guarani when they mixed with the Chané. The ancient Guarani used to live in the large house or *malocca*, that is, in gigantic huts dwelling several families. Having emigrated to the foot of the Andes, they kept until well into the 17th century a type of habitation which corresponded to a particular social organization (the large maternal and undivided family). In the 18th century we see them living in huts similar to the ones they still have today, intended to house only one family. In the same way one can witness the disappearance of cannibalism, which in the 18th century is no more than a memory among the Chiriguano. Certain traces of it have survived up to our day.

This three pages justify the assertions of the preface. With the Chiriguano we are dealing with a union of recent formations whose civilization is a composite of Guarani, Arawak, and especially Andean elements. The geographic area inhabited by the Chiriguano can be divided into as many diverse zones of acculturation as America has. It has brought about, not the joining of three cultures, but their fusion.

Bibliography

The Chiriguano belong to the Tupi-Guarani linguistic family.

They emigrated from Paraguay to the foot of the Andes in the last quarter of the 15th century and the first half of the 16th.

/331 cont./

This migration had as its motive power the attraction which the moral riches of the Inca Empire exerted on the Guarani, and perhaps also certain mystical factors (the myth of the "Land without affliction").

/332/ The famous expedition of García is probably only an episode in this great migration.

At the foot of the Andes the Guarani found a population of Arawak speech, the Chané, whose civilization had felt strongly the influence of the tribes of southern Bolivia subject to the Inca.

The Guarani exterminated part of the Chané, reduced the others to slavery, and took Chané women as wives.

The Chiriguano nation issued from this ethnic mixture.

From a cultural point of view, the Chané exerted a decisive influence on the Chiriguano; and it is through them that today certain aspects of the Inca civilization are continued by the Chiriguano.

On their part the Chané adopted the language of their conquerors, keeping for a long time their Arawak speech as a secret language.

Situation of the Chiriguano in the 18th Century and Today

In the 18th century the territory of the Chiriguano can be defined as follows: "According to Jolis and Hervas, their domain extended from Tarija to the east a distance of 50 leagues (250 kilometers), and from north to south, 100 leagues (500 kilometers). Their frontiers were the following: In the north they reached 17° south latitude and advanced as far as the Jesuit missions of Chiquitos. In the south they reached 22° south latitude. In the region of Salinas, Itáu, and the upper Pilcomayo, they had as neighbors the Matako-Mataguayo and the Tobo. Toward the west they had establishments as far as Chorlaca, Pilaya, Laguna, and Valle Grande. Permanent

/332 cont./ Permanent?

villages were there under the command of hereditary caciques. The middle course of the Parapití formed their boundary to the east. In the 18th century the Chiriguano constituted the most important and remarkable nation of the western Choco. The statistics concerning them vary a great deal: the figures, given with their usual exaggerations, vary between 41,000 and 15,000 warriors. The Chané are included in this number, which completely removes all value from these statistics." (Kersten, pp. 68-69.)

Today the boundaries of the Chiriguano have stayed about the same. But even though they inhabit a territory whose extent has varied little, their situation has none the less undergone great changes. Several thousand half-breeds from Tarija, Santa Cruz, and Chuquisaca have settled inside this area that we have defined. A Chiriguano frontier no longer exists, but only remains of villages and small groups which still mark the former extent of the tribe. On the other hand, the number of Chiriguano has diminished terribly and is diminishing each day, so that a few years from now the true habitat /333/ of the Chiriguano will be contained between the Parapití and the Pilcomayo and will be reduced to the former Franciscan missions and to several valleys of the Precordillera, such as those of Caipipendí and Igüembé (1).

1. Some historians not well informed about the ethnic geography of South America have claimed that in the 16th century the Chiriguano lived well beyond the boundaries I have indicated. One of them (Dr. Fulgencio Moreno) went so far in this direction that he attributes to the Chiriguano the possession of a large part of northwestern Argentina and pushes this fancy to the point of locating them almost as far as in the province of Córdoba. Mr. Coni in an excellent monograph, documents in hand, has done good justice to these bold allegations and has demonstrated that these hypotheses were without foundation.

Guarani 5814
Tupi Guarani 3146

/322 cont./

The archeological arguments of those who believe in a vast extension of the Guarani into Argentina rest on the occurrence of burials of adults in urns in the provinces of Salta and Jujuy. Recently I conducted excavations in several pre-Hispanic cemeteries of this region (Candelaria department, Salta prov.), and I was able to satisfy myself that the peoples who left us these great necropolises had nothing in common with the Chiriguano from a cultural and anthropological point of view. The funerary urns I brought to light are entirely different from those of the ancient Guarani, and the funerary furnishings include no pieces which could be attributed either directly or distantly to the Guarani.

Burials of adults in urns is not in any way characteristic of the culture of the Tupi-Guarani Indians, and, I might say, even the opposite. Already in 1905 Outes (1) in a very well-documented monograph had proved that the cemeteries of Rosario de Lerma and San Pedro de Jujuy, which Boman (1) considered as Guarani, in no way constituted proofs of a Guarani migration into northwestern Argentina. Nordenskiöld (15, pp. 196-199) and myself (Mémoire, 5, pp. 271-278) have renewed study of this question, and our results entirely confirm those of Outes (1). Therefore, as much from the historic as from the ethnographic point of view, boundaries other than the ones I have indicated could not be assigned to the ancient Chiriguano.

Chapter II

Agriculture

241 The Chiriguano, like the Guarani and the Chané, their ancestors, are excellent farmers, and the working of the soil represents their principal occupation and their great concern.
243 For them corn is of prime importance; it constitutes the basis
[273] of their diet, for it enters into the preparation of most of their dishes and in addition gives them their preferred drink, chicha or bibi.

[132] The sandy lands of the western Chaco and its climate,
[134] hot and dry a great part of the year, but also rainy during the summer months, seem to be particularly suitable for this grain. I have never seen such beautiful fields of corn anywhere. The ears are large, well filled out /236/ with kernels, and extremely tasty. The Bolivian half-breeds and settlers who are coming in greater and greater numbers to take the place of the Indians devote themselves like them to the growing of corn, which, with cattle-raising, is their main resource.

114 My trip to the Chaco, which took place from the month
243 of February to the month of June, did not give me a chance to
[201] be present at the sowing which is done at the beginning of the rainy season. For many details I shall therefore be forced to
[229] refer to Conzelo (pp. 47 and 48), Campana (pp. 88-90), Stendenskiöld (2, pp. 101-104, and 11, pp. 75-76), to Nino (pp. 227-241), and Rosen (1, p. 315).

241 When a Chiriguano wishes to cultivate a new piece of
243 ground for himself and his family, he scours the environs of his village looking for a spot which may suit him and which is, in addition, easily irrigable. This condition is generally fulfilled by the lands at the foot of a hill or rising ground. The rain water which pours down there assures them of fertility.

/334 cont./

241/ Before taking possession of a new plot of land the
242 Chiriguano is always careful to make sure that there is no trace
243 of previous cultivation. Otherwise the former owner or his
(242) descendants would have the right to lodge a complaint against him to the chief of the village.

(226) The Chiriguano makes known his new property right by planting any edible plant before the rainy season, for example, the large squash (gindaio-winy) which spreads everywhere and is not smothered by the underbrush. He can equally well insure possession of the chosen terrain by knocking down the underbrush all around and making big gashes in the trees (1).

(191) 1. Compare this manner of insuring property rights with the method observed by the Cashinawa /Cashinawa/ in the same circumstances: "I saw (an Indian is speaking) rising ground which is suitable for a planting. I am going to make a planting for this summer. I broke many branches on this hill to mark this excellent place. No one can make his clearing on this hill. This hill is excellent; do not go there to make your planting." (Abreu, p. 69.)

241 In the middle of the dry season, say, in August, the
243 Indian, with a long stick diary on both sides, fells the underbrush which encumbers his future field and sets fire to it. This operation has the further advantage of fertilizing the soil, thanks to the bed of ashes, which is a rather good fertilizer.

The cultivated fields are usually cleaned up after the harvest.
(234) The domestic animals, who feed there with little expense, are first let out there, and then the fields are let alone.

(221) Sowing takes place in the month of November when the first
(221) rainstorms have refreshed the soil. This time is announced by the appearance of the Pleiades (iñu) above the horizon early in the morning.

/334 cont./

241 The Chiriguano who is getting ready to sow takes care
243 to hoe his field and to rid it of all weeds. For this he uses
/335/ a shovel, which I shall describe, in part from Campana
243 (p. 98), not having seen this instrument whole.

241 The shovels (sipe of the Chiriguano, even not so long
242 ago, were entirely of wood, preferably wood of the urundei
(824) (Astronium urundeuva F. Allemao) or of the palm siripa. Although narrower and longer, they resembled those of our bakers. The edges were straight, almost parallel, and only the cutting edge was slightly rounded at the sides. Toward the top they ended in a point, a
(824) kind of embryonic handle, which was lengthened by a stick to which it was attached with ties made of chuqui (Nilotica farnesiana), of lianas, or toborolli fibers. The two shovels examined by Campana measured 70 centimeters in length and 15 in width; one of them, however, was less wide at the top than at the bottom by several centimeters (Fig. 2).

Fig. 2. Shovel (sipe) made of wood, without its handle, formerly in use among the Chiriguano (from Campana, Pl. VIII, Fig. 1).

If the Chiriguano have abandoned the ancient wooden shovel, they have nevertheless faithfully kept the long handle to which it was attached and which permitted them to work the soil without having to bend over. A remark of psychological order becomes necessary in this regard. The Chiriguano
[139] could well have acquired in the Syrians' stores, where they are available, shovels already provided with handles and ready to use. If they felt the need to modify the handle and to give it the traditional form, it is because it did not correspond to the movements and position of the body and hands which an age-old tradition had ingrained.

In each human group all manual labor requires certain set gestures to which, to a certain extent, the tools are adapted. This explains the variations these exhibit from country to country and even from tribe to tribe. With regard to this, Professor

241
412
243
[464]

Mauss used to cite to us the following example: during the great war the French soldiers did not much like using English shovels different from their own, and vice versa. The Chiriguano I have seen laboring on military roads in Bolivia handle our shovels exactly like any European laborer; but back home, when it is a question of working a field, they return immediately to the ancestral gestures and are constrained to adapt the form of their instruments to them.

The handle fits into a handgrip carved out of a small block of wood and set in with the greatest care. The latter generally takes the shape of a crescent on which the hand rests comfortably. The handgrips with an elegant curve, which gave an aesthetic character to the ancient spades, have become very rare. In the course of /336/ my trip I was able to acquire only two shovel handles which were provided with them. One comes from Ibopeytí (Fig. 3) and the other was made for me by an old Indian of the Ivu mission. The workmanship of this latter specimen is careless, but it reproduces fairly faithfully the ancient models (Fig. 4).

[126]

241
412
172
243

The use of the shovel among the Chiriguano probably dates back only three or four centuries. This instrument was unknown in ancient Paraguay where our Indians came from. The borrowing which could be presumed a priori has been confirmed by the discovery in the Quebrada de Humahuaca of wooden shovel, similar in every detail to the ones I

Fig. 3. Shovel handle. Prov.: Ibopeytí. (1/11 nat. size.)

Fig. 4. Shovel handle. Prov.: Ivu. (1/8 nat. size.)

/336 cont./

241 have described here. These finds were made in the ruins of
412 the Alfarcito and of the Pukará de Tilcara (Debenedetti, 4,
172 Fig. 17 and p. 32) and at the Huerta in the same Quebrada de
243 Humahuaca. Numerous wooden shovels have been dug up at La Paya (Ambrosetti, 6, Figs. 236-237, pp. 457-458), and Ambrosetti supposes with justification that they were hafted like those of the modern Chiriguano. Debenedetti (1, p. 35) obtained a specimen of this instrument at Kipón in Salta province.

[191] This type of shovel is particularly well represented in the archeological material of the Chilean coast. Numerous specimens have been found in Calama, Chiuchiu, and Pica in Tarapaca province (Boman, 2, Vol. II, pp. 731-732 and Plate LXVIII a; and Uhle, 3, pp. 15-16 and Plate I).

[191] The half-breeds and Indians of the Bolivian altiplano still work the earth today with a spade which in no way differs from that of their ancestors; moreover, it shows great similarity /337/ to the wooden shovel of the ancient Chiriguano (Chervin, p. 216, Fig. 120).

241 Nordenskiöld (9, pp. 30-32), studying the distribution
412 of this cultural element, established that it was peculiar to
171 the Andean zone and the adjoining regions. The Chiriguano
243 shovel nonetheless has a characteristic feature for which we should look in vain on all the specimens found inside the boundaries of the Inca Empire: this is the crescent-shaped handgrip. It corresponds quite precisely to the crutches terminating the oars in use among the tribes of Brazil, Paraguay, and the Guianas and on which the paddler puts his hand flat.

241 The Chiriguano formerly lived in a region rich in rivers and
412 streams, and they probably made use of paddles of this type to
174 go up or down them. Once settled at the foot of the Andes,
243 the resemblance between their former /Fig. 5 appears here/ oars and the shovels they saw in the hands of the Chané or the Chicha must have struck them; and they naturally sought to adapt to the new instruments this detail of structure whose convenience paddling had shown them. Such a hypothesis is not too adventuresome, for do we not have in the Chaco some shovels which have exactly the appearance of oars? (On this subject see the Ashluslay shovel published by Nordenskiöld, 9, p. 30, Fig. 1.)

/337 cont./

243 Once their fields are free of weeds, the Chiriguano call
[476] together relatives and friends. On the date agreed upon, all
[534] go to the fields early in the morning, after waking each other up with shouts, whistles, and by blowing into cow horns, which for them take the place of horns (in Chiriguano: waka-ranti) (Fig. 5), each trying to outdo the other. In olden days the
[622] village chief used to take part in the sowing and watched to make sure that all helped one another.

[534]
[321]

Fig. 5. Cow horn (waka-ranti) which the Chiriguano use for a horn. The end is carved into a mouthpiece. Prov.: Ibopeyti. (1/5 nat. size.)

Sowing is done in a very simple way. If the ground is soft, the Indian sticks his shovel vertically into the soil, after giving two or three thrusts in order to push it in as far as possible. He enlarges the slit by pushing his shovel forward without drawing it out and slips two or three kernels of corn into the opening. Without changing position he makes two or three similar holes on his right and left, takes a step forward and begins again. The plants thus grow in a certain alignment /338/ which is far from perfect. Since several work at
[461] a time, the job is done quickly. At noon, or about two o'clock
[273] in the afternoon at the latest, they have finished their task and go back to the village where the chicha or kiwi, which the owner of the field has had prepared for his helpers, awaits them

/336 cont./

243 476 178 The sad state of decline in which the Chiriguano are at present has put an end to collective work, and it is only rarely that sowing is done in common. Each one must provide for his needs without any assistance other than that of his near relatives.

342

Fig. [illegible]. Chiriguano hut (ñoñ), temporarily abandoned by its inhabitants, who have gone to work in the fields. Caipipendí. (Photo. A. M.)

241 The Chiriguano cultivate the following plants:
Corn (avati): 11 varieties;
Beans (kumanda): 11 varieties;
Squash (andai and grindaka-wasu): 5 varieties;
Sweet potatoes (yeti): 6 varieties;
Yucca or sweet manioc (mandio) (Manihot utilissima Pohl);
Groundnuts (manduvi);
Pimento /peppers/ (ají) (Capsicum), very rarely cultivated;

/320 cont./

241 Sorghum (triko) (Sorghum sacchariferum) (1):

[242] 1. Sorghum is cultivated only on a very small scale. It is a delicacy that the Chiriguano reserve for children, who suck its stalk.

/330/ Sugar cane:
Melons:
Watermelons (sandia):
Prickly pear (cain) (Opuntia spec.):
Fig trees:
Orange trees (in the missions).

[199] The Chiriguano cultivate only on a very small scale the plants which, like sorghum, sugar cane, fig trees, and orange trees, have been introduced by the Europeans. Of these only melons enjoy general favor.

248 They always devote some parts of their fields to the cultivation of plants of value only for their arts and manufactures. These are cotton plants (mandiyú), cucurbitaceous plants (ká) which grow on the ground next to their squash and furnish the containers they need, reeds (ureká), which scarcely exists except in the northern part of their habitat, and finally a species of reed (Arundo donax) with which they make the shafts of their arrows.

249 They also plant tobacco (pétí), but I have never seen any in their fields. According to Nordenskiöld (15, p. 75), its cultivation is insignificant and rare. The Chiriguano are not [276] great smokers, and the numerous packs of cigarettes I took [123] along for them found only a few devotees. Among the Toba, Matako /Matacco/, or Chaco /Chaco/ my stocks would have been exhausted in the wink of an eye, for these Indians love tobacco more than anything in the world.

276 The use of tobacco among the ancient Chiriguano, as among 277 their ancestors in Paraguay or Brazil, was reserved for the 278 medicine men for their magical operations. Their use made [178] of it a plant endowed with "mystical" virtues, and its

/339 cont./
276 consumption was limited (1).
256
[824]
[113]

1. Father Giannechini (Diccionario Chiriguano-Espagnol, etc., pp. 169-170) gives us very interesting details on this topic. Formerly, says he, tobacco was reserved for magicians
[249] and adults. He states that even today where its use is most widespread it is cultivated on only a very small scale. The Chiriguano do not have the patience to let it ripen and dry it over the fire in order to be able to smoke it.
[755] When they were called to a sick person, the medicine men used to put themselves in a trance by smoking ever so much. By this means they discovered the author of the illness and gave him battle.
[789] We shall see farther along (p. 76) the role of tobacco in the magical ceremonies intended to make rain fall.

243 At harvest time I visited the lands cultivated by the
22 Indians of the Cururuti region in Caipipendi valley. From the
[114] end of February to the month of April, the Indians rarely spend the day at home. Most of the time they go to settle down in their fields, leaving the village as soon as the corn begins to ripen, not to return until the /340/ end of the harvest. The
[351] house of the absentees is made safe from all foreign intrusion by thorn hedges which they raise all around or only in front of the door. The latter can also be closed by a cot or bedstead, which they put up against it and anchor solidly (Fig. 6).[1]

243 This temporary migration of the whole population of a
22 village to the fields sometimes made my job as a collector rather
123 difficult. It /Fig. 7 appears here/ often happened that I found myself in nearly empty villages. The rare Indians who had
[421] remained there refused obstinately, and rightly, to sell me the objects which interested me, if they belonged to an absent person.

[1] [Fig 6 appears on p. 69.--Analyst]

/340 cont./

421 Property is a sacred thing among the Chiriguano, and the nearest relatives cannot dispose of their belongings without their formal consent.

241 115 123 At the time of my stay in Caruruti. I once asked my old friend "Captain" Karnapadyü to take me to his field. He was very

249 407 997 142 291

Fig. 7. Mill for grinding sugar cane at the Ivu mission. (Photo. A. M.)

241 115 [123] touched by /Plate VI appears here/ /341/ the interest that my wife implied and in an instant showed himself ready to do the honors.

His field was about 700 meters from the village on top of one of the cliffs which border the "quebrada" /ravine/ of Caruruti. Access to it was by a steep path across fallen rocks. The entrance [351] [417] to the field was closed by a hedge composed of tree trunks and thorny shrubs which we climbed over with the help of an Indian-style ladder, That is, a thick branch with deep cuts for steps.

241 115 ladder, that is, a thick branch with deep cuts for steps. Captain Kamapadyö's chacra /cultivated clearing/ was about 700 meters by 70 meters in size. At the edge stood a small wooden hut covered with straw.

The "Captain" began by showing me some native plants and had me cross a large square sown exclusively with beans and gourds /cirouilles/. The corn fields came next. They were divided in two by a second hedge formed of trunks and thorns. Squash /courges/ grew between the rows of corn. After the maïkal /field of corn/ followed a second expanse covered with beans, squash, and melons, which Kamapadyö told me belonged to his daughter. Here and there rose several stalks of sorghum. A new corn-field was opposite the

241 530 [illegible] 239

241 115 [322] [415] [824] first, and another cabin rose at its edge. In both of these properties the only plants cultivated for their manufacturing value were the cucurbitaceous ones from which the Indians make their cups and bottles.

Next, on the opposite cliff, I visited the chacra of another Indian of the same village. A steeper and more difficult road than the first led to it. The plantation was lower down a hill on which a little hut was perched. These fields were almost solely covered with corn among whose stalks grew squash. As before, the maïkales were preceded by plantings of beans and squash.

/341 cont./

Parrots are veritable plagues for agriculture in the Chaco and cause great damage. In order to fight their voracious bands the Chiriguano make scarecrows by attaching to the tip of flexible pojos the masks they wear during the carnival festivities and which they have no use for afterward (Fig. 9). It is the need to be constantly /342/ on the watch to repulse the intrusion of these formidable bands of plunderers which obliges the Indians to come and live in their fields as soon as the corn ripens. The children and young people have the task of frightening off by their shouts these insatiable marauders. As soon as they see or hear a flock of parrots, they emit a long modulation which, it seems, has the effect of scaring them. If the parrots come too near or perch on the fields, the Indians make them flee by bombarding them with stones with their slings. They have two kinds of them. Wherever the Chiriguano are in direct contact with the Quichua /Quechua/, these slings are of wool (Plate VII, 1 and 7); elsewhere, especially in the Caipipendí valley, they are of vegetable fibers and made according to the net technique (Plate VII, 7). We doubt the Chiriguano borrowed this weapon from the Andean population. To be convinced of this it suffices to compare the slings of the Indians and half-breeds of the department of Tarija with that of the Chiriguano (Ibem, 1, Fig. 387, p. 381).

Another means of scattering the birds is to stretch a string above the fields. I do not know the effect that this measure can have on them.

The fields of the Chiriguano Indians are always surrounded by a high, thick hedge which protects them from animals, wandering cows and horses, which could get in and play havoc with them. Grasshoppers sometimes do them much harm. In the Caipipendí valley I saw a field in which they were swarming and which seemed to have been abandoned for this reason (1).

1. When grasshoppers are particularly numerous, the Chiriguano dig ditches which they make them go into and in which they bury them. (Diccionario Chiriguano-Español, etc., p. 83.)

/343 cont./

[illegible] Women accompany their husbands to the fields. They spend the day there spinning, sewing, grilling ears of corn, or [illegible] [illegible]ing manioc. In the evening, if they return to the village, the wife comes back bent under the weight of her allapoka, or carrying-net, full of ears of corn. Sometimes the men help them. [illegible] Those who have donkeys and horses use them as beasts of burden.

[illegible] Transport of corn is done generally with the help of the carrying-net, but makeshifts let them do without it in case of necessity. The ears of corn are held together in bundles by means of leaves which encompass them and are suspended from a flexible switch bent in the shape of a figure eight. When the two loops are balanced, one can raise them by grasping them by the middle.

251 In the village the ears are either stored in granaries on poles, to which steps cut in a tree trunk (Fig. 9) lead, or kept in the hut where a special corner has been made into a compartment. A tree trunk [illegible]ipped with a natural fork may serve /Plate VII appears here/ /343/ as a storage place for corn. The ears, tied into bundles, are piled between the two branches of the fork (Fig. 10).

[illegible] Formerly, before their dreadful decline began, the Chiriguano had recourse to magical ceremonies to hasten the ripening of corn and to avoid drought or too great an abundance of rain. /Fig. 9 appears here./

When the sun threatened to burn the harvest, they had one or several medicine men come who were charged with bringing the recalcitrant clouds. Provided with a cigar, they went around the fields blowing the smoke in every direction (Diccionario Chiriguano-Español, etc., p. 167). The symbolism of this rite of homeopathic magic is clear: the smoke represents the clouds which the ipaye is to gather.

[illegible] The game of mboto represents the survival of a magical ceremony having to do with the growth of corn and its maturing.

526 In the Chiriguano missions or in the villages of the Cai-
178 piyendí valley one finds on the large village plaza /Fig. 10
243 appears here/ an abundance of onion-like objects made of leaves
789 of corn folded together (Fig. 11). Children throw them to each other with the flat of the hand and try to catch them again before they fall to the ground. A hurried traveler would see in this

343
251

Fig. 9. Cornerib on piles (avatóp). Ivu. (Phot. A. M.)

526 game only an Indian form of our court tennis or a rudimentary
178 tennis. Actually, this is certainly the present significance of
243 this amusement. In olden days the meaning was not the same.
789 as I learned in the Macharetí mission. Only a few years ago mboto was played only at the time when the corn was beginning to ripen. The children formed a circle and threw this kind of shuttlecock to one another. If by chance one of them let it fall through inadvertance or awkwardness, he left the place

/2 [illegible]/

526 179 945 789 immediately, chased by his comrades who pulled his hair energetically. The awkward player who threw the ball in such a way that his partner could not catch it was in the same category as the one who let it fall. As a condition, however, that his opposite number had not made the gesture of catching it. Once the corn was ripe, they stopped playing ball.

526 191 The game of *mbondi* has a wide distribution in South America, but it is limited to the populations of the Amazonian basin and the Guianas. Doubtless the Chiriguano introduced it into the Chaco [illegible]. [illegible]

[illegible] Fig. 10. Forked tree on which the Chiriguano pile corn inside their huts. This device may have given rise to the cornrolls on piles.

526 789 243 This game without any direct definition from a magical rite whose object was to produce the beneficial course of the sun and to oblige it to shine without interruption in order the corn ripen. The straw dumbbell represents the sun. The period when this game is played and the meaning the Chiriguano attach to it make any hypothesis a very likely one. Preuss demonstrated that in all of Central America and even in North America the /245/ balls came into use out of a magical operation intended to influence the sun.

Fig. 11. Straw dumbbell (*mbondi*), accessory for the game of the same name. Prov.: Caraguatá (1/3 nat. size.)

/mi casa./

The Chiriguano are proud of the extent of their fields. "Capitán" Kawagadi made me walk over all of his, emphasizing its size and the abundance of its produce. Another Chiriguano, after taking me along across all of his plantations without showing me one plot of ground, told me as he was bringing me back, with an air at the same time proud and questioning: "Guapo yo" /I am enterprising/. I assured that he was indeed very "guapo." He seemed flattered and happy.

The father clears his daughter's field, which represents for her a kind of dowry. The son-in-law must then take care of it, do the sowing and reap the harvest (1). My guide Cipriano

1. Cardús (p. 150) states that young married couples live at the expense of their parents and that they do not cultivate any chacra nor build a house before having a child.

complained bitterly about his son-in-law, whom laziness had obliged him to harvest his daughter's corn himself.

Chapter III

Cooking and Food

Food Resources

I have eaten meat only very rarely in Chiriguano villages, and I have never had a chance to taste a piece of game. It is not that this latter has disappeared from the region, exterminated by man, but the Chiriguano do not take the trouble to pursue it. In former days they were enthusiastic hunters, like nearly all the Indians of tropical America. When they were expecting guests for a drinking feast, the men went out into the bush and during 15 to 20 days got a good supply of the flesh of the peccary, deer, nandu, pigeon, armadillo, chuña /a wading bird/, and even parrot. To preserve it they dried it in the sun without salt (Nino, pp. 249-250).

/[illegible]/

Outside these official expeditions they doubtless used to hunt for pleasure or simply to interrupt the monotony of their [illegible].

Quadrupeds were killed with arrows with lanceolate tips, originally of wood, later of iron (Plates VIII and IX, 7); small game, with arrows tipped with a barbed wooden rod (Plate IX, 3-5). Birds were taken in traps or felled with a special arrow having a splayed ferrule (Plates X-XI).

Anyone who has seen the little dogs of the Chiriguano Indians, with elongated /[illegible]/ muzzle, pointed ears, short hair, and arched tail will ask with surprise how animals so miserable, stupid, and snappish could have been trained to render service to man. Nevertheless, such seems to have been the case. For hunting the peccary, for example, the Indians employ the dogs, who track them and /Figs. 12 and 13 appear here/ force them to hide in their dens, from which they are smoked out and killed with blows of a stick when they try to run away. At least this is how the inhabitants of the village of Salinito (upper Pilcomayo) told me they had killed a peccary which they showed me at the time I was there.

For the modern Chiriguano, hunting has lost its reason for existing as an activity having an economic character, except perhaps /Plates VIII, IX, X, and XI appear here/ /[illegible]/ /Fig. 14 appears here/ for those of this nation who live in the region of the upper Pilcomayo. At least this is the impression I had after examining their huts: the bedsteads or wooden cots were often covered with peccary skins and the old deerhorn awls (Fig. 17) numerous enough to be able to be exchanged for a rifle. The relative abundance of these objects proves that among these Indians hunting has not been relegated /Fig. 15 appears here/ to the rank of a simple sport and that it keeps, at least in part, its past importance. The contrast is striking if one then goes into the zone of the Chaco: no minimum there, more peccary skins, more perforators made of deerhorn, more ostrich feathers. In the villages of the upper Pilcomayo there is no cabin, poor as it may be, in which a bow and a bundle of arrows are not slipped

433 between the roof beams. Once out of this region the ethnog-
224 rapher will have all the difficulties in the world to acquire
184 these weapons for his collections. If they are offered to him.
[411] they will be either a few souvenirs of former days kept by an old man or crudely made specimens without any value other than that of a toy or a sport accessory for some sare lover of hunting.

224 The Indians of the semi-independent valley of Caipipendí
411 are still, in some villages, capable of making a bow and using
184 it. The arrows, which I bought from them in rather large quantity, almost all belonged to a single type and were intended, from what they told me, for killing the yakú (pavo del monte /wild turkey/ (Penelope sp.). They are long reeds armed with two barbed wooden rods (Plate IX, 1). One must not conclude that the yakú, abundant as they may be, rep-
[433] resent an appreciable food resource. Besides, hunting is scarcely practiced except by the young men, who do it for
[126] fun. The Indian who gave up to me the handsomest lot of
[425] these arrows felt some remorse about it; for, as he explained to me, /348/ they belonged to his little boy, who would not fail to cry when he found out that his father had sold them without his consent.

857 Chiriguano children are even more ardent about shoot-
868 ing with a bow than ours. One can see them run around the
224 village trying to shoot down with little miniature arrows (Plate XII, 2 and 4) the birds which light within their reach. Contrary to what took place formerly, once grown up they will not benefit from the skill they have thus acquired. /Fig. 16 appears here./

223 Some Indians of the Caipipendí valley sold me large
[126] bunches of nandu feathers. I could not find out whether they had taken them from birds killed in the region or whether they had been hunting them in the east nearer to the great deserts. That would not have been at all improbable, for nandus are certainly not numerous in this region; in a month's stay I
287 did not see any. These feathers serve for fashioning /Fig. 17
439 appears here/ feather dusters, which the Chiriguano sell in the

287 439 [484] [435] half-breed villages. For the meager profits which this trade brings them they undertake long trips and even go as far as Sucre, where they are paid two to three pesos for each feather duster.

224 178 231 433 Hunting lost its importance from the day when the Chiriguano began to have cattle. Already about 20 years ago, those who /Plate XII appears here/ /349/ had several sheep, goats, cows, or even chickens did not take the trouble to accompany their comrades into the bush in search of game. What is the use of tiring oneself out running after peccaries for long days and risking getting oneself disemboweled or coming back empty-handed if just by staying home one can treat one's guests with some roast of meat or chicken broth?

231 435 [464] [465] The price of cattle has gone down a good deal these last years, and the Indians no longer need to go to the sugar mills of Argentina in order to come back with a cow or two in recompense for four to five months of hard work. Goats, sheep, and pigs are valued at two to four pesos apiece and it is often even a question of "prices for foreigners." A cow currently costs from 25 to 30 pesos, and an economical Indian has the means to acquire several during his life. Little by little, in each village modest herds have been formed, which the Indians care for like treasures. They husband them carefully, like all primitive peoples who raise cattle. They almost never kill their cow, and they sacrifice only rarely a goat or a sheep to their gluttony (1). In showing themselves to be so economical

471 231 [435]

[262] [178] 1. In former times they used to feel an unconquerable repugnance toward pork, which is dissipating nowadays (Nino, p. 252).

they are not obeying any superstition but simply are afraid to diminish their capital. The wealth of an Indian is gauged by the number of his cows; and, in their Spanish jargon, "vacudo" /vaca, "cow"/ is a synonym for rich (2). Some of them have a

556 tendency to estimate the value of objects in cows. For example,
[435] a loom with a nearly finished poncho was offered to me "for
[437] a cow," and the owner of the loom could not understand that
it was difficult for me to convert the exchange into money.

262 Charqui, or meat dried in the sun, most often replaces
[251] fresh meat in the menus of our Indians. It is not a question
of preference, but of necessity. Charqui is cheap and is
bought in any estancia.

Fishing

221 When I went through the Chiriguano villages of the upper
226 Pilcomayo and the Parapiti, the rivers were in flood, the corn was
ripening in the fields, and no Indian wanted to let the parrots
eat his corn in order to go to catch fish at the risk of getting him-
self carried off by the current. If I had come back to these
same villages in July or August, the scene would have been
completely different. The rivers would have been only thin
trickles of water, and in every direction I should have per-
ceived men /350/ and women busy fishing. The fishing season
would have been at its height.

[178] The Chiriguano, having come from a country rich in
watercourses, have in this respect preserved the traditions of
their ancestors of the Paraná or the Paraguay.

226 Some, equipped with large landing nets (Fig. 18), form
barriers against the current and advance, gathering the fish as if
[227] with a spoon. Then they grab them and attach them to their
[482] belts, after /Fig. 18 appears here/ threading them on a cord
by means of a wooden needle (Fig. 19). Others lie in wait for
a fish in the water and, as it goes by, impale it with an arrow
equipped with several points (Fig. 20) or simply with two long,
barbed wooden rods. Some, with the help of stone barriers,
try to make the fish converge toward the opening of a wicker
trap (1). Sometimes a group of individuals turn aside a

Ce 226

2. Nordenskiöld (2, pp. 184-185) describes a curi[illegible]ay of catching fish which is in use amon[illegible]e Chané of the Itiyuro River. They set branches in the water, which give shade and attract the fish. They also put there a calabash with some scraps of corn. The fish enter the calabash, whose neck is narrow. When several fish have gone in, the women close the orifice of the calabash with the hand and pull it up to the surface.

/351/
226 /Figs. 19-22 appear here/ /352/ Chiriguano attach them to the
[229] end of long cords. A spear with one or two points serves to
harpoon the enormous surubú which pass within their reach
[481] (Fig. 21). It goes without saying that the Chiriguano are
marvelous swimmers.
262 The Chiriguano like fish (1). If they live far from the
439

226
195
229
481

1. The skill of the Chiriguano at fishing had already attracted the attention of the ancient chroniclers. Acosta (Vol. I, p. 236) reports that he had a chance to see them handle the spear, a specimen of which is reproduced here in Figure 21. "Some Chiriguanas plunged under the water and, swimming with admirable speed, followed the fish, and with some fish spears, or harpoons, which they carried in the right hand, swimming only with the left, they struck the fish; and, spearing it thus, they came up, so that they certainly seemed to be more fish than men of the land." /Translated from the Spanish./

Rosen (1, Fig. 215, p. 213) represents a Chiriguano holding one of these two-pointed spears in his hand.

262 Pilcomayo and cannot get any directly, they buy it from the
439 Toba or the Matako, who are good fishermen and in addition
have the advantage of living on the very banks of the lower
Pilcomayo.

In the dry season one can see near Pilcomayo a continual
[482] coming and going of Chiriguano, bent under the weight of their
nets full of ears of corn that they are going to barter for fresh
[484] or dried fish. They would not hesitate, it appears, to travel
150 kilometers to feast on it (Nino, p. 251).

227
[482]
[284]
252

Fig. 20. Arrow used to catch fish. The points are of iron wire: formerly they were made of cactus spines. Prov.: Pípi. (1/2 nat. size.)

Fig. 21. Spear 4.70 meters long, which the Chiriguano use to harpoon large surubú when the latter swim within their reach. Prov.: Ibopeytí. (1/33 nat. size.)

Fig. 22. Spit for roasting fish. Prov.: Ibopeytí. (1/7 nat. size.)

/352 cont./

C 252 The fish begins by being opened and cleaned and only then is it boiled or roasted. In this last case it is inserted between the two branches of a switch split for three quarters of its length (Fig. 22). So that the latter does not open completely, the lower part is fastened securely with bands of bark, and so that the fish does not fall out once it is inserted in the interstice, the upper part. Among their ancestors, the Guarani, G [252] such a spit would have been superfluous, because to grill the product of their fishing or hunting they used to construct C [251] [262] buccans. Our Chiriguano also eat fish dried in the sun and enjoy it in this form combined with some corn dish.

/353/

Chapter IV

Cooking

Fire

C 372 177 The modern Chiriguano more and more use matches of Bolivian make, but their poor quality has contributed to maintaining the popularity of the tinderbox. That of the Chiriguano, borrowed recently from the white men, is composed of a flint and a piece of iron with which they make sparks fly, which fall on a little wild cotton (the one which the fruit of the palo borracho (Chorisia insignis) produces). This tow (tata rimbiuna) is kept in a small receptacle made from the end of a cow horn or an armadillo tail. /Figs. 23 and 24 appear here./ It is hermetically sealed by a wooden disk, which a small cord passing inside the capsule and coming out through a hole at the tip of the horn or tail allows to be put back in place with a single motion. This ingenious contrivance is not, however, of Indian invention; I saw it adapted to the tinderboxes of the creoles in the Argentine Republic. Some C [415] [281] Chiriguano make cloth wicks which at first sight would seem to have been produced in one of our factories. The tinderbox with its accessories is carefully kept in small bags of deerskin, wildcat, iguana, etc. (Figs. 23 and 24).

332 cont./

372 [171] In former times the Chiriguano made fire exactly like all the Indians of South America, by rubbing two sticks one against /354/ each other. One of my friends from Cururú reconstructed one of these devices for me in the hope of surprising me and getting a good price for it. He took two sticks of tata iwira, or fire wood (1), cut one of them lengthwise

(824) 1. According to Father D. Giannechini (Diccionario Chiriguano-Español, etc., p. 91), the Chiriguano might use, for obtaining fire by rotation, sticks made from the wood of a red liana whose

and provided one of its sides with two cups along which he contrived a perpendicular groove. These two little furrows were intended to conduct the glowing sawdust onto the tinder placed on the ground. /Fig. 25 appears here./ The other stick was slightly sharpened to allow it to go into the cups. Since this

/354 cont./

372 small stick was too short to be handled with ease, he fastened it securely to another stick by means of vegetable fibers (ombaia) (Fig. 25). This done, he sat down on the ground, pressing the soles of his feet on the small cupped stick, and imparted with the palms of the hands a rotating movement to the other stick. The glowing sawdust which was detached by the effect of the friction fell on dried dung placed near the gadget to serve as tinder, which, at the end of a rather short time, began to catch fire.

354 According to the season, the Chiriguano light their fires inside the hut or outside. The hearth is composed of long branches which they lay out like the spokes of a wheel. As the ends burn, they push them closer to the central fire. The job of getting the dead wood falls within the province of the men (Fig. 26).

[462] [313]

343 In front of the huts they often erect a little shed in which the women do the cooking. The

[372] Fig. 25. Ancient apparatus for making fire, reconstructed by a modern Chiriguano. Prov.: Caraparí. (1/6 nat. size.)

roof of this shelter serves as a shelf for putting provisions and utensils on.

Preparation of Food

262 The modern Chiriguano do not seem to observe any food prohibitions, at least in daily life, for the custom of fasting, for women at the time of puberty and for men upon the birth of a child, is not yet lost. In olden days certain animals /355/ were taboo (1). The men of a few villages thus reserved for themselves

[789] [825]

262
[175] do not hunt nor eat this animal (Diccionario Chiriguano-Español, etc., p. 3).

[176] Medicine men cannot under any circumstances eat pimento. If a man refuses to taste this condiment, one can be sure he is a magician (id., p. 184).

[165] Grilled corn is strictly forbidden for persons in mourning, whose tears would dry up if they ate this dish.

[825] the exclusive right to eat deer meat, which thus instilled in them
[187] the agility and suppleness of this animal. Women could eat, without

262 /355 cont./ Women could eat, without
[542] harm, parrot, a heavy and stupid bird. In their misogyny the Chiriguano doubtless figured that that would not change their nature in any way. (Campana, p. 92.)

252 Cooking is not a secondary activity: it is an important form /Fig. 26 appears here/ of the material culture and an excellent index for judging the cultural level of a human group. The art of preparing dishes reveals as well as any tool the faculties of invention and taste. In South America one can very well classify the tribes according to the more or less great variety of their dishes and the care they take in preparing them. This hierarchy would certainly correspond to that of the cultural elements.

[171] In the Chaco, Chiriguano cooking stands in contrast by its variety, its /356/ taste, and its cleanness to that of the more primitive tribes like the Toba or the Matako.

Before passing on to the study of the utensils used by the Chiriguano housewives, it is fitting to describe their menus.

When the Chiriguano kill a cow, goat, or sheep, the meat is boiled in water, roasted on a spit, or dried in the sun (charqui). They are especially partial to the head of the animal they kill, and they eat it boiled after skinning it. The pieces of meat are cleaned carefully before being cooked; and the tripe, for example, which is a delicacy, is taken out beforehand.

Corn is prepared in various ways. If the ears are tender and green, they are boiled in water or grilled over the fire or under the ashes.

When the corn is still in this state, the women prepare simbikuai or humitas (in Spanish). They bite with an appetite into the still tender ears, chew the kernels for a long time, and spit them into a calabash. This white mash saturated with saliva is wrapped in corn leaves and put under the ashes.

[415] The Chiriguano give the name of atipũ to kernels of corn roasted in a special bowl called tapuipe (Plate XIII, 3) or in large potsherds, which tend more and more to replace the primitive utensil appropriate for this use. The atipũ requires

/356 cont./

252 no preparation other than constant stirring to order not to be burned. This food takes the place of bread for the Chiriguano, who like to munch these crunchy and appetizing kernels. They provide themselves with it when they go on a trip.

Atipú pounded in a mortar and passed through a sieve gives atí, a brownish flour which has an excellent taste. Atí is also prepared differently: kernels of corn are reduced to a flour which is roasted in a terra-cotta roaster or in a wide potsherd. According to Nino (p. 246), the name atikiri would be given to the kernels of roasted corn made into flour after being put through a sieve and ground until pulverized. The same missionary reserves the term atí for roasted flour obtained from the residue left by kernels which have been treated in the following way: after letting them soak in water all night, they are poured into a sieve the next morning. When the water has drained off, they are pounded in a mortar. This flour is now sifted, then roasted: cooked in water, it is the dish the Chiriguano call muiní or huiní. Atí then would be made with the residue from the muiní flour, which is ground again, then roasted like it, but first mixed with salt or pimento. I
[122] have often eaten roasted corn flour which the Indians told me was atí, but I could never tell that it was seasoned. The Chiriguano give the name abatikuse to the corn bran.

This is how muintimimo is prepared: kernels of corn are /Plate XIII appears here/ /357/ put to soak all night. The next morning they are ground and sifted in an urungé (sieve with very fine mesh). The flour is poured into a muitero
[115] (Plate XIII, 1 and 2). This utensil is a terra-cotta basin whose bottom is pierced with holes like a skimmer (1). The flour is

[191]
[114]

1. Lizné (L. Map 1, p. 22) has given us the distribution of vessels with perforated bottoms throughout America. The enumeration he makes of them is very complete: yet it lacks mention of La Rioja in the Argentine Republic where Boman (L. p. 17) discovered fragments of vessels whose bases were entirely perforated like a sieve.

[TEXT CONTINUES ON P. 104]

Plate XIII

1 and 2 Basin with perforated bottom for preparing [illegible] flour cooked in steam. Prop.: Iron. (1/4 nat. size.) -- 3. Basin for winnowing corn kernels or flour (Kanjiqie). Prop.: Bolaiiro. (1/4 nat. size.).

/207 cont./

252 covered with the bran. The *mutiero* is then placed on the opening of a pot full of water and the whole put on the fire. The rising steam goes through the holes of the *mutiero* and cooks the corn while saturating it with moisture. So that the steam will not escape at the sides, the line of contact between the edges of the *mutiero* and the neck of the vessel is smeared with clay.

I have given the recipe for this dish according to Nino (p. 266), for I have never been present at its preparation. The Chiriguano themselves must have forgotten it: I do not remember having seen more than two *mutiero* during my whole trip: one at Tumbá's and the other at Ivo. Since it is im-
[276] possible to prepare *mutiericinos* without this basin, one must suppose that the Chiriguano of the decline have forgotten even the taste of one of the most original dishes of their cuisine.

At Ivo the Chiriguano had me taste *kiwi-rai* (little *kiwi*), a kind of gruel made with kernels of corn softened by a more or less long soaking in water, then pounded and rid of the bran. This gruel is cooked in water and eaten cold. It is
[277] sometimes left to ferment for several days and from that has doubtless come its name of "little corn beer."

The Indians make flat corn cakes (*mayape*) (1), which are

> 1. The corn fritters that I saw roasted in a frying pan at Piji were doubtless *mayape* cakes. Unfortunately, I was not able to learn their name.

mentioned in the myths I have collected, but which I myself have never had a chance to taste. *Avatindi*, or white corn, is softened in water, pounded, then kneaded with salt and pimento and the dough shaped into flat cakes which are cooked under the ashes. When they are supposed to be done, they are pulled out from beneath the glowing embers and washed with water, and they finally have a kind of bread with a pleasant taste.

/357 cont./

252 A rudimentary way of preparing corn, but also little valued, consists of boiling the kernels in water for a long time until they have become soft (atiruru) (3).

262
881
765
846

3. Atiruru is a dish whose consumption is intimately associated with the observance of magico-religious prohibitions. It is the only permissible nourishment for girls when they have their first menstrual periods, for people in mourning, and for women for a period of ten days after giving birth (Diccionario Chiriguano-Español, etc., p. 14).

252 /358/ The Chiriguano make a broth with corn-flour (api)
262 and meat, which is not bad.

They do not use haphazardly the 11 varieties of corn which they cultivate. Each, according to its properties, is intended for the preparation of a definite dish. Yellow corn (avati-hendi-vaé or avati-iyu-vaé) serves for making chicha or corn beer; white corn (avati-ndi) is roasted, as is avati-kanana. The corn called katšintši, or crinkled corn, is generally roasted, as are avati-tšore and avati-saimpini (gray corn), which are intended to be roasted and made into flour.

262 Avati-rai, or small corn, is planted only in times of scarcity when the harvest has been bad. Of small stature, it yields only one ear of reduced size, but has the advantage of growing fast (Nino, pp. 241-242).

A Chiriguano's meal in normal times is not made up exclusively of corn, even if this grain figures in all his menus. The popularity which corn has is also shared by beans, or kumanda. The Chiriguano cultivate 11 varieties of them also.

The Chiriguano eat beans either dry or fresh. In the
[252] latter case they are cooked in the pod in water or under ashes.
[263] Beans boiled in the pod are seasoned with pimento. Then one has the dish called sopiriwa.

/358 cont./

252 In order to shell dry beans, the women make a big pile of them which they put on a hide; then, sitting down beside it, they hammer them with a stick as if with a flail. The seeds are loosened, and to separate them from the pod they take handfuls which they winnow (Fig. 27). They carry out this operation several times until not a single seed is left sticking to the pods. Next they collect them into a pile with a small broom and rid them of all impurities by shaking them in a sieve. The shelled beans are kept in vessels.

At Caruruti every morning I was offered a dish of beans cooked in the following way: a handful of beans, with a little water, was put on the fire in an improvised frying pan formed out of a large potsherd. In an instant the water was evaporating and the beans beginning to smoke; this was the moment to take them off and serve them.

The underground oven, which among other American tribes is used almost exclusively for cooking meat, has been adapted by the Chiriguano to a more humble use: in a hole which they make in the ground and which they have first heated, they bury fresh beans and leave them until they are done (Nino, p. 243).

262 After beans in order of importance come squash or gourds
252 (andai ankú, and ginda). The Indians boil them or roast them
[263] under ashes. In the first case they season them with pimento or salt to make gindaka-mikira, or squash fat. The /359/ seeds are also roasted and eaten with corn flour, atipíi, or beans.

The Indians of the Caipipendí valley sometimes, but rarely, ate sweet manioc tubers. They boiled them in water or roasted them under ashes.

Sweet potatoes or camote (in Chiriguano: yeti) are roasted or boiled. They were served to me only two or three times.

/Fig. 27 appears here./

263 The Chiriguano like condiments and season all their vegetables with them; in the bean pot they put pimento, which with them occurs in the form of extremely strong small oval fruits, green and red. I have also seen ground red pimento. In the villages where the Indians use crystallized salt, they break it into small

/359 cont./

263 pieces which are put near the fire to make them melt little by little. The cooks dip them from time to time into the soup, then take them out. If the salt is taken from salt marshes or from water by evaporation, /360/ they mold it into large balls which are scooped out as needed (Fig. 28).

252
291
516

Fig. 27. Young Chiriguano woman winnowing beans. Caruruti. (Photo. A. M.)

317 The major part of the salt exploited in Chiriguano coun-
263 try comes from a mine situated in the San Simon region, between San Luis (Entre Rios) and the Salado River, in the depart-
[484] ment of Tarija. The Indians flock there from all directions
[492] with droves of donkeys which set out again loaded with big blocks of crystallized salt afterward cut into small pieces.

C 263 317 /360 cont./

The Indians of Ibopeytí, although living in the neighborhood of the San Simon salt mine, consume it in the form of the big balls which I have just mentioned. Pulverized, it is a salt which reminds one of our table salt but coarser. The inhabitants of this village assured me that they used to find it near the Pilcomayo. That is very possible, for the rivers which flow in the region are very salty as their names indicate (Río Salado, Saladito, etc.). These rivers, which frequently overflow and often change their beds, must form here and there real salt marshes. The Chiriguano of Ivu and Macharetí collect the water from a salt spring, boil it, and by successive coolings obtain salt which they mold into balls (Campana, p. 89).

Fig. 28. Salt molded in a ball, ready to be consumed or exported. Prov.: Ibopeytí. (1/2 nat. size±.)

C 263 The Chiriguano are parsimonious with their salt. I did not see them salt anything but dried beans; and when the latter are cooked in the pod, they are served that way without condiments, the same as corn or squash.

C 264 When a Chiriguano woman offers you a dish of beans or meat, she always puts some corn flour beside you. It is not easy to eat it according to the rules; the Indians take great pinches of it between their fingers and throw them into their mouths with marvelous dexterity. Upon seeing them so adroit, I thought of their ancestors from Brazil, the ancient Tupinamba and Guaraní, who excited the hilarious admiration of the first navigators: "But however that may be, our Tououpinambaoults, men and women as well as children, being accustomed from childhood to eating it (manioc flour) completely dry instead of bread, are so used to and trained for that, that taking it with

T 175 264

T /360 cont./
175 their four fingers from the earthen dish or other vessel in
264 which they keep it, even though they throw it from rather far away, nevertheless they put it so accurately into their mouths that they do not drop a single bit. So that some of us Frenchmen, wishing to imitate them, thought we would eat it in that fashion, and not being at all trained for that like them, instead of throwing it in our mouths, we discharged it on our cheeks and floured our whole face; /361/ consequently unless those principally who wore beards would have wanted to be accoutered as players of farces, we were constrained to take it with spoons" (Léry, Vol. I, pp. 143-144).

T This comparison permitted me to suppose that roasted
262 corn flour has simply replaced the "farinha" of the Brazilians.
252 As we know, the pulp of manioc tubers, after being carefully
264 squeezed in the tipiti, or trough, was roasted on a terra-cotta slab and changed into dry flour, with which the Tupinamba accompanied all their meals. The Chiriguano think the same
C 262 way about atši: they say that corn flour, in order to be eaten,
264 must have an accompaniment, an intina. To my way of think-
176 ing, atši and muínti are two substitutes for manioc flour that the Chiriguano invented or adapted after emigrating into a
C land where bitter manioc was unknown. Neither the other tribes
[171] of the Chaco nor the Quichua eat corn in this form, and, to my knowledge at least, there is no doubt that the Chiriguano introduced these two dishes into the country, without counting a goodly number of the ones which have been enumerated.

C The only fruits that the Chiriguano consume on a large
262 scale are the prickly pear or tuna (Opuntia), which are seen
C in all their villages. They also plant some fig and orange
[245] trees when they are under mission influence. They are also
[197] great lovers of melons, of sandias (watermelons), and when they have eaten one of these which has pleased them particularly, they keep the seed. They love sugar cane with a passion. Sorghum is especially meant for the children, for whom these graminaceae are a veritable sweetmeat. They suck the juice, which is as sweet as that of sugar cane.

/361 cont./

262 252 Among the foods that nature gives them spontaneously can be counted the caraguatá, whose mealy roots, roasted on embers or under ashes, remind one a little of manioc tubers.

The pods of a mimosaceae (?), which remind one of large beans and for this reason are called iwira-kumanda, were pointed out to me as being edible. I have found this information confirmed in an article by Campana (p. 97), who adds that these fruits have a bitter taste which they lose only after several repeated cookings.

To this list must be added the fruits of the algarroba, mistol, tusca, bitter algarroba, ulala, higuerilla, etc. Chañar fruit can also help them to stand famine. Since they are sweet, they can be eaten raw, cooked, or in the form of bread after being pounded in a mortar.

In Father D. Giannechini's Diccionario Chiriguano-Español, etc., one finds enumerated a large number of plants which grow wild and which the Chiriguano eat by necessity or to vary their menus. These are:

/362/ The roots of the kaaratiro, red and stringy outside but white inside. They are edible and even pleasant tasting after being cooked in three waters (p. 18).

The watery tubers, of the size of a small onion, which the Chiriguano call iwía and of which the children are very fond. One belief has it that the spirit inhabiting this plant hides it from those who look for it if they do not observe silence or if they point at it (p. 80).

The fruit of the shrub iwira-rorai (p. 82).

The tubers of a kind of wild yuca which they call, like the cultivated species, mandío or mandionsi. This is a bitter plant, prickly and poisonous. To eat this root they cut it in pieces and cook it in several waters to make it lose its sharpness and its poison (p. 99).

A kind of wild potato known by the name mangara which the Chiriguano dig up and eat in times of scarcity. This tuber is edible only after being boiled in several waters (p. 100).

The herb monki would be equally edible (p. 133).

A certain liana (supúa) whose leaves can be eaten if other food is lacking (p. 193).

/362 cont./

262 The Chiriguano call kumanara a leguminous plant, wild,
[252] which resembles the yuca and which can serve as food after being boiled. They resort to it only when pressed by hunger. The word designating this plant has a strange resemblance to
[192] the name of the batata in the Quichua dialects of Ecuador and northern Peru (Rivet, 3, pp. 583-590). It is perhaps a question of a Quichua word introduced into the Chiriguano language to designate a plant of which they did not have the equivalent in their original homeland. The case is nevertheless rare, and one can wonder if it is not a simple coincidence.

[222] Neither do the Chiriguano look down on honey, although they
[171] do not seek it with the passion of their cousins, the Kainguá. What I tasted among them was contained in thin honeycombs having the consistency of cardboard. It had a pleasant taste.

222 Any Indian who goes in search of honey (ei) must not make
784 his intention known to anyone and, if he is asked where he is going, he must answer: "To look for wood." If you do not take
[176] these precautions, the protecting spirit of the honey is warned of your plan and hides the honeycombs he guards (Diccionario Chiriguano-Español, etc., p. 86).

222 The missionary Corrado (p. 43) assures us that grass-
114 hoppers, cicadas, the larvae of bees are that many delicious
[252] dishes for the Chiriguano. He adds that these insects are roasted. Nino (p. 247) reproduces the statements of his predecessor and completes the list of strange foods by adding /363/ ants, lizards, leaves of the cucurbitaceae, melted tallow, etc. Personally I
[171] have never seen the Chiriguano touch these dishes strange to our palates, but I am all the more inclined to believe these two missionaries that the tastes they indicate are actually those of the Indians in other regions.

262 Already in the 16th century the Chiriguano passed as snake
252 lovers, even of poisonous species. They cut off the head and tail, skinned them, and roasted pieces of them on live coals. They used to eat them with pimento. No doubt the Spaniards con-
[178] fused snakes with iguanas, which even today the Chiriguano justly like (Lizárraga, Vol. I, p. 260).

/363 cont./

234 To end up, one could still cite among Chiriguano food
262 the cheese they make in some villages. Each time they butcher they take care to keep the abomasus in order to make
[177] milk separate. Chiriguano cheeses are of the same quality as those of the half-breeds, who for once have taught something
[272] to our Indians. I shall add that I have never seen a Chiriguano drink milk.

312 The problem of water does not come up for the Chiriguano
133 as for the other Indians of the Chaco. Numerous rivers cross their territory, and several of them are large enough not to dry up even in the middle of the dry season. These watercourses form innumerable quebradas, gorges or valleys, which give its characteristic aspect to the country inhabited by our Indians.
[361] Sometimes villages are built near springs or small lakes, like the Ivu mission, which is provided with plenty of water.

312 When I crossed the Caipipendí valley, the river which occupies the bottom was nearly dry. The Indians had scooped out small wells about one meter in depth in the sand of its bed. They had surrounded them with slabs of stone to prevent any caving in and to preserve the water which accumulated in them from the heat of the sun. In this same valley, in a village situated on top of a hill, the Indians had dug a cistern four to five meters in diameter in which rain water had collected.

271 The Chiriguano have found a way to purify the muddy
312 water they often have to drink. They crush caraguatá leaves
824 between two stones, then steep them in the water, and all its impurities settle as a result of the action of the juice of this plant.

264 The Chiriguano do not eat at set times. They make a rather substantial breakfast very early in the morning and again take some food toward the middle of the day. In the evening
[562] about six o'clock they make a kind of dinner. Since the men are served first, then the women and children, it follows that the meals drag out in length. At any moment of the day one
[415] can see someone eating. The food /364/ is presented to each one in a calabash or terra-cotta bowl which each holds on his knees. They pick up the pieces with their fingers but imbibe liquids with a wooden spoon (Figs. 42 and 43). After eating, they wash their hands. I have seen some rinse out their mouths.

/364 cont./

Fermented Beverages

293 Anyone who has traveled among the Chiriguano or the Chané has learned to prize corn beer, or kāwi. Few moments in the course of my expedition have left me more pleasant memories than the ones when, tired by a long stage, I would sit down in front of a hut and receive from the hands of the wife of the "captain" a calabash full of this liquid, slightly sharp and a little granular, which quenches thirst and allays hunger. The day when the Chiriguano stop making kāwi will be a sign that they have disappeared from the face of the earth, and perhaps this delicious drink will survive them as a creole speciality in which good nationalists will take pride.

[122] [123]

Father Corrado (p. 43) once heard from the mouth of a Chiriguano an admirable definition of the role of kāwi in the life of an Indian: "It is our father and our mother," said he. Indeed, it is the father of joy, the sign of plenty, the companion of the most beautiful moments of existence as well as the most tragic ones. It has within it a mysterious and mystic force which penetrates the individual, exalts him, and protects him against supernatural dangers. All festivals are reduced, in their essential part, to the consumption of kāwi; no collective enterprise is conceivable without their first drinking it from full jars (1). From birth to death, all that affects the

293 726

1. Even in the 16th century the Chiriguano, like the ancient Tupinamba, did not undertake any expedition of war without having celebrated a caouin or a vin /wine/, to express ourselves like the old French chroniclers; /a passage of poetry in Spanish from Barco Centenera, p. 262, is omitted in the translation/.

When the Chiriguano of Parapití and Caipipendí rose up in 1799, before the revolt they held great drinking festivals, during the course of which they decided on the plan of operations (Corrado, p. 254).

/364 cont./

273 life of the individual or the community is associated with this beverage. The divine principle which kãwi has in it does not take away its secular character; and, while one gets drunk on it during the festivals, nothing prevents washing down meals with it at the time when the corn ripens. As a sign of [574] hospitality every stranger is invited to empty a calabash full [576] of it; and the compliments he addresses to the wife of his host fill his heart with pride.

527 The Indians always appreciated the liking I showed 273 /Plate XIV appears here/ /365/ for kãwi, and my old friend [123] Karnapadyú did not fail to recall the big vats full to the brim to persuade one to return to celebrate Easter with them, or, if you like, the corn harvest, since these two dates coincide more or less. Such promises /Fig. 29 appears here/ could not remain without effect, and Karnapadyú was not at all surprised to see me arrive shortly before the festival.

The greatest animation prevailed in the village of Cururutí, formerly so calm. Men came and went, bending under enormous loads of wood. All the urns were lined up in front of the huts and buried to a third of their height (Plate XIV, 1). 527 For a long time big piles of corn had already been heaped up 273 in the village, which all, big and small, men and women, 243 /Fig. 30 appears here/ were actively engaged in husking. [412] Some used their fingers, others knives or a pointed stick. Not [413] one had thought of the so practical instrument used by their ancestors: a small wooden peg with a leather loop to put two fingers through. It is curious to note that such a simple object fell into disuse; an old man still sold me a specimen made of iron but a close copy, so to speak, of the wooden prototype, of which it reproduced the smallest details (Fig. 29).

273 Now the hardest work begins: the grinding of the kernels. Day and night the dry noise of the pestles crushing the corn [461] resounds in the village. Often, to get the chore over more quickly, three women group around the same mortar and with surprising speed raise and pound their pestle without a single [415] error in rhythm interrupting their laborious work. Once ground, the corn is sifted in an urumpesa or large-meshed sieve (Fig. 31). The rather coarse flour is poured into large urns filled with water.

/365 cont./

273 The preparation of chicha is not play; it is necessary not only /366/ to grind an enormous quantity of corn, but again to go
484 ceaselessly to get water, often at a great distance. At Cururutí
482 the nearest potable water was at the bottom of a ravine of particu-
273 larly difficult access. The women were constantly going there with an îru (Plate XVII, 1), which they carried on their backs in a net (añapoka) held on the forehead by a strap. They would fill

Fig. 31. Woman sifting corn which she has just ground in the mortar beside her. This flour is to be roasted, then chewed to serve as ferment for kãwi. Cururutí. (Photo. A. M.)

484 the jug and, loading it with difficulty, would go back up the
482 steep slope doubled over under the weight. So as not to lose any
273 time, these hard-working creatures would take along a calabash full of ground corn which they continually chewed.

273 The ground corn is cooked in water and constantly stirred
412 with flat sticks whose edges used to be cut out with a certain
[178] artistic care in olden days (Fig. 32). Today a kind of oar (Fig.
[237] 33) or the scapula of an ox (Fig. 34) fastened to a long handle
[531] replaces the ancient utensils in which was manifested so well the Chiriguano tendency to decorate even the most humble objects.

[For plate XVII, See Category 116, P. 127-- Analyst]

/366 cont./

273 126 It is not so easy as one thinks to observe in detail the preparation of kāwi, and I am still at a loss to describe the stages in their exact sequence. This difficulty is due to the fact that kāwi is prepared over several days (generally three or four), and it is /Plate XV appears here/ /367/ difficult to be on the spot all the time so as not to miss any detail. Besides, as different families do not begin to prepare kāwi at the same time, confusion results; and it is hard to know at what point of the operation [114] one finds oneself. Apparently I am not the only one to have come up against this obstacle, for it is enough to read the various descriptions devoted to this important occupation to become aware that they are far from agreeing.

273 462 At the moment when the water is at the boiling point in the big vats, the burning pieces of wood and the live coals are scattered, and the corn flour is poured in, being stirred vigorously so that it will not form lumps. While this operation is performed, other women have pounded fine a certain quantity of corn, sifted it, winnowed it to rid it of any impurity, then roasted it in a large potsherd. As this flour is taken off the fire, the women chew part of it and spit this into a calabash. This paste impregnated with saliva is called temišu. According to Nino (p. 248), the Indian women mix the temišu with the corn broth which is cooking in the vats and with which they fill a pot. The woman who busies herself with this mixture (umopirai) allows it to fall back in from a certain height "to give it sweetness."

/367 cont./

273
412

The umopirai is added to the kāwi, which from this moment on is subjected to intense cooking. A large, bright fire is lighted around the vat containing it and burns day and night; the women go to stir it from time to time to keep it from sticking.

At night the village of Caruruti has a strange look: over the open square in front of the huts high flames rise, against which are outlined in black the silhouettes of the women who, busy and hard-working, do not take time to sleep. The next morning the fire is allowed to go out and the kāwi to cool. It is then decanted into vessels of smaller dimensions, and all the women, including little girls, assemble to take handfuls of the marc and chew it, one trying to outdo the other. These balls, sticky with saliva, are spit back into the vessel. A rather large amount of cold water is added to the kāwi, and right afterward comes the bottling, if I may so express myself. The kāwi is strained through a very fine-meshed sieve. The marc, or tiripi, /368/ is thrown away or used again. The beer, or pale wine, is distributed into vessels which are carefully closed with a calabash or bowl, and this liquid is left to ferment for two or three days. So that it may be completely protected from the air, the line of contact between the vessel and its cover is smeared with clay.

273
412

[239]

C 273 /368 cont./

A certain variety of kāwi is prepared by boiling it again after passing it through the sieve and "bottling" it only after letting it cool a second time.

Kāwi is generally covered with a thick oily layer which the Indians are far from scorning. The mistress of the house takes the precaution of pouring a certain quantity of it into the vessels which do not have any.

In their descriptions of the preparation of kāwi, Giannecchini and Nordenskiöld say nothing about the temisu, the umopirai, and, in general, a good many of the stages the corn goes through before being converted into beer. This silence is probably due to the very complexity of this operation, more than one detail of which certainly escaped them. The preparation of kāwi is a tiring occupation which requires great effort. The Indians display a veritable science in its manufacture. It is easier to distill alcohol, and, in any case, this is a task demanding less physical activity. Perhaps centuries of groping were needed for arriving at determining the time of cooking, the proportions of roasted and chewed flour, the quality of the grain, etc. All that is the result of minute observations, many trials, and also much reflection. These considerations are intended to justify the remark made at the beginning of this chapter: a simple cooking recipe often tells as much about the civilization of a people as a perfected tool.

C 273 824 [171] ce [273] [824] [114]

/369/ The fruits of the mistol, chañar, or algarroba can give a chicha that the Chaco Indians like very much, but which the Chiriguano scorn. They have recourse to it only in case of scarcity. The Chané of the Izozoc, whom I could not visit, have the specialty of kāwi from batatas. The Chiriguano also know how to make use of this tuber to prepare a fermented drink, but they judge it to be of inferior quality and declare that one must be a poor devil to take any. (Nordenskiöld, 2, p. 236) (1).

1. Barco Centenera (p. 315) already mentions the different types of chicha prepared by the Chiriguano: "El vino de maiz y de algarroba,

293
824

/369 cont./

De Molles, y de murta bien obrado,
Seguro que bebian casi sirobe,
Que media á cada cual le estaba dado."
/The wine of maize and of algarrobe,
Of Molles, and of myrtle well worked,
It is certain that they drank almost
an arrobe,
The measure which was given to each
one./

293
574
596
[123]
[114]

Kiwi is too respected a drink to be drunk in any old way. Etiquette requires one to comply with certain rules if the honor of participating in a drinking bout is done you. I sometimes had a chance to be invited to these festivities, and on such an occasion I was able to make the following observations which I am setting down just as I noted them in my field notebook. The men are seated in a circle on chairs or benches. The women squat behind them, on skins spread out on the ground. The kiwi is brought in vessels shaped like bulls, and one of them is put down at the feet of the "captain." The girl who has brought it fills a small calabash and offers it to the "captain," who empties it. Next he serves me and gives the vessel back to her. He does the same with my neighbor, then with several of the guests. Then he hands the calabash to his wife and goes to sit down. The latter serves the rest of the men present.

[554]

A second vessel, brimming over with kiwi, is put this time before another Indian who perhaps is held in some esteem. He drinks first, then busies himself with his companions. Two large calabashes are then given over to the women, and from that moment on, the distribution no longer seems to follow any order. Men and women drink and serve their neighbors without obeying any rule of decorum other than not to forget other people. They acquit themselves perfectly in this duty of politeness, and nobody is neglected, not even the very small children, who take alarming quantities of kiwi.

/375 cont./

293 At Saipirenda on Easter Day I was able to note that the
374 first one served is always the "captain." As before, the
376 vessel full of kiwi is put down at his feet. He drinks the first
[564] burrper, then hands his cup or calabash to his neighbor. The
letter gives back the calabash empty or fills it and passes it
on in his turn. Several calabashes are circulated, but they
always come back to the first person who received each one
and he finishes it. The men move from their places several
times to go to serve the women who, on their part, do not
forget themselves and drink according to the same /376/
[533] ritual as the men. The drinking takes place to the sound of
flutes and violins.

When the supply of kiwi is exhausted in a village, they
get in single file and, the music at the head, go elsewhere
to revel.

[789] Formerly the preparation of kiwi was accompanied by
[198] magic rites. Today nothing is left of this but the custom of
[302] daubing the face and legs with roucou. In certain villages the
women do not even take this precaution any more. However,
between Cururuí and Caipipendí, I could still see several women
stained like this, who seemed "handsome devils," to use an
expression dear to Jean de Léry.

415 Notes on the Cooking Utensils Used among the Chiriguano

Nothing strikes the traveler who arrives in a Chiriguano
village so much as the abundance of pieces of pottery he finds
inside or outside the huts. Figure 1 of Plate XIV /see p. 115/
gives an idea /Fig. 35 appears here/ of the number of vessels
one can see in a small area at the time when the Indians are
preparing corn beer.

Pottery for culinary use among the Chiriguano has a com-
[192] pletely different nature from that for ceremonial days. The
[195] latter is clearly of Andean origin with a few rare Arawak elements,
while the former has retained a very marked Guarani character.

/[illegible] cont./ 69

It is distinguished especially by finger impressions, which decorate the neck of nearly all the common pots.

While watching the Chiriguano potters work, I realized that the finger impressions which so often decorate their vessels result automatically from the process of fabrication. At the moment when the potter forms the neck of the vessel, she has to press the roll constituting this part between her thumb and index finger and so longer with the flat of the hand as she has done up until then. The vessel is generally too narrow in this zone to allow putting in the whole hand. The result of this is a whole series of finger impressions which vaguely give the effect of ornamentation. Now the potter rolls them out in order to remake them more symmetrically. Thus this motif which adorns most of /Plates XVI and XVII appear here/ [illegible] the vessels in common use among the Chiriguano is obtained, so to

Fig. 35. Small vessel (cazuela) decorated with fingernail impressions. The lines of contact between the three rolls of clay of which it is composed are still visible. Prov.: Caraguatá. (1/3 nat. size.)

[illegible] mechanically. From the neck these decorations have been extended to the rest of the vessel for an aesthetic purpose, but their occurrence on the upper part influenced the rest.

C
415
531

/371 cont./

The ordinary pots used to cook the food are, as a general rule, decorated all around the neck with several rows of finger or finger-nail impressions. The most typical example is the vessel of Plate XVI, 3 /see p. 125/ which typologically can be ranked with the big urns for cooking corn beer, many of which have more or less the same shape.

Ordinarily pots meant to go on the fire are provided with handles (Plate XVI, 2 and 4 and Fig. 36).

Fig. 36. Vessel (yapepó) with twisted handles and decorated with two series of small depressions imprinted on the neck. Prov.: Yumbía. (1/3 nat. size.)

T
415

Fig. 37. Toba vessel in the shape of a flattened gourd. Serves for carrying water while traveling. Prov.: Macherotí. (1/3 nat. size.)

/371 cont./

415 Certain vessels (Fig. 35) have the exterior surface entirely
531 covered with these depressions obtained by pressure of the thumbnail. The Indians call this decoration tatupire, that is "armadillo carapace," /Fig. 37 appears here/ a completely justifiable comparison.

One can consider as an evolution of the process of ornamentation by finger impressions the angles or chevrons which decorate the outside surface of the vessel of Figure 2, Plate XVI /see p. 125/, which have been incised in the soft clay with a pointed instrument. This type of ornamentation can be reduced to its simplest expression; thus on the neck of the vessel of Plate XVII, 2 /see p. 127/ it is limited to a row of little cavities made with a pointed stick. The small vessel of Figure 36 /see p. 128/ with a belly flattened from top to bottom belongs, from the decorative point of view, in the same category.

415 On another vessel (Plate XVI, 1) the small nipples which
531 project /372/ all around the belly constitute a summary
171 decoration which completes that of the neck formed by fingernail impressions. Pots of this type are found among the Ashluslay (Nordenskiöld, 9, Fig. 65, p. 218).

This decoration is exceptional in South America. Jijon y Caamaño (p. 6) considers it characteristic of the northern part of Ecuador. He points out its distribution in Central America and in the Mound region in the United States.

[126] The ìru of Plate XVIII, Fig. 2 /see p. 131 / has the exact shape of a calabash; this resemblance was intentional, for the Indian woman who sold it to me presented it at the same time as the calabash which /Fig. 38 appears here/ had doubtless served as a model. Vessels which are almost replicas of this specimen have been found at Jachal and Calingasta in San Juan province in Argentina (Ambrosetti, 1, Plate VII, and Debenedetti, 3, Fig. 41, p. 69).

415 The Chiriguano call the vessels in which the women
[462] draw the water they need for their households by the Quichua name ìru. The ìru are characterized not only by their more
415 or less globular shape and the narrowness of the neck on top,
323 but also by the quality of the paste from which they were

C /372 cont./
323 modeled. The latter is extremely fine, of very good quality,
[415] and, when fired, forms a compact, hard, and resistant mass. This clay is inherently not very porous; to render it still more impermeable the Chiriguano potters give the vessel a long polishing while it is still unfired but nevertheless very dry. This is applied on the exterior walls of the receptacle and gives them a brilliant and metallic appearance which at first sight would be taken for a glaze. This operation has the effect of making the vessel almost impermeable and thus of avoiding the evaporation which takes place more or less rapidly in most Chiriguano receptacles. The narrowness of the neck at the top of these vessels serves a similar purpose.

C
415
→

The îru can be of any size: there are very large ones like the Chané specimen of Plate XVII, 1 /see p. 127/ and other very small ones (Plate XVIII, 4 /see p. 131/) which little girls use to help their mothers and /Plate XVIII appears here/ /373/ become initiated into housework. Vessels 1 and 3

A
[415]
←

of Plate XVIII represent rather rare close forms, which derive from the primitive type but which have been perfected. The handles with which these îru are provided allow them to be carried on a trip in place of gourds.

C
[172]

Prototypes of the Chiriguano îru have been furnished us by Debenedetti's excavations (2, Fig. 119, p. 171) on the Isla de Tilcara.

Water pots (iru). Chiriguano. The exterior surface of iru Nos. 1, 3, and 4 has been polished to the point of appearing glazed. The iru No. 2 has been modeled in the shape of a calabash. No. 1 comes from Ivu, No. 2 from Carurutí, No. 3 from Yumbía, and No. 4 from Macharetí. (1 and 2 = 1/4; Nos. 3 and 4 = 1/3 nat. size.)

C
Ce
415
171
177

/373 cont./

Typologically, we must put the vessels of the primitive tribes of the Chaco in the category of the iru. Like the Chiriguano or their forerunners the Chané, the Matako, Toba, Choroti, and Ashluslay copied Andean models, which they adapted to their needs. It is appropriate to note that the seminomadic tribes of the Chaco must have fashioned their vessels in such a way as to be able to take them along with

T
415
531

Fig. 39. Toba vessel with bands in relief imitating the suspension cords with which vessels of this type are generally provided. Prov.: Macharetí. (1/4 nat. size ±.)

C
Ce
415
171
177

them on their peregrinations, while the Chané and Chiriguano, sedentary nations, did not feel the need to modify the primitive form and kept the Andean prototype without bringing variations to it. For comparison I am reproducing here two vessels from the Chaco: one (Fig. 37) comes from the Toba section of Macharetí, and the other (Fig. 38) from an Ashluslay tribe traveling in northern Argentina.

T 415 531

/373 cont./

The handsome vessel of Figure 39 comes from the Machareti mission. It is /374/ the work of potters of the Toba tribe. Three details make it worthy of a place apart: the very wide, flat base; its almost quadrangular horizontal section, a very rare characteristic in Indian pottery; and, moreover,

C 415

Fig. 40. Small bowl (ñaè) with 4 nipples. Chiriguano. Prov.: Caipipendí. (2/5 nat. size.)

T 415 531

the two bands which run along the neck, imitating in terra cotta the suspension cords with which Toba vessels are usually provided.

T [482] T [178]

This vessel is a good example of the influence the way of life can have on the art and technique of a tribe. The ancient vessels of the Toba were, as I have just said, always furnished with a suspension cord to make it possible to carry them when traveling. Today the Toba are sedentary and this cord, having become useless, has been transformed into an embellishment.

C 415

Fig. 41. Small miniature bowl with cord for hanging. Chiriguano. Prov.: Ñawirenda. (1/2 nat. size.)

Bowls

Bowls are not plentiful among the Chiriguano, among whom calabashes replace them to advantage. The ones I have been able to collect, and which were not painted, are made of a clay which, after firing, gives the appearance of being wood. The base is flat and the rather high sides flare out, except in the specimens of Plate XIX, 3, and Figure 40, where they are convex. The latter puco is

/374 cont./

415 surmounted by two nipples, remains of stylized ears. These protuberances can be perforated and allow a suspension cord to pass through, which permits hooking the bowl to a beam of the hut (Fig. 41).

Spoons

412 Spoons are very common among the Chiriguano. Their
171 form connects them closely to those which have been made
172 known to us by the excavations carried out on the Bolivian altiplano and in northwestern Argentina. It is among the ancient populations of this region that we must seek the origin of this cultural element (on this subject see Nordenskiöld, 9, pp. 91-92), of which the Chiriguano have faithfully kept the primitive aspect and even certain peculiarities such as the indentations of the handle which /Plates XIX-XXI appear here/ /375/ are seen on one of our specimens and on one discovered in the Puna de Jujuy (Pucara de Rinconada) by Boman (2, Vol. II, Plate LIX, Fig. 142).

412 Beside these spoons, whose use spread under the influence
237 of the civilized peoples of the west, the Chiriguano kept the
824 most rudimentary forms of this utensil: the valves of a fresh-water mollusk (anodonta) (in Chiriguano: inta) are often used by them to eat liquid dishes; the shell of the fruit of a bignoniacea (?) opened lengthwise also appears in the north of the Chiriguano territory as the survival of a time when spoons were still unknown to them (Fig. 44).

412 Some small calabashes, ovoid or round, with a jutting peduncle, can, after being cut through the middle, replace
[171] wooden spoons to advantage (Fig. 45). It was in this natural form that the spoon spread in tropical America where Andean influence did not make itself felt. The Chiriguano do not disdain using these half-calabashes to dip into the bean pot or the meat broth. Calabashes like the one of Figure 46 /see p. 139/ take the place of ladles.

Bowls (naè). Chiriguano. Bowl No. 1 was found in a funerary urn from Caipipendí. It was originally painted red. Nos. 2 and 4 come from Saladito (upper Pilcomayo); No. 3 from Carurutí. (No. 1 = 1/3; Nos. 2, 4 = 1/3; No. 3 = 2/5 nat. size.)

Calabashes

415 In each Chiriguano village calabashes are as abundant as pottery (see Fig. 47 /see p. 139 /). The huts are full of them. They are of every shape and size, from the spoons we spoke of to the big basins in which the kāwi is distributed on feast days.

[286] The calabashes which are ovoid or gourd-shaped are generally enveloped in a kind of rudimentary net of vegetable fibers or leather thongs, which allows them to be carried in the hand or hung (1). In them is put either water, or grain

415
286
171

1. Nordenskiöld (10, p. 97) has given the list of the South American tribes who put their calabashes inside a net to carry or hang them. This contrivance is widespread on the continent and its distribution is certainly greater than that indicated by Nordenskiöld, but travelers generally take only slight interest in such details, which are nevertheless important. The Kaingúa of Paraguay encompass their calabashes with wembé bark just like the Chiriguano (see Ambrosetti, 2, p. 716).

415 and seed, or roasted flour, or finally roucou or kalasapa powder saved for feast days (Plate XX, 1 and 2; Plate XXI, 3 and 4).

[322] Some calabashes are provided with a lid which the Indians make by cutting a calotte with star-shaped edges in the still green fruit, and this then forms a hermetic closing. The lid is fastened on by means of a small cord which, when pulled, suffices to close the calabash /376/ (Plate XX, 4 and Plate XXI, 2). Gourds whose opening is small in diameter receive a fragment of a shelled ear of corn as a stopper. /Figs. 42-47 appear here./

[121] Painted, pyrographed, or incised calabashes will be the object of a special study.

Wooden Bowls and Basins

C 415 171 439 The Chiriguano also use wooden bowls (Fig. 49). I do not know whether they make them themselves or receive them from the half-breeds of the /Fig. 48 appears here/ San Luis region. In this latter case the Chiriguano of the San Luis (Entre-Rios) region would be the only ones to make them. In Tarija /Figs. 49-50 appear here./ where these bowls are much sought after by the half-breeds, they were indicated to me as coming from that zone. The rare wooden bowls which /378/ I saw at Caipipendí had been bought by the Chiriguano in the course of their trips. The same origin must be attributed to the wooden troughs found among the Chiriguano who live near the Quichua half-breeds of Tarija department. These basins are used for washing food and also as bathtubs. Ci 415 177 The Choroti have wooden dishes (Nordenskiöld, 9, Fig. 20, p. 88) which have a shape very similar to that of the trough reproduced here (Fig. 50) and which doubtless were introduced among them either by the ancient Quichua or by the half-breeds. A 415 171 Among the Araucan of Argentina wooden basins are found, which are similar in every detail to those of the Indians and half-breeds of Bolivia and the specimen pictured here.

Chapter V

Tools of the Chiriguano

C 412 178 [179] The work tools the Chiriguano use nowadays are almost all of European manufacture. Here and there the ancient forms were kept when stone or bone were replaced by iron. Witness the adze of Plate XXII /see p.143 / which constitutes a curious survival of the eared or T-shaped ax certainly adopted by the Chiriguano after their migration and their establishment at the foot of the Andes. T-G [412] [184] This type of ax is unknown to me from any other Tupi-Guarani tribe and is rare in the area occupied by the different nations belonging to this linguistic family (see Rivet, 1, pp. 149-155).

/378 cont./

412 The specimen I am publishing here was still giving good
114 service to its owner, who gave it to me with regret and only
171 for a large sum of money. The presence of the eared ax among
178 the modern Chiriguano invalidates the allegation of Nordenskiöld (14, p. 120), who places it among the cultural elements which have completely disappeared in South America. It survived
[181] thanks to the prodigious conservatism of the Indians. I am convinced that several of the objects whose disappearance is attested to by Nordenskiöld will perhaps be found in some tribe now living, when we have more abundant ethnographic material from South America than we now have at our disposal.

412 Another very interesting peculiarity of this ax is the bent
171 shape of the handle, to which the blade is securely fastened with leather thongs. The distribution of the bent-handled ax has been traced by Lissé (2, p. 202). Few tribes of South America have continued to use it up to our day. They are the Colorado of Ecuador, the Tukanó /Tucano/, Tarianá, and other tribes of the /Plates XXII and XXIII appear here/ /379/ Caiary-Uaupés, the Tehuelche, and the modern Quichua /Quechua/. Among the Indians of the Caiary-Uaupés the tool lost all practical value and finally became a simple dance accessory (Koch-Grünberg, 2, Vol. I, Fig. 225, p. 330). /Fig. 51 appears here./

The bent ax has been found archeologically in Peru (Chuquitanta: Marquez Valley near Lima) and in Casabindo in La Puna de Jujuy (Argentine Republic). The specimens from Peru are designated as being hoes, which is possible. However, I shall call attention to the fact that the Chiriguano specimen from Caipipendí is exclusively a carpenter's instrument, which the Indians use for cutting the pieces of wood from which they make their furniture or weapons. /Fig. 52 appears here./

Figure 51 shows how modern axes of the simple neolithic ax type can be hafted exactly like their stone prototypes. The similarity of this ax to the stone ones used up to today by the Guayaki extends to the somewhat arched shape of the handle and to its slightly swollen upper end (La Hitte, Plate IV, 9).

Plate XXIII

Stone axes of the ancient Chiriguano. The first of the eared axes, Nos. 1 and 10, comes from Ibopeyti, the second from Ivu. The axes with a complete groove (Nos. 2, 3, 5-9) were collected in the Caipipendí Valley, with the exception of ax No. 4, which was acquired in Ivu. The simple neolithic ax, No. 11, comes from Caipipendí. (1/3 nat. size ± .)

/379 cont./

412 171 Still hafted in this way are the stone axes of the Indians of the upper Xingu (Steinen, 2, p. 197) and the Kaingang /Caingang/ of southern Brazil (Nordenskiöld, 15, Fig. 16, p. 38) and the iron cutting tools of the Matako-Vejos (Nordenskiöld, 15, Fig. 29, p. 44) and the Yamana (?) of Tierra del Fuego (id., 14, Fig. 45, p. 86) which replaced the ancient stone celts.

172 412 Plate XXIII /see p. 144/ reproduces a series of stone axes coming from the region of Caipipendí, Ivu, and Ibopeytí. The Caipipendí axes are all provided with a groove. Of the two axes with heels one was found at Ibopeytí and the other at Ivu.

Mold for Tembetas

The tembeta, or labrets, of the Chiriguano are of tin. They make them themselves with the aid of the mold pictured here (Fig. 53). It is a calabash into which the fins of the labret have been hollowed out, while the thicker central part of the ornament corresponds to the end of a stick going through the calabash. The cavity produced in the central part of the labret is then filled with wax into which glass or turquoise beads are incrusted. These come from ancient burial-places and are sold to the Chiriguano by the half-breeds of Tarija.

[531]
[439]

Balances

296
177
171

The Chiriguano of the upper Pilcomayo and the Igüembé valley prize coca quite as much as the Quichua of the altiplano. Besides, it is from them that they got this vice. The fact is known and does not need to be demonstrated. This custom

/380 cont./

276 177 171 spread among the Chiriguano recently for it has not yet spread throughout the territory they inhabit. The Chiriguano who live far removed from the half-breed or Indian populations of the Cordillera are not "coqueros," and only rarely does one meet among them some old man who accepts a quid of coca.

276 171 302 114 Ivu is the last point toward the east and north where I could distribute my supply of coca to advantage. Nordenskiöld (10, pp. 85-91) sought to demonstrate that the custom of blackening the teeth went along cheek by jowl with that of chewing coca and derived from it. As a matter of fact, this habit has a very marked western distribution and follows the zone of coca cultivation.

276 [824] The Chiriguano mix each quid of coca with the ashes reaped from a tree (ulala) whose scientific name I do not know. These ashes (tanimbo), which corresponds to the llicta of the Quichua, are contained in a small leather bag.

276 439 804 Coca is a luxury commodity which the Quichua Indians or half-breeds come to sell to the Chiriguano. To avoid all argument and all fraud on the part of unscrupulous sellers, the Chiriguano have recourse to balances of their own making. They fabricate them with /381/ two calabashes cut in half to serve as scales (Figs. 54 and 55). The balance with scales was in [177] use in pre-Hispanic times /Fig. 54 appears here/ in the ancient Inca Empire (see Nordenskiöld, 16) and so I believed at first that among the Chiriguano it represented a survival of /Fig. 55 appears here/ the Andean influence, whose importance we shall see further on. Among the Chiriguano, however, this object is designated by the Spanish name /382/ mbalanza, which seems to indicate that they borrowed it from the half-breeds. The latter and the Quichua use them in their commercial transactions, but especially for weighing the precious coca. Perhaps it was the same in prehistoric times. There is nothing to prove that only metals were weighed, as has been supposed with respect to these ancient scales.

804 177 For weights the Chiriguano use old Bolivian silver coins and express measures according to the old Spanish system. By a tacit convention a coin worth two modern sous is the equivalent of one ounce.

Chapter VI

121

Art among the Chiriguano and Chané Indians

To Professor Félix F. Outes.

The artistic sense of the Chiriguano is manifested in pottery decoration, pyrography, and wood carving.

We shall study these three activities one after the other.

Pottery Technique

114 323 The Chiriguano pottery technique has been studied briefly by Campana (p. 54), following Father Giannechini's notes, and by Outes (3, pp. 122-123), who adds some details communicated to him by the naturalist Holmberg to the ones he took from Campana's work. Nordenskiöld (1 and 10, pp. 142-147) completed on many points Campana's brief survey, so that I myself shall have few new things to note.

317 323 The clay used by Chiriguano potters comes from beds well known to the Indians, where they go from time to time to lay in fresh supplies. It is enough to see old vessels full of earth around a hut to know that a woman lives there still practicing the ancestral industry. Where adequate clay is [439] lacking, pottery is imported. Thus in the Tigüipa mission all the vessels in use were made in Machareti.

323 In order to be used the clay must be degreased with powder /383/ coming from potsherds. Fragments of old vessels are ground in a mortar until, after being put through a sieve, they give a fine powder which is kneaded for a rather

/383 cont./

323 long time with the clay. This paste must have all the impurities removed, which is done in the course of the kneading (Fig. 56).

323
342
291
516
351

Fig. 56. Fabrication of a vessel: the clay, after being mixed with pulverized potsherds, is kneaded. (Photographs taken by the author at Masaví in the Igüembé Valley.)

323 When the potter has obtained an elastic and sticky paste, she molds the base of a vessel, which she puts either on a piece of cloth or a small board. The foundation of the future receptacle looks like a disk raised on its periphery. A

/383 cont./

323 Chiriguano woman will never be seen making one single vessel at a time: since before continuing she must wait until each one of the parts making up the piece of pottery is dry, she occupies this interval by beginning another vessel, which will dry while she works on the first one again.

415
531

Figs. 57-58. Vessels (yapepó). The rolls of clay of which they are composed are still apparent and constitute a rudimentary ornamentation. No. 57 comes from Carurutí, No. 58 from Yacuiba. (1/4 nat. size.)

323 /384/ When she judges that the bottom has taken on some firmness, she rolls between her hands a roll to which she tries to give a regular diameter. Then she applies it on the base, forming a perfect circle. She cuts off the part which extends beyond the junction point. Next she flattens the roll with her hand, the compression being made from inside to outside, with the back of the left hand and the right palm. When the whole periphery has thus been raised, she evens off the edge, filling all the depressions with pieces
[824] of wet earth. Then she smooths the outside of the vessel with a
[412] stripped ear of corn and a splinter of bamboo. These two instruments are placed beside her and frequently dipped in water so that the earth
[237] does not stick to them. The inside surfaces are polished with the valve of a shell (anodonta) (Plate XXIV, 2). The raw clay, once it is shaped, is supple and resistant like leather. Vessels can be

C /384 cont./
323 made only in the sunshine. One day when rain threatened to fall, the women hurried to grab the vessel they were in the act of making and to carry it into the hut. It was swinging on all sides during this moving, but did not break at all.

From base to neck the vessel is constructed in the same fashion, the number of rolls superposed varying with the size of the vessel but never being very large. The handles are added last. Some are twisted and have been obtained in the following manner: a long, thin roll is bent in two and rolled on itself.

When finished, the vessel is put to dry. After it has hardened, the potter rubs it on the inside with a shining, polished stone (tankua or ita-nkua) (Plate XXIV, 3-4) until the surface is rendered shiny as /Plate XXIV appears here/ /385/ if glazed. The purpose of this operation is to avoid porosity of the inner wall of the vessel, which without that would be too permeable. The exterior of ordinary vessels is left as is. Vessels that are to be painted are apparently also polished on the outside. The polishing of the vessel is done over several days and slowly. The potter does it with great care (see Fig. 66).

C [237] [413] If the vessel is to be painted, the color is applied with a brush made of agouti hair or feathers held together in a tuft with wax (Plate XXIV, 1).

C Ce 386 The coloring materials used by the Chiriguano and Chané are of mineral and vegetable origin. The first are taken from rocks, of which I have had samples examined petrographically and chemically.

Chemical analysis gave the following results: the yellow samples contain clay (aluminum silicate and calcium carbonate) and iron in the form of hydrated oxide; the reds are of the same composition but contain less hydrated iron oxide and more iron oxide. In a specimen of yellow-brown ocher the iron oxide is abundant. In another, hard and compact, of a red-violet tint, the iron is almost entirely in the state of anhydrous oxide.

The yellow, red, and dark-yellow ochers, when heated in a test tube, change color and become dark red, with the exception of the violet specimen which remains invariable.

C
Ce
386

Two gray minerals are silicates of aluminum and calcium with traces of iron. They are almost pure clays.

A jet-black mineral is a calcareous manganese-bearing complex (manganese dioxide in the form of oxide crossed by veins of calcite).

Petrographically, these samples are some yellow ochers very compact (manganese-bearing, quartzose) or somewhat sandy, some very sandy red ochers, and finally slightly sandy clays.

The ochers all give a red color, pyrolusite (?) furnishes black, and the pure clays the yellowish white on which red and black motifs stand out (1).

> 1. Nordenskiöld (10, p. 145): "The colours used by the Chiriguano and the Chané on the Rio Itiyuro are black, red, brown and white. The white is caolin, the red, brown and black are obtained by pulverizing schists of these colours." /cited in English./

C
323

Colors of mineral origin are applied on the walls of the dried and polished vessel before firing.

C
323
237

Most of the vessels from the upper Pilcomayo are distinctive because of motifs of a glossy, solid black which the Indians obtain by rubbing, shortly after firing, with a resinous excrescence looking like a white muff, which a kind of cochineal (?) forms around /386/ mimosa branches (in Chiriguano: iskayanti) and in which she deposits eggs (Plate XXIV, 5).

According to Father Giannechini (Diccionario Chiriguano-Español, etc., p. 200), who was the first to note the use of this material, it was a question of the viscous saliva of an ant (?) which sticks to the trees. The /Fig. 59 appears here/ Chiriguano potters would use it to paint their vessels after mixing it with roucou. In reality, this information is inexact. The resinous muff is not made of saliva but a kind of manna or lac. It is rubbed directly against the sides of the vessel to produce the solid, glossy black of certain motifs.

/386 cont./

323 The paintings on some vessels produce a particularly successful /387/ effect, thanks to the alternation of brilliant,

323
342
351
516
415
291

Fig. 59. Fabrication of a vessel: the inside surface is polished after being flattened with the hand.

323 solid red with black of the same nature. The first of these colors
[386] is taken from the famous roucou, whose oily paste is mixed with resin, kneaded into a loaf, and melted on the hot walls of the vessel.

/387 cont./

C 323 386 The name tarawirisi is also given by the Chiriguano to objects resembling loaves of bread kneaded by hand which are composed of a resinous material mixed with wax. According to the explanations given me by the Indians themselves, this

C 417 415

Fig. 60. Forked tree-trunk serving as a shelf for putting vessels on. (After a sketch by the author.)

C 323 386 substance is taken from a mimosa. After being sprinkled with boiling water, it is kneaded and dried in the sun. Its color is yellow or red, but after firing it becomes black.

I could not learn whether this black glaze was applied over a layer of black paint or spread directly on the walls of the vessel. In every case the designs made by this process are much less regular than the ones drawn with a brush.

C [126] My collections of pottery, which consist of nearly 200 pieces, do not contain any glazed specimen. Nordenskiöld (10, p. 144) assures us that the Chiriguano and the Chané of the Parapití coat their yambui with a sort of gum called tarawisi, a word which, except for one syllable, is the same as the one designating the resinous substance we have just been considering.

C 114 323 386

C
Ce
386
323
171

/387 cont./

This makes me think that glazing implies a technical process analogous to the one in use on the upper Pilcomayo.

Ce
C.I
323

The Chaco Indians draw crude decorations on their vessels with palo santo resin, which they apply after firing. According to Nordenskiöld (id. supra), the Chané of the Itiyuro probably use the same method to decorate some of their vessels with black designs.

C
323

After being painted, the vessel is put in the shade to dry for several days. It is only when the sides have acquired a certain hardness that the firing process is begun. The vessels are then taken to a spot where there is plenty of dead wood. A large quantity is collected, with which the vessels are covered from bottom to top. Generally, long pieces of bark are selected, which burn brightly.

They set fire to this pyramid of wood and, with a long pole, the /388/ potter watches to see that no brand burns directly against the walls, which would bring on a "shot of fire." When she ascertains that a vessel gives a metallic sound on being touched, she scatters the firebrands with her pole and, by rolling it, makes it go out of the fire.

It may happen that in the course of the firing a vessel may suffer some cracking. This is remedied by taking a little moist earth mixed with dung and applying it on the split while the vase is still hot. The fissure closes, but remains noticeable.

Classification of Chiriguano Pottery

C
415

The figures which illustrate this text, the plates published by Nordenskiöld (10, pp. 155-162), and the diagram of Outes (3) give a better idea of the more common forms of this pottery than any description. However, a few remarks are called for.

C
[184]

Vessels with a subglobular belly surmounted by a low, wide neck flaring at the top constitute, without doubt, the most widespread type. (Plates XXXV-LVII.)

/388 cont./

415 184 The footed bowl or "compote" (Fig. 72) comes from the Caipipendí valley, the same as the vessel with ribbed belly of Plate XXVI, 2. These are the only specimens of this type that I found in the whole Chiriguano country.

415 184 532 Anthropomorphic or zoomorphic vessels are rare. Scarcely anywhere but in the Caipipendí valley is corn beer ordinarily served you in vessels shaped like a bull. Besides, their workmanship is careless. The admirable anthropomorphic vessel of Plate XXVI, 1 is an exceptional piece.

415 Twinned vessels (Plate XXVII, 3) and those which a constriction separates into two bodies (Figs. 74, 75, and Plate XXVII, 1) are very rare.

415 531 The motifs painted on Chiriguano vessels most often are of a purely geometric nature.

There are few exceptions to this rule. As an example of them, I shall give the large yambuí of Plate LII, 1, on the belly of which have been painted more or less stylized dogs, chickens, and toads; the yambuí of Figure 83, whose principal decoration is composed of a series of yakú (pavo del monte /wild turkey/, Penelope spec.); and finally several vessels in my collections, which I did not want to publish because of their completely Europeanized form. On one of them silhouettes of nandus are distinguishable (Plate XXXIV, Fig. 222) and on another have been drawn a man and woman whose hands are united by a red line (symbol of marriage, of love?).

I remember having seen on a jar in the Caipipendí valley /389/ nandus drawn with particular skill. I would gladly have bought that piece if it had been possible to arrange its transportation.

[178] The vessel of Figure 83,[1] gives an excellent idea of what Chiriguano potters could do in the "realistic" genre if a long /Fig. 61 appears here/ tradition did not oblige them to limit themselves to the representation of geometric motifs.

[1] [See P. 249, Category 116 - - Analyst]

/389 cont./

415 531 The plant kingdom hardly inspires Chiriguano artists. The vessel of Plate LII, Fig. 3, is the only one whose decoration is clearly phytomorphic; and again in this case I am not sure that

323 516 342 291 415

Fig. 61. Fabrication of a vessel: the exterior surface is smoothed with a chip of bamboo after being flattened with the hand.

415 531 a European model did not serve as an intermediary between nature and the picture the potter portrayed.

[126] [179] /390/ Among the 200 vessels I collected in Chiriguano country there is not one that includes a figuration of the human face, with the exception of the one to which I have alluded, whose form betrays the desire to satisfy the stupid puerility of THE TOURISTS.

/390 cont./

COD the tourists. In this respect Nordenskiöld (10, Fig. 28, p. 137)
Ce was more fortunate than I: among the Chané of the Parapití
415 he was able to acquire a pot on which one distinguishes a nose
531 in relief and the organs of the face painted in a conventional
199 fashion, but in which the Andean influence is clearly re-
532 flected.

Each region, often even each village, has its special
C style, and this varies again according to the fancy or skill
531 of each potter. The differences are often sufficiently accentuated
415 to permit an ethnographer with some experience to recognize
184 the provenance of each piece at first glance.

From the point of view of decorative style, the Chiriguano country is divided into three zones, whose characteristics are the following:

On the upper Pilcomayo the fundamental element of decoration is the spiral in the form of a couchant S which is combined with the volute of another color taking off from the apex of a triangle (see, for example: Plate XXXV: XXXVI, 1: XXXVII, 2; Plates XLVII-L, etc. /see pp. 211 ff. and pp. 226 ff./

This motif is arranged in parallel zones framed by geometric figures (festooned lines, alternate triangles, barbed strokes, etc. (see, for example: Plate XXXVII, 1 /see p. 213/: Plate XXXIX, 2, /see p. 215 /: Plate XL, 2 /see p. 216 /: Plate XLIV, 2 /see p. 220 /. Rare are the pieces of this zone whose principal decoration does not consist of variously combined spirals. The style of the pottery I collected in the Igllembé valley differs only a little from that of the upper Pilcomayo: we find the same principal elements without, however, the spiral playing a predominant role (Plate XXXIX, 1: Plate XLI: Plate XLII, 2: XLVIII, 4: Plate LI, 1-3: LIV, 2).

C The pottery made by the Chiriguano of the Ivu,
531 Macharetí, and Tarairí missions and by the Chané of the
415 Itiyuro reveals a special predilection for linear motifs stand-
184 ing out in black against a yellowish background. These are
Ce ascending and descending lines which run around the belly of
531 the vessel forming large triangles, and something of a kind,
415 which, in turn, end in Greek frets or spirals. The triangle

/300 cont./
surrounded by a volute is a motif which appears often in this region. Triangles with a solid surface combine to form either denticulate bands or somewhat hourglass-shaped figures whose effect is pleasing to the eye (Plate XXXIX. 1; Plate XL. 7; Plate XLI; Plate XLII. 1; Plate XLIII. 1; Plate LII; Plate LIV. 1 and 3-4; LVII. 3-4; LV. 1 and 3, etc.).

Between the Chané vessels (Plate XXXVII. 1; Plate LIII. 1-3) and the Chiriguano ones in the mission there are some differences which have less to do with the choice of motifs than with the manner in which they are treated. The Chané women have a purer taste and they evince greater suveness /301/ of hand than the Chiriguano potters. One senses clearly that the latter are only their pupils.

It is difficult for me to say what decorative style might have been in vogue in former times in the Caipipendí valley (Plate LVII. 7; Plate LX. 4; and Fig. 7). Painted vessels have become rare there, and the few examples I saw or acquired were in very bad condition. As elsewhere, they were covered with geometric figures: broken lines, triangles, /Fig. 63 appears here/ festooned bands, etc. The individuality of Caipipendí pottery shows itself more in the form of some vessels than in their decoration.

Since I could not visit the Chané of the lower Pacajní, I have no idea of the characteristics of their pottery. Nordenskiöld (10, p. 144), who was more favored than I, declares that their pottery presents only a few traces of Andean influence, and he explains this fact by their isolation and poverty.

If now, instead of style, that is, the combination of motifs, we consider the latter in themselves, /302/ a feeling of unity will succeed our feeling of diversity. The same identical designs are repeated over the whole of Chiriguano territory, and only their relative frequency in a given area and the importance attributed to them to the exclusion of the others create these distinctions of style which I have tried /Fig. 63 appears here/ to define. Nevertheless, there are some decorative elements which are limited to a certain region: the spiral is

/161 cont./

peculiar to the villages of the upper Pikoroayo and the Igikondi valley. The decoration made up of broken and asymmetric lines does not go beyond the zone of the Franciscan missions and the Dayaro region.

/393/

Decline of the Art of Pottery among the Chiriguano

323 Of all the Chiriguano industries the most threatened one
178 is doubtless ceramics. The Chiriguano can claim the glory of
415 having been until recently the last Indians of South America
/Fig. 64 appears here/ to have a pottery which deserved to be
included in the number of beautiful manifestations of this art,
so brilliantly represented in certain regions of the continent.
Today things have changed a great deal. Villages in which
one can still find women capable of decorating vessels with
the mastery of former days have become rare and are limited
415 to a restricted area. /394/ It was in the tolderías of the Timboy,
126 the Great Salado and the Little Salado, in the region of Yumbía
178 and in the Igüembé valley (upper Pilcomayo, departments of
Tarija and Chuquisaca) that I was able to collect the finest
specimens in my collection. Elsewhere it was exceptional
/Fig. 65 appears here/ /see p. 166/ to be lucky enough to lay
my hands on a fine piece; and, if I did have this luck several
times, it was almost always a question of an old vessel pre-
[797] served as if by a miracle. The Franciscan missions which
formerly gave Nordenskiöld and Holmberg such fine specimens
799 contributed less toward enriching my collections. Nothing ex-
323 presses the sad state of decline of the Chiriguano better than
415 what I /395/ could observe in the Macharetí mission. After
178 going through nearly all the huts of this large village, which in
[162] normal times has close to 2,000 inhabitants, I could scarcely
acquire five or six yambuí having some artistic value. There
[463] were no longer more than three or four women who still knew
how to hold a brush and they had to /Fig. 66 appears here/ /see
p. 167/ provide for almost the whole village. In a few years
the ancient painted pottery will exist only in memory in the
large village where the famous "Captain" Mandepona lived.

323 This decline has several causes. The first is the state of
415 profound demoralization in which the Chiriguano are found, the
178 total disorganization of their social life, and the increasing
177 influence of the white men, followed by its corruptive effects:
finally, the introduction of manufactured products, first and
foremost gasoline cans.

/396/

000 first and foremost gasoline cans. Artistic ceramics have become the
323 appanage of a few old women who are not founding a school and who

[531] the other fingers of the potter. Finger impressions result from this, forming a crude design.

323 will carry the secret of their art to the grave. Already today,
178 obliged to satisfy a large demand, they endlessly repeat the same
463 motifs and have a vexing tendency to draw them hastily and
887 without any care at all. These designs are becoming awkward,
531 crude, and are taking on a primitive appearance which is far from corresponding to the taste and culture of the Chiriguano.

[123]

In some villages there are no more potters. The inhabitants of the toldería of Ibopeytí, for example, have to import the painted vessels they need to celebrate festivals. When I wanted to acquire them, it was generally objected that they had been bought and often at a very high price. "You go away and leave us without vessels," they often used to say to me as a half-joking, half-sad good-by after my raids.

/396 cont./

323 178 Without wishing to pass as a prophet, I think I can assign five years of life to the artistic pottery of the Chiriguano. Already it is becoming difficult to make collections of it, at least collections having aesthetic value.

323 415 531

Fig. 66. Fabrication of a large vat: when dry, the clay is polished with a well-polished stone. The purpose of this operation is to avoid all porosity in the surface of the vessel.

415 198 184 323 The state of decline and regression in which Chiriguano pottery is found explains perhaps the decided differences often existing in the pottery of the various regions inhabited by the Chiriguano. Artists being few, it is not surprising that their output varies little and that, because of this, the vessels of one village are all very much alike.

In former times when artists were not lacking, the number of motifs used within each group must have been larger, and in this variety was doubtless found many an element which today seems to have disappeared, only to be met in another zone. It is probable that an ethnographer who might have made a collection among the Chiriguano a century ago would have established a classification other than the one I have tried to outline here.

Comparative Study of the Basic Elements of the Painted Pottery of the Chiriguano and Chané Indians

1. The Problem of the Chincha Atacama Civilization

The pottery of the Chiriguano and Chané Indians shows such strong affinities with that of the ancient Andean populations from the point of view of form as well as decoration that their relationship cannot be doubted.

These analogies are especially striking among certain pieces /397/ of pottery dug up in the Quebrada de Humahuaca and the ones still made by Chiriguano or Chané women. With an interval of four centuries the resemblance between the pottery of these two regions is still so pronounced that it had attracted the attention of Mr. Debenedetti (2, pp. 134, 149, note 1, and 156), even though he apparently had for his whole basis of comparison only a few rare pieces of very simple Chiriguano pottery collected in the Chaco and of such uncertain provenance that one of them was attributed to the Choroti. The latter in reality, have pottery of an entirely different type, although also influenced by the Andean civilization.

O
C
Ce
[648]
[439]

The affinities of Chiriguano pottery with certain pottery of the Quebrada de Humahuaca have been scientifically established by Nordenskiöld (10, p. 143). This scholar explains these surprising similarities very naturally by the influence the Indians of the Humahuaca region had on their immediate neighbors, the Chané or Chiriguano, and by the trade relations these peoples maintained.

C
Ce
415
17

0
[648]

/397 cont./ these peoples maintained. These relations between Chiriguano and Humahuaca Indians are historically attested to. At the time of the uprisings which took place during the period of the Spanish conquest, Humahuaca and Chiriguano united to resist the common enemy (see Boman, 2, Vol. I, p. 77).

The yambuí and yapepo, of which I made a good collection in the upper Pilcomayo region, provide new evidence, even more conclusive, of this striking parallelism which appears between the pottery of the modern Chiriguano and the prehistoric populations of northern Argentina. To allow a direct influence of the Humahuaca Indians on the ancestors of the present-day Chiriguano living on the upper course of the Pilcomayo in the departments of Tarija and Chuquisaca would be a point of view difficult to defend. The radiance of the culture of the Quebrada de Humahuaca could have affected only the southern Chiriguano and the Chané of the Itiyuro. As for the hypothesis which would make of the Chiriguano the precursors of this culture, it is so absurd, so contrary to all good sense, that we cannot envisage it here. At the spot where the Pilcomayo gets ready to leave the valley that it digs across the Andean spurs to spread out in the Chaco plain, the Chiriguano had Chicha Indians as immediate neighbors whose territory extended to the north of the Quebrada de Humahuaca in the south of present-day Bolivia. It was they who transmitted the special forms of their pottery and its principal decorative elements to the Chané, who in turn left them to their successors and conquerors, the Chiriguano. Perhaps the Chané have not everywhere been the inevitable intermediaries between the two cultures; in many cases, Chicha groups must have communicated directly to the Guarani invaders the principal products of their industrial techniques and of their arts.

C

C
17

/398/ We know from 16th and 17th century documents that the Chiriguano constantly made forays into Chicha territory, that they raided their villages, made them pay tribute, and carried away groups of these Indians into slavery, as they did with the Chané. These direct contacts between the Chiriguano and their western neighbors must have contributed greatly to the spread of Andean civilization among them, and

/398 cont./

17 this explains why the Chiriguano culture of the upper Pilcomayo presents such close affinities with that of the Chicha, the Humahuaca, and the Atacama (1).

175
648
[101]
[177]

1. On the western borders of their territory the Chiriguano were in constant touch with the Chicha, whose territory they devastated and whom they obliged to pay tribute to them.

Lizárraga (Vol. I, p. 282): "the quality of the valley (of Tarija) being known, and the importance of its being populated, in order to check in that direction the Chiriguanas, who had done no little harm to the Chichas there, and they even paid them tribute, named as corregidor, etc...." /translated from the Spanish/.

Lizárraga (Vol. II, p. 117): "he went to Mosquera and returned, and with more than thirty natives, twenty of them Chiriguanas, and the rest indios Chaneses /Chane Indians/ in service, and among them two more illustrious Chiriguanas, one called Marucare and the other par excellence Inga Condorillo, and another Indian of Chicha nation, whom they confined with those Chiriguanas ..." /translated from the Spanish/.

Archivo de Indias (74-4-1, cited by Coni, p. 19): "and in about a month they reached another nation of indios called chiriguanaes, who thus neighbor this city a dozen leagues from potosí, and they carry off a pueblo of indios chichas who are called chupas." /translated from the Spanish/

Coni (p. 21): "In a letter from the licenciado Matienzo he tells us that the Chiriguanaes continued to raze the plains of Manso and, in addition, made frequent onslaughts on the Charcas, where they

/398 cont./

175 648 [266] [443]

acted as masters and lords of the land, even to collecting a tax from the Chicha Indians. If they did not agree to this, they ate them and even 'had public meat markets for human flesh.' " /Translated from the Spanish./

175 177 648 [567] [126]

Chicha women certainly shared the fate of the Chané women reduced to slavery by the bellicose Chiriguano and, like them, brought the secrets of their civilization to their masters. On the upper Pilcomayo I acquired a vessel (Plate XXV), a Panpipe (Fig. 67), and a T-shaped ax (Plate XXIII, 1), found not far from the village of Ibopeytí, well within Chiriguano country. These objects reveal either the existence in this place of an ancient Andean population, Chicha or some other one, which the Chiriguano may have annihilated or assimilated, or active commercial exchanges. In the absence of concrete evidence, the influence of the neighboring Andean tribes would have been demonstrated by the very style of the pottery of this region, which more than that of any other point in Chiriguano territory continues a tradition peculiar to the peoples of southern Bolivia.

437 439

Even today the Chiriguano receive from the half-breed descendants of the Chicha silver objects which probably used to be the object of an age-old traffic, and turquoise beads the latter unearth from the /Plate XXV appears here/ /399/ graves of their ancestors. On their part the Chiriguano go to sell ostrich plumes and pieces of basketry to the half-breeds and Quichua Indians.

121 172

Southern Bolivia is very little known from an archeological point of view. The few excavations which have been carried out there testify that the culture peculiar to the Humahuaca valley continues without appreciable modification. The homogeneity of the civilization which flourished in these vast regions will be even more apparent on the day when the decision is made to undertake the systematic study of this immense territory which includes all the altiplano to the north of the Argentinian frontier and the valleys which form the spurs of the Andes at the edge of the Chaco. It is already evident

[Text continues on p. 173]

Anthropomorphic vessel found on the banks of the Pilcomayo near the Chiriguano village of Ibopeytí, attesting to the existence in this region of a civilized population before the Chiriguano. The vessel has a red glaze and the ears of the personage are pierced. (1/2 nat. size.)

O 172 171 415 /399 cont./ It is already evident that the pottery of the Humahuaca region shows identical characteristics from the north of Jujuy to the vicinity of La Quiaca. To me the local variations seem absolutely negligible. Boman (2, Vol. I, p. 77) was already expressing himself in the following manner on the relations between these two A [172 171] regions: "If one wishes to compare the objects dug up in the Humahuaca region with the pre-Hispanic remains of other regions, they would be most like those of the Chichas." At

C 172 531 534

Fig. 67. Panpipe made of olive-hued stone, found on the upper Pilcomayo near the Chiriguano village of Ibopeytí at the same time as the vessel on Plate XXV. (1/2 nat. size.)

C 172 171 415 Tolomosa in Bolivia, in the department of Tarija, AT the von Rosen mission (2, Fig. 175, p. 112) found an ornithomorphic dish, an exact replica of the famous puco of this type discovered at La Paya in the Calchaqui Valley.

A 172 171 18 The Humahuaca-Chicha culture does not form an isolated bloc. It is more or less closely related to those whose remains have been studied in the northwest of Argentina in Diaguite territory, on the Puna de Atacama and de Jujuy, in the Atacama Desert, in the north of Chile and the extreme south of Peru. In the geographic area thus defined, it surely seems as though there was formerly a center of acculturation whose existence was pointed out only a few years ago.

/400/

A 172 Boman (2, Vol. II, pp. 767-778) is the first to have defined the specific characteristics of the most important of these cultures from the historical point of view, that of the Atacama. By comparing the objects his own excavations or those of his colleagues brought to light in Calama, in Chiuchiu in the Atacama Desert, and in various localities of the Puna de Jujuy, he could demonstrate the homogeneity of these finds. He rightly attributed all these remains to one single people, the Atacama, whose habitat probably embraced, besides the regions I have just enumerated, the Puna de Atacama and part of the Calchaqui Valley as far as La Paya.

C 172 531

C [178] Fig. 68. Fragments of incised pottery found at Caipipendí. Present-day Chiriguano never decorate their pottery with engraved lines. (2/3 nat. size.)

A P.A. 114 172 However, there is one aspect of the problem to which Boman gave too limited a solution. In seeking to determine the frontiers of the ancient peoples of the north and northwest of Argentina, in my opinion he stressed too much the divergences which the remains of their culture present and not enough the traits they have in common. Still, the points of contact are too numerous and too specific to be attributable simply to a great Peruvian civilization from which these civilizations emanated.

Atacama SG5
Prehistoric Chile SG3

A
17

/400 cont./

It cannot be denied that there exist, between the civilization of Atacama and those of the provinces of north and northwest Argentina, of southern Bolivia, and of the coast of Chile, variants important enough to justify the subdivision of this culture zone into separate regions corresponding perhaps to the extent of tribes speaking different languages. But along with these local variations, how many similarities! How many analogies in technical materials and artistic forms! Farther on when I deal with fundamental elements of Chiriguano art from a comparative point of view, I shall have occasion to dwell on some of these resemblances and to give many an example.

The credit for bringing out the elements common to all these civilizations and seeking to explain them belongs to Uhle (1, 3, 4).

P.C
A
172

/401/ Already in 1913, on the subject of tablets from Chiuchiu, this scholar (Uhle, 1, p. 457) declared "that there had not been only one Atacama civilization, but several belonging to different periods." Several years later, after some systematic excavations he made in Pisagua, Arica, and Tacna, he tackled the "Atacameño" problem as a whole and proposed a plausible solution for it. Since knowledge of the results acquired by Uhle is important for understanding what follows, I believe it necessary to give as complete a résumé of them as possible.

Near Tacna, Uhle (4, p. 2) collected remains of several superimposed cultures, which he classifies in the following manner:

1. Period of primordial man (objects of paleolithic type);

2. Period of the Arica aborigines (first centuries of our era). The remains of this period belong to a very primitive population of fishermen;

3. Period contemporary with the Chavin ruins, which goes from about the year 400 to 600 A.D.;

4. Tiahuanaco period and continuation of the epigonal style, from about the year 600 to the year 900;

5. Period of the indigenous civilization of Atacama, from the year 900 to about 1100;

Atacama 565
Prehistoric Chile 563

A P.C. 172 /401 cont./

6. Chincha-Atacama period, from 1100 to about 1350;
7. Inca period, from about 1350 to the Spanish conquest.

A P.C. 114 172 Of course, Uhle's chronology must be accepted with reservations, and at first sight this division appears to be much too subtle. Besides, the duration of each period seems much too short to me. I also doubt very much that Uhle has really given us proof of the existence of a culture contemporary with the Chavin ruins.

A P.C. 172 Whatever may be the gaps in this chronology and its undeniable weaknesses, it seems nevertheless certain that there existed in Tacna and probably in Arica too a civilization clearly related to that of the region of the Atacama Desert (1) and of the Andean territories we have enumerated.

A P.C. 171 172

1. Montell (1, p. 41): "With the Arica culture the Calama-Chiuchiu area has many traits in common, unmistakably pointing to these districts being very closely connected, as has also been convincingly shown by Uhle. One quite obvious point of agreement exists in the before mentioned broadshouldered shirts, a type one hardly is able to suppose to have arisen independently in areas so adjacent as these. The technique called 'coiled basketry' is, we know, common to both. The pottery types present, generally speaking, much similarity. In regard to ornamentation one may point to the occurences [sic] of pyrograved spirals in calabashes, and to the ornament here called 'wing-shaped'." /Cited in English./

A P.C. [291]

A P.C. [285] [415] [531]

A P.C. 121 174 172 114 In a strong position from the obvious analogies existing among the objects /402/ found in this geographic area, Uhle established a theory which, even if it is too bold in certain aspects, must nevertheless in its exactness contain a great deal of truth.

A 172 174 131 167 /402 cont./

The Atacama Indians, whose original territory would have been the vicinity of the Atacama and Arizaro salt marshes and a portion of the coastal zone near Tocopilla, including the lower course of the Loa River, emigrated at an unknown date from the south to the north. They occupied the

C 172 415

Fig. 69. Pot decorated with incised lines and provided with two holes for hanging. This object was unearthed at Caipipendí. (2/3 nat. size.)

A 172 174 131 167 provinces of Chicha and Lipez, the region between the great salt marshes of western Bolivia and the western Cordillera, and spread across the whole province of Carangas and the districts west of the Desaguadero. They would also have taken possession of a large part of the Titicaca and the northern plains. Their culture would have spread to the south of modern Peru as far as the latitude of Ica and as far as Ayacucho in the A [177] mountains. Upon this ancient ethnic and cultural stratum influences from the north made themselves felt (Uhle, 3, p. 13).

A
172
174
P.C.
172

/402 cont./

Still according to Uhle (4, p. 38), in the period following the epigonal period, the inhabitants of Chincha and Ica created a culture of a regional character offering close analogies with certain vessels from Tacna, which we shall have to consider. The Chincha Indians were conquerors whose warlike enterprises are often mentioned in the ancient chronicles. According to Montesinos, they made expeditions as far as into Chiriguano country. Before Uhle's discoveries at Tacna and Arica, the limit of the Chincha's area of influence ended at Arequipa. The Tacna pottery which Uhle attributes to the Chincha-Atacama period permits us to extend the civilizing activity of this people to the south.

The ancient civilization of the Atacama enriched by a Chincha contribution would have given birth to a new type of culture to which Uhle gives the name Chincha-Atacama. It would have reached maturity between about 1100 and 1350 A.D.

"The sphere of influence of the Chincha-Atacama civilization reached part of the coast (Pisagua, Taltal), the southern coast, in the east the Atacama region proper from Calama to the province of Jujuy. Its influence extended abroad as far as into Araucan country. In the east its reflections are found /Plate XXVI appears here/ /403/ on numerous remains in the basin of the Titicaca and of Tiahuanaco, and to the north one can follow its advance as far as Cuzco.

"By it are explained the different types of ornamentation in use among the Inca. Chincha-Atacama influence thus embraced a vast region of which part (south coast, Atacama territory proper, the western Bolivian altiplano, conquests directed toward the Cuzco) was passed through by the Chincha-Atacama in person." (Uhle, 4, p. 39.)

A
P.C.
17
531

Further on Uhle (4, p. 42) adds: "Previously we could not explain the presence of the volutes, jagged triangles, diamonds, snakes, and many other similar motifs in the decoration of the engraved calabashes of Calama, on the vessels brought to light in Jujuy province, and on those of the Pelike type from the Pucará de Tilcara, as well as on the textile now made by the Araucan. Today everything is explained by the extent and influence in distant regions of the Chincha-Atacama civilization."

Latcham (p. 5) says that for a long time he has also had the impression that Chincha culture had played a very important role in the development of the prehistoric art of the north and center of Chile, especially in the Diaguito-Chilean region, that is, the provinces of Atacama and Coquimbo, and that these influences had extended as far as Cachapoal in the south.

After the publication of Uhle's work, Latcham (p. 20) not only accepted his conclusions but even demonstrated the extension of Chincha culture as far as Caldera. Like Uhle, Latcham (p. 20) is of the opinion "that an examination of Diaguito-Argentine pottery would furnish proof that the traces of Chincha and Chincha-Atacama influences are very common in the art of northwestern Argentina, where all the designs reproduced (by Latcham) are found again alone or in combinations with other local motifs. These influences made themselves felt as far as the southeast and even the northeast of Bolivia, as can be ascertained by consulting the works dealing with the antiquities of these regions. In the modern pottery of the Chiriguano many of these same elements persist, as one can realize by leafing through the work of Outes, 3."

C [415] [531] [199]

C 415 199 121

In the pages which follow I shall seek to demonstrate that Chiriguano pottery presents characteristics obliging us to rank it among those which seem to have undergone the influence of the Chincha-Atacama civilization.

A P.C 17 114 121 [648]

Even if the hypothesis of the existence of a Chincha-Atacama civilization must be rejected some day, it is not any less certain that at a given moment the prehistoric tribes of the region of Atacama, of the northern coast of Chile, of the south of Peru and Bolivia, and of the north and northwest of Argentina were united by close relations, which /404/ explain the numerous points of contact of their cultures. Uhle's theory has on its side the advantage of accounting for these analogies whatever may be the reservations we might be able to formulate concerning the date this scholar attributes to the Chincha-Atacama civilization. Concerning the importance and the extent he gives it.

/404 cont./

concerning the importance and the extent he gives it. To the Chincha-Atacama sphere of influence belongs, precisely, the culture of the Andean Chincha and Humahuaca peoples whom the Chiriguano and their Arawak predecessors had as neighbors for centuries.

2. Analysis of the Influences Exerted on the Fancy Pottery of the Chané and the Chiriguano

The criterion of form. -- The influences which have made themselves felt on Chané and Chiriguano pottery are manifested in both form and decoration. In the pages to follow I propose to note the most striking affinities between Chiriguano and Chané vessels and those of the neighboring regions, and also to determine the importance of Guarani or other survivals which we meet here and there.

1. Vessels with a subglobular belly, short neck, flared lips, flattened base, constitute the most common type of fancy pottery (Plates XXXV-XL, XLVII-LIII, etc.). Pottery of this category lacks well-characterized counterparts in the Andean zone. On the contrary, they resemble the jars for kaliri still used by the Indians of Guiana and the Amazon (Koch-Grünberg, 2, Vol. II, Fig. 151, p. 227).

One of the yambuí (Plate XLVIII, 3)[1] of this type has as handles on each side of the neck two little miniature vessels of the same form as itself. In what is perhaps only the fancy of a native artist appears nevertheless a concept peculiar to the Andean peoples and one in harmony with their style.

2. The yapepo (Plate XLV, 1 and 2; LIX and LX)[2] are subglobular vessels with a low neck, provided with a handle which extends from the rim to the belly: they can be considered as yambuí in miniature. This category of vessels has its equivalent in several points of the adjoining Andean zone. Thus in Calama (Atacama Desert) and in Cagua (Yura canton, Porco province) pots have been found which seem to be, from the point of view of form, replicas of Chiriguano yapepo. (Créqui de Montfort, Plate VII, Fig. 8, and Plate VIII, Fig. 11.)

C 415 191 BA [415] [192]

/400 cont./

5. The iru of Fig. 70 b goes back into the class of the vessels known as pseudo-apods, as some Argentinian archeologists call them. As their name indicates, they are closely related, from the morphological point of view, to the vessels known as apods or more simply aryballuses, which constitute in northwestern Argentina so many concrete proofs of Inca influence. Among the Chiriguano and Chané this type of pottery is exceptional, and the specimen of Fig. 70 b is a unique piece whose interest is considerably increased by the extraordinary resemblance it bears to a vessel discovered in the cemeteries of the Isla de Tilcara (Fig. 70 a). These two iru have so many similarities between them that one could easily believe them to have come from the hands of the same artist. In the regions near the habitat of the Chiriguano numerous vessels of this type have been dug up. Ottilia Bregante (p. 287) /406/ enumerates for the specimens found in Jujuy province the following localities: Saruga, Tarasta, Pucará de Tilcara, Isla de Tilcara, and Cochinoca, for the Puna de Atacama, Antofogasta de la Sierra. In La Paya in Salta province these aryballuses or aryballoid vessels are very numerous, and one of them published by Ambrosetti (6, Fig. 42, p. 67) has on the upper part of the belly a row of triangles with volutes, which we find again on our specimen from the upper Pilcomayo.

C [415] [191] BA [415] [192]

C 415 191

Vessels of this kind are, as we have said, characteristic of the Inca civilization. Similar jugs already appear in Tacna during the Chincha or Chincha-Atacama period (Uhle, 6, Plate XVII, Fig. 4; Plate XIX, Fig. 1 and 1 a; Plate XX, Figs. 1 and 2). /Fig. 71 appears here./

C [191]

This type is so little diffused in Chiriguano country that one could not invoke its occasional presence to attest to the strong Inca influence of civilization on these Indians.

6. The miniature vessel of Figure 71 is also a unique piece. If its distribution on the eastern slope of the Andes were not so sporadic, it would constitute an eloquent proof of the persistence of Inca tradition in Chiriguano pottery. Actually, as Linné (1, p. 161) demonstrated with the aid of

C [191]

C /406 cont./
415 a map, these footed vessels "bakershaped" /quoted in English/
171 mark out the whole extent of the Inca Empire from Ecuador to Chile and Argentina. This is the first time, however, that their presence has been noted among the Chiriguano and outside the borders proper of the Inca Empire.

C 7. As Nordenskiöld (10, Fig. 48, p. 162) established,
[177] the twinned Chiriguano vessels (Plate XXVII, 3)[2] also denote an Andean influence. As for that, it suffices to compare them with the ones from the Quebrada de Humahuaca (Debenedetti, 2, Fig. 144, p. 196).

C
415
531

Fig. 71. Miniature footed vessel. Prov.: Cuevo. (2/5 nat. size.)

C 8. As for the vessels consisting of triple connected bodies
415 (Plate XXVII, 4), Jijon y Caamaño (p. 26) believes them to
171 be of Central American origin. "Their center of dispersion," he says, "must be located in a southern region of Central America, from where, perhaps through the medium of the Arawak, they arrived in the Chaco and Peru." This hypothesis is tempting.

9. The Central American origin of the footed bowl or "compote" (Fig. 72)[2] could not be doubted. Jijon y Caamaño
C (pp. 31-51), Rivet (2, pp. 8-9), and Linné (2, Map 6, p. 107)
A 415 have amply demonstrated it. On the subject of one of the
171 varieties of this type, Jijon y Caamaño (p. 34) makes the

[2] [See p. 183 -- Analyst]
[2] [See p. 187 -- Analyst]

C A /406 cont./
415 following observation: "The dispersion and evolution of a type
.171 of pottery whose /407/ origin must be assigned to the peoples near the Isthmus of Panama can be due only to the Arawak, who spread it among the nations living beyond the Andes, in regions as southerly as the Chaco and the territory of Misiones (1).

1. Ambrosetti (2, p. 714) as a matter of fact represents Kainguá vessels with a circular foot. I doubt very much that these pots reproduce a primitive type. They are badly fired, badly modeled, asymmetric, and the foot, which is fastened to the vessel when the latter is finished, is easily detached from it.

These vessels are perhaps crude imitations of European pottery.

A
171 In South America the Arawak have been the propagators of Central-American culture among the primitive tribes located east of the Andes."

C A 10. The distribution of vessels with a ribbed belly, of
415 171 which I acquired a marvelous specimen in the Caipipendí
C valley (Plate XXVI, 2),[2] is almost the same as that of the
[126] "compotes," and we can, as with the latter, rank them with the pottery which shows a Central-American origin /Fig. 72 appears here/ and whose dispersion was the work of the Arawak (Jijon y Caamaño, p. 5, Fig. 1 D).

C 11. The vessel of Plate XXVII, 2[2] is composed of two
415 superimposed domes: one in the shape of a truncated cone,
171 the other rounded. It comes from Ivu and is the only specimen
C of this form that I encountered in the course of my trip. An
[172] identical vessel was dug up on the upper Paraná by Ambrosetti (3, plate between pp. 256-257, Fig. 5). Similar receptacles are still in use by the Yuruná /Yuruna/ Indians of the lower
C Xingú (Steinen, 1, plate between pp. 266-267). The presence
415 of vessels of this type among the ancient Guarani authorizes us
171 to suppose that our specimen from Ivu represents /408/ the
172 survival of an ancient form of Guarani pottery which the Chiriguano have not abandoned.

[2] [See p. 179--Analyst]
[2] [See p. 183--Analyst]

/408 cont./

000 Chiriguano have not abandoned. It is not out of the question,
CE however, that the Chané did not contribute toward preserving
415 this type,[1] if it was really they who made it known to the popu-
171 lations of tropical America east of the Andes. Jijon y Caamaño
C [415] (pp. 11-13) studied its distribution in the two Americas and
[171] placed its center of diffusion in Central America. In Diaguite

415 In Diaguite
171 country we find pottery of a more or less similar aspect, but
D which must nevertheless be eliminated from this category.
415 It is indeed provided either with a tongue-shaped appendage or
531 with an anthropomorphic or zoomorphic figuration (Ambrosetti, 6, pp. 372-380).

1 [i.e. The type depicted in Plate XXVII, 2, p. 183 -- Analyst]

/408 cont./

415 171 172 12. The ornithomorphic vessel of Figure 73 seems to have come from the hands of the ancient potters of the Isla de Tilcara who, several centuries ago, used to make analogous pieces, without a doubt servilely imitated by the Chané and the ancestors of the Chiriguano (see Debenedetti, 2, Figs. 139-141, p. 191). Boman (2, Vol. II, p. 786, Fig. 193) also publishes a bird-shaped vessel, perhaps of the pavo del monte (Penelope obscura, Vieill.?), found not far from the present-day village of Humahuaca and which, in addition to its general appearance, has in common with our specimen

415 531

415 171 172 from Tarairí designs painted on the sides which represent the wings and tail.

415 532 [273] [172] [171] [114] The Chiriguano Indians of the Caipipendí valley and the Ivu mission still like to serve chicha in vessels to which they give the appearance of a bull (Plate XXVIII, 7-9).[7] Llama-shaped vessels have been discovered in the Quebrada de Humahuaca (Debenedetti, 4, p. 27, Fig. 14, and Odilia Bregante, Fig. 132, p. 147). Perhaps these are the prototypes of the present-day Chiriguano specimens. Why suppose that these receptacles had solely ritual usage, as Mr. Debenedetti thinks, when one sees the modern Chiriguano make an entirely secular use of them?

13. The marvelous vessel of Plate XXVI, 1[2] is entirely of Andean inspiration. The idea of giving the shape of a human head to the neck of the yuro was not foreign to the ancient populations of the Quebrada de Humahuaca (Boman, 2, Vol. II, Fig. 190 and Plate LXXXII, Fig. f; and Debenedetti, 2, Fig. 136, p. 186). Up to the present time this region has not provided any vessel of this type which, by its beauty and the sureness of the modeling, /Plate XXVIII appears here/ /409/ was comparable to our specimen from the Itiyuro. The woman who fashioned it was a worthy artist.

/409 cont./

415 "This particular form is not unique. It is found in the
191 northern cultures of the coast of Peru and its area of dispersion
192 stretches as far as Pachacamac and Ancon, including Lambayeque, Cajamarca, and Trujillo. East of the Andes, this type exists among the Chiriguano, the Ashluslay, and the Lengua. Specimens of it have been dug up by Debenedetti in Tilcara and in the Quebrada de Humahuaca. The find of the Loa River contributes to forming a link of this distribution uniting the /Fig. 75 appears here/ /see p. 189/ eastern zone with that of the Peruvian culture whence this type surely emanates.

Pots of this type show a striking resemblance to the signal trumpets of Guiana. Objects of this kind have been described by many authors and depicted by Gumilla and Roth. If one disregards the mouth and the base, one cannot distinguish these vessels from the terra-cotta trumpets. It is probable that this instrument was discovered independently in Guiana. In any case it is still too early to present theories on the possible connections between the two types, without preliminary research having been done to justify such comparisons."

To the distribution indicated by Montell must be added Molino del Puesto and Caspinchango in Catamarca province (Bruch, 2, Fig. 42, p. 54, and Debenedetti, 5, Fig. 14, p. 27).

415 15. Jugs with a globular belly or one in the shape of a
191 truncated cone, with a short and narrow cylindrical neck from which often begins a small handle attaching at the other end /410/ to the belly of the receptacle (Plate LVI, 1, 2, and 4; Plate LVIII, etc.), make up a very common type in all of the Chiriguano region which is in the hands of the missions. Up to the present the neighboring territories have not produced prehistoric vessels which could have served as models for the Chiriguano or the Chané at the time when Andean influence made itself felt on them. The only jug belonging to this type, outside Chiriguano country, is one found in Chile in Valdivia, which Medina (Fig. 184) reproduces in his great work on the antiquities

C
415
171

16. The little cup of Figure 76 is the only one of this shape I was able to collect. Like the vessels examined thus far, it constitutes by its aspect and decoration an Andean survival. Many cups have been discovered in northwestern Argentina. Some of these specimens have been found on the Isla de Tilcara (Debenedetti, 2, Fig. 149, p. 206) and at Casabindo in the Puna de Jujuy (Lehmann-Nitsche, Pl. IV, 5 D).

P.A. [172] [415]

17. Bowls have such a wide distribution in South America that their presence among the Chiriguano would not by itself be a sufficient argument to demonstrate the Andean origin of their culture. However, among these Indians, the numerous specimens of this category of receptacles found in each village show such similarities with the puco of the adjoining Andean regions that we are obliged to consider them as borrowed forms.

C [177]

C /410 cont./

415 Thus, for example, the puco of Plate XIX, 2 and 4[1A] are
171 nearly identical with certain dishes coming from La Poma, Salta province. (Dillenius, Fig. 7, p. 13.)

The Chiriguano puco (Fig. XIX, 3) could easily be mixed with a specimen from La Paya (Ambrosetti, 6, Fig. 185, p. 368), which, like it, has two nipples on each side of the rim.

C [531] The small bowl of Figure 77 carries on the rim two heads of a mammal stylized to the point that one can identify it as a llama or a puma, as one wishes. The two appendages in relief are perforated to allow a suspension cord to pass through. One would never finish enumerating all the receptacles of the Andean region which are decorated with the same motif. I shall limit myself to citing, in the countries adjoining the habitat of the Chiriguano, /Plate XXIX appears here/ /411/ P.A. [172] [415] several analogous finds. Thus, a dish of this type was dug up at Casabindo, on the Puna de Jujuy (Ambrosetti, 4, Fig. 49 b, p. 39, Vol. LIV) and at La Paya (Ambrosetti, 6, Fig. 181, p. 364).

C 415 531 Several bowls (Plate XXIX, 1 and 6) of my collections are provided /Fig. 77 appears here/ with small nipples on the sides, whose use is, at first sight, enigmatic. As Rosen (2, p. 109, Figs. 167-188) has demonstrated, they are appendages which permit passing a small cord around the dish and hanging it. On some Chiriguano specimens these protuberances are perforated and a string passed through. By this means, /Fig. 78 appears here/ the bowl is suspended from the roof beams. P.C. [415] Several from the Quebrada de Humahuaca (Debenedetti, 2, Figs. 60-63, pp. 111-112) also show these protuberances, whose use must have been the same as among the present-day Chiriguano. These nipples are doubtless handles or ears which, having lost all practical usefulness, were reduced /412/ to the state of simple ornamental motifs and not, as was believed, of still embryonic handles.

18. To put an end to these comparisons, I shall call attention to two vessels (Fig. 78 a and b), one acquired in Ivu in the Chaco and the other in Tacna, and dating from the Inca period (Uhle, 4, Plate XXVIII, 2). A simple glance at the two figures permits the establishment of their perfect identity.

C
Ce
415
171

In short, from these comparisons and the ones we made on the subject of pottery in common use, we can draw the following conclusions: Chiriguano and Chané pottery is, from the morphological point of view, closely related to that of the ancient populations of southern Bolivia and northern Argentina and therefore offers numerous points of contact with the Chincha-Atacama civilizations. It still keeps traces of strong Inca influences (footed vessel (baker-shaped /in English/), aryballoid jars, ornithomorphic and anthropomorphic vessels, bowls, etc.). The ancient Arawak ethnic substratum is manifested in this sphere by the survival of several special types of pottery (vessels in the form of beakers or bowls (compoteras), vessels with a ribbed belly, vessels with three connecting bodies, etc.).

184

Comparative Study of the Principal Decorative Motifs of Chiriguano Pottery and That of the Neighboring Andean Peoples

The triangle with volute. In the region of the upper Pilcomayo the fundamental motif of pottery decoration is the triangle whose apex is prolonged in a volute or spiral (Plates XXXII-XXXIII, 136-199). This decorative element is repeated to repletion on all the vessels I collected from the village of Saladito to the valley of Igüembé. Elsewhere it becomes less frequent and takes on a more rudimentary form, which can be considered as further developed or degenerated.

[See pp. 200-201 -- Analyst]

/412 cont./

531 184 Even on the upper Pilcomayo this design occurs in many variations according to the place or the artists: on certain pieces the volute which prolongs the triangle is clearly drawn (Plate XXXV, 1; XXXVII, 2; XXXVIII,[3] 2; etc.); on others it is no more than a hook more or less closed (Plate XXXII, 137-151). This last case is more usual. Finally, the hook itself is drawn with so little care that it is transformed into the simple arc of a circle, then into a straight line prolonging one of the sides of the triangle (Fig. 78 a).

Some vessels, generally outside the upper Pilcomayo region, /Plates XXX-XXXIV appear here/ /413/ present the same motif, but instead of the hook or the spiral the potter has painted a fret element (Plate XLI, 2, and XLIII, 1; LIV, 1 and 4),[2] more or less well executed. Thus one can follow the evolution of the spiral to the fret by going from one point to another of Chiriguano territory.

Most often these triangles with a volute are arranged in two rows and face each other alternately. When such an arrangement occurs, the potter always takes care to draw, along the line forming the volute, a parallel line of a different color, which, after following the inflections of the volute, goes to join that of the facing triangle. The figure (Plate XXXIII,[3] 178-194) thus obtained is a double volute in the form of a couchant S. It is particularly characteristic of the pottery of the upper Pilcomayo and the Igembé valley. This double volute perhaps can be treated as an independent decorative element, witness the yambui of Plate XXXVI, 2, and LI, 3.

531 Sometimes, but rarely, the triangle with a double volute is replaced by an angle whose sides, by being drawn out, form a continuous line which unites these motifs to each other (Plate XXXVI, 1; XLVII, 3; LIII, 3).[4]

[191] The origin of this motif is lost in the night of time. It appears already very stylized on the vessels of the Tiahuanaco period, coming from Tiahuanaco itself (Posnansky, Plate III, Figs. E and F) and from the Mizque valley (Nordenskiöld, 5, p. 90, Fig. 40).

/413 cont./

It is also met on most of the vessels from Tacna and Taltal, belonging to the period known as Chincha-Atacama (Uhle, 4, Plate XIX, Figs. 1 and 2; Plate XX, Figs. 1 and 2; Plate XXI, Fig. 2; Plate XXII, Fig. 4; Plate XXIII, Fig. 1; Plate XXIV, Fig. 2; and Guevara, Vol. I, plate between pp. 42 and 43 and between pp. 48 and 49).

These analogies with Chiriguano pottery become still more striking if one considers the details and arrangement of this motif. On a vessel from Tacna (Uhle, 4, Plate XX, 1) the volute takes off from two lines forming an angle, as on the yambuí of Plate XI, 1, published here. On the vessel from Tacna (Uhle, 4, Plate XXI, Fig. 2) the triangles with a volute face one another, and the inflections of the spiral are accompanied by a parallel line in another color. An anthropomorphic vessel found at Tacna (Uhle, 4, Plate XXII, Fig. 1) is also decorated with hooked triangles which face each other alternately.

As for the frets of Uhle's Chincha-Atacama vessel (4, Plate XXII, Fig. 4), they are doubtless volutes which the potter's fancy modified.

One can as well consider as a derivation of the voluted triangle the hooks which, on several Tacna and Taltal vessels and on a Calama calabash, form vertical and horizontal rows (Uhle, 4, Plate XX, Fig. 1; Plate XXI, Fig. 2; Plate XXIII, Fig. 3; XXIV, /414/ Fig. 3, etc.; Guevara, Vol. I, plate between pp. 46-47 and 48-49; and Oyarzun, Fig. 11). With the Chiriguano the voluted triangle underwent an analogous process of simplification, but this evolution took place only in very rare cases and on pieces whose decoration was drawn with a certain negligence (Plate XXXII, $\frac{1}{A}$ 138-140).

A 531 192

The textile fabrics from Arica discovered by Skottsberg (Figs. 41-42), which are kept today in the Göteborg Museum, exhibit the voluted triangle, among other motifs. Judging by their style, these specimens undoubtedly belong to Uhle's Chincha-Atacama period.

$\frac{1}{A}$ [See p. 200 -- Analyst]

Atacama SG5
Yunca SE21
Chimu

A /414 cont./

531 According to Uhle (4, p. 38), the volute and the triangle
171 with spiral which combines with its opposite number appear on
172 the cloth of the Chincha and Ica region and also suggest certain motifs of Chimu art.

The voluted triangle is one of the motifs tattooed on the hand of an Ancon mummy with which Montell (2, pp. 148-151) dealt in detail.

Y On a large number of Chimu vessels with stirrup handles,
415 belonging to the "lecythi" category, the decoration consists
531 of a series of voluted triangles.

Y Judging by the plates in Baessler's atlas (Plates I-VI),
531 the spiral is most often combined with a triangle, one of whose sides is in steps or zigzags. Baessler sees in these different
Y figures stylizations of octopus arms. I do not think so. This
[114] motif, whose distribution is so wide, cannot be derived from
[113] the representation of an animal whose role is secondary in Chimu mythology and in which interest is purely local in every case.

A In the coastal zone of the Pacific where Chincha-Atacama
531 influence manifested itself, the triangle with spiral is as fre-
171 quent on pyrographed calabashes as on pottery. This design
172 was pyrographed on calabashes found at Arica by Skottsberg (Göteborgs-museum, No. 19.1.5), in the valley of the Loa River (Montell, 1, Fig. 40, p. 35), and at Calama, where on several specimens the volute was replaced by a fret which prolongs the classic triangle (see Boman, 2, Vol. II, Plates LXXV-LXXVI, Figs. 176-177, and Oyarzun, Figs. 4-9, 15, and 18). The specimens from Calama are remarkable for the variety and boldness of the decoration and are, without any doubt, the most beautiful specimens of the pyrographic art in South America (1).

1. Boman (2, Vol. II, p. 746) states that certain decorations pyrographed on the calabashes found at Calama, such as, for example, the one composed of couchant S's, are found again on engraved calabashes from

Arica. One of the latter is reproduced in the work of Stübel and Reiss, which was not available to me (Stübel, A., Reiss, W., Koppel, B., and Uhle, M., Kultur und Industrie südamerikanischer Völker /Culture and Industry of South American Peoples/. Berlin, 1889, Vol. I, Plate 25, Fig. 19).

PC
531

The same design is represented on the bottom of a Chilean puco from Cenchalí, on the sides of a vessel from Rivadavia, and on an ornithomorphic bowl /415/ from Freirina, Chile (see Latcham, Fig. 47, p. 19; Fig. 53, p. 21; Medina, Fig. 165). If, as I am inclined to believe, the fret or fret element surmounting the triangles with one stepped side derives from the simple triangle with volute, the distribution of this motif would be still wider. In Chile it has been painted: on vessels from Rauten, San Francisco, San Felipe; on an urn from Chellepin; on a puco from Paipote, Tongoy, and Valdivia (Latcham, Fig. 17, p. 11; Fig. 26, p. 12; Fig. 74, p. 32; Fig. 55, p. 22; Fig. 59, p. 28; Medina, Figs. 166 and 171).

BP
531

At Tolomosa in Tarija department in Bolivia, the excavations dug by the Swedish mission produced, among other pieces, a dish whose rim bears intertwined voluted triangles painted in black. This specimen is the exact replica of puco of the same shape found at La Paya, which I shall mention further on (Rosen, 2, Fig. 175, p. 112).

PA
[415
531]

P.A.
531

The ancient inhabitants of the Puna de Jujuy liked to pyrograph on /Fig. 79 appears here/ their calabashes borders composed of voluted triangles arranged in two rows and facing one another alternately (Ambrosetti, 4, Figs. 65-67, pp. 66-67; Fig. 68, p. 68, Vol. LIV). At Morohuasi, Rosen (2, Fig. 117, p. 71) discovered a receptacle of the same kind with analogous ornamentation.

The voluted triangle is a classical element, so to speak, in the decoration of the vessels found at the Pucará de Tilcara (Debenedetti, 2, p. 88, note 1. See also Bregante, Fig. 177, p. 170; Fig. 223, p. 189; Fig. 229, p. 191; Fig. 230, p. 191; Fig. 242, p. 198).

PA 531 114

/415 cont./

On the other hand, the excavations carried out on the Isla de Tilcara have produced only a few specimens of pottery whose ornamentation was curvilinear. Debenedetti (2, p. 88) considers the latter, for reasons which I cannot accept, as foreign to the locality. Nevertheless, he has reproduced in his book the decoration of two dishes which is made up of facing triangles with volutes (Debenedetti, 2, Figs. 53 and 54, pp. 88-89) (Fig. 79); and he notes the same design on two other dishes which he does not reproduce. In the same publication (Debenedetti, 2, Fig. 113, p. 165; Fig. 114, p. 166; Fig. 115, p. 166) are represented three vessels similar to the Chiriguano yapepo and also decorated with hooked triangles.

C 415 531 171

/416/ The most interesting piece in this respect is the

C 415 171 531

P.A 415 531

Fig. 79. a, bowl from the Isla de Tilcara, whose rim is decorated with facing voluted triangles; b, border of a dish decorated with voluted triangles (Isla Tilcara) (from Debenedetti).

C 415 171 531

yuro of Figure 70 b, reproduced from a drawing given by Debenedetti (2, Fig. 124, p. 175). We have already seen that its form is identical with that of a Chiriguano iru I bought on the upper Pilcomayo. The same is true for the general elements of its decoration.

PA 531

The voluted triangle is found on three other pieces from the Isla de Tilcara (Debenedetti, 2, Fig. 160, p. 217; Figs. 161 and 163, p. 217), which Debenedetti (2, p. 218) classes among the pottery imported to the Isla de Tilcara and utilized by curacas /chiefs/. Our yambuí from the upper Pilcomayo, which from the artistic point of view are very superior to the specimens described by Debenedetti, have often been bought

53 by me in humble cabins whose owners were certainly not
415 curacas, but poor devils who had the luck to have a mother
12 or grandmother who was an expert potter. If the criterion of
[126] Mr. Debenedetti were admissible, the crude pottery and the
[114] fancy vessels which can be bought in every Chané or
C Chiriguano village would be products of two different civiliza-
415 tions. In reality the fancy pottery is used on feast days for drinking chicha; and the other, more humble in appearance, is adapted to daily needs.

P.A
531
[114]

Besides, the voluted triangle is more frequent on the Isla de Tilcara than Debenedetti wishes us to think. In addition to the examples cited, seven others must be added (Debenedetti, 2, Fig. 24, p. 59; Fig. 30, p. 63; Fig. 40, p. 70; Fig. 48, p. 80; Fig. 165, p. 219; Fig. 165, pp. 219-220). A vessel from Alfarcito in the same Quebrada bears a triangle with volute on the inside rim of the neck (Debenedetti, 5, Fig. 15, p. 29).

/416 cont./

Several vessels from Yavi to the north of Jujuy also have as the principal decorative motif the triangle with volute (Bregante, Fig. 71, p. 82; Fig. 72, p. 83; Fig. 226, p. 190).

A large number of vessels found at La Paya (Calchaqui Valley, Salta province) bear series of triangles with spirals which combine and face one another in the style of the upper Pilcomayo. Pottery of this region exhibiting this motif has been illustrated by Ambrosetti (6, Figs. 36 and 37, p. 59; Figs. 38-39, p. 60; Figs. 41-43, pp. 61-62; Figs. 50-52, pp. 70-73; Fig. 128, p. 287; Fig. 131, p. 291; Fig. 138, p. 297; Figs. 173-175, pp. 346 and 349-350; /417/ Fig. 218, p. 405) and by Boman (2, Vol. I, Plate X, Fig. 22; Plate XI, Figs. 23-24; Plate XII, Fig. 25; Plate XIII, Fig. b).

PA AD 531 171

After describing these pieces, Boman (2, Vol. I, p. 238) adds rightly that "pottery of this style occupies first place at La Paya, which is curious because the decoration does not belong at all to the Diaguite region. Actually, La Paya, on the border of the Pulares, an Atacama tribe, has the characteristics of the culture of the Diaguite /Diaguita/ and Atacama Indian (Boman, 3, p. 540, and 4, p. 2). Doubtless the pieces we have listed above must be attributed to the latter or to their influence.

PA 531 171

The distribution of the volutted triangle in northwestern Argentina has been studied very briefly by Odilia Bregante (pp. 189-193) /there are no quotation marks to indicate the end of the following quotation/: "The triangle with spiral is very common in northwestern Argentina from the most northerly regions up to the Calchaqui valley. In the north it is isolated; in the south it is combined with motifs which express a high degree of evolution. Sometimes it appears in bands of consecutive triangles whose appendages are separated. However, more frequently these appendages are found interlaced two by two. In localities as distant as Yavi to the north of Jujuy and Amaicha in Tucuman province we can state that the motif is always the same, but that in each place it acquires characteristics peculiar to the region.

PA 531 171 /417 cont./

On some pieces the voluted triangle is associated with the triangle with rectilinear prolongation. In certain regions of the north the voluted triangle has been found with a singular complement: a series of more or less parallel lines which take off from the volute of the triangle. This triangle with spiral and lines appears, outside our territory, on a specimen from Quillagua (Chile). No example of this curious decoration has ever been found in the numerous excavations carried out in the zone which extends to the south of Jujuy. No doubt it is peculiar to the cultures of the north.

D 531 The triangle with spiral reaches its highest degree of evolution and elegance when it has a stepped pattern on one of its sides. This figure predominates in the Calchaqui zone. It is seen on urns and puco, where it constitutes one of the most interesting geometric motifs. It enters into the formation of admirable borders decorating the dishes of the Calchaqui valleys with extreme frequency.

PA 531 171 At Tinti in the Salta country, in a zone where almost no remains of the Calchaqui culture exist, and even farther away at Tastil north of La Poma, Boman found pottery decorated exclusively with triangles with volutes and stepped, whose appendages interlace two by two.

The distribution of the triangle with volute is the following: Jujuy, Salta, Tucuman, and Catamarca.

/418/ "In the province of Salta it has been found at La Paya, Kipon, Angastace, and Luracatao.

"At Tucuman it appears on pottery excavated in Amaicha and Tafí. Specimens with this decoration come from different points of Catamarca province: Fuerte Quemado, Molino del Puesto, Pabellón, Andalhuala, Santa María, Loma Rica, Cusayaco, La Toma, Costa de los Reyes, La Cienega, and Belen."

This list must be lengthened. Other points in Argentine territory have furnished vessels or dishes bearing this famous motif. Thus, in the archeological material from Tastil, Quebrada del Toro, published by Boman (2, Vol. I, Plate XXXI, Fig. 83, and Plate XXXII, Fig. 84), there is a calabash cut in half and decorated with pyrographed spirals

PA /418 cont./
531 taking off from a blackened triangle. A painted vessel from
171 the same locality has the same motif on its belly, but there the spiral has changed into a fret.

So that the distribution of the triangle with spiral may be complete, we must add: Caspinchango in Catamarca province (Debenedetti, 5, Figs. 10-12, pp. 24-25, and Fig. 14, p. 27); San Blas de los Sauces y Los Mazas in La Rioja province (Boman, 5, Plate VI, Fig. E; Plate VII, Fig. F; Plate XX, Figs. a and b, and Fig. 11, p. 65); Antofogasta de la Sierra (Ambrosetti, 5, Plate I, Figs. 31 and 32); Chañar Yaco (Catamarca) (Lafone Quevedo, 1, Fig. 47, p. 39); and finally Barreal in San Juan province (Kühn, p. 21).

D The recent excavations of Messrs. Emile and Duncan
P.A Wagner in the province of Santiago del Estero permitted them
531 to discover the remains of a population whose culture was
171 closely related to that of the valleys of the Diaguite region. It is undoubtedly a matter of a tribe of the Kakan language, established on the plain crossed by the Salado River. There too we find our triangle with volute, judging by the plates on which Mr. Duncan Warner has tried to reconstitute the pieces of pottery whose fragments he found. Here again we note the transition of the volute to the fret.

D Over and above these additions, some observations must
P.A be made concerning the passage from Odilia Bregante. The
531 triangle whose apex is prolonged in a curved or straight line
[178] can be considered as a degeneration of the voluted triangle, as has already been said above (see Lafone Quevedo, 2, Plate IX, b).

D I have called attention several times to the transition
531 of the volute into fretwork or element of it. This progressive
178 mutation of one motif into another took place in Diaguite
E country exactly as among the Chiriguano. Urns of the Santa
[531] Maria type exhibit, among other common decorations, a
[178] triangle, with steps or not, which terminates in fretwork. Now on several specimens this fret element is a volute or a /Plates XXXV-XLVI appear here/ /419/ more or less closed

/cont./

book (1). I strongly doubt that the triangle with volute and the

1. See, for example, Bruch (C, Fig. 57, p. 57; Fig. 68, p. 71; Fig. 70, p. 74; Fig. 65, p. 65; Fig. 86, p. 89; Fig. 120, p. 122) and Lafone Quevedo (C, Fig. 61, p. 106).

triangle with feet have a separate origin. The second doubtless derives from the first.

PA 531

At Tiahuanaco on the Bolivia plain the motif Odilia Bregante speaks of is a triangle one of whose sides is stepped and which terminates in a foot which in turn interlaces with the one taking off from the following triangle (see Benson, 3, Plate XIV, Fig. 36. I cannot understand what arguments Odilia Bregante relies on in order to assert that no vestige of Diaguita culture exists in this place. The contrary seems to be true.

D 531 194

PA 531 191

To sum up, the triangle with volute has a nearly uninterrupted distribution from the north coast of Peru to San Juan province in Argentina, and as far as central Chile. To the east it extends as far as the Pilcomayo and the Quebrada de Humahuaca.

The importance of this decoration increases in proportion as one moves from south to north. In Calchaqui country it is of secondary importance and constitutes an accessory motif; at La Paya it gains in preponderance and this asserts itself in the Quebrada de Humahuaca and on the Pacific Coast. In Chiriguano territory on the upper Pilcomayo it triumphs.

C 531

By itself this motif would constitute a meager proof of the existence of related cultures over the whole extent of this geographical area; but combined with other elements it acquires a very special significance.

C 531 191

The triangle with volute seems to have developed independently in the Guianas. At least I doubt very much that its occurrence in that region is due to a western influence. The motif adorns manioc graters coming from the Paranoma tribe (Nordenskiöld, 16, Fig. 19 c, p. 52) and several Wayãpono /Wayãpinang/ and Tonlipang calabashes (Koch-Grünberg, 3, Vol. III, Plate XIX, Figs. 1-3).

C /419 cont./

531 171 The S-shaped double volute (Plates XXXII-XXXIII.[1] 163-164, 167-197). I have already had occasion to insist on the fact that the S-shaped double volute was a motif closely associated with the voluted triangle. In certain cases, and, moreover, rare ones, this decorative element appears detached (see Plate XXVI, 2).[2]

PP [531] The double volute has been painted on several vessels from Tacna (Uhle, 4, Plate XXIII, Fig. 1; Plate XXIV, Figs. 2 and 3; and Goevara, plate between pp. 46-47). There it is once even framed by a line which follows its contour exactly as on some Chiriguano vessels (Plate XXXII, 162-163).

PQ 531 On vessels found at Calama and doubtless coming from Cagua (Yura, Porco province, Bolivia) and even in the region of Cagua /420/ (Créqui de Monfort, Plate VII, Fig. 8, and Plate VIII, Fig. 11) an S-shaped decoration is seen which could be brought nearer to our double volute if its style were different. The ends of the curve are slightly pointed, and a dot is inscribed in each hook.

PC 531 Chilean potters have sometimes made use of the double volute to decorate their vessels, but a limited use (Latcham, Fig. 38, p. 16; Fig. 58, p. 25; Fig. 59, p. 26). This motif PC [524] is also carved in a block /Fig. 81 appears here/ of stone from the Chilean province of Antofagasta, between Santa Fe del Toro and Quillagua (Plagemann, Plate III). In the Quebrada de PA 531 Humahuaca the double volute embellishes the outside surface of the yuro from the Isla de Tilcara reproduced by Debenedetti (7, Fig. 124, p. 178).

At La Paya the motif is represented on the bottom of two ornithomorphic puco (Ambrosetti, 6, Fig. 131, and Boman, 2, Vol. 1, Plate XV, Fig. 29).

D 531 [415] [464] A design in the shape of an S, but made up of a more or less wide band adorns the base or the belly of a large number of funerary urns of the Diaguite region and the bowls which closed them. This decoration /Plates XLVII-LIV appear here/ /see pp. 226-235/ /421/ is not to be confused with the one which has occupied us up to now because it is nothing but a

[1] [See pp. 200-201--Analyst]

531 Spirals (Plate XXXII, 165, and Fig. 81). The decoration of certain vessels from the upper Pilcomayo and the Santa Rosa mission (Nordenskiöld, 14, Fig. 70, p. 58) consists of a large spiral making many turns and covering almost the whole exterior surface of the receptacle. Just as in certain cases the volute was transformed into fretwork, this spiral gave birth to the motif seen on the vessel of Plate LV, 3,[1] which is composed of a series of concentric rectangles.

/421 cont./

C 531 171 The spiral or an independent decorative element has a much less wide distribution than when it is combined with the triangle it ornaments. In the geographical area which interests us it is known only on some pieces from the Quebrada de Humahuaca (Debenedetti, 3, Figs. 41 and 42, pp. 72-73; Bregante, Figs. 176 and 178, pp. 170-171), on a calebash from Colama (Oyarzun, Fig. 10), from the Puna de Jujuy and from the valley of Tucumán (Ambrosetti, 4, Fig. 76, p. 66, and Fig. 68, p. 72, Vol. LIV), on a pacu from Pabellón in the Santa Maria valley, Catamarca province (Outes, 1, p. 18, Fig. 18).

C 531 Angles, triangles, and zigzag lines (Plate XXX, 1-46, Plate XXXI, Figs. 71-106, 127). Nearly all the yambuí and yapepo which form my collections are decorated on the interior rim, at the base of the neck, or on the upper part of the belly with interlaced angles, with series of triangles painted on the surface, which form denticulate bands. This decorative theme, simple and a bit monotonous, varies from one specimen to the other, according to whether the field of the triangles is sprinkled or surrounded with dots, whether the spaces are joined by angles or arcs of a circle, or, finally, whether or not these triangles are bordered by a broken line which they face.

C [164] Triangles and zigzag lines only rarely constitute the fundamental decoration of vessels. On the upper Pilcomayo, the yambuí of Plate LIII, 4, is the only one exclusively decorated with triangular dots and parallel zigzag lines. Some pieces from Ivu and Caipipendí are characterized by the same simplicity.

C 531 171 At Tacna and Taltal the series of triangular dots constituted a motif particularly dear to the populations of the Chincha-Atacama period (Uhle, 6, Plate XVII, Fig. 4; Plate XVIII, Figs. 1, 2, and 4; Plate XIX; Fig. 1 a; Plate XXII, Fig. 4; Plate XXIII, Figs. 3 and 4 and Figs. 21 and 22, pp. 40-41).

C 531 172

C 531 171 /421 cont./

In Chile, on the pieces influenced by Chincha art, PC 531 there is the same abundance (Latcham, Fig. 28, p. 14; Fig. 53, p. 21; Fig. 59, p. 26; Medina, Fig. 206).

PA 531 171 /422/ In the whole northwest of Argentina, borders composed of triangles painted, striped, or reticulated are extremely frequent and do not form a type characterized clearly enough for anyone to try to give the distribution in detail. The latter extends from the Quebrada de Humahuaca to the Yocavil valley (Bregante, p. 182).

C P.A. B.P. 531 171 One of the varieties of this motif, however, is worth examining closely, for it permits establishing a striking parallel between present-day Chiriguano pottery and that of northwestern Argentina and southern Bolivia. It consists of a denticulate band or series of triangular dots and one or several zigzag lines which run parallel to these triangles. This decoration figures in my collections on the specimens of Plate XLI, 1, and Plate LX, 4. The archeological replica of this ornamentation is furnished by a vessel from Tolomosa (Tarija department, Bolivia), from Pabellon (Santa Maria, Catamarca), from Chañar Yaco (Catamarca) (see Rosen, 2, Fig. 166, p. 109; Outes, 2, p. 11, Fig. 8; Lafone Quevedo, 1, Fig. 5 e and f; Huaca E., p. 42). The excavations of the Messrs. Wagner at Llacta Maucta (Santiago del Estero province) yielded fragments of a dish whose patterns belong in this category.

A 531 172 The triangles which stand out against a background sprinkled with dots (Plate XLVIII, 1) and which form a band on the yambuí of Plate XXXV, 2, have their prehistoric equivalent at Taltal on a vessel of the Chincha-Atacama period (Uhle, 4, Fig. 21, p. 40).

P.A 531 171 Series of triangles arranged horizontally are very often associated with the decoration of apodal or aryballoid vessels, which have been discovered in northwestern Argentina in such large numbers (see, for example, Boman, 2, Vol. I, p. 297) and, in general, over the whole extent of the Inca Empire.

/422 cont./

531
171

Festooned bands (Plates XXXI-XXXII,[1] 129-131). The series of triangles with which we have been occupied are often replaced by festooned bands (see, for example, Plate XLIX, 3; L, 1; and LIII, 3).[2] The transition from one of these motifs to the other is, so to speak, imperceptible; it is sufficient for the triangles to be slightly rounded for them to take on the appearance of a band of festoons. In northwestern Argentina the same transformation has taken place several times. A good example of it is the vessels from the Jachal (Bregante, pp. 179-181).

Isosceles triangles joined at the apex (Plate XXXI, 116-122). Two isosceles triangles joined at the apex form a design schematically representing an hourglass. This motif is rather common on Chiriguano pottery. In neighboring regions it is less frequent and seems to be peculiar to the pottery of Inca origin. Nordenskiöld (14, Fig. 69 a, p. 157) has already pointed out the close resemblance of this figure as it appears on several Chiriguano vessels with the one which decorates the ornithomorphic dishes /Plates LV-LVIII appear here/ /423/ of Cuzco. The analogy extends to the perpendicular lines which separate each one of the facing triangles from the following ones. This decoration is typically Inca. The ancestors of the Chiriguano copied this motif on several Inca specimens exactly like the ancient inhabitants of Tilcara, La Paya, and Catamarca who drew them: some, on a vessel with a lateral handle (Bregante, Fig. 320, p. 268), others, on a cup (Boman, 2, Vol. I, Plate XII, Fig. 26, and Plate XIV, Fig. f), and the last on an apodal vessel (Outes, 2, Plate III, Fig. 5). Outside of the "aryballuses," or purely Peruvian type vessels, the "hourglass" is a motif of rather rare use. It was painted on a vessel from Fuerte Quemado published by Ameghino (Vol. I, Plate X, Fig. 333) and on a vessel from Punta de Balasto (Lafone Quevedo, 2, Plate VII, Fig. a). Other examples could be cited, but I have neither the intention nor the means of being complete.

Prehistoric Argentina SI 3

C 521 191

This decorative element is no stranger to Chilean pottery either (Latcham, Fig. 42, p. 18, and Fig. 45, p. 19; Medina, Figs. 180, 202, 206, etc.). It figures also on the base of an Araucan vessel found in the territory of the Neuquen (San Martin, Plate 15, Fig. III).

Tooth-shaped triangular designs enclosing diamond shapes between them have been pyrographed on a calabash from Calama whose ornamentation matches that of our Chiriguano vessels.

Concentric diamond shapes (Plate XXX, 52-56). The series of concentric diamond shapes drawn on a goodly number of vessels in my collections had already been painted on the pottery of the Chincha-Atacama period at Tacna and Taltal (Uhle, 4, Plate XX, Fig. 2; Plate XXI, Fig. 2; and Guevara, plate between pp. 42-43) and pyrographed on the Calama calabashes (Oyarzun, Fig. 6).

PA [531]

This design is classic, so to speak, on the aryballuses from Argentina (Boman, 2, Vol. I, Plate XVIII, Fig. 43, and Outes, 2, Plate III, Fig. 2).

PA 531

Reticulated design (Plate XXX, 59-64). Several vessels in my collection have a reticulated band on the belly or neck. On the vessel of Plate LIV, 2, the triangles have this detail. On the subject of this motif, Odilia Bregante (p. 167) expresses herself as follows: "Reticulated decoration is found in the middle of the Yocavil valley beside pieces which bear the symbol of the triangle with spiral and the stepped element and even in modern cemeteries like that of Chañar Yaco (see, for example, Lafone Quevedo, 1, Plate VII, Fig. a). But it is in the northern regions, in Salta and Jujuy, that the greatest number of specimens of this reticulation are found and where it enters into the composition of characteristic embellishments. On the Isla de Tilcara, in the Pucará de Tilcara, and in other localities, the archeological material which includes this design forms the most interesting type of pottery and is abundant enough to be classified."

PA /423 cont./

531 Some vessels from the Isla de Tilcara and the Pucará de
C Tilcara, /424/ as a matter of fact, have a reticulated band on the
531 rim, like our Chiriguano vessels. (Debenedetti, 2, Fig. 45, p. 79,
171 and Bregante, Fig. 164, p. 166.)

PC In Chile we encounter bands, triangles, diamond shapes,
531 reticulated rectangles, and there again the unity of these different cultures in whatever has to do with pottery asserts itself. (Latcham, Figs. 25-28, P. 14, and Bregante, Figs. 232, P. 192.)

Fig. 82. Vessel b comes from the Chiriguano village of Tintapaw (upper Pilcomayo). It offers an extraordinary resemblance to vessel a from Tilcara. (1/2 nat. size.)

000 Figs. 25-28, p. 14, and Bregante, Fig. 232, p. 192.)

C Checkerwork (Fig. 76). A cup I acquired in the Igüembé val-
531 ley is decorated in a brown and white checkered design. This is the
171 only example I know in Chiriguano country. In northwestern
PA Argentina this motif has a very wide distribution: it extends from the
[531] Quebrada de Humahuaca to San Juan province (Bregante, p. 196).
[171] It was common in Chile (Latcham, Fig. 7, p. 7; Fig. 41, p. 18;
PC Fig. 55, p. 22, etc.). In the post-Columbian period it was still
[531] in use among the Araucan of southern Mendoza (Métraux, 6, Fig. 12, p. 50).

Crenels, broken lines; Z-shaped lines (Plate XXXII, 154-155 and XXXIII, 200-206). While trying to define in the preceding pages the decorative style characteristic of the Chané of the Itiyuro and the Chiriguano of the region of the Franciscan missions, I mentioned single or multiple lines which, running around the belly of the vessel, form triangles, crenels, and Z's with elongated or linked strokes. At first sight these apparently capricious motifs seem to escape all comparison and one would almost be tempted to believe them autochthonous or constituting reminiscences of Guianan art. Nevertheless, their counterpart is found in the archeology of northwestern Argentina and, as expected, in that of the Quebrada de Humahuaca.

Debenedetti (2, Fig. 75, p. 132, and Fig. 78, p. 135) reproduces a goblet found on the Isla de Tilcara, which has on its lower part a band /Plates LIX and LX appear here/ /425/ composed of three parallel lines broken at right angles. Mr. Debenedetti rightly compares this decoration with that of Chané vessels, of which he shows an example he attributes erroneously to the Choroti. The same remark may be made about some engraved vessels from the Arroyo del Medio, which in some respects are similar to our Chiriguano vessels (Boman, 2, Vol. II, Fig. 207, III, p. 843).

[531]

Much more striking yet is the resemblance between the Chiriguano yambui of this type and two vessels from the Diaguite region, one found at Molino del Puesto (Fuerte Quemado, Catamarca), and the other at Hualfin (Catamarca), both of which have been published by Bruch (2, p. 87, Fig. 88, and id., 2, Fig. 11, p. 8, and Fig. 27, p. 13). A puco from Llacta Mauca, province of Santiago del Estero, offers a similar design, to judge from a sketch by Mr. Duncan Wagner. There can be no doubt as to the Andean origin of this type of decoration.

A
[531]
[172]

Z-shaped motifs stand out again on a vessel from Tacna of the Chincha-Atacama period (Uhle, 4, Plate XXI, Fig. 1) and from San Felipe, Chile (Medina, Fig. 68).

LIX Miniature Chiriguano vessels (yapepawi) (serve as containers). Prov.: 1, 3, and 4, Tumbía; 2 and 6, Ibopeytí; 5, Saladito (upper Pilcomayo). Colors: red and black motifs on white background; 5, red background. (Nos. 1-3 = 1/2 approximately; 4 = 2/5; 5 = 2/5; 6 = about 1/2 nat. size.)

LX Miniature Chiriguano vessels (yapepawi). Prov.: 1, Ibopeytí; 2, Tiwinaiti (upper Pilcomayo); 3, Tintapaw; 4, Caipipendí; 5, Tumbia; 6, Tintapaw. Colors: red and black motifs on cream background, with the exception of No. 2, decorated with black motifs on reddish background. (Nos. 1 = 1/3; 2-6 = about 2/5 nat. size.)

C 531 1971

/473 cont./

The large triangles which run around the belly of the *ica* and *yanibú* from the mission region strongly resemble an analogous motif which covers the outside surface of vessels made by the Neuquen Araucan (See Martin, Plate XV, Fig. 7).

Eyebrow-shaped design (Plate XLIX, 4). A vessel from Saladillo (upper Pilcomayo) has as its only decorative motif a strange decoration in the shape of a stylized eyebrow which stands out in white against a red background and is situated on the neck. This design is made up of two parallel lines separated by dots. In the presence of this curious motif one cannot help thinking immediately of the human faces painted on the funerary urns of the Diaguita region. The facial organs are overhung by a gigantic superciliary arch which, starting from the tip of the nose, descends to the height of the ears. The manner in which this part of the head is drawn recalls strongly the figure we are concerned with here.

D [415] [531] [964]

Cross. The vessel of Plate LX, 7, is decorated on the belly with a series of crosses inscribed in diamonds. This sign constitutes a decorative motif of which the present-day Chiriguano make exceptional use. Like the majority of the motifs painted on their vases, this one has no particular significance. A calabash from the same region is also decorated with pyrographed hollow crosses (see Plate LXI, 1 /see p. 202/). We know the frequency of this ornamentation, symbolic or not, on the funerary urns of the Diaguite country, principally of the Santa Maria region (Catamarca), a frequency such that it warranted a book by Quiroga, some of the illustrations of which are interesting.

D [415] [531] [964]

The cross appears also on a Tafiel vessel of the Chiriba-Atacama period (Guevara, plate between pp. 46-47 and 50-51), on a calabash from Calama /476/ (Oyarzun, Fig. 10), on another from the Puna de Jujuy (Ambrosetti, 4, Fig. 70, p. 68, Vgl. LIV), and on a box from Mortuari (Boman, 2, Fig. 75, Plate XXVII), etc.

Representation of the human face. The human face is not reproduced on any of the vessels I collected. Nordenskiöld (cf. Fig. 56, p. 137) shows and describes a pot on whose rim a face was represented: the nose was in relief and the other organs painted on it. The similarity of this motif and the one decorating some pieces from the Andean region does not tend to be emphasized.

C [532]

[See P 922--A-61917]

/old text./

Sign of unknown significance. On the Markland vessel (Plate LII, 1) was painted a crescent-shaped sign having in its concave part two dashes perhaps representing feet. The subject is doubtless a stylized bird, a presumption all the more plausible because another vessel from the same locality and made by the same hand is decorated with animal figures (dogs and toads) (Plate LII, 1).

This mysterious sign is very similar to the one found on a pace from Tolomosa in the Tarija department (Boman, 3, Fig. 110, p. 117) and on some dishes from La Paya. These designs are also more or less stylized pictures of a bird. (Boman, 3, Vol. 1, Plate X, Fig. 78, and Ambrosetti, 6, Figs. 35-41, 70, 80-81.)

Zoomorphic representations. Animal figures are rare in Chiriquano pottery, but their occurrence only brings out the better the similarities of this art to that of the neighboring Andean region. The rows of yaks (pero del monte) on the vessel from the Aguarey are the counterpart of the toads on the Diaguita funerary urns and the La Paya birds. The dog on the vessel in the plate represents nearly identical with the bottom of a pace from Molino del Puente, Catamarca. (Bregh, 3, Fig. 70, p. 70.)

The comparisons we have made could doubtless be extended and many another relationship noted between the modern pottery of the Chiriquano and that of the populations which have today disappeared from the Bolivian altiplano and northwestern Argentina. To continue such an investigation would be superfluous, for there is no one acquainted with the art which formerly flourished in the Andean and Chiriquano regions who would hesitate to establish a relationship between the two and would not have the second derive from the first.

As one might logically expect, these similarities become more numerous and more striking in proportion as one leaves the south and advances toward the north into the Andean zone which runs parallel to the habitat of the Chiriquano and Chané. When [illegible] is methodically explored, models of the vessels which the [illegible] of the Chiriquano admired and copied will be found.

[See p. 231 -- Analog?]

Looking there, the study we have pursued brings us the establishment of a very important fact. The existence on the upper Pilcomayo of a pottery [illegible] closely related to that of the

Fig. 88. Chané vessel. Prov.: Toyomí (Aguaray, Salta Chaco). On the bulge: series of yaha (grave del monte) in blackish brown on white background. (1/3 nat. size.)

Cordeiro de Mamathuaca is an indication which proves in a sure way that the art of the lowlands inhabitants of these regions was identical to that of their neighbors, and perhaps racial brothers, of the Bolivian altiplano.

Apropos of the Chiriguano, I believe it is wrong to speak of Andean or Inca culture. The first of these terms is too vague and the second partially false. In this chapter I have tried to demonstrate that Chiriguano pottery exhibits close affinities with that of the civilizations which, by their numerous points of similarity, seem to have undergone a Chincha or Atacama influence and which preceded Inca culture.

000 /427 cont./
C 531 171 105 which preceded Inca culture. If one compares the present-day pottery of the Chiriguano with that of the Quicha /Quechua/ of Cuzco, certain analogies will appear, but they will be neither abundant nor conclusive enough to establish a direct filiation. Aryballuses are missing or rare, ornithomorphic dishes seldom found, etc.; on the contrary, we have seen how multiple and close the ties are between this pottery and that of the Chincha-Atacama period. Chiriguano pottery, in relation to that of Cuzco, is in a situation analogous to that of northwestern Argentina: on an Andean but original base, influences from Cuzco have been superposed. This Inca action on the Chicha is attested to even today by /428/ the presence among the Chiriguano of footed vessels of the purest Inca type and apodal ones of the same origin. Arising from the same influence, one may add certain decorative motifs, with which I have already dealt.

A [531] [171] [415] Arawak and Amazonian tradition is scarcely represented, except by footed bowls (compoteras), vessels with a ribbed belly, those with a body in the shape of a truncated cone and a subspherical belly, and perhaps by some motifs (T-shaped figures, Plate XXXVIII, 1).

The conclusion of this chapter will be: there exists today and for some years to come a civilization which, closely related to that of the Chicha, continues an art earlier than that of the Inca but influenced by them. May this fact make archeologists cautious!

Chapter VII

Calabashes

C 531 462 [323] The second art in which the Chiriguano excel is pyrography and engraving on calabashes. When pottery-making was an essentially feminine activity, pyrography was the province of the men. Nordenskiöld (9, pp. 233-236) thinks, completely wrongly it seems to me, that pyrography is of Andean origin. He advances in support of this opinion the advantages that knowledge of metal offers to this art. Nevertheless, the populations of the

171

/428 cont./ Nevertheless, the populations of the upper Xingú where Andean influence certainly was never felt have pyrographed calabashes, as do the Guató /Guato/ of the upper Paraguay. Pyrography is equally in use among the Indians of Guiana, on whom any influence by Inca civilization is very problematical. The distribution of pyrography in itself demonstrates that there is no need at all of possessing metal objects in order to practice this technique.

C
531
171

If one compares the motifs which decorate the calabashes I collected in the Chaco with those exhibited by the pyrographed calabashes found in northwestern Argentina, one is struck by the similarity of their style and the numerous analogies of detail they have in common. Thus, the Maltese cross which decorates a calabash from Jujuy (Ambrosetti, 4, p. 68, Fig. 70, Vol. LIV) is found again identically on the calabashes of Plates LXI, 1; LXII, 1; and the volutes of a maté from Tastil (Boman, 2, Vol. 1, Fig. 84 a) have their counterpart in the hooks incised on the specimen of Plate LXI, 2. On the fragment of a calabash discovered in the same region (Boman, 2, Vol. I, Plate XXXII, Fig. 84) and on another specimen from La Paya (Ambrosetti, 6, Fig. 288, p. 524), we have the prototype of the checkerwork which so often embellishes /Plates LXI-LXXI appear here/ /429/ Chiriguano calabashes (Plate LXI, 1 a, and Plate LXIV, 2). The reticulated bands which frame the decoration of one of the Calama calabashes (Boman, 2, Vol. II, Plate LXXV, Fig. 176 b) are frequently incised on those of the Chiriguano (Plate LXVI, 1 and 4; Plate LXIX, 3, etc., for example), just like the rows of triangles on a blackened field which appear on some calabashes from the Puna de Jujuy (Ambrosetti, 4, Figs. 61-63, pp. 65-66; Figs. 70-71, pp. 58-69, Vol. LIV) and on the fragment from La Paya already mentioned. The zigzag line which stands out in white on the reticulated background of one of the Calama calabashes

LXI Pyrographed and incised calabashes. Chiriguano. Prov.: 1a and b, Saladito (upper Pilcomayo); 2, Ivu. (Nos. 1 = 1/3 nat. size; 2 = 1/2.5 nat. size.)

D
[415]
[531]

LXII Engraved and pyrographed calabashes. Chiriguano and Diaguite. Prov.: 1 a and b, Saladito (upper Pilcomayo); 2 a and b, Isirié (upper Pilcomayo); 3 a and b, calabash found in a funerary chamber (boveda) of the ancient Diaguite in "La Quebrada" (Valle del Cajón, Catamarca Province). This calabash was beside an adult skeleton. (Nos. 1 a = 1/2; 2 a and 3 a = 2/3 nat. size±.)

LXIII Incised and pyrographed calabashes. Chiriguano. Nos. 1 (a and b) and 2 (a and b) come from the Macharetí mission. Engraved motifs: 1, human personage and birds; 2 a, dog (?); 2 b, llama. (1/2 nat. size±.)

C
[422]

LXIV Incised and pyrographed calabashes. Chiriguano. Prov.: 1, Masaví (Igüembé Valley); 2, Achua (upper Pilcomayo); 3, Carurutí; 4, Macharetí; 5, Tiwiraití; 6, Caipipendí. Remark: Note the mark of ownership on Calabash 4. (Nos. 1 and 3 = 1/2; 2 and 4-6, 1/3 nat. size±.)

LXV Incised, pyrographed, and painted calabashes. Chiriguano. Prov.: 1, Tígüipa; 2 and 6, Macharetí; 3, Ivu; 4, Saladito; 5, Tiwiraití (upper Pilcomayo). Remark: Calabash No. 3 is painted with roucou. (About 1/2 nat. size.)

LXVI Incised, pyrographed, and painted calabashes. Chiriguano. Prov.: 1, Santa Rosa; 2, Mangarati; 3 and 6, Caipipendí; 4, Masaví; 5, Carurutí. Remark: All the lower part of 3 is painted with roucou. (1/2 nat. size.)

415
531 /Captions for Plates LXI-LXXI, pp. 252-262 cont./

LXVII Incised, pyrographed, and painted calabashes. Prov.: 1, Caratindi (Igüembé); 2 and 6, Macharetí; 3, Tiwiraiti; 4, Tintapaw (upper Pilcomayo); 5, Caipipendí. Remarks: On No. 3, more or less deformed numbers. Calabash No. 4 is painted, pyrographed, and incised. (Nos. 1-5 and 5 /sic/ = 1/2; 4-5 /sic/ = 1/5 approximate nat. size.)

LXVIII Incised and pyrographed calabashes. Prov.: 1, Ñawirenda; 2 a and b, Caratindi (Igüembé Valley); 3 a and b, Yumbía; 4, Ibopeytí. Remark: On No. 3 a and b a very stylized bird has been represented. (Nos. 1-3 = 1/2; 4 = 1/3 approximate nat. size.)

LXIX Pyrographed and incised calabashes. Chiriguano. Prov.: 1 and 3, Caipipendí; 2 and 4, Macharetí; 5, Tiwiraiti (upper Pilcomayo); 6, Ñawirenda (upper Pilcomayo). Remarks: Calabash No. 1 is decorated with a series of engraved numbers going from 1 to 10; Calabash No. 6 with motifs clearly European in inspiration. (Nos. 1, 3, 5, and 6 = 1/2; 2 and 4 = 1/3 approximate nat. size.)

[801]
[199]

LXX Incised and pyrographed calabashes. Chiriguano. Prov.: 1 and 4, Tarairi; 2, Macharetí; 3, Caipipendí. (Nos. 1 and 2 = 1/3; 3 = 1/2; 4 = 1/3 approximate nat. size.)

LXXI Painted, incised, and pyrographed calabashes. Prov.: 1, Ivu; 2, Igüembé; 3 and 4, Caipipendí. (Nos. 1-3 = 1/2; 4 = 1/3 approximate nat. size.)

C /429 cont./
531 (Boman, 2, Vol. II, Plate LXXV, Fig. 186 c) reappears nearly
171 identical on the pretty calabash of Plate LXII, 2.

C I can give no better argument in favor of the close analogy
D between the calabashes of the Andean region and those of the
531 modern Chiriguano than by publishing the calabash of Plate LXII,
171 3 a and b, found in Diaguite territory in Catamarca province ("La Quebrada," Valle del Cajón). Its decoration is composed of incised and finely reticulated bands on a blackened background. The hooks which leave from the circle

Fig. 84. Incised and pyrographed calabash. Prov.: Caratindi (Igüembé Valley). (About 1/2 nat. size.)

engraved on the top of the calabash and the sides of the latter strangely recall analogous motifs we have seen on Chiriguano specimens.

C The spiral, which seems to have been a motif especially
531 dear to the pyrographers of northwestern Argentina and the Atacama
171 Desert, does not occur on any of the specimens in my collections, if one does not want to consider as rudiments of spirals or as degenerated spirals the hooks we see on some Chiriguano calabashes (Plate LXI, 2). It is interesting to ascertain that the spiral and the voluted triangle of Andean calabashes are typologically closely related to analogous motifs which the Chiriguano women of the upper Pilcomayo paint on their vessels. If these designs have been better preserved in pottery than in pyrography, it is doubtless due to the fact that the first art has remained closer to its origins. The
C women, who have the monopoly of it, are more conservative
[323] than the men, who decorate the calabashes.
[462]

/429 cont./

531 171 On almost all the calabashes in my collection, pyrographed designs alternate with incised motifs. Perhaps it is the same with the calabashes of the Andean region. Judging from the ex-
[114] cellent photographs which Boman (2, Vol. II, Plate LXXVI) gives us of them, and from /430/ the specimen from the Calchaquí valley which I am publishing here, this scholar erroneously considers them as having been entirely pyrographed. When a Chiriguano incises a design with a knife on a calabash, he is always careful to fill the engraved lines with ashes to make them stand out. At first sight this process may be confused with true pyrography.

415 531

a b

Fig. 85. a and b. Engraved calabash. Only the rim has been lightly pyrographed. On one side (a) is seen a feline animal (jaguar or puma), on the other (b) a fox (?) and a bird. Prov.: Masaví (Igüembé Valley). (About 1/2 nat. size.)

531 A single glance at Plates LXI-LXXI allows one to realize that pyrography and engraving on calabashes do not obey such rigid stylistic rules as pottery. These calabashes differ very much, and there are scarcely any motifs that seem to be preferred to others. To what is this diversity due? I believe it artificial; and I am convinced that formerly this art followed precise norms, in a word, that in times past there was a true style of pyrography and engraving on wood. How would one explain otherwise that precisely the most beautiful pieces in my collection are at the same time the oldest and the most similar to the Andean prototypes (Plate LXI, 1 and 2; LXII, 1 and 2; LXIV, 2; LXVIII, 2 and 3, etc.)? Let us not forget that

177 /430 cont./ Let us not forget that
531 pyrography is a masculine activity and that men are more
[462] open than women to every innovation. Moreover, for the
[167] most part they have gone to Argentina, and from there, with a new turn of mind, they brought back models and inspirations foreign to their ancient tradition. This European influence is patent in many cases; thus, the calabash of Plate LXVII, 3, and the one of Plate LXIX, 1, are decorated with Arabic numbers. The calabashes of Plates LXIV, 1, LXV, 1 and 5, and LXIX, 5, are decorated with stylized flowers or stars which are not Indian at all. The influence of the white men and their bad taste is evident in the motifs painted in roucou which decorate the calabash of Plate LXV, 3.

531 Anthropomorphic or zoomorphic representations are commoner on calabashes than on pottery. A rough drawing of a man greatly schematized /43[illegible] is represented on the calabash of Plate LXIII, 1 a and b. On the calabash of Plate LXIII, 2 a, dogs have been engraved and birds on those of Plates LXIII, 1, LXVIII, 3 a and b, LXIX, 2, and LXXI, 3. A llama was represented in very expressive fashion on calabash No. 2 b on Plate LXIII; and on the calabash of Fig. 85 a and b one recognizes a horse and a feline animal, a puma or jaguar. Three fish and a bird appear on the specimen of Plate LXVII, 2.

531 The Indians of the Ivu mission and the ones from
322 the Caipipendí valley paint their calabashes with roucou.
386 This color is very difficult to rub off and does not spread beyond the periphery of the colored designs. /Fig. 86 appears here. To obtain this result, the Chiriguano begin

C /431 cont./
531 by taking off the epidermis which covers it, except at the places
322 which are to remain uncolored. Then they smear its exterior
386 surface with roucou and scrape the tegument where they have saved it. The figures then stand out in red against a yellowish background. An analogous process is in use among the Pauserna (Nordenskiöld 5, p. 344). The motifs decorating most of the

Fig. 86. a, b, and c. Miniature calabashes, "liqueur glasses" and children's toys. Chiriguano and Chané. Prov.: a, Tuyunti, near Aguaray (Salta Chaco); b, Ñawirenda (upper Pilcomayo); c, id. (About 1/2 nat. size.)

C
531 The motifs decorating most of the
177 painted calabashes I collected in Ivu are unfortunately very much influenced by European models, and beside very pretty designs one finds others of the most distressing banality.

/431 cont./

Chapter VIII

Weaving

286 Weaving is a very widespread industry among the Chiriguano.
[177] Unfortunately, at the present time its products are commonplace and, since they have been using aniline dyes (1), often very ugly.

386
824

1. The Chiriguano used to extract blue dye from a plant they call kaa-howi, that is to say, "blue grass." They also used to grow it. In order to color their tiru (large sleeveless bag slipped on over the tipoy, of the same shape but less ample), they dipped them into a decoction of this grass. Sometimes also they used to add coloring woods, such as palo soto or quebracho, to this bouillon. The leaves of a tree which easily reaches a height of eight to ten meters, the iwira kaa-howi, also furnish a blue dye, but for that they must be young and the tree must be in bloom.

With piari, black resin which exudes from the trunk of the algarroba (Prosopis), Chiriguano women blacken the tiru which they had dyed blue. (Diccionario Chiriguano-Español y Español-Chiriguano, etc., pp. 16-17 and 173.)

286
[291]
[177]
Most of their ponchos are copied from those of the Bolivian half-breeds.

/432/ The type of loom prevalent among the Chiriguano is the one which has been given the name Arawak loom. Plate LXXII 2/1 gives an idea of it. Two forked sticks are set in the ground. They support two /Fig. 87 appears here/ parallel crossbars, one of which, the lower one, is a pestle of hard and heavy wood. The warp threads are rolled around them, but at each circuit turn back on themselves after going over a /433/ small cord stretched parallel to the ground. Once the cloth is finished, this string is removed, and in an instant the piece of cloth, which until then formed an endless band, opens up (Fig. 91). 2/1

/434 cont./

286 171 The Chiriguano have their loom in common with many tribes of tropical America, and they doubtless were already acquainted with it in Paraguay, at least in a more rudimentary form. In some Chiriguano villages looms of the Inca or Quichua /Quechua/ type, that is to say, horizontal ones, can be seen. The warp is then fastened to a small cord along a piece of wood and the cloth is rolled around as it is produced.

286 294 Headbands and belts are woven with looms of a type similar to the one just described. The warp threads are fastened to a loop of cotton attached to a hut post. As the fabric is made it is rolled around two small sticks or two ears of corn attached to the lower end of the warp (for this type of loom, see Nordenskiöld, 10, Fig. 4, p. 175).

291 30 I am reproducing in Fig. 95 a tsumbi headband. These ornaments have now become very rare, and only a few old men still wear them. Our specimen is dyed with natural colors.

291 [178] Every Indian woman who lives outside the influence of the missions still wears the tipoy, that is, a kind of long sheath which they fasten on the shoulder nowadays with a safety pin and formerly [286] /Plate LXXII appears here/ /435/ with a thorn. In olden times these tipoy were woven by the Indian women on looms of the Arawak type. They were of cotton and dyed blue-black. /Fig. [439] 90 appears here./ Today it is almost impossible to find a woman whose tipoy is not made of chamalote, a kind of cheap cotton cloth which the Syrians and half-breeds sell at a high price to our Indians. In the Caipipendí valley /Fig. 91 appears here/ I met two old women who still kept the tipoy of olden times. They would not [126] give it up to me for any price. At Carurutí, an old fellow desirous of striking a good bargain sold me his wife's at a very /436/ high price in order to buy brandy for himself. It was very necessary to celebrate Easter fittingly.

[178] The shirts (tiru-kumbaè) which the men formerly sported exist no more except in the memory of the old men.

/436 cont./

880 animals or human beings. There is nothing like that among the
G Chiriguano. The simplicity /437/ of their fabrics forms a striking
286 contrast with the richness and variety of the decoration of their
531 pottery. Their inferiority in this respect is far from corresponding
191 to the skillfulness which is their worst in all their activities. It is
G enough to see the admirable pieces of work executed by little
286 Chiriguano girls in the missions to realize what they would have
179 been capable of if historic traditions had not held them away
857 from this art. Their distant Tupi-Guarani ancestors were
FG acquainted with only rudimentary forms of weaving, and it can
286 be asserted that /Fig. 95 appears here/ this industry remained
174 foreign to all the Tupi tribes which did not undergo the influence
T of a nation more civilized than they. The Tupinamba of the
286 Brazilian coast apparently practiced only the double-thread
174 technique (Doppelfadentechnick) by means of which they used
G to make their hammocks. The ancient chroniclers note the use
286 of the tipoy among the ancient Guarani of Paraguay, which is an
[175] indication of the existence of weaving among that subdivision
[291] of the Tupi family. Their present-day descendants, the Kaingua
/Caingua/, could pass for good weavers to judge by the fineness
G of the several fabrics which have been collected among them.
[291] These are for the most part wide belts which they pass between
their legs and knot around their loins. In reality, weaving is in
its beginnings among them. /438/ as is shown by their loom. It
is only a simple frame around which the warp threads are coiled.
The woof is passed through, thread after thread, as in darning.

No doubt it was the Chané who taught the Chiriguano to weave,
E and as they had probably not reached a /Fig. 96 appears here/
286 very high level in this art, they could only transmit to their
177 successors and suzerains, the Chiriguan, a still little-developed
technique, which the latter have scarcely improved on.

/439 cont./

323 The contrast between a highly evolved pottery and a still
292 rudimentary art of weaving is characteristic of the Indians
296 of the tropical and subtropical regions of South America, at
191 least for those who can pass for being relatively civilized,
such as the Arawak and the Karib /Carib/.

Chapter IX

Basketry and Its Techniques

1. General Considerations

Basketry is far from being as abundantly represented among the Chiriguano and the Chaco as among the Indian tribes of the Amazon basin or the Guianas. The secondary role it plays in their industry is due to the nature of the soil where they live and the climate they enjoy. Palm trees with pinnate leaves are lacking, to my knowledge at least, over the whole extent of their territory: as for the ones whose leaves open like fans, if they are numerous in certain places, their occurrence is far from being uniform. The palms which the Chiriguano Indians call karandaí (Copernicia australis) form veritable groves here and there, whereas over vast regions they are lacking or appear only sparsely. I saw a considerable number of them between San Luis and the Saladito River, and I have crossed some large palm groves between Tacuiba and Villamontes, on the Pilcomayo, and south of the Parapití River, going from Cuevo to Pipí. I noted, moreover, that the distribution of the karandaí coincided with that of a certain type of basketry (twilled work /named in English/), for which the Indians use these leaves.

Fig. 97. Back basket used by the Guaraní Indians for transporting heavy loads (from Nordenskiöld).

Nordenskiöld (10, p. 169) recounts an anecdote which illustrates well the influence the environment exerts on this industry. At the time of one of his trips into the Chaco, the scholar was accompanied by several Guaraní Indians, who followed him as far as Chiriguano country. The Guaraní customarily load their baggage and the products of their fields into back baskets of a special type (see Fig. 97) which have a wide distribution in tropical America, from the Guianas to Paraguay (Nordenskiöld 13, p. 191 and MAP 21).

/4.29 cont./

p. 171 and Map 71). Their baskets being of bad shape, the Guarayú wanted to make some new ones and were very annoyed not to find in the region into which they had come the palm trees with pinnate leaves which they were in the habit of using for this purpose. Now, Guarayú and Chiriguano are brothers in race and language and emigrated at the same period from Paraguay to settle in the vicinity of the Andes. When leaving their country of origin, both were acquainted with this type of basket used by their ancestors, the Guarani, the Tupinambá of the Brazilian coast, /441/ and still favored among their first cousins from Paraguay, the Kaingué (Métraux, 3, p. 208). The disappearance of this cultural element among the Chiriguano is due solely to the lack of appropriate raw materials.

In order to make up for the absence of back baskets, indispensable to a farming people /Fig. 99 appears here/ the Chiriguano borrowed from their neighbors in the Chaco, either the Matacco or the Chorotí, the carrying nets (in Chiriguano *aliquiña*) whose use is so widespread among the latter and is so characteristic of their civilization. Carrying nets today are in general use among the Chiriguano, and in every village each family has at /Fig. 99 appears here/ least one (Figs. 99 and 98). In spite of this wide diffusion, the Chiriguano *aliquiña* betrays its origin by its form and technique (see Figs. 100 and 101 /see pp. 202 -203/), which are both found in the tribes we have just enumerated (Nordenskiöld, 3, p. 206, Technique I). Although considerably more advanced on the way to civilization than the semi-nomadic tribes of the Chaco, the Chiriguano do not by any means equal them /441/ in the art of making nets. The *aliquiña* I collected cannot be compared with the deep bags which the Matacco or the Chorotí, for example, make for the same purpose. In the village of Mariavení, where Tsika live with Chiriguano, it is the former who furnish the latter with the /Fig. 101 appears here/ carrying nets they need (see Fig. 99 /see p. 202/) (1).

1. Nordenskiöld (11, p. 163, Fig. 49 A) gives the detail of the technique of a Chiriguano carrying net. This technique is not found on any

/941 cont./

Fig. 100. Technique of the net of Fig. 98 (Technique I, according to Nordenskiöld, 9, p. 304).

/No. 1 cont./ of the *ellapoke* I brought back from the Chaco. I suppose it is a question of a carrying net which the Chiriguano might have bought from Chaveri, who, with the *Ashluslay* and the Matako, seem to be the only ones to use this technique. The technique we show in Fig. 101 is known to the Ashluslay, the Chaveri, and the Tapiete. Nordenskiöld (9, p. 304) does not mention it among the Toba, where it nevertheless exists, as the *ellapoke* of Fig. 99 testifies.

/441 cont./

174 Everything thus leaves us to suppose that, in the early period of
177 their settling on the western confines of the Bolivian Chaco, the
286 Chiriguano procured by barter the carrying nets intended to re-
482 place the back baskets they had used until then. It was only later
[439] that they learned to make them themselves, adopting only the simplest and easiest of techniques besides. Thanks to this example we can catch alive the causes which have motivated the adoption of a new cultural element after the disappearance of another which rendered the same services. For that, two factors have come into play, the physical environment and the ethnic one. There was adaptation and borrowing at the same time. This fact also proves that a relatively civilized people never hesitates to appropriate the inventions of more barbaric tribes when they find some advantage in it.

285 The present poverty of the basketwork industry among the
17 Chiriguano does not imply that it is insignificant and worthless. Perhaps before the decline of this nation it was more widely represented in each village. I was able to observe that the disappearance of basketwork /442/ went along with the influence of the white men. But, for the reasons I have given above, I do not believe that at any time there could have been found among the Chiriguano that abundance of objects made of basketwork which travelers noted among the Indians of Guiana or the Amazon basin. Formerly, when the ancestors of the Chiriguano were still living in Paraguay and Brazil, they possessed basketwork identical with that of the tribes inhabiting the regions I have alluded to. Proof of it is furnished by the survival among the modern Chiriguano of various types of baskets, fire fans, and sieves, of which we find /Fig. 101 appears here/ the exact equivalent only in Guiana and the Amazon basin. As we shall ascertain in the course of this study, the identity between these two ethnic areas is perfect from this point of view. The only difficulty is to know whether in this case it is a matter of the remains of an industry peculiar to the Chané Indians of Arawak origin, whose influence upon the Chiriguano was considerable, or whether this basketwork only continues that of the ancient Guarani emigrants. In my opinion
ooo the question does not need to be asked. The basketwork of the

C /442 cont./ The basketwork of the
285 ancient Guarani or Tupinamba did not differ essentially in tech-
171 nique, form, or processes of ornamentation from the basketwork
174 of the north of southern America (Métraux, 2, pp. 249-255). It must have offered more than one point of similarity with that of the Chané, and we must consider the modern basketwork of the Chiriguano the heir of the basketwork common to these two /443/ nations. Let us notice in passing that the basketwork of the populations of tropical America has a certain unity. Nevertheless,

C
286

Fig. 101. Technique of the net of Fig. 99 (Technique V, according to Nordenskiöld, 9, p. 208).

C it was in the Guianas that it reached perfection.
285 After their great migration to the foot of the Andes, the
171 Chiriguano seem to have adopted basketwork of a new technique,
174 which doubtless was unknown to their ancestors and racial brothers in Paraguay and Brazil. This technique is characteristic of all the baskets I am putting under the heading of wicker work
Ce /named in English/ in the following pages. As we shall see,
[285] this technique also exists in the Guianas, and it is possible that
[171] it was brought into the Bolivian Chaco by the Arawak nation
[174] of the Chané. The center of dispersion of the Arawak must be

Ce 101 174 /443 cont./ the center of dispersion of the Arawak must be placed to the north of the Amazon, and before the Chiriguano invasion the Arawak tribe of the Chané was established over the whole extent of the territory now occupied by the former.

C 285 171 Beside this technique another exists, known to the Chiriguano since time immemorial and well before their great migration. The English-language ethnographers give it the name of twilled work. No other type of basketwork is so widespread. This technique is preponderant in all of tropical America from the Antilles to Paraguay and in the south stops at the Chaco. The Chiriguano are the only Indians of the Chaco among whom twilled work is in current use. This type of basketry used to exist on the coast of ancient Peru, but its importance there was not great and it appears only in work baskets.

C 285 184 Basketry in wicker work and that in twined work do not have an identical distribution among the Chiriguano. Baskets of the first kind are numerous in the villages of the upper Pilcomayo (Saladito, Salado Grande and Chico, Ibopeytí, and Yumbia) and go as far as the Ivu mission. They stop, or are rare, in the rest of the Chiriguano country, notably in the Caipipendí valley, where baskets of the second type (twilled work) predominate almost exclusively. These are widespread there, and the beauty of their workmanship, the embellishments with which they are provided, put them well above the basketwork of any other zone and even above that of tribes living in regions richer in palm trees.

C [126] In the huts of the upper Pilcomayo I collected several baskets in twilled work, but they were rare there and often incomplete and torn. I had the impression that they had arrived there by way of commercial exchanges. In any case, the Indians no longer plait baskets of this type, and it is possible that their disappearance has given value to the specimens of them which remain. That would explain the absence of any new specimen and the preservation of ancient baskets almost beyond usefulness. Be that as it may, at present the true center of basketry in twilled work is the Caipipendí valley, and that of the basketry of /444/ wicker work, the region of the upper Pilcomayo. Since the living conditions of the

C [178] Chiriguano in the missions north and south of the Pilcomayo have undergone deep modifications, I do not know what the respective

/444 cont./

285 distribution of these two techniques must have been in former times.
184 We shall find this difficulty every time we consider the diffusion of a cultural element peculiar to these Indians.

285 Wicker work basketry has undergone strong European influence.
177 The agents have been the half-breeds of the department of Tarija, who live in constant contact with the Chiriguano. This foreign influence on the baskets belonging to this technique is manifested by modifications of the original forms and improvements of details, such as horseshoe handles.

285 Among the Chiriguano I did not find a single basket woven
171 with the technique called "in spirals" (coiled basketry /named in English/), although in olden times it was in use among the Andean populations who used to and still do live in contact with the Chiriguano. Basketwork "in spirals" has continued on the altiplano, as the basket of Fig. 103, which I bought in La Quiaca, proves.

Basketry in "Wicker Work"

285 Mason (p. 228) designates under the name of wicker basketry a type obtained with the following technique: a rigid framework composed of thick, solid elements is intercrossed by thinner, more flexible elements. In the course of this work I shall call warp the rigid elements of the framework, and the ones crossing them, woof. The woof passes alternately over and under each element of the warp. This technique is well known to us: it is that of our wicker baskets, trunks, and back baskets (see Fig. 105 /see p.295 /).

Because of its very simplicity we have a right to suppose that this technique is old. It is only a variety of checker work /named in English/, the most elementary of all the techniques. By checker work we understand the process which consists of interlacing flexible bands so as to obtain a checkerboard design. The only piece of basketry made with this technique that I know of in the region we are concerned with is a basket that Eric von Rosen

/444 cont./

285 (1, Fig. 134, p. 122) obtained from some Choroti who were
[114] camping near Tatarenda. I share the opinion of this explorer, who considers this object as of Chiriguano origin.

In spite of its simple and archaic character, basketry in
[171] wicker work is rare in South America. According to Nordenskiöld (10, p. 171, and 11, p. 198), it is found among the Araucan, Yurakare, Atsawaka, Tambopata Guarayú (Chama), Yamiaka, and the Indians of Guiana, in particular those of the Roroima region.

1. Latcham, R. E., "Ethnology of the Araucanos," in The Journal of the Royal Anthropological Institute of Great Britain and Ireland, Vol. 34, London, 1904, cited from Nordenskiöld, 10, p. 171.

/446 cont./

285 171 This information needs to be completed. The technique called wicker work was apparently known to the ancient Diaguite. A vessel from one of the Andean valleys in Tucuman province bears imprinted on its base impressions left by a tray or basket in wicker work, upon which the potter had placed this receptacle when the clay was still soft (Fig. 102). This discovery did not surprise me: already, and for a long time, I had supposed that this manner of plaiting baskets was not foreign to the peoples of the Andes. How otherwise could one explain the occurrence of wicker work among the half-breeds and Indians of Tarija department, the Araucan and Chiriguano Indians of the upper Pilcomayo?

Guiana forms a second area of dispersion of this technique without, however, its being very common there. The small bags in which the Patamona put the cotton with which they provide the arrows of their /447/ blowguns before blowing them are in wicker work, the same as the pegalls with the so-called "armadillo" motifs of the Arawak, Patamona, and Makuši /Macusi/. The baskets in the form of carafes or bottles of the Siusí /Siusi/ and Kauá /Caua/ of the Aiary River are also good examples of this technique. (On the modalities and distribution of this technique, see Roth, p. 140 and Plates 104, 105, and 106, and pp. 329-331.)

The distribution of this technique is wider in North America. It is known to the Indians of eastern Canada and abounds in /Fig. 102 appears here/ southern Mexico and in Central America. It appears scattered here and there on the Pacific Coast and in the interior basin.

Most of the fish weirs, the enclosures for stopping game during hunting drives, and the coarse baskets serving for the transport of numerous objects are made in this technique.

285 323 If one examines the baskets of this type among the Chiriguano, one will doubtless be struck by the fact that several of them assume the form of pottery pieces. This resemblance is further accentuated by the fact that some (see Plate LXXV, 2 /see p. 299/) are provided with lateral handles in imitation of vessels. The interplay between these two industries is evident.

/448/

285 171 172 The horseshoe handles which surmount some of these baskets (Plate LXXV, 1 and 3) seem to me to come from imitation of European or half-breed basketwork. Among the half-breeds of the eastern slopes of the Andes I found baskets which had exact replicas among the Chiriguano (see, for example, Fig. 108 /see p. 302 /) and attested eloquently to the borrowing of the latter.

285 171

Fig. 102. Base of a vessel from the mountainous region of Tucumán Province, and bearing the impressions of a tray or basket in wicker work, on which it rested during its manufacture.

Besides, the Chiriguano give the Spanish name of canastos to baskets of European form /Fig. 103 appears here./

Among the baskets in wicker work there are some (Plate LXXV, 4) which in form and technique are singularly reminiscent of the baskets of Brazilian Guiana which Koch-Grünberg (2, Vol. II, p. 221, Fig. 242 a, b, c) compares to carafes. (Cf. also Roth, Plate 104, Fig. C.)

[See p. 299--Analyst]

/448 cont./

Description of baskets in "wicker work"

285

Figure 104. Length, 20 centimeters; width, 14 centimeters; height, 14.5 centimeters. Provenance: Ibopeyti (upper Pilcomayo region).

This little basket was made by the technique called wicker work, that is, the woody stems constituting it were intermingled in such a way that the elements of the woof pass alternately above and below those of the warp. There are ten of the latter: four go in the transverse direction and six in the longitudinal. They are crossed over and held by the stalks of the woof. Plate LXXIII gives a very exact idea of the technique I have just tried to define.

[415] →

Fig. 103. Small basket in spiral basketry (coiled basketry). Bought at La Quiaca. (2/3 nat. size.)

The fibrous stalks which constituted the warp and went far beyong the rim of the basket were bent back in an arc and fastened into the fabric. They were slipped into it beside another element of the warp after /449/ crossing the neighboring element (see Fig. 105 /see p.295 /). Because of this, the little sides of the basket seen in Figs. 104 and 105 seem to be formed by a warp of which each element is double. The rim is regular and strong.

The basket is provided with a suspension cord of vegetable fibers. I do not know the scientific or common name of the plant from which the stalks used in the plaiting of this basket were taken. They are flat, regular, and rectangular in cross-section.

/449 cont./

285 Nordenskiöld (10, Fig. 53 B) published a basket of analogous shape and identical technique.

Plate LXXIV, Figure 1. ? Height, 16 centimeters; maximum diameter, 14 centimeters. Provenance: Saladito (upper Pilcomayo).

The warp is composed of 12 elements crossing one another at the base in the shape of a quadrilateral, that is, in groups of three (see Plate LXXVI, 1 /see p.300 /). The woof, like the warp,

Fig. 104. Basket in wicker work with cover. Prov.: Ibopeytí. (1/3.5 nat. size.)

is made of fibrous, flat, thin strips. The ends of the warp which passed beyond the rim have been folded back and slipped into the fabric.

Plate LXXIV, Figure 2. Height, 16 centimeters; maximum diameter, 18 centimeters. Provenance: Ivu.

The technique of this basket is identical with that of the preceding specimen. Only the raw material is different. The tigellas composing it are very thin and lend themselves less well to regularity of the /450/ fabric. For this reason the elements of

[See p. 298-- Analysr]

/450 cont./

285 the warp are double. It is composed of 32 tigellas arranged in pairs, which, in reality, gives 16 elements. They cross at the base, forming an octagon somewhat like Plate LXXVI, 2.

Plate LXXIV, Figure 3. Height, 13.5 centimeters; diameter, 11 centimeters. Provenance: Ivu.

The framework of this basket is made of uneven, coarse stalks. The base is composed of fine, close-woven tigellas. Some stalks of the warp have been split, then spread to form two distinct

Fig. 105. Detail of the technique of the rim of the basket of Figure 104.

elements (see Fig. 106 /see p.301 /).

Plate LXXIV, Figure 4. Height, 13.5 centimeters; diameter, 11 centimeters. Provenance: Tintapaw (Alto Pilcomayo).

This basket is identical with the one we have just described, except that the rough and brittle stalks make a thick, coarse fabric.

Plate LXXV, Figure 1.[1] Height, 19 centimeters; diameter, 18 centimeters. Provenance: Timboy (region of the Saladito River).

This basket differs from the preceding ones only by the shape of the horseshoe handle surmounting it. This is composed of twisted fibers exactly as in our household baskets. There are 12 warp elements, arranged in groups of three, radiating from the base and forming a quadrangular figure as in Plate LXXVI, 1.[2] Some stalks of the woof have been dyed pink.

[1] [See P.299 -- Analyst]
[2] [See P. 300 -- Analyst]

/450 cont./

285 Plate LXXV, Figure 2. Height, 16 centimeters; maximum diameter, 17.5 centimeters. Provenance: Ibopeyti (upper Pilcomayo).

This basket deserves a place apart by virtue of its general shape, the handles it has, and the care with which it was plaited.

The handles with which it is provided are formed by an element of the woof which, after making the round of the warp, takes off from it to pass three times, perpendicularly, under the framework of the basket. /Plates LXXIII-LXXVI appear here./

/451/ The handle thus obtained is reinforced by a supplementary tigella which laces among the elements just as the woof does (see Fig. 107 /see p.301 /). Plate /Fig. 106 appears here/ LXXVI, 2, shows us the fashion in which the basket-maker proceeded in order to group the warp elements, which are 15 in number.

Plate LXXV, Figure 3. /Fig. 107 appears here./ Height, 16 centimeters; maximum diameter, 15 centimeters. Provenance: Ñawirenda (mouth of the Salado River).

The framework is composed of flat, brittle stalks always going in groups of two. The added handle is made of twisted fibers. [177] The general form of this basket betrays European influence.

Plate LXXV, Figure 4. Height, 15 centimeters; diameter, 12 centimeters. Provenance: Ñawirenda (mouth of the Salado River).

The warp is formed of flat, thin elements wider than those of the woof. The handles /452/ are added on. They are formed by a stalk coiled on itself and passing three times under the woof elements. One stalk interlaces there exactly as the woof interlaces with the warp. /Fig. 108 appears here./

Plate LXXVII, Figure 1.[7/1] Height, 8 centimeters; diameter, 16 centimeters. Provenance: Ibopeytí (upper Pilcomayo). /Fig. 109 appears here./

This little, slightly rounded basket is remarkable for its rigidity and strength. The technique is still the same as we have examined thus far. The warp is composed of 15 elements arranged at the base exactly as on Plate LXXVI, 1.

Plate LXXVII, Figure 2. Height, 9 centimeters; width, 11 centimeters. Provenance: Tintapaw (mouth of the Salado River, upper Pilcomayo).

/Oil case./

285 This small basket is closely related to the preceding one in its technique. The warp is made of four fibrous bands which cross in octagons and are then divided into three /Plate LXXVII appears here/ /Oil/ or two diverging elements which form the warp (see Fig. 108 /see p. 361/).

Figure 108. Height, 12 centimeters; maximum diameter, 18 centimeters. Permanent Inc.

[291] There is no doubt that this basket is a pure and simple imitation of European ware. I have seen baskets identical from the point of view of form and technique among the half-breeds of the department of Tarija.

5. Basketry in "Twilled Work"

The term twilled work designates the basketry technique in which the weft elements pass over two or several elements of the warp so as to produce with the connection of the fabric diagonal motifs and an infinity of others all based on the changes of rhythm in the number of the warp elements which have been skipped over (Mason, p. 78).

286 In the pages where I dealt with wicker work I have already had occasion to note the affinities which not only the technique but even the form of Chiriguano baskets offer with those from Guiana. The analogy is still more striking with twilled baskets. We have among the Chiriguano the exact counterpart of the famous telescope baskets or pegall of Guiana. These are rectangular baskets in two parts, one fitting into the other and sliding horizontally (Plates LXXVII, LXXX, and Figs. 110 and 111). Nordenskiöld (11, p. 178) has given us a map indicating the distribution of baskets provided with a cover into which they fit more or less completely. These "telescope" baskets are particularly abundant north of the Amazon. I suspect that the famous bananas of the Tupinambá, in which the latter put their feathers, must have belonged to this type. Among the Tupi-Guarani, the only ones where this type of closure has been noted are the Guayakí, Pawaxa, Mbaká /Mbaá/, and Oyampi (Métraux, 5, p. 311).

/453 cont./

285 [531] [171] Another point of contact between the basketry of the Chiriguano and that of the Indians of the east and north of South America is the occurrence of baskets in twilled work in which elements of two colors are combined, following a changing rhythm, to produce geometric figures. The basket of Plate LXXVIII, with the frets standing out in black on the sides, is representative of this form of art, which, in the Guianas, shone with a lively brilliance.

Baskets of the pegall or "telescope" type are divided into two categories according to the principle of their plaiting. To make one kind (Plate LXXIX, and Fig. 111), the basket-maker began by crossing the warp elements with one another in such a way that they radiate from a single center. Then he interlaced according to a binary rhythm the tigellas which /454/ left the common center like so many rays. Baskets of the second category have been plaited by intermingling the elements of the warp and woof at right angles so as to make the bottom without any precise point from which the elements come away (Plate LXXX, 2). The photographs (Plates LXXIX and LXXX, 2) show what I mean better than any description.

[824] The stalks which serve for the fabrication of baskets in twilled work are taken from the leaves of the karandaí palm (Copernicia cerifera Mart. or Copernicia australis). The leaves are cut into fine strips and softened by immersion.

Sieves and fire fans belong in the basketry called twilled, but I shall deal with them in a separate chapter.

Description of baskets in "twilled work"

Plate LXXVIII, Figures 1 and 2. Height, 7 centimeters; diameter, 17.5 centimeters. Provenance: Caipipendí.

This basket belongs to the category of those called "telescopes" or /Fig. 110 appears here/ pegall of Guiana. Plate LXXIX which shows us the detail of its upper surface also indicates its technique with sufficient clarity so that no diagram is necessary. The warp is composed of 32 flexible elements radiating from a common center. They begin by interlacing for two rounds; then,

[See P. 308 -- Analyst]

/454 cont./

285 the basket-maker having introduced black-colored strips into the fabric, these in turn go to cross /Plates LXXVIII-LXXX appear here/ /455/ the first and permit obtaining the figures seen in Plate LXXVIII, 1 and 2.

Figure 110. Height, 14 centimeters; diameter, 35 centimeters. Provenance: Caipipendí. /Fig. 111 appears here./

This large basket is exactly like the preceding one from a technical and decorative point of view. Unfortunately, the dark strips are scarcely distinguishable from the others, whether their color has been rubbed off or whether they have always been thus. The detail of one of the sides is represented on Plate LXXXI, 1. /Fig. 112 appears here./

Fig. 110. Circular basket in twilled work. Prov.: Caipipendí. (About 1/3.5 nat. size.)

Figure 111. Height, 9 centimeters; width, 12 centimeters. Provenance: Caruruti.

This basket goes in the same category as those we have just examined, except that it does not show any motif originating from an interlacing of dark and light stalks.

285

Fig. 112. Hat in twilled work. Prov.: Carurutí. (About 1/5 nat. size.)

/456/

285 Plate LXXX, Figures 1 and 2. Height, 8 centimeters; width, 12 centimeters. Provenance: Carurutí.

The fine strips of palm leaves which make up this basket are wider and more brittle than the ones constituting the preceding one of identical shape but different technique. The fibers, instead of radiating from a single center, simply cross, following the rhythm which Figure 2 of the same plate permits examining.

[296]

Fig. 114. Chiriguano cigarette case in twilled work. Prov.: Carurutí. (2/3 nat. size.)

[291]
[294]

Figure 112. Height, 10 centimeters; diameter, 36 centimeters. Provenance: Carurutí.

This hat is made exactly according to the technique of the baskets of Plate LXXVIII and Figs. 110 and 111.

/456 cont./

285 A half-finished hat (Fig. 113) which I was able to acquire
294 at Carurutí shows well the process of fabrication. The basket-maker begins by making the crown of the hat, interlacing 36 tigellas and shortly afterward adding other supplementary stalks whose ends are seen protruding. When the hat is finished, all those projecting beyond the fabric are cut off. The rhythm of the crossing elements is twofold.

285 Figure 114. Length, 10 centimeters; width, 8 centi-
276 meters. Provenance: Carurutí.

This cigarette case faithfully imitates the ones the Chiriguano have seen in the hands of half-breeds or creoles. Nevertheless, its technique is interesting, for it is purely indigenous. The /Plate LXXXI appears here/ /457/ tigellas of karandaí leaves cross in a twofold rhythm.

The Chiriguano are not great smokers and it is rare to find cigarettes among them, so that these cases seem to me to be made for amusement rather than for their practical utility.

Sieves

415 There is no Chiriguano housewife who does not have at
252 her disposal at least two sieves. The importance of this kitchen utensil corresponds to the considerable role of corn
[262] flour in their food. Of the 12 different dishes that the Chiriguano prepare from this grain, there are six or seven in which it appears in the form of flour. Kāwi itself is made with corn pounded in a mortar and then passed through a sieve. Sieves serve also for cleaning beans and ridding them of the stones and dust accompanying them. Finally, sieves are used for straining kāwi after cooking and for separating the liquid, which is to ferment, from the marc or temiču. They can also be used as simple baskets, and I have seen some holding cotton seeds.

Plate LXXXI

285

1. Details of the technique of the basket of Figure 110.

2. Details of the technique of the sieve of Plate LXXXII.

/457 cont./

C 415 285 Sieves are of two kinds. The first category includes those whose meshes are close together and composed of fine strips of karandaí leaves intercrossing in a binary rhythm. Sieves of this type belong in the basketwork called twilled. The Chiriguano give them the name of urumpé and use them in preference to the others, whose usage is limited.

The second category includes sieves with wide meshes. The strips forming them cross in checkerwork, that is, the woof passes alternately under, then over, an element of the warp. The Chiriguano designate sieves of this type by the name of urumpesa, and they use them for sifting ground corn when they wish to obtain a coarse flour.

C G 415 285 171 Some of these sieves are real works of art, but they cannot be compared with the magnificent specimens from Guiana, on which the alternation of the black and white elements produce geometric figures of the handsomest effect. It is probable that formerly the Chiriguano had identical sieves, as can be supposed from the one on Plate LXXXII, which is composed of a warp and a woof whose gray and white elements are arranged in such a way as to form dark and light bands on which concentric squares stand out.

C 415 171 The sieve is widespread in all of tropical America, where it is used not only for corn flour but also for that which the natives make from bitter manioc. It is unknown to the primitive populations of the Chaco, who have not even felt the need to borrow it from the Chiriguano or Chané. The populations of the Inca Empire /458/ did not know its use. The urumpé is a utensil common to nearly all the Tupi-Guarani tribes; it has been described or noted among the Tupinamba, the Guarani, the Kainguá /Caingua/, the Guarayú, the Pauserna, the Apiaká /Apiaca/, and the Parintintin. The Chiriguano must therefore have taken C [174] along with them when they emigrated from Paraguay, which does not exclude the fact that they may also have found it in use among the Chané.

/458 cont./

285 I was present at the making of a sieve at Caruruti in the
[824] Caipipendí valley. Here is what I noted about it: "The raw material is furnished by the leaves of the karandaí palm (Copernicia australis), which is cut into fine strips. The plaiting is done very simply: they form a square by crossing at right angles the elements of the woof and warp, following the rhythm of 1 (one element over, the other under, etc.) In order to slip in the woof elements, it suffices to raise each time all the strips

Fig. 115. Detail of the rim of the sieve of Plate LXXXIV, 2.

of the warp which have already been crossed by the woof. When the sieve is plaited, they choose a straight, flexible branch and carefully split it in two. Each of the two halves is bent into a circle so that one of the hoops can fit into the other. The unplaited elements of the warp and woof are inserted between the two hoops (see Fig. 115), then securely tied. Since the hoops have a diameter a little smaller than the width of the woven square, the result is that when it is fastened into the circle, it bulges out. All the ends which stick out are cut off."

285 The string used to attach the sieve to the hoops is made in the
283 following manner: "The bark of a tree (embira) is taken off in wide, long strips, in turn divided into finer lengths. They take two of these lengths, moisten them with saliva, and roll them on the right calf, each one separately, then the two together. When the cord must be of a certain length, they have to add new pieces. These plices must be made without changing the diameter of the cord and without any gaps. For that they are always careful

/458 cont./

285 to roll together two strands of unequal length. When one of them
283 has been rolled to the end, another is added. Any possibility of breaking is thus avoided. The movement of the hand is downward when they form a strand, and upward and downward when they roll the strands together to make the cord. The cord, at first fine, grows thicker, but slowly."

285 Plate LXXXII. Diameter: 43 centimeters. Provenance: Igüembé valley.

/Plate LXXXII appears here./

/459/ This urumpé is a remarkable specimen from every point of view. The elements composing it cross according to a binary rhythm, that is, each

Fig. 116. Sieve in the process of being made. Prov.: Saladito (upper Pilcomayo). (About 1/4 nat. size.)

element of the woof passes under or over two elements of the warp. Darker stalks alternate by sections with lighter ones and form gray and light-colored bands which run parallel and cross at right angles.

It will be noticed that, having arrived at the vertical diameter, the elements of the woof, which until then had obeyed a binary rhythm, change it abruptly. The first time, the stalk crosses over; the second, it passes under three elements of the warp;

[TEXT Continues on P. 318]

285
415

Plate LXXXII

Sieve (urumpé). Prov.: Igũembé Valley. (1/3.5 nat. size.)

/459 cont./

285 the third, it again passes under one single element, then again three elements are crossed over, then only one, to recommence passing under three elements, then again under one. This new rhythm continues along the whole length of the vertical and horizontal diameter and permits the formation of the sides with concentric squares (see Plate LXXXI, 2 /see p. 313/).

/460/ Plate LXXXIII, Figure 1.[1] Diameter: 43 centimeters. Provenance: Ivu.

The technique and decorative process are exactly the same as for the preceding specimen, with the exception, however, of the alternation of the dark and light fibrous bands.

Plate LXXXIII, Figure 2. Diameter: 33 centimeters. Provenance: San Luis region.

This urumpé is made according to the same principle as the other sieves, but it does not involve the change of rhythm along the two diameters. Consequently, it does not appear to be embellished with any geometric motif. The warp and woof elements always cross in pairs.

Plate LXXXIV, Figure 1.[2] Diameter: 42 centimeters. Provenance: Saladito.

The urumpesa are distinguished from the urumpé not only by the greater width of the fibrous strips composing the fabric but also by the technique of this fabric. The woof elements cross regularly those of the warp, passing now under, now over, but each time they cross only one single element. This technique is the one Mason calls checker work.

The intervals between the elements are also larger and facilitate the passage of big kernels of corn.

Plate LXXXIV, Figure 2. Diameter: 40 centimeters. Provenance: Saladito.

The principle of the technique is the same as for the preceding sieve, with the one exception that the warp and woof elements are very wide.

/460 cont./

Fans or Fire-blowers

C 372 184 [171] Great was my surprise when upon arriving in the Chiriguano villages of the upper Pilcomayo region I found fire fans identical with those of the Indians of Brazil and the Guianas. Nordenskiöld (10, p. 56) barely mentions them and insists on their rarity. The fact is explained by the absence of this cultural element in all the rest of the zone inhabited by the Chiriguano. In most of the villages they use old hats or fragments of baskets to fan the fire.

C 372 285 Plate LXXXV. Length, 28.5 centimeters; width, 31 centimeters. Provenance: Saladito.

The making of these fans is rather simple. The leaves composing them cross in a rhythm of two. On the edge the stalks have been bent back and, passing again across the fabric, are interlaced to form a pucker on each side. The free ends /Plates LXXXIII-LXXXV appear here/ /461/ have been plaited on top and one part passed into a split stick forming the handle (Fig. 117).

C [171] An important remark must be made on the subject of these fans. They /Fig. 117 appears here/ differ little from the fans made of a single pinnate palm leaf, such as are found in Brazil and Paraguay. C [824] The Chiriguano, having no palm trees of this species in their new homeland, had to /Fig. 118 appears here/ adopt the palmate leaves of the karandaí. They replaced the petiole, which forms the handle, with the split stick to which I have alluded. (Max Schmidt, 2, Figs. 106 and 107, pp. 219-220.)

C 285 353 797 [824] /462/ "Flowers"

On feast days the Chiriguano of the Franciscan missions decorate the church with artificial "flowers" which they make from leaves of karandaí palms. These decorations are of ancient origin and derive directly from the straw amusements /jeux/ still made by the Indians in various /Fig. 119 appears here/ regions of America, notably in the Guianas. G 285 353 The natives of the latter region often hang them in their houses where they perhaps

serve as amulets, and, in any case, as ornaments. (Roth, pp. 497-499, Figs. 241-244 and p. 270; Koch-Grünberg, 2, Vol. II, p. 244.) In the same way the Chiriguano Indians decorate their huts with these figures, which they take care to have blessed. Exactly as in Europe they keep palm branches as lucky charms. Rosen (1, p. 61, Fig. 51) publishes a similar straw amusement which he found among the Chorotí and which was pointed out to him as an ornament worn on the forehead. This explorer suspects the exactitude of this information and supposes that a ritual object is concerned. In reality, it is only a "flower," which the Chorotí described by Rosen probably received or bought in some Chiriguano mission. It is enough to compare the figure of it that he gives us and ours in order to be convinced of this.

Figures made of palm leaves are not, however, unknown to the other Indians of the Chaco. The Ashluslay sold me a diadem braided according to this principle (Fig. 119) and Rosen (1, Fig. 44, p. 46) reproduces an identical head-ornament which he bought from a Chorotí tribe.

/462 cont./

Chapter X

Masks

532 The handsome masks, whose description I shall give
796 further on, are worn during the carnival festivities. Difficulties
[122] with the Bolivian authorities kept me from arriving in the Chiriguano villages at the time when they were taking place. When I finally found myself among my Chiriguano friends, they had emptied the last vats of kāwi and were /463/ in their
[126] normal state. Thanks to the closeness of the feast I was able
[241] to collect the masks published here; ordinarily they are destroyed or used in the fields as scarecrows.

115 My host, Mr. Alberto Torrejon, who lives at Ibopeytí on the upper Pilcomayo in an Indian village, gave me some very interesting details about the ceremonies and merrymaking in which he had just participated. I transcribe them as given.

796 At my approach of any festival, the carnival, for exam-
775 ple, the first act consists in causing the souls of the dead to flee.
789 If this precaution is not taken, the widows and relatives of the deceased will have to abstain from taking part. For the purpose of purifying the air, a drum is beaten, and the whole family /Fig. 120 appears here/ which has lost a member weeps and shouts. When the spirits have cleared out, the drum, in a joyful rhythm, gives the signal for merrymaking.

796 The festival is opened by a man and a woman who, with a stick decorated with flowers in hand, advance toward the middle of the square, followed by all the inhabitants in a long chain. When they have arrived at the middle of the area extending between the huts, the couple plants this sign, thus giving the signal for the festival.

[535] The chain breaks up and small groups form to dance in a ring. Their dance consists in advancing and retreating in triple time to the sound of flutes and drums.

/463 cont./

796 The attraction of the carnival consists of the enormous
273 consumption of kāwi and alcohol which takes place then. Men
578 and women drink, one trying to outdo the other; and, under the influence of drink, old angers and secret hates are awakened and the most excited provoke each other and come to blows.

796
532

Fig. 120. Chiriguano Indians wearing masks. (Photo. by the R. P. H. Catinari.)

796
273 /464/ The "captain" must then call them to order and separate
578 the combatants.

Some people increase the tumult by blowing into their
796 sénéné (long whistles).
534

Sexual passions become aroused, and the men begin to
796 whirl around the women, whom they entreat, a calabash of
832 kāwi in the hand, while reciting to them in a singsong tone
786 pieces of verse of this type:
539

Epuka, puka maipora	Laugh harmoniously
Seve no	For me
Epuka, puka maipora	Laugh harmoniously
Seve no.	For me.

/464 cont./

796	Eyu sekuama	Come and kiss me
832	Semireko mi	My little wife
786	Diyuru emesie	Give me thy mouth
539	Tuisa dipota	I love thee much
	Se songo pe	With my heart
	Ime deresa ikavi	Thou hast pretty eyes
	Ime diyuro misiray	Thou hast a little mouth
	Tuisa dipota	I love thee much
	Pairamo ayporu deve.	For that I am going to ask for thee.

796 During this time young or old men with their faces
532 covered by a mask (afiawasu) run here and there, force the peo-
522 ple to dance by blows of a stick, play tricks on them, and address jokes to them.

796 The feast lasts as long as there is kiwi or alcohol. At
[273] the moment when it is on the point of ending, a final ceremony takes place. The rite of going out is similar to the rite of entering: the couple who planted the flowery stick tear it from the ground and go out of the village, followed by the afiawasu and all those who took part in the festival. The procession advances to a certain distance from the village to the sound of the flutes and drums. They throw away the masks and throw stones while shouting. The carnival is finished and everyone goes home.
[585] Some take along their new wife, for it is at this moment that most marriages are celebrated.

796 The carnival festivity such as I have just described in-
177 volves only a few elements borrowed from the half-breeds or
178 creoles, outside of the coincidence of dates. This is an ancient
[241] feast of a purely agricultural character, which the Chiriguano have acquired the habit of celebrating at the same time as the Bolivian carnival. Besides, the Indians of Ibopeyti are pagans.

796 The masked men are supposed to represent the spirits of the
241 dead, as their name indicates (afia: spirit; wasu: great). As in
171 the festivals of the Guianas and Central America, they come in numbers /Plate LXXXVI appears here/ /465/ to insure for their

Chiriguano masks (tovaraanga). Prov.: 1, Cuevo; 2, Tintapaw (upper Pilcomayo). (3/5 nat. size.)

C /465 cont./
796 descendants or relatives the fertility of the fields and the
241 abundance of the future harvest. These masked festivals have
[171] their counterpart in the famous ceremonies of the populations of
C the Negro River, the details of which Koch-Grünberg has made
[177] known to us. Besides, it is probable that the Chiriguano
borrowed these ceremonies, and especially the masks, from the
A Chané. It is the racial brothers of the Chané, the Arawak of
796 the Negro River, who celebrate these festivals with the most
241 splendor. The Chané of the Parapití still accord to these ancient
Ce rites more importance than the Chiriguano, and their masks
796 crowned with immense tufts of feathers are, it appears, more
241 sumptuous than those of their old Guarani enemies.
532

In the missions the carnival has lost its purely pagan
C significance and has become contaminated with usages which
796 the Chiriguano have borrowed from the half-breeds. Nino
[797] (pp. 267-270) gives a good description of them, of which I
[177] shall summarize the principal features.

C The festival is directed by a personage wearing an old-
[532] man mask. He stops at each corner of the square, recommending peace and harmony to all.

Then they give themselves over to different games: masked personages scatter bean pods or corn bran upon the dancers.

Young men, masked but almost entirely naked, daub
C themselves with mud and try to soil all those who have new
[177] garments. These two customs can have only a Bolivian origin.

Individuals who are also masked mime a combat between
C a jaguar and a bull which is finally put to death by a fanciful
796 butcher. Then they pass on to the pleasures of the dance. "The
535 dancers form a large circle by joining hands and dance thus
[536] three times. Three times also they squat down, and three more times they pass under the extended arms of a couple of the same circle, and finally the same number of times they press against one another, forming a big mass, their faces turned toward the outside and their hands folded. They remain in this position until another couple dances around them. These do not hold each other by the hand. The man chases the woman and tries to grab her. She avoids him and goes to hide in the middle of the others."

/465 cont./

796 Toward the end of the festivity, the men improvise a seat by crossing sticks. They have a child sit on it and form a bulwark for him with bamboos. The others come and rain a hail of blows on him, without hurting him, however. Then they have him get down and begin this ceremony over again three times in different places.

On the second lap, the masked individuals go from house to house and receive from each person the strangest objects: bean pods, watermelon rinds. On the third lap, young and old begin to weep.

To finish up, they go in a procession to throw away the masks and all wash their faces and hands.

/466/ Description of the Masks

Plate LXXVI

532 1. Mask of toroboki wood (light, soft wood). The face is painted white and framed by a black ribbon fastened with small wooden pegs. The eyebrows, mouth, and the parallel lines which cross the bridge /Fig. 121 appears here/ of the nose have been painted in black. The edges of the nose are emphasized with two green lines. On each cheek, two concentric circles, one black and the other green with a black dot in the center. On each side, a hole through which passes a cord serving to hold the mask over the face.

Small cavities along the periphery seem to indicate that at the time of the festival feathers were stuck along the edge of the mask exactly as on the following specimen.

2. This mask is the one which, in my collection, is in the best condition. The face, whitened with a substance similar to lime, is bordered with feathers stuck into the wood. The eyebrows are painted in black, as is the upper lip. The mouth is represented by a slit. The facial painting on both the cheeks and the forehead is green, except for the center dot, which in each disk is brown.

/466 cont./

532 The mask of Figure 121 comes from Tabacal near Oran, where it was acquired by Mr. Palavecino from Chiriguano

Fig. 121. Chiriguano mask from Tabacal (near Oran). Museo Nacional de Buenos Aires (Palavecino Collection). (1/3 nat. size.)

Indians settled in the region. Its dimensions are considerable. It measures 52 centimeters in length by 16 centimeters in width. It is painted white and the face is framed by a fringe of feathers. *I do not know the significance of the large ears which surmount it.*

Combs

C 302 G T [302] C [177]

Formerly, at the time when they carried out the conquest of their present territory, the Chiriguano wore a tonsure after the fashion of their relatives in Paraguay and the coast of Brazil, the Guarani and Tupinamba, who shaved the whole anterior part of the skull with a bamboo chip /467/ (see Métraux, 2, pp. 181-185) (1). Later, probably under the influence of the

1. Annuae litterae, page 407: "Cultus eorum singularis valde, coronis in modum nostrorum Sacerdotum utuntur, reliqui vero capilli ad ulnam circiter dimidiam pendent a tergo; corpora utplurimum variis depingunt coloribus."

(Their appearance [to the Chiriguano] is truly singular. They make use of a tonsure similar to that of our priests, and others let their hair hang down their backs to the length of an aune and a half. They dye their bodies with various colors.)

Chané or the Quichua /Quechua/, the Chiriguano abandoned the tonsure and let their hair grow, letting it fall over the nape of the neck and the back. They were content to cut it on the forehead from one temple to the other.

C 302 178

This hair style, still common in the last century, is tending to disappear in turn. The only ones who have remained faithful to it are a few old men and the inhabitants of several villages lost in the valleys of the upper Pilcomayo.

C [291] [648]

The Chiriguano who continue to observe the old style knot their long hair around their heads and hide it under a hat or a kind of turban when they go to work among the white men, for fear of being ridiculed.

/467 cont./

302 The women never cut their hair according to the custom of the other Indian women of the Chaco, so they have heads of long and remarkably soft hair. They gather their hair together [301] on the nape of the neck by means of a red or blue ribbon, which they knot on the forehead after passing it around the head (see Plate VI, 1 and 2 /see p. 73/).

302 Chiriguano women are extremely meticulous about their
515 hair and wash it nearly every day. For soap they use flitira seeds.
824
412
388

Fig. 122. Chiriguano stone mortar for crushing flitira seeds. Prov.: Ivo. (About 1/4 nat. size.)

which they crush in a little mortar (Fig. 122) especially intended for that use. The flitira seeds, rich in saponin, lather easily.

302 For me it was always a pleasant spectacle in the morning to see the women come back from the river with their hair twisted on the front of the head and fastened into a conical chignon. They would let it dry, then would begin to comb it slowly until it was soft and shining.

412 Two types of comb coexist among the Chiriguano. On the
303 upper Pilcomayo in the Igllembé valley and in Ivu, they are carved
184 out of a small board, and often the flat part which serves as the handle is cut out /468/ with art. In the Caipipendí valley and among the Chané, besides combs of the preceding type there are others composed of fine splinters of wood wedged between two splinters of bamboo and held in place by a clever plaiting of cotton thread forming a design.

/468 cont./

000 forming a design. Combs of this category generally have a double
412 row of teeth but sometimes one row is entirely covered by the
171 plaiting and is transformed into a handle (Nordenskiöld, 2, Fig.
[303] 109, p. 204. These two kinds of comb are also found in the Andean zone; but whereas the first is limited to this geographical area and especially to northwestern Argentina, the second, which includes all varieties of composite combs, has a vast distribution

[531]

Fig. 123. Composite comb made of fine splinters of bamboo. Chiriguano. Prov.: Caruruti. (1/5 nat. size.)

over all South America, in the Inca Empire as well as in Brazil. The Chiriguano doubtless used them well before they settled in their present location. It is not the same with the comb of carved wood, which they borrowed from the Chicha or the Humahuaca. With regard to two combs in my collections, one (Plate LXXXVII, 14) has a handle carved in the shape of a dog, and the other, a deer (Plate LXXXVII, 15). They strongly resemble a comb found in the Quebrada de Humahuaca, which is also surmounted by the silhouette of a quadruped (Debenedetti, 2, p. 247, Fig. 186). At Kipon in the Calchaquí Valley Debenedetti (1, p. 27, Fig. 16) discovered a comb whose upper part represents a human head, in which our author thinks he sees an idol with a sad expression (!?). The half-breed women of that valley have kept up to our times the ancient indigenous combs of algarroba wood.

/468 cont./

412 171 At La Paya, Ambrosetti (6, Fig. 254, p. 484) discovered combs cut out of a small wooden board and some composite combs. Instead of simply recording the coexistence of two different types of combs /Plate LXXXVII appears here/ /469/ in the same place, a very natural phenomenon by reason of the heterogeneous character of the culture of La Paya, Ambrosetti puts forth the strange hypothesis that these combs served for carding wool, without taking the trouble to inquire whether this instrument was known in pre-Columbian times.

303 322 467 412 The making of combs, like all wood carving, is an essentially masculine job.

412 174 The table on Plate LXXXVII indicates my idea of the morphological evolution of the different forms of combs which I have collected.

Chapter XII

Furniture

352 [114] Since the diverse cultural elements which constitute the furniture of the Chiriguano have been completely studied by Nordenskiöld (10, pp. 8-22), I shall limit myself to mentioning them here, insisting only on several details. /Fig. 124 appears here./ /See p. 338./

[342] Let us enter a Chiriguano hut. The door we open is a kind of screen of reeds or a cowhide hardened in the sun. Daylight penetrates the interior through this opening. The only important [513] piece of furniture is a wooden cot (Fig. 125), a kind of bedstead generally occupied by two persons between whom one or two children come /470/ to slip in somehow or other. Nor do the Chiriguano hesitate to sleep on the ground on an oxhide, which they spread out in front of their house. On the upper Pilcomayo, in nearly all the huts one can /Fig. 125 appears here/ /See p. 339./ see one or two hammocks which serve either as seats during the day [286] or as cradles for small children. Their technique, that of the [177] double thread (Doppelfadentechnik), continues an old Guarani

352 and Arawak tradition. Some hammocks, not many, are crudely
[256] woven. The threads which /Fig. 196 appears here/ compose
[197] them are of wool: formerly they were doubtless of cotton (Plate XXXVIII).

352 It is a delicate business to persuade a Chiriguano mother to
354 sell you the hammock of her nursling. She fears that an /Plate
754 LXXXVIII appears here/ /471/ evil-intentioned person will profit by the fact that the fabric is impregnated with urine, in order to indulge in magical practices which would make the new-born child die.

342
351

Fig. 194. Chiriguano hut. Saladito (upper Pilcomayo). (Photo. A. M.)

353 Along the walls are lined up vessels of all dimensions
[415] which /Figs. 197 and 198 appear here/ are kept there for the drinking feasts: some contain seed, others serve as linen cupboards or provision bags. On the walls, generally in the four
[352] corners, hang reed screens or loops made of palm leaves /Fig. 199 appears here/ which take the place of shelves (Figs. 198 and 199).

/475 cont./

353 and 177). Everything in the world can be found there: small
vessels, baskets, boxes, packages carefully wrapped in cloth,
in short, a thousand little objects which the Chiriguano women
regard as their treasure. From the roof hang hooks from which
are suspended household effects or supplies. These hooks are
generally of wood, but there are some also which are formed
by a deer foot bent back and dried in the sun (Fig. 120).

Every chink in the walls is transformed into a hiding-place
where the women put their scissors, the men their knives or
combs. /475/ Bows and arrows are slipped between the struts
of the roof.

In some huts whose walls are plastered with earth, the
Indians arrange niches in the shape of swallows' nests, which
serve as rudimentary cupboards. Might there be in that a
distant remembrance of the niches as characteristic of Inca
houses? It is possible.

352 The inhabitants of each hut sit on the cots or on /Figs.
516 120-122 appear here/ chairs with backs very well copied from
(199) those of the creoles. The women generally squat on the ground.
(198) On the upper Pilcomayo, one still finds benches with two seats
(Fig. 170), a cultural element which the Chiriguano inherited
from their ancestors of the Amazon basin.

356 The fire for cooking is lighted in the middle of the hut.
(354) Chiriguano dwellings are clean. I have never caught fleas or
other vermin there as I have in the ranches of creoles or half-
breeds. The women sweep their huts at least once a day. One
is rarely disturbed there by mice (Fig. 173).

/473/

Chapter XIII

Toys and Games

524 [126] All the toys which Chiriguano parents make for their children or the latter put together themselves are represented in my collections. Nevertheless, I consider it useless to give a description of them, for Nordenskiöld (2, pp. 193-200) has been greatly /Fig. 133 appears here/ concerned with this and has reproduced all of them. Simply as a curiosity I sketch a doll clothed in the traditional tipoy and the hair of which is intertwined with a ribbon in the Chiriguano manner (Fig. 133). A little bag (Fig. 134) contains a whole assortment of tipoy in miniature. Minuscule vessels and baskets (Fig. 109) have been made for the use of little girls, who, in playing, thus learn little by little to become excellent housewives. [868]

String figures. I have never seen children make string figures (cat-craddle /cat's cradle/), but I know they are acquainted with them. At Caruruti an Indian amused himself by executing a whole series for me, some of which were sewn by the Indians themselves onto the leaves of my notebook. According to the figure they wanted to produce, they used both hands or helped with the mouth and feet (Figs. 135 and 136). The "full moon" (Plate XXXIX, 3) /Fig. 134 appears here/ was made by my Indian who, having sat down, used feet and hands.

524 121 String figures have extraordinary interest from the point of view of comparative ethnography. If they prove themselves identical in two different regions, they can testify to trade or migrations, like certain games which pass from one region to the other without modifying their character or modalities. Games are the most stable of all cultural elements since they are independent of the environment, race, or way of life, at least in general. It is urgent to collect in South America /474/ the greatest possible number of string figures in order to be able to study their distribution. For this continent we know only a very small number, but this, insignificant as it may be, already allows us to establish some very curious facts.

[Text continues on p. 346]

1: Métraux--345 E-5 (1929) 1930 SF10 Chiriguano SF10

524

Fig 134. Miniature clothes bag, full of little tipoy. Chiriguano. Prov.: Ibopeytí. (1/2 nat. size.)

/474 cont./

000 already allows us to establish some very curious facts. Thus, among
524 the string figures I have brought together, three are exactly like
171 figures from various tribes of the upper Negro River and the Guianas.
The first is the one the Chiriguano call "full moon" (yasiwasu)
(Plate LXXXIX, 3) and we find it again among the Siusí of the
Aiary River under the name of "tapir intestines" (Koch-Grünberg, 2,

291
524

Fig. 135. Indian executing the string figure called "make designs" (mboi-kwatía). Caruruti. (Photo. A.M.)

524 Vol. I, Fig. 69 c, p. 123), among the Tukano /Tucano/ designated
171 as being a "tapir with its four feet," and among the Betoya simply
as "a tapir" (id., Vol. I, p. 253, and Vol. II, Fig. 73, p. 131).

Our "star" (yasi-tata) (Plate LXXXIX. 1) is interpreted as a "spider" by the Siusí (id., Vol. I, Fig. 69 g, p. 123) and the Kobeua (id., Fig. 73, p. 131), but the Wapiana /Wapishana/ see a "star" in this figure, exactly like the Chiriguano (cf. Roth, Fig. 267, p. 513).

/474 cont./

524 171 The "snake designs" (mboi kwatía) (Plate XC, Fig. 3) have their equivalents among the Akawoi, Arawak, Wapiana, and Patamona (Roth, Fig. 289, Fig. 526), but represent, according to these Indians: "four fish walking" (sic). In his book on the Indians of the Chaco, /Plates LXXXIX and XC appear here/ /475/ Nordenskiöld (2, Fig. 25, p. 71) gives the photograph of a Choroti child who has just executed a cat-craddle identical with our "snake design." It is regrettable that Nordenskiöld has not given its meaning.

524 The string figure on Plate XC, 2 represents the mark borne by the woolen blankets (jergón) the creoles put under their saddles. There is no doubt that the indigenous meaning of this figure has been forgotten and replaced by a new appellation. This is probably what has happened also to the cat-craddle (Fig. 136) named culo de caballo /horse's rear end/. /Fig. 136 appears here./ /See p. 350./

String figures can be subdivided into two categories, the first including all those which form a stable figure like a design, and the second those which represent an object, animal, or organ by synthesizing its characteristic movement.

Thus the string figures on Plates LXXXIX-XC belong to the first class, but the one which the Indian on Figure 136 is in the act of executing belongs to the second. The latter cat-craddle consists in opening or closing a small circle of string which is supposed to represent the contractions of a horse's anus.

524 171 Among the Siusí there are also mobile string figures which symbolize an animal by imitating its typical movements (the "caterpillar," for example) exactly as among the Chiriguano.

524 171 177 The resemblances between the Chiriguano string figures and those of the /476/ Guianan tribes could be explained by Arawak influence, and we could suppose that the Chané kept the figures common to the whole family. String figures travel very rapidly and only their meaning changes. Therefore it is possible that the Chiriguano were acquainted with them before being in contact with the Arawak.

[See p. 349--Analyst]

524

/476 cont./

123 Drawings. On Plates XCI-XCIII one can see gathered to-
126 gether a certain number of drawings executed for my sake by
532 Chiriguano Indians. In order to obtain them I first approached
several old men, who refused with an outraged air as if I were
123 asking them to do a thing beneath their dignity. A small boy
126 of 12, Consito, two young men, Asensio and José Miguel, and
115
532

524

Fig. 136. Indian executing the mobile string figure called "culo de caballo /horse's rear end/.

123
126
115 a girl, Iwawasei, showed themselves willing to cover the pages
532 of my album with all kinds of sketches.

Consito did not have to be begged: I was proposing to him a game not only pleasant but fruitful, and he had soon filled two pages (Plate XCI, 1, 2, 4, 9; Plate XCII, 2, 4; Plate
115 XCIII, 1, 3, 10). Asensio, my faithful friend, also gave me
123 complete satisfaction. He was a curious individual, and I keep
126 a particularly vivid and congenial memory of him. He was 25 to 30 years old and was conspicuous because of his extraordinary
[322] activity and ingenuity. At any moment of the day he could be seen busy cutting or carving a piece of wood which then

[See pp. 355-359-- Analyst]

/476 cont./

115 123 126 322 463 became an ingeniously conceived tool or still oftener a musical instrument. Asensio used to make violins which on first sight appeared to have come from a European factory. It goes without saying that he was the recognized carpenter of the village and the great provider of household articles. When Asensio had understood the purpose which had brought me to his home, he transformed his hut into a workshop for ethnographic objects; and I owe it to his enterprising spirit that I was able to collect many a piece, today no longer in use, which he reconstructed for me.

At the time when I was in his village, Asensio had received big orders for flutes for the coming Easter festival, [532] and I had a good time watching him work. Once an instrument was finished, he would embellish it with engraved animals.

115 126 532 The material on which Asensio (see Plate XCI /see p.355/, 5, 7., and Plate XCII /see p.356 /, 3, 6) incised his figures exerted an indirect influence on the pencil drawings he drew in my notebook. They stand out by their angular character, but also by their cleanness.

José Miguel (see Plate XCI, 8; Plate XCII, 1, 5, 7, 9; Plate XCIII /see p. 357 /, 2, 4, 6, 8, 11, 12), whom Asensio's example had encouraged, asked me to give him the notebook and pencil, and he made me a whole series of drawings which, although rather light and uncertain, sometimes are not lacking in a certain movement. [177] José Miguel had traveled to Argentina: the train and the automobile (which he drew from memory) attest well to his admiration for the /477/ marvels of "Progress" (Plate XCII, 7, 8). Thank God his modernism had not made him forget his mythology, and he was able to draw for me a mythical episode which is to be seen on Plate XCIII, 12, A, B, C: the blue jaguar (yaguarowi, personification of the spots on the moon) is preparing to devour the moon and the sun.

123 126 532 When I had finished with the men, I wanted to have several feminine drawings, imagining that the women would lend themselves willingly to this game since they are the recognized artists of the tribe. All, unanimously and to my great surprise, refused to do it, shouting in the middle of gales of laughter: A,kuaá "I can't do it, I don't know how."

/477 cont./

000 laughter: Aikuaá "I can't do it. I don't know how." Only one,
123 a girl, Iwawaei, allowed herself to be persuaded by the promise
126 of a spool of thread. Her awkwardness was not feigned, as I
115 was able to see from the beginning, seeing the embarrassed air
532 with which she took the pencil. Once ready to draw, inspiration was suddenly lacking. She stopped short until I had pointed out a vessel to her to copy. Since her confusion only grew greater, she asked Conito, the small boy who made my first drawings, to help her. He drew the vessel on Plate XCIII. 10, which she began conscientiously to reproduce in series. I protested, and then she made me a horse and on this horse's back a man and a child, then a woman (Plate XCI. 3 and XCIII. 7). I am not very sure that all the drawings she told me she had made were hers, for when my attention was diverted by a visit, she had Conito secretly help her.

532 The drawings the Chiriguano executed for my sake recall not
171 only those of our children but approximate appreciably those which have been collected in various regions of South America, notably among the tribes of the Negro River (Koch-Grünberg, 1): the Tauripang and the Makú (Koch-Grünberg, 2, Plates 28-32, pp. 120-161): the Indians of the upper Xingú (Steinen, 2, Plates III-IV), (Max Schmidt, 2, Figs. 245-247, pp. 396-398): the Chorotí and the Ashluslay (Nordenskiöld, 2, Figs. 63-66, pp. 130-132): the Kaingué (Ambrosetti, 2, Plates I-III, pp. 674-682), etc.

There could be no question of making a comparative study of these drawings, so uniform is their style. The only details which are worth being brought together are those denoting similar psychological characteristics and yet these common traits are not characteristic of a primitive mentality. I should scarcely have to point out the fact that in drawing a woman, a Kaingué Indian proceeded exactly as did two of my Chiriguano artists (Plate XCI. 3 and 7): he began by representing the woman naked, then dressed her.

/477 cont./

532 The Chiriguano are too civilized for one to be able to hope to surprise interesting features in their artistic productions; some of our conventional representations appear in their /478/ drawings (see Figs. 12 B. C. on Plate XCIII /see p. 307/ showing the moon and sun).

In my opinion, the scientific value of such drawings is little and attest to only one things the difficulties the Indians experience in reproducing natural objects with means unfamiliar to them. On this subject I shall quote a very sensible remark of Boas (p. 65): "When one gives a pencil and paper to a primitive and asks him to draw an object from nature, one is obliging him to use instruments which are unfamiliar to him and imposing on him an unfamiliar technique. He must set aside his usual work methods and solve new problems. The result therefore cannot be a work of art--except under exceptional conditions. This is exactly what takes place for a child; the amateur artist must face a task for which he lacks technical preparation, and the difficulties which embarrass the child are precisely those which embarrass the primitive, whence the apparent resemblance between children's drawings and those of primitives."

The Chiriguano are doubtless as well endowed for drawing as Europeans. On one of the walls of the Macharetí mission I saw frescoes drawn with charcoal by an Indian, which proved real talent in their maker.

Plate XCI

Figure 1. Hut (hut). The forked sticks on which the trusses of the roof rest, although invisible, have been carefully indicated by Cimaito, maker of this drawing.

Figure 2. Woman (buffo), front view. She wears a dress. She has four fingers on each hand and her ears are disproportionately large (Cimaito).

/476 cont./

532 Figure 3. Woman (kuña) drawn by Iwawasei. At the beginning she was content to make an enormous head surmounting a stunted body and long thin legs. Upon my remark that the [534] woman was naked, Iwawasei, out of modesty, dressed her by surrounding her legs with a kind of oval which she scribbled in black. She ended her drawing with the hair when I showed my surprise at the woman's baldness.

Figure 4. Dog (yeimbá) drawn by Consito. The body is in profile and the head seen straight on. The front legs end in two claws, the hind ones in two balls.

Figure 5. Iguana drawn by Asensio. He had a predilection for this animal, which he engraved on his flutes, and he hurried to reproduce it on my notebook, keeping the slightly angular style of his incised drawings. /Plates XCI-XCIII appear here./

/477/ Figure 6. Masculine individual (aña) drawn by José Miguel. On one hand, four fingers; on the other, five.

Figure 7. Woman (kuña) drawn by Asensio. The artist [534] began by drawing her naked, and it was only afterward that he had the idea of clothing her, drawing her dress as if seen in cross section.

Figure 8. Chiriguano shooting with a bow. He grasps the wood of the bow with his right hand and the cord with the left according to the Chiriguano custom (drawing by José Miguel).

Figure 9. The author of these lines as seen by Consito. His wide-brimmed hat is transformed into an American sailor's cap; and his glasses, which evidently impressed the Indians, are indicated head on, although the author is drawn in profile with his head thrown back. The blackened parts represent his suit.

Plate XCII

Figure 1. Uru, hen (José Miguel).

Figure 2. Ñandu (nandu), drawn by Consito, who has given it the regulation number of toes on one foot, but has forgotten one on the other.

[text continues on p. 358]

/479 cont./

532. Figure 3. This needs with angular lines characterizes the style of Aumaio, used to drawing on a material as unyielding as bamboo.

Figure 4. This drawing is supposed to give the picture of a pig (Sus), whose tail, however, would be more appropriate for a fox and the face for a man (Cimarro).

Figure 5. A boy (zambiay) and the zorino, recognizable by his hat and the heels of his boots (José Miguel).

Figure 6. Tagua (jaguar), drawn by Aumaio, who here again has reproduced a figure in doubtless was in the habit of engraving on his flutes. The jaguar, which is seen in profile, naturally has only two legs.

Figures 7 and 8. These two drawings, one representing a car and the other a train, are owed to José Miguel, who
[64] moved to Argentina. They constitute a good example of the sense of observation and memory of the Chiriguano. The car has three wheels, that is, the front one have been represented in profile, but as if they were viewed head on.

Figure 9. Women walking, drawn by José Miguel.

Plate BC30

Figure 1. Calchaches attached to their oxen (Cimarro).
Figure 2. Parent (ancuri) (José Miguel).
Figure 3. Cow on calf (ancu) (Cimarro).
Figure 4. Cow (ancu) (José Miguel).

/480/

Figure 5. Duck (ipa) (José Miguel).
Figure 6. Deer (ancu) (José Miguel).
Figure 7. Horse, and over it, a man and a child. In reality these are two distinct drawings which the artist, young Ivanoski, put together inadvertently.
Figure 8. Armadillo (Ñipa) (José Miguel).
Figure 9. Dog (ancuchi) (José Miguel).
Figure 10. Vessel (yanchi) decorated with related triangles (Cimarro).

Chapter XIV

The Treatment of Illnesses

Sorcerers and Remedies

956 [415] Sorcerers. Medicine men have become so rare among the Chiriguano that I could not get to know a one during my whole trip. Only on the upper Pilcomayo did they allude in front of me to a talented *pajé* who lived in a nearby village.

Although great sorcerers endowed with supernatural powers and surrounded with great prestige no longer exist, there still must be in each village a man or woman capable of curing certain illnesses and of pronouncing incantations.

A scene I witnessed at Timboy (Salado River, upper Pilcomayo) demonstrates well that the profession of sorcerer, less important though it may be, has nevertheless not disappeared. I was living in the home of a Bolivian half-breed whose child's body was covered with purulent pimples. His parents began by appealing to my medical knowledge, but I declared myself incompetent to treat his case or any other. They then called an old Indian woman, who appeared one morning with a plant in her hand, a kind of wild pumpkin which the half-breeds call *sandía del monte*. This plant, crushed and mixed with hot water, is used for external washing. They stretched the child out on the ground and commanded him to hold himself motionless. The old woman sat down near him and began to mutter inaudible incantations which she interrupted only to spit often on the limbs of the little patient. Then she would take up her recitation again, at the same time spreading the saliva over his body from head to foot. Nordenskiöld (L, p. 44,

956 [419] 95

/680 cont./

75 Fig. 10) was present at an analogous treatment also practiced /681/ by a medicine woman on a child at Tumbia, not far from the Salado. She rubbed him and blew on his body (1).

[113] [192]

1. In the Diccionario Chiriguano-Español y Español-Chiriguano, etc. (p. 72), we find the word hunga translated "to rub, to massage" and the sentence Nyari Yerungerunga nin, ivó ifa with the following meaning: "My grandmother rubbed me enough, but I did not get well." The medicine woman, add the authors of the dictionary, use the word hunga to express the act of rubbing with the hand any painful part of the body, especially the chest, without any remedy other than the saliva they put on their hand. These women attribute a special virtue to saliva.

[827]

75 The sick boy's father told me that, once suffering from prolonged headaches, he had had recourse to a sorceress, an old woman with woolly hair, who was called the handa. She sucked the place where the ache was localized and drew out worms from it. The half-breed got well, of course.

75 [825] In the soldery of Ñaurenda, where there was a child ill with fever, his mother had made him eat crushed garapata (ticks). The unfortunate child's lips were purple from it.

75 [821] I shall devote a special study to Chiriguano medicine men in a future volume of this Review. Meanwhile I shall limit myself to describing, according to the Diccionario Chiriguano-Español y Español-Chiriguano (pp. 186-187), the way in which these powerful personages customarily proceed when they are called to the bedside of a sick person. I am forced to have recourse to the observations made by another for lack of having been able to be present myself at the spectacle which Father Giannechini evokes with as much accuracy as vivacity. The great Chiriguano pays an,now all in the hutia where they take

/49 cont./

955 952 956 care of the dead and no more will any ethnographer have the privilege of being present at their funerals.

"When an Indian is gravely ill, his relatives hasten to call a medicine man whose first duty is to hold an inquest on the origins of the illness. He asks his patient whether the symptoms of his infirmity did not coincide with a festival, whether he does not have a particular enemy, or whether his wife or children have not had a quarrel with one of their neighbors. When the sorcerer has received an answer to all these questions, he begins to make grimaces, to toss his head, to put on an afflicted air, and ends up by exclaiming in an emphatic tone the result of his diagnostic: Ilmo, yuwi ki! ayuwi ntayali ymin kanunga ndeyi! 'My friend, this is serious, sorcerer has perhaps poisoned you.' Yahela ta. 'We shall see.'

"Then he asks for tobacco, fills his pipe, and smokes. When he has finished, he immediately begins again and continues to smoke.... He becomes sad, loses the power of speech, throws convulsive looks in every direction, makes gestures as if he were trying to put phantoms to flight, faints, agonizes.... Poor sorcerer, he seems dead.... No, the sorcerer lives... yes, he lives and he is recovering consciousness. /50/ 'Yes,' he says to the sick person, 'I know the author of your illness, he who through hate or in a spirit of revenge is trying to take you away from your children, to throw your wife and relatives into mourning and grief. It is so-and-so.... I have seen him, I have had to struggle with him and I am almost dead. Have confidence, I have conquered him. You will not die.'

956 "Then the sorcerer demands his honoraria, which consists of ponchos, cows, horses, etc., which the sick man's relatives dare not refuse him for fear of being in turn victims of his magic power. Entire families have been seen ruined in order to pay for the violence of the sorcerer.

"If the sick man dies, the sorcerer has no trouble finding an /Fig. 137 appears here/ excuse, but sometimes he has to give back part of the goods he has received in payment."

/MS 100/

Judging from this text, the Chiriguano sorcerer, like his Tupinamba or Siberian colleague, put himself into a state of trance so that his spirit, free from corporeal bonds, could go to engage in battle with the soul of the evil-intentioned individual who is responsible against his patient.

The *hupia*, that is, the magical force, is indispensable to one who claims to be a good sorcerer. At least this is the meaning I give to the word translated in the *Devocario Chiriguano-Español y Español-Chiriguano* etc. (p. 73) but "remedy, medicine," but of which it is said that possession is indispensable to every medicine man. This word refined to any noun whatever expresses the faculty, the power, the facility to make or obtain the thing signified by the noun. Thus a dog trained to hunt deer is *wasu-ugia* (*wasu* deer), a warrior is *tuwaiu-ugia* (*tuwaiu* enemy), etc.

(193)

Fig. 137. Calabash containing snake fat. From: Saladin. (About 1/7 nat. size.)

Remedies. 1. Snake fat (*ybobiha*) is efficacious against leprosy. The Indians keep it in a small calabash sealed with wax (Fig. 137).

2. A little cotton impregnated with cacao oil (*yaoi*) and rubbed on the skin is an excellent liniment for rheumatism.

3. A similar virtue is attributed to chicken fat (Fig. 138). In everyday life they resort to chicken fat or cacao oil to anoint the body, which they then rub with cocoa paste. Women generally have their

Fig. 138. Section of bamboo containing chicken fat. From: Cappendi. (1/7 nat. size.)

/left cont./

[301] teeth and legs oiled in this way, which gives them a very strange reddish and shiny hue. This custom, which was already noted /left/ in the sixteenth century among the Tupinambá of the Brazilian coast, is tending to fall into disuse.

[301] [302] [303] Roucou in paste form is kept in a small cow-hoof bag (Fig. 139). /Fig. 139 appears here/ as is *halauga*, a substance composed of a mixture of roucou and pounded *arrua* seeds, which gives a violet color.

[297] [297] 4. Jaguar fat (*yaguarica*) cures any "leprosy" (*kaxeli*) if one rubs oneself with it after bathing in.

[302] 5. Iguana fat makes cramps go away and heals wounds. Its use is external.

6. The dried penis of a fox makes toothaches and earaches go away. For that it suffices to touch the ailing part with the end /Fig. 140 appears here/ of this member. The Indians consider it very malodorous and touch it only with repugnance. [305] To avoid this inconvenience they provide it with a handle and shut it up in a bamboo case (Fig. 141).

7. Deerhorn heated and /Fig. 141 appears here/ applied against the neck will cure a stiff neck. The medical use of deer (*ayuu*) horns explains the frequent presence of the horns of this animal in the archeological strata of the neighboring Andean regions. Some have thus been found in the ruins of the Allaricos, in the Quebrada de Humahuaca (Debenedetti, 6, p. 71), at Tilcara (Debenedetti, 9, p. 102), at La Paya (Ambrosetti, 6, Fig. 116, p. 457), and at Tastil (Boman, 7, Vol. I, Plate XXIX, Fig. 79 f).

[297] [298] [299] [300] Horns adhering to a fragment of the skull and whose use could only have been magical or medical must be distinguished from the ones which the Indians work into awls. These instruments still have a ritual use and are reserved for piercing the lower lip of children when they are old enough to wear the labret. At least this is what Compana (p. 89) informs us. Besides, the Indians all have confirmed this detail to me. [291] Formerly, the Tupinambá of Brazil practiced this operation with an awl of the same nature (see Métraux, 3, p. 100).

/484/

412 However, these awls are too abundant in each village for their use to be only sacred. It is probable that the Chiriguano use them as a simple tool for solely secular purposes.

[174] At Tilcara, Debenedetti (2, Fig. 176, p. 232) discovered specimens made of deerhorn identical with our Chiriguano examples.

824 757 8. I have in my collections seeds whose virtues are multiple: they are an excellent remedy for skin eruptions, ulcers, and toothaches.

9. For stomach-ache the Chiriguano recommend the absorption of particles of wood (mboipinda).

232 [824] 10. Certain seeds (of a graminaceous plant?) when crushed give a paste or powder with which they treat animals whose sores are attacked by worms.

11. When cows' hooves tend to work loose, they bathe them with fragments of limestone (itakwi).

757 237 12. Fat extracted from a cow's foot is an effective ointment for cases of rheumatism.

13. The beak of the toucan is said to enjoy great medicinal properties. They grate it and drink in water the powder which comes from it (Cámpana, 111).

Stitches in the side and dysentery are treated with a piece of armadillo shell burned, ground, and dissolved in water, which the patient drinks.

757 [114] In the Diccionario Chiriguano-Español y Español-Chiriguano etc. (passim) and Nino's book (pp. 288-290) is found many a very interesting piece of information on the pharmacopoeia of the Chiriguano. I shall summarize them in order to complete my own observations.

757 164 1. The oil which floats on kiwi, when it is done, is a good remedy for headaches.

2. Salt, ground and drunk mixed with the urine of a small child, quiets stomach pains.

[824] 3. Rheumatism is doctored by applying on the ailing part a branch of ulala (ñankawina) from which the thorns have been removed and which has been heated.

[164] /484 cont./
[757]
[824] 4. To stop dysentery, one must drink a decoction made of corn and watermelon seeds ground together.

[237] 5. Stitches in the side are treated by drinking a fragment of armadillo shell ground up and by rubbing the ailing place with a portion of this same calabash heated.

6. Tumors and swellings of the throat or knee are made to disappear by applying on the sore region the leaves of a shrub called urukuna, heated in a pot. Another herb (yundurimbiu) has the same virtue.

/485/ Urukuna leaves put in compresses on the skull dissipate headaches, protect one from congestion, and cure erysipelas. The leaves of yandipa (hediondilla) have all the virtues of urukuna.

7. Hemorrhages are stopped by means of latex or the roasted leaf of the liana supuapempe.

8. Kaa-upaya is an efficacious herb in cases of stomach ailments; and soto root cures pains in the feet (rheumatism?).

9. Guaya is a liana which cures any swelling in the side.

[753] [821] 10. Goiter, rare among the Indians, is attributed by them to the sun. They treat it with tutía, a yellow fruit which reminds one of an apple, or by putting around the neck compresses of the blood of the gallinazo, carancho, or bandurria, kinds of vultures.

11. Ophthalmia or conjunctivitis is doctored with drops extracted from the bark of the algarrobillo or with the glue taken from the bud of the membiría plant. The leaves of yandi-wope are excellent for cases of ophthalmia.

12. A variety of caraguatá makes diarrhea stop.

13. The flower káa-ro (bitter herb) cures skin eruptions and is as good for malaria.

14. The herb inái (tooth of water) is a remedy against whooping cough, which can also be treated with an infusion made of boiled or roasted wasps and drunk warm.

15. Tingi bark attached around the belly is excellent for fighting dropsy, as are the leaves of the aturu (palo de india), a tree reminiscent of laurel, or the herb kaa-paye, taken as an infusion.

164 /485 cont./
757 16. Gonorrhea is treated with the boiled root of the
824 mistol and tapir fat.

17. Earaches pass away if drops of chicken, beetle, and
[237] cicada fat are poured into the auditory canal.

18. The root of chirimoya del monte (aratibu) is a good antidote if one feels poisoned.

752 19. Snake bites lose their seriousness if one applies some
824 of the herb ururu, guaje, tobacco, or nicotine on the wound.

The sap of the liana isipo-poro-mboyi, although poisonous, nonetheless constitutes an excellent antidote for the same cases.

752 20. By putting melted wax on the wound, you do not risk
237 dying when a mad dog has bitten you.

21. Wounds produced by a sharp instrument heal if burned chicken feathers are spread on them.

757 22. It suffices for a woman to drink the powder of a shell in water to put her fallen uterus back in place.

/486/

757 23. The red leaves of the aflankamisa, iwira-ro (quebracho
824 cacha) bark, the woody plant toba-pitle, taken as infusions, are as many remedies for fever.

[752] 24. Compresses of kaa-ruruntirái make abscesses burst.

25. In case of constipation it is good to drink the latex of the kaa-si (cardencha, lechetrezna).

752 26. After any serious fall one must drink water in which
757 one has made an infusion of a part of vervain (kaimberai)
824 pounded beforehand. The consequences of the shock will not be felt if one applies on the sore regions poultices made with this same plant carefully ground.

27. Recommended for spreading on sprains are cara guatá leaves or a thick glue obtained by boiling the bark of iwira-pitiyu-wasu. This substance is equally good for fractures.

757 28. The Chiriguano chew the bark of iwira-pitiyu-wasu to make
824 their violent toothaches stop and to make their teeth more solid.

29. A cataract is doctored in the following way: One boils kuruwa leaves and bathes the patient's head with this infusion.
[237] Then one takes the gall from the dorado fish with pincers or

/486 cont./

757 824 237 some similar object and rub the sick person's eyes with it until the cataract comes off.

30. The tannin contained in kurupai bark is a disinfectant which hastens the healing of wounds.

757 824 31. The leaves of kurupairi (small sibil), squeezed and put into compresses on a tumor, act in a lenitive way.

757 824 304 32. The plant wambero (kind of purslane) is a laxative. It has a scarlet flower which girls dry and pulverize to be able to color their cheeks red.

33. Iwowi bark, pounded and roasted, is a good remedy for any pain affecting the limbs. The sap taken from the pips of this tree hastens the healing of wounds.

[752] 34. Powdered inai seeds make teeth fall out.

35. The root of the iniro-poro-mbowi, ground and kneaded with salt and tallow, is an emollient which is spread on tumors.

36. When they feel pains in the limbs, the Chiriguano apply on the ailing part a poultice made of ica-wasu roots, crushed and roasted.

37. The seeds of the yandi-wasu, taken in doses of two or three, are a good emetic.

38. The sarai is a tree reminiscent of our walnut tree. Its inner bark yields a powder which is spread on skin eruptions.

39. A climbing plant called kaa-rowa is supposed to have medicinal properties. /487/ It is taken in the form of an infusion, or poultices are made with it after it is pounded.

40. Another climbing plant, the kaa-tai (hacha de chivato) is a very active caustic which can produce burns if the compresses made with its flowers, leaves, and twigs ground together and mixed with water are kept on too long. If the hands are rubbed with this plant, they become numb.

41. The roots of the shrub mbaipina, well cooked, yield a broth which combats atrophy.

757 825 42. A species of bug (tambeyia) is used in the native pharmacopoeia as a caustic.

757 271 43. The Chiriguano have great faith in the virtue of hot water. Every sick Indian has beside him a small vessel the size of an egg, full of hot water. Those who are attending him

/497 cont./

wet their finger and moisten his lips (Campana, p. 113). The patient must also drink this water.

Chiriguano medicine in the 18th century. A manuscript of the 18th century, written by Father Manuel Mingo and kept in the Library of the Collège de Tarija, contains information of the greatest interest on the way in which the Chiriguano used to doctor themselves when they were still independent. Here is the translation of the passage in question:

"The manner in which they doctor themselves in case of sickness is curious. Sometimes, when they feel sick, they go immediately to bathe inside their house in jars or a wooden basin. Sometimes they have several herbs applied, which they go to get in the fields or thickets. Sometimes also they allow an enema or clyster to be administered to them. This instrument (according to what I could see at Tariquea) is also very curious. It comes down to a small calabash or hollow gourd with a round opening on top and a small hole at the bottom. In the lower part one fastens or puts a hollow nozzle or a small hollow reed corresponding to the nozzle. One pours through the top (that is, through the large round opening arranged in the swollen part of the calabash) a broth of urine with salt. After that, the one who is acting as nurse or orderly blows hard through the upper part or from the top by pressing his lips to the opening or window of the calabash, and the force of the breath makes the liquid pass into the patient's intestines." (Fol. 107-108).

Neuenswiffel (14, pp. 194-195), who in a recent book went full length into the matter of the various instruments utilized by the American Indians for giving enemas, distinguishes two types: those which are provided with a rubber or leather bulb or a bladder, and those which amount to a simple tube. The one described for us with such a wealth of details by our missionary belongs to the second type, although /498/ exhibiting some similarities with the first. It can be considered as intermediate between the two.

/488 cont./

757 114 The explorer Eric von Rosen tried to demonstrate that some objects found in northwestern Argentina are clyster tubes or nozzles. Nordenskiöld is also of this opinion. As for me, I am all the more tempted to adopt this hypothesis because I could not otherwise explain the presence of this instrument among the Chiriguano. No Tupi tribe, as a matter of fact, with the exception of the Omagua on the upper Amazon, seems to have resorted to enemas in case of illness; at least not one of the numerous travelers who gave their attention to these Indians mentions the operation among them. There is no doubt that the Chiriguano borrowed this curative method and the corresponding instrument from the nearby Andean peoples. We know that the Quichua /Quechua/ gave each other enemas, as is proved by the discovery of a leather syringe in a pre-Hispanic grave of the Ollachea Valley in eastern Peru (Nordenskiöld, 14, Fig. 74, p. 188). (To be continued.)

757 171 174

2. Group of Chiriguano in a Franciscan mission.

Plate V. 50

1. Iwawaei, Chiriguano Indian girl from the region of Cururuí (near the middle course of the Parapití River).
2. Chiriguano Indian girl from the village of Ibopeyti (upper Pilcomayo).

Plate VI. 73

1. Young Chiriguano, daughter of the "capitan grande" Karnapadyí.
2. Chiriguano Indian girl from the Cururuí region.

page

Plate VII. 77

1. Sling of yellow, purple, white, and green wool.
2. Sling of brown, green, and white wool.
3. Sling of vegetable fibers.

Plate VIII. Arrows for war or for hunting large game. Chiriguano. 83

Plate IX. 86

1. Arrow for hunting the yaki. Chiriguano.
2. Arrow tipped with an iron rod wedged into the shaft with the aid of a wooden peg, perforated, and tied with a small cord.
3-5. Arrows with barbed points.

Plate X. Arrows with splayed ferrule for killing birds or small mammals. 86

Plate XI. Arrows with splayed ferrule for killing birds or small mammals. 87

Plate XII. Arrows with splayed ferrule for killing birds or small mammals. 92

Plate XIII. 103

1 and 2. Basin with perforated bottom for preparing maizizimma. Flour cooked in steam.
3. Basin for roasting corn kernels or flour.

Plate XIV. 115

1. Vessels assembled in front of a hut for the preparation of kiwi (chicha).
2. Women and children taking kiwi.

page

Plate XV. 110

1. Large vessel (wambu) in which the Chirigwane make corn beer ferment
2. Large vat (wambu) for boiling bilwi. The Chirigwane bury their dead in similar urns.

Plate XVI. 115

1. Cooking pot (wawa).
2. Vessel (wawa) with twisted handles and decorated with incised triangles
3. Cooking pot (wawa) decorated with fingernail impressions.
4. Cooking pot (wawa) decorated on the neck with fingernail impressions.

Plate XVII. 117

1. Vessel in which the Chirigwane draw water for household use.
2. Vessel (wambu) decorated with a series of cups on the base of the neck.

Plate XVIII. Water pots (). Chirigwane. 121

Plate XIX. Bowls (wai). Chirigwane. 125

Plate XX. 130

1 and 2. Calabashes () put in a net in order to be transported or hung in the hut.
3. Calabash with lid cut out in star shape.
4. Calabash with automatic closing.

Plate XXI. 137

1. Calabash used as a mug.
2. Calabash with star-shaped lid and automatic closing.
3. Flat calabash suspended by means of leather thongs.
4. Calabash enclosed in strips of wambi bark.

List of Figures

Fig.

1. Old Indian from the Santa Rosa Mission 60
2. Wooden shovel. 63
3. Shovel handle. 66
4. Shovel handle 66
5. Cow horn ([illegible]) used as a horn. 68
6. Chiriguano hut. 69
7. Sugar-cane mill. 72
8. Stack. 74
9. Cassavas on poles. 78
10. Twined vine on which the Chiriguano pole cows smoke their hats. 79
11. Straw dustbrush. 79
12. Stockade pail. 82
13. Bow of the Chaná Indians. 82
14. Hunting arrow. Chiriguano. 88
15. Upper tip of a [illegible] for catching wild parrots. 88
16. Perch with tongue for the tamed parrots used for catching wild ones. 90
17. Perforated calabashes in which the Chiriguanos put chicks to protect them from birds of prey. 90
18. Sewing set of cotton thread. Chiriguano. 94
19. Wooden needle (chuos) for threading fish to carry them more conveniently. 96
20. Arrow used to catch fish. 96
21. Spear for harpooning large surubú. 96
22. Spit for roasting fish. 96
23. Small deerskin bag for carrying a tinder-box and its accessories. 95

Fig.		page
24.	Puma paw made into a bag.	99
25.	Ancient apparatus for making fire, reconstructed by a modern Chiriguano.	99
26.	Chiriguano woman lighting a fire.	100
27.	Young Chiriguano woman winnowing beans.	107
28.	Salt molded in a ball, ready to be consumed or exported.	108
29.	Iron peg with leather handle, for husking ears of corn. Chiriguano.	116
30.	Chiriguano mortar and pestle.	116
31.	Woman sifting corn.	117
32.	Sticks for stirring kîwi during its cooking.	118
33.	Oar for stirring kîwi during cooking.	120
34.	Shovel ending in an ox scapula, used for stirring kîwi.	120
35.	Small vessel (yapopoti) decorated with fingernail impressions.	124
36.	Vessel (yapepô) with twisted handles and decorated with two series of small cups engraved on the neck.	128
37.	Toba vessel in the shape of a flattened gourd. Serves for carrying water while traveling.	128
38.	Ashiulay vessel.	130
39.	Toba vessel with bands in relief imitating the suspension cords with which vessels of this type are generally provided.	132
40.	Small bowl (ñaê) with 4 nipples. Chiriguano.	133
41.	Small miniature bowl with cord for hanging. Chiriguano.	133
42-43.	Wooden spoons (karuba or iwira-karu).	139
44.	A bignoniaceous or an asclepiadaceous fruit whose shell cut in half is utilized by the Chiriguano as a cup or spoon.	139

Fig.		Page
45.	Calebash cut in half to serve as a spoon.	139
46.	Ladle carved out of a calebash.	139
47.	Reserve calebashes hanging in a net inside a Chiriguano hut.	139
48.	Calebash hung by means of a transverse stick.	141
49.	Wooden bowl (*ma*).	141
50.	Wooden basin sometimes used among the Chiriguano.	141
51.	Iron ax of the type called simple neolithic ax, hafted like the ancient stone axes.	143
52.	Stone roller used as a grinder on a flat stone. Archaeological piece.	145
53.	Mold for making tin labrets.	146
54.	Balance with scales in use among the Chiriba half-breeds of the Tarija region.	149
55.	Balance (*mbalanza*) in use among the Chiriguano for weighing coca.	148
56.	Fabrication of a vessel.	150
57-58.	Vessels (*yapepo*).	151
59.	Fabrication of a vessel.	155
60.	Forked tree-trunk serving as a shelf for vessels.	156
61.	Fabrication of a vessel.	159
62.	Fabrication of a large vat.	162
63.	Fabrication of a large vat.	163
64.	Fabrication of a large vat.	165
65.	Fabrication of a large vat.	166
66.	Fabrication of a large vat.	167
67.	Panpipe.	173
68.	Fragments of incised pottery found at Calipendí.	174
69.	Pot decorated with incised lines and provided with two holes for hanging.	177

ÉTUDES SUR LA CIVILISATION DES INDIENS CHIRIGUANO

PAR ALFRED MÉTRAUX
Directeur de l'Institut d'Ethnologie de l'Université de Tucumán

---

PRÉFACE

Dans les chapitres qui vont suivre, je me propose de publier une partie des résultats obtenus au cours de la mission que j'ai entreprise dans le Chaco bolivien et argentin, en qualité de directeur de l'Institut d'Ethnologie de l'Université de Tucuman.

Cette expédition eut lieu de février à juin 1929. L'itinéraire en a été le suivant : parti de Tucuman, je me dirigeai par chemin de fer à La Quiaca où je restai quelques jours, faisant des observations sur les indigènes plus ou moins métissés de la région. De La Quiaca je me rendis à Tarija où je séjournai plus longtemps que je ne l'aurais voulu en raison des suspicions que mon voyage provoqua au moment du conflit paraguayo-bolivien.

Après un arrêt de quinze jours, je quittai Tarija pour gagner les *tolderías* chiriguano du haut Pilcomayo. Je traversai le village de Santa Ana, puis la Abra del Cóndor, le río Narvaez, le poste de San Diego, passai à 5 kilomètres de San Luis (Entre-Ríos) pour m'arrêter à la Cuesta de San Simón où je trouvai les premiers Chiriguano. Une fois la Cuesta de San Simón franchie, j'atteignis rapidement le río Salado, puis les villages chiriguano de Timboy (Saladito). C'est là que je fis mes meilleures acquisitions de poteries et où je recueillis le plus d'objets anciens. Les habitants de ces *rancherías* qui vivent relativement loin de la grande route de l'Argentine à Santa Cruz, ont conservé mieux que leurs frères de race les traditions et la culture de leurs ancêtres. De Saladito, je gagnai le village de Itasiri, puis de Salado Grande pour

atteindre le Pilcomayo au confluent du Salado. Là, les villages chiriguano sont grands et nombreux. Les plus intéressants sont ceux de Nawirenda, d'Ilupeyti et de Yumbia.

Après m'être arrêté quelque temps en cet endroit, je continuai mon voyage vers Huacaya et la mission de San Pascual de Boicovo.

En un jour je me rendis de Boicovo à Cuevo en passant par la mission de Santa Rosa.

De Cuevo, je fus à la mission de Ivu qui est, sans doute, celle où les anciennes coutumes chiriguano ont subi le moins de modifications.

De Cuevo, je partis au nord ouest vers la région du rio Parapiti. Je passai cette rivière près de Pipi. Après m'être arrêté dans ce village, je suivis un sentier indien qui me conduisit jusqu'à Cururuti, chez mon bon ami le capitaine *Karuapadyá*. Je restai chez lui une semaine et ne le quittai que pour parcourir toute la vallée de Caipipendi, visitant tous les villages indiens les uns après les autres. A Caipipendi même je fis des fouilles fructueuses et recueillis des mythes intéressants.

Le terme de mon voyage vers le nord fut la petite ville de Charagua.

Je consacrai la dernière partie de mon voyage à des séjours plus ou moins longs dans les missions franciscaines de Tarairi, Tigüipa, Macharetí et Ivu.

Avant de regagner l'Argentine, je fis une excursion dans la vallée d'Igüembé jusqu'au village de Masavi.

Les deux dernières semaines de mon expédition furent déllées à l'étude des indiens Chané qui vivent près d'Aguaray dans le Chaco salteño (République Argentine).

Précédemment j'avais dû, pour des raisons diverses, m'arrêter à Oran un mois que je mis à profit pour faire des collections parmi les indiens Ashluslay qui y viennent pour la récolte de la canne à sucre.

Je ne publierai, dans ce volume, les résultats de mon expédition que pour autant qu'ils apportent des faits et des détails nouveaux. Il ne faut donc pas considérer les chapitres que je consacre aux Chiriguano comme une étude exhaustive de leur civilisation, mais simplement comme une *contribution*. La culture des Chiriguano a fait l'objet de quatre travaux importants dont deux sont dûs à des ethnographes de grande autorité (1).

(1) Nordenskiöld (**2**, **5** et **10**) et Rosen (1). La monographie de Campana sur les Chiriguano, que j'aurai souvent l'occasion de citer, n'est qu'une recompilation et une mise au point des notes manuscrites laissées par le missionnaire italien, le R. P.

Mon but a été de compléter l'œuvre de mes devanciers et de réunir pour le Musée de Tucuman une collection qui fût vraiment représentative de la dernière des cultures qui jadis ont fleuri dans les limites de l'ancienne *gobernacion* de Tucuman. Mes collections chiriguano sont, avec celles recueillies par Nordenskiöld, les plus complètes, je crois, qui existent au monde de cette région. Elles témoigneront, je l'espère, de la richesse de cette contrée au point de vue ethnographique, richesse que l'on a laissée inexploitée et qui disparaîtra dans quelques années.

Puissent ces pages démontrer que toute culture est un tout si complexe, si varié, que nul ethnographe n'en peut étudier tous les détails au cours d'un seul voyage. Ce n'est pas faire œuvre vaine que de retourner là où d'autres vous ont précédé car, quels qu'aient été leurs mérites, la matière ne peut être épuisée en une fois.

Il me reste à remplir un devoir de reconnaissance en remerciant le docteur J. B. Terán et le docteur J. Heller qui, en qualité de recteur et de vice-recteur de l'Université de Tucuman, m'ont donné les moyens de réaliser ce voyage. Le nouveau recteur de l'Université, le docteur J. Prebisch, m'a accordé les crédits élevés qu'exigeait la publication des résultats de cette expédition et a soutenu constamment la *Revue d'Ethnologie* de mon Institut. Je tiens à lui manifester ici tout le gré que je lui en sais.

Je veux encore exprimer ma gratitude à tous ceux qui m'ont aidé au cours de mon voyage : en tout premier lieu aux missionnaires franciscains qui m'ont accordé une généreuse hospitalité et m'ont aidé dans la mesure du possible ; ma dette est particulièrement grande envers le R. P. Jucundo Ferrari, grâce à qui j'ai pu effectuer sans dégâts le transport de mes collections du haut Pilcomayo à Cuevo ; au P. Angrisani qui m'a reçu si fréquemment dans sa mission de Ivu. Je ne veux pas non plus oublier les Pères Luis Mattioli, [illegible] Polvorini, Juan Nicolai et Honorato Catimari, qui m'ont secondé en diverses occasions. Le R. P. Enrique Biagini m'a rendu un service auquel j'ai été très sensible en me recommandant à tous les missionnaires du Chaco.

Le préfet de Tarija, le colonel Nuñez del Prado, a facilité mon voyage

Dorotea Giannechini. Ce travail est à bien des égards excellent. Quant au livre du R. P. Bernardino de Nino, ce n'est qu'une traduction de l'article de Campana, complétée par de copieux emprunts à l'ouvrage de Corrado. Cependant le R. P. Bernardino de Nino a ajouté aux textes qu'il reproduit maints détails fort intéressants qui rendent indispensable la consultation de son *Etnografía chiriguana*.

en me donnant un sauf-conduit qui m'a été particulièrement utile auprès des autorités de la Bolivie orientale. Cet homme, courtois et intelligent, vient de trouver la mort sur le champ de bataille. Je tiens à saluer sa mémoire avec gratitude.

Mes compatriotes MM. Burry m'ont assisté au cours de tout mon voyage et m'ont rendu des services inappréciables dont je garde un souvenir reconnaissant ainsi que de l'aide précieuse que m'ont prêtée MM. Attié, de Tarija.

J'ai reçu une cordiale hospitalité de M. Bonardi, de Sancarwinza, et de M. Vicente Constantini, que je remercie ici.

M. Alberto Torrejón, d'Ibopeyti, s'est montré envers moi un hôte plein d'intelligence et son intervention en ma faveur auprès des indiens m'a été fort utile.

Ce serait me montrer ingrat et injuste si je ne manifestais ici tout ce dont je suis redevable aux indiens eux-mêmes, dont l'accueil, les premières défiances dissipées, a été toujours si cordial, si généreux. Je voudrais citer ici le nom de mon vieil ami le capitaine *Karnapadyú*, de Carurati, qui a été pour moi un ami courtois et bienveillant et qui m'a rendu si agréable mon séjour dans la vallée de Caipipendí. Puissé je un jour revenir chez mes amis Chiriguano avec des mules chargées de couteaux, de tissus et de perles et remplir ainsi les vœux qu'ils m'exprimèrent si souvent.

PREMIÈRE PARTIE

La civilisation matérielle

A Eva qui fut mon compagnon de voyage.

INTRODUCTION

Pour qui veut vérifier expérimentalement, si je puis dire, la valeur des méthodes qui se font jour dans l'ethnographie moderne, pour qui veut juger des facteurs qui conditionnent la formation et l'évolution des civilisations, il n'est pas de meilleur terrain que l'étude des indiens Chiriguano.

Nous savons d'où ils sont venus, l'époque à laquelle ils se sont constitués en une nouvelle nation, les populations avec lesquelles ils se sont mêlés ou ont été en contact, les influences qu'ils ont subies et leur durée, et enfin nous connaissons les vicissitudes de leur histoire; nous pouvons, en un mot, assister à la formation et au développement de ce peuple depuis son origine jusqu'à sa décadence actuelle; expérience unique en Amérique du Sud, rare peut-être ailleurs et, en tous les cas, riche d'enseignements.

Adaptation au milieu, emprunt d'éléments culturels nouveaux, abandon de traditions et de techniques, transformations somatiques et linguistiques, autant de problèmes que pose la civilisation chiriguano et que les documents historiques et les collections permettent de résoudre ou du moins d'éclaircir.

La civilisation chiriguano est composée d'éléments d'origines différentes, empruntés à des tribus qui n'avaient entre elles que peu de points communs. Elle comporte un vieux fond guarani, transformé et entièrement renouvelé par l'apport de la culture arawak des Chané, qui elle-même avait été enrichie et modifiée par l'influence des populations andines du sud de la Bolivie actuelle. La communauté de milieu et un long voisinage ont permis à maintes techniques et industries des indiens primitifs du Chaco, d'être adoptées et assimilées par les Chiriguano. L'importance de ce troisième composant est minime.

L'analyse de la civilisation des Chiriguano (v. Nordenskiöld, **10**, pp. 196-213) rend manifeste cette hétérogénéité que l'histoire de la tribu laissait soupçonner *a priori*. La céramique, la vannerie, les armes, le mobilier, présentent, presque constamment, des caractères disparates où s'expriment ce jeu d'influences, ce mélange de races et d'idées dont la culture actuelle des Chiriguano est le produit.

L'ethnographe se sent d'autant plus à l'aise dans son analyse qu'à chaque pas l'histoire confirme ou infirme les constatations auxquelles le conduit son travail comparatif. Il marche donc en terrain sûr et les résultats qu'il aura acquis dans ce domaine particulier justifieront sa méthode lorsqu'il l'emploiera pour résoudre des problèmes dont les données seront moins complètes.

Les Chiriguano méritent, à plus d'un titre, de tenir une place prépondérante dans l'ethnographie de l'Amérique du Sud. Ils ont joué un rôle important dans l'histoire de la Bolivie, du Paraguay et de l'Argentine : leur civilisation a été brillante et s'est maintenue intacte presque jusqu'à notre époque ; ils sont, en outre, remarquablement doués au point de vue du caractère et de l'intelligence. A ces titres, ils ajoutent celui d'avoir constitué leur civilisation, pour ainsi dire, devant nos yeux et d'offrir à la science un terrain où elle se meut avec quelque sûreté.

Pour comprendre le point de vue que j'ai essayé d'exposer dans cette introduction, il est indispensable de connaître dans ses grandes lignes l'histoire primitive de ces indiens.

CHAPITRE I

Aperçu historique sur la formation de la nation chiriguano

Poblando y conquistando los alrededores
Del Pico inaccesibles cordilleras,
A cuyo pie su tierra subyugado
El rio Pilcomayo y sus riberas.
Mas entre de la sierra los capitales,
A gentes muy valientes y guerreras
Y en el rio Guadiello y Yesso
Y en el grande y famoso Grapal.

(Blas COSAMAMA, *La Argentina*, pp. 16-18.)

Mon intention n'est pas de raconter l'histoire des Chiriguano, du XVIe siècle à nos jours, telle que nous pouvons la connaître par les documents officiels et les chroniques. Cette œuvre a été faite et, généralement bien faite (Corrado; Kersten, pp. 66-69; Serrano y Sanz; Nordenskiöld, **7** et **8**, pp. 45-58; Gandia, **2**, pp. 25-56 et id., **1**, pp. 161-196; Church, pp. 206-227; Mujía; etc.). Je me bornerai à retracer ici, dans leurs grandes lignes, les caractères de la grande migration guarani qui a abouti à la formation de la tribu des Chiriguano.

Les indiens Chiriguano appartiennent à la famille linguistique tupi-guarani. Rameau détaché de la grande nation guarani ou, plus exactement, essaim séparé de l'ensemble des tribus dites guarani du Paraguay et du Brésil méridional, ils sont venus s'établir au pied des Andes à la fin du XVe et au début du XVIe siècle, après avoir traversé les plaines du Chaco.

Les causes de ce grand mouvement, qui a entraîné tant de milliers de Guarani vers les frontières de l'empire incaïque, s'expliquent par la singulière attirance que les objets en métal, les vêtements, en un mot tout ce qui peut rendre la vie plus facile et plus belle, ont exercée et continuent à exercer sur les indiens. Le Pérou et ses richesses étaient, depuis longtemps, connus des Guarani du Paraguay et des Tupi de la côte du Brésil. Ils en recevaient des instruments en bronze et des ornements en argent et, parfois aussi, en or (1). En même temps que ces objets, leur parvenaient des descriptions confuses de ces peuples des montagnes, si étrangers, qui vivaient dans des hottes de pierre, avaient à leur service des « cerfs à long poil » et qui dévoraient leur personne de jeunes brillants. Haches en bronze, colliers, bracelets, plaques pectorales, diadèmes et gobelets en argent leur arrivaient par une voie commerciale dont le tracé exact est inconnu, mais qui passait probablement par le Chaco bolivien. Les Chané qui vivaient en contact direct avec les populations de l'empire incaïque et trafiquaient avec elles, jouaient le rôle de courtiers et, par leur intermédiaire, ces outils et ces ornements gagnaient le Paraguay, en passant de mains en mains (2).

(1) Sur les relations commerciales entre les peuples des Andes et les tribus du Chaco, du Paraguay et du Brésil (*cf.* Nordenskiöld, 8, pp. 225-226).

(2) Hernández, p. 322 : « Fueron preguntados qué generaciones son de los que han la plata y el oro, y cómo lo contratan y vienen a su poder; dijeron que los payaguas, que están tres jornadas de su tierra, le dan a los suyos a trueco de arcos y flechas y cuchillos que hacen de otras generaciones, y que los payaguas lo han de los chanaes y chiquitos y cocoanes y candiros, que son otras gentes de los indios, que lo tienen en mucha cantidad, y que los indios lo contratan, como dicho es. »

Avant de pénétrer dans les régions du « vrai métal », les conquistadors espagnols firent de nombreuses enquêtes pour connaître les tribus chez lesquelles ils pourraient trouver les richesses convoitées. Grâce à cette préoccupation, nous avons plusieurs listes des tribus indigènes de la Bolivie orientale qui vivaient en contact avec les peuples andins. La plus complète de ces nomenclatures ethnographiques est celle que nous donne la préviraue *Relación de Domingo Martínez de Irala* : « dixo que la vanda de la mano yzquierda que es del norte que ay muchas generaciones entre las sierras que parecian y de lo qual tiene noticia, se llaman : turubanos, y ayguas, y chanos, y tocuas y conaqua, y turucuyo guarucia, y xaxua, y que aun arriba dicha, en la misma vanda, ay de su generacion de carios » ; (pp. 339-340).

« Preguntado ey sabe o a oydo decir que generacion tiene el dicho metal, dixo que sabe mas de que las generaciones de los guaranas, y turubanos, y xacuy, y garyolic, y hactari, y cadria, y cape, y coachaguy, y ortery, y aona, y uaga, chuaga, y chanos, e ey, e ayuay, y dexay, tienen algunas planchas y quentas generaciones estan de la vanda del rrio y de la otra, pero que los que mas tienen son los ayguas; preguntado ey lo ha visto, dixo que ey que les ha visto muchas planchas pero que son sus enemigos y van algunas veces a la guerra a ellos; preguntado que quien les da el dicho metal, dixo que ha oydo decir que una generacion que se llama xutig, de la tierra adentro y quellos lo han de mano en mano de los payguas; preguntado que quien hace las rrueptas que trexo el dicho principal a presentar, que heran de algo-

Cette infiltration d'objets a probablement duré fort longtemps avant que les Guaraní aient eu l'idée d'aller eux-mêmes les chercher à leur source. Les notions sur l'empire incaïque, d'abord vagues et incertaines, ont dû se préciser peu à peu et accroître leur désir de connaître de plus en plus les hommes et les pays fabuleux qui produisaient tant de choses belles et étranges. Il faut sans exagérer l'attitude des indiens Guaraní vis-à-vis des populations sujettes à l'Inca, comme en

dos, dice que los hacen afiladas y todos los otros yndios que antes dichos, para en hacer; preguntado si los dichos yndios usan o utilizan del oro y a que usan, dice que a la vuelta de la mano izquierda, que la del hombro; preguntado que usaban para, dice que para y tomaduras, y sonajeras, y alguna prenda, y otras cosas que ayudaban: preguntado si sabe o a oydo que yndios son los oriundos verdaderos del metal, si los peruanos o otros, dice que no sabe o oyydo que tiene dicho, lo ha oydo o los dichos yndios» (pp. 311-312).

« El sandor preguntado para del reyno otras generaciones de la vuelta de la mano izquierda que donde se pone el sol que se llama chaco, y quiquaterati, y chamachabang, y manchaterati, y tapaiti; preguntado quien lo ha estado chamo, dice quien lo ha estado como ellos y que hablaban varios» (p. 312).

« Preguntado si sabe que generaciones son los oriundos verdaderos del metal, dice que no sabe mas de que ha oydo decir que son los chamos, y payaynos, y cuarcos, y quechos son los que tienen el metal [illegible] » (pp. 312-313).

« Preguntado que generaciones son los oriundos del metal, dice que muchas generaciones tienen metal, en especial los payaynos y guaraguati, y yamandagui, y chacaiaos, y tamagoyaqui, y pano, y tigoyaos, y matarauos, y mahamboyo, y tamaraqui, y quaraos y curacos, pero que los verdaderos que tienen el metal son los mentiros o los chamos» (p. 316).

« Preguntado si sabe que yndios tienen el dicho metal, dice que no sabe mas de que ha oydo decir que los yndios que llaman chiriaos o payaynos, o chamaimaos, y guaraoos, y curacos, y mahamoyo, y mapa, y cuey chaco, y que todo el comun es poblado e que los cacicos que se dicen aparentados quando los de guaya mentiros o los chamos, que ya hacen barbas o son aparentes viejos» (pp. 313-314).

Chaco cuarcos, ou siècle plus tard, dans les régions occupées aujourd'hui par les Chiriguano et les Chaná, existent des noms des tribus mentionnées au XVIe siècle par les interprètes guaraní. Ces innombrables tribus auraient elles disparu? Cela semble peu probable, car jusqu'à notre époque cette région n'a pas subi de remaniements au point de vue ethnique. La solution de ce problème nous est donnée par cette notice Bolivienne (p. 326). Ces noms de nations ne désignent que des sous-tribus chamaimaos, comme l'explique fort bien le chef chaná interrogé par Sala (Id., p. 326) :

« Dice el dicho chamaymo que tardaron a ir tierra tres dias y que salia muy bien el camino porque se iria criado alli y que hasta agora no habia salido nunca de su tierra, pero que sabia que salia quel quaria ya con el dicho capitan alli y que es quaraoos que se iria largo a que en generacion es mucho e arrayan sus chamos, todos se llaman cada cual de su nombre e que por ser se llaman ellos primeraos, y que de las postreras cosas de su generacion a los yamandagyos tardan tres o quatro dias, y que de los yamandagyos a los payaynos dos, e que juntos ellos vienen los yamandaos y zinzanos y que de alli tardan quatro o cinco jornadas a los cacicos que son los oriundos del metal, e junto con ellos vienen los cacicos que acompañan con los oriundos del metal. » Naturellement les « mapa », dont il est question dans quelques-uns de ces textes, sont les Mapá de la famille Guaikurú.

toute petite semblable à celle de leurs descendants, les Chiriguano, et des peuplades actuelles du Chaco par rapport aux blancs. Il est encore des tribus qui ne les ont jamais vus, mais qui déjà sont en possession d'objets en fer dont, ils apprécient toute l'importance dans la lutte pour la vie. Je possède dans mes collections deux haches des Tsirakua dont la pointe est en fer, et cependant ces Indiens n'ont jamais aperçu un blanc, et c'est à peine s'ils en ont entendu parler. Qu'une occasion se présente de pouvoir s'approcher sans danger des villages métis ou créoles, ils le feront. C'est ainsi que nous avons chaque année une migration temporaire de milliers d'Indiens vers les *Ingenios* (fabriques de sucre) de l'Argentine. Parmi les nombreuses tribus qui s'achemainent vers les plantations de canne à sucre, il en est peut-être beaucoup qui n'avaient jamais eu de contact direct avec les hommes blancs chez lesquels ils vont chercher en allégeant à leur vie et une amélioration de leurs conditions matérielles. En partant vers le Chaco et les Andes, les Guarani obéissaient donc aux mêmes aspirations que ces pauvres *Tsirakuo* (Chiriguano) que l'on croise en automne sur les routes qui conduisent à l'Argentine. Si l'invasion des Guarani fut brutale, c'est qu'ils se sentirent assez puissants pour tenter de s'emparer par la force des richesses convoitées. Il n'y a pas longtemps encore, les Chiriguano n'hésitaient pas à attaquer les fermes des créoles s'ils y trouvaient profit ou si une injure leur avait été faite.

Il faut se rappeler aussi que les Guarani étaient belliqueux; habitués à triompher des peuplades voisines, ils ne reculaient pas devant de lointaines expéditions et étaient doués en outre d'un esprit d'aventure qui les a fait appeler les « Phéniciens de l'Amérique du Sud. » Au début du XVIe siècle, les Guarani étaient en pleine force d'expansion; la traversée du Chaco n'était pas pour les arrêter.

Les premiers Guarani qui traversèrent le Chaco et revinrent chez eux, richement vêtus, parés d'ornements en métal, suscitèrent sans doute la même considération qui s'attache à tout Chiriguano moderne qui rentre dans son village après six mois de séjour en Argentine. Il faut les voir alors, habillés de pied en cap, bottés et éperonnés et caracolant fièrement sur un cheval plus ou moins étique. Interrogez-les sur leurs souvenirs : avec orgueil ils vous racontent leurs bonnes fortunes, feront allusion à leurs riches ceinturons et vous diront leur admiration pour toutes les choses surprenantes qu'ils auront vues. C'est surtout de leurs gains qu'ils vous entretiendront, car c'est pour avoir des couteaux, des haches, des têtes de bétail qu'ils sont partis. Ce sont ces biens-là qui leur ont donné la considération et amélioré leur existence et l'exposition s'en revêt de tous les charmes de l'aventure et d'un voyage au pays des merveilles (1).

(1) Pour l'intérêt que le Pérou ouvrait sur les Indiens Guarani et sur les voyages que ceux-ci faisaient vers la Cordillère, v. les textes cités par Gandia (2, p. 32, note

La migration des Guarani vers l'ouest se poursuit aujourd'hui sous une forme peu apparente, mais avec une certaine régularité. Il est probable que la sécularisation des missions franciscaines, qui entraînera le dépouillement des indiens et rendra leur sort plus misérable dans leur patrie actuelle, aura pour conséquence d'accélérer cet exode.

N'y a-t-il pas eu d'autres motifs que le désir de piller ou de commercer qui ait entraîné jadis les Guarani vers la terre du métal?

Apparemment non. Mais tout phénomène ethnique est complexe dans ses causes et dans ses effets, et vouloir l'expliquer en raison d'un seul facteur est une tentative toujours superficielle et sujette à caution. L'œuvre de l'historien, comme celle de l'ethnographe, est de dégager tous les éléments qui se sont combinés pour aboutir aux faits que les traditions et les chroniques enregistrent.

Que la migration des Guarani ait eu pour cause directe le goût du pillage, la singulière attirance que le Pérou exerçait sur les indiens des forêts, soit; mais, n'y a-t-il pas eu aussi quelque obscure croyance, quelque aspiration mystique qui aient joué leur rôle dans cette grande aventure collective? A l'ambition précise de conquérir, ne s'est-il pas mêlé le souvenir de quelque vieux mythe qui aurait contribué à déclencher ce mouvement? Je crois que oui. »

Toutes les tribus tupi guarani, celles du nord comme celles du sud, connaissaient au XVIe siècle et connaissent encore un mythe où il est question d'une « Terre-sans-mal », où les hommes vivent toujours jeunes et immortels, où tout pousse sans effort où le gibier tombe de lui-même sous la flèche du chasseur, en un mot, une sorte de Paradis terrestre où s'est retiré le grand Dieu civilisateur, après avoir effectué ses « transformations » dans ce bas monde et avoir donné le manioc aux hommes. Les morts vont le rejoindre s'ils ont été enterrés selon les rites et s'ils ont triomphé de toutes les épreuves qui les attendent sur le chemin de l'Au-delà. La particularité saillante de la « Terre-sans-mal » est de pouvoir être atteinte sans qu'il faille passer par la porte de la mort : des hommes hardis et pieux peuvent aller y habiter à condition de prendre la bonne route, d'en être dignes et de connaître les rites. De tout temps, des magi-

1 et 2). C'est ainsi que les Guarani insistèrent beaucoup auprès de Irala pour qu'il les emmenât chez les indiens « seigneurs du métal ».

Dans une lettre de Martin Gonzalez (1556) citée par Gandia, il est dit qu'à l'Assomption « ay muchos yndios que an ydo, venido dos o tres veces allá con sus hijos y mugeres, por aqui de frente desta ciudad, por un rio que estará dos leguas de aqui que va a dar a la villa de la Plata, y junto a este rio estan los yndios de aqui poblados y más por toda la cordillera, y a lo que dicen no están de aqui cien leguas ».

Tambien an ydo estos carios allá a las sierras y venidos por otro rio, quesió de aqui hasta quarenta leguas este Paraguay abajo, que se dice el Ypiti; y asi mesmo están allá en las sierras pobladas carios, junto a este dicho rio, que va a dar, según dicen los que vinieron del Perú, cerca de la villa de la Plata. »

cielle poissante y est en cause, et leur exemple à fait naître l'impulsion que des tribus entières pouvaient y percevoir elles aussi, si elles étaient conduites par des hommes médecins parfaitement informés de la situation de ce l'inédit terrestre. Dès le XIVe siècle, nous pouvons suivre des tribus à la quête de cette terre de promission et les voir entreprendre de vastes migrations pour y parvenir : les unes vont vers l'est, c'est-à-dire, vers l'Orient; les autres vers l'ouest, dans la direction du Pérou (1).

Citons pour mémoire la migration des Tupinambs qui en 1539 remontèrent l'Amazone pour arriver en 1549 environ dans la province de Charkapuyas au Pérou, les deux migrations qui eurent pour théâtre le nord du Brésil, en 1570 (?) et 1609 et dont le caractère religieux est indéniable; enfin, toujours pour le côté du Brésil, les pérégrinations de ces Tupinambs qui, partis en 1608 environ, arrivèrent dix ans après sur le cours moyen de l'Amazone dans l'île des Tupinambaranas, après avoir séjourné aux abords de Madeira, non loin des Andes. Le dernier en date de ces mouvements ethniques d'origine mythique est celui qui entraîna les Apapokéva-Guaraní de la frontière du Paraguay à la côte du Brésil et qui dura plus d'un siècle, de 1810 à 1912.

La vague ensablement que les Tupi de la côte du Brésil avaient des parvenus de l'empire inconnu, explique la marche vers l'ouest de certaines de ces migrations. Parvenus sur le bord de la mer et se voyant dans l'impossibilité de gagner du ce côté la « Terre sans mal », il est possible que les Tupi se soient mis à en rechercher dans l'autre sens, comme l'ont fait, il y a peu de temps encore, quelques groupes des Apapokéva-Guaraní. Le prestige de la civilisation inconnue a dû, sans doute, influer sur leur décision et, en bien des cas, ils ont en certainement tendance à l'assimiler à cette terre mythique où ils désiraient si ardemment pénétrer.

Si je risque cette hypothèse, c'est dans l'impossibilité d'expliquer autrement cette ruée vers le Pérou qui s'est produite au XIVe siècle chez certaines tribus tupi de la côte du Brésil. Un tel point de vue n'est pas trop audacieux, car, sinon, comment pourrait-on justifier l'ardeur déployée par les Tupinambs pour atteindre le Pérou après avoir remonté l'Amazone, dans la tentative qu'ils firent en 1539 pour pénétrer dans la « terre de l'immortalité et du repos éternel » ? Comment s'expliquer que les Tupinambs, un siècle plus tard, aient voulu s'établir temporairement sur le haut Madeira, près des Andes, alors qu'ils pourraient eux aussi la chimère de la « Terre sans mal » ? (2). Quelque chose devait

(1) Sur les migrations des Tupi-Guaraní à la recherche de la « Terre sans mal », voir Métraux, I, pp. 6-22. J'ai analysé les mythes de la « Terre sans mal » et étudié les mouvements mystiques que ces croyances ont suscités, dans un chapitre de mon livre sur la religion des Tupinambs (v. Métraux, I, pp. 180-224).

(2) Lorsque je me suis occupé de cette migration (v. Métraux, I, pp. 22-24), j'avais cru, sur la foi d'Anchieta, que le cacique en avait été le chef d'origine à la tyrannie

les pousser vers l'ouest et déterminer le choix de leur itinéraire : le message qui les attirait, était celui qui, plus tard, enflamma la vie à tant d'Espagnols. C'est de la « grande nouvelle » qu'il s'agit, du au pays mystérieux, abondant en richesses, situé au delà des limites vers le soleil et que les Tupinambas sont certainement supposés, puis assimilés à cette « Terre sans mal » dont parlaient les vieux mythes.

A la même époque ou peut-être, chez les Guarani du Paraguay, vint tendance analogue à identifier le pays de l'Ouest avec celui où vivait le Héros civilisateur.

Il est un texte fort intéressant et peu connu, qui montre fort bien comment les Guarani se représentaient l'empire Incaïque, au début du XVIe siècle. En le comparant à ce que nous savons des mythes de ces mêmes Indiens, nous serons à même de faire ensuite rapprochements divers et fournir par ce moyen d'amusantes que les Guarani ont cru voir en l'Inca leur Héros civilisateur, l'andire.

Le document en question se trouve dans les *Relaciones geográficas de Indias* (t. II, p. [illegible]) où il figure sous le titre suivant : *Relación geográfica al tenor en pública forma y se está notificado al virrey en la provincia de los Longuaqua en el grados sobre el río Paraguay, 140 (leguas) de la Asunción, donde había llegado el general Ryfo de Chaves con 200 hombres, con órden é intento de poblar en ella, y después, por la relación que [illegible] pasó adelante.*

Les Espagnols, s'aventurant sur l'Uruguay qui constituait une partie mêmes grossi dans la région des Xarayes, leur déclarèrent qu'ils étaient venus leur apporter du fer, abattre les pachamamas et réconforter les bons. A cela, ces derniers répondirent « que ne bougeaient mondes, parce ancêtres habitaient que non devaient rien en sortir, et que mêmes mondes, ensuite, entendaient les dieux et ne se engagèrent. Dieu vous allez et les dieux mêmes frères en la terre, et que en principal Andire est le habita demande ». L'information continue en ces termes : « Parlez propriétaire que dit entaba et que qui le Ronchan Andire. Dépêchez que ces mêmes, et que en ennemis à la mêmes dit mêmes, dépêchez que en les temples pouvaient se Ronchan en parler Cuge, et vous jusqu'à la dernière gentes mêmes et vaincu en les Chiriguanos

des Portugais. Je ne les représente pas comme d'ingénuités, en faisant plus tard le [illegible] d'Hortatio (pp. 10-12), que ces Tupinambas avaient entrepris un long voyage pour aller à la recherche de la « Terre sans mal ». Le passage en question est du plus haut intérêt et doit être cité en entier : « Il principio dicono Indian Tupinambaranas nome fu da natione d'esso dio. Dicono que, un anno de 1549, antiqui avec antepassados do Brasil, em tres tempos, em busca da Paraiso terrestre (como de barbares) empenhado e empedindo tocou, e que buscando considerado sentir tempo chegaram a queste aldeia, que infinitam abundante, e ricos de Indios naturaes; e que em boa e ultimam et conquistamos os seus naturaes, quasi infinidos, e com o tempo se casaram com nos mesmos, e se aparentaram; mas nem deixam de conhecer os naturaes a superioridade que os Tupinambaranas tem sobre, »

SF 10 Chiriguano

[facing p. 306]

y en los *Ontes*, hasta llegar á los pueblos de *Paicocoro*, cacique principal y a los pueblos de *Paiçuri*, en demanda de el *Candire*, que es señor del metal verdadero y de todas las cosas buenas ». A première vue, on voit dans ce passage une contradiction qui saute aux yeux et qui ne peut s'expliquer que par les difficultés que les Espagnols éprouvaient à comprendre leur interlocuteur : *Candire* est, d'une part, représenté comme un puissant chef guarani qui les a conduits dans une migration, et de l'autre c'est un personnage « seigneur du vrai métal et de toutes les bonnes choses » en quête duquel ce même *Candire* est parti ! Voyons plus loin et efforçons-nous de démêler cette confusion. Le pays où habite *Candire* nous est dépeint comme possédant des « cerfs à longs poils » avec lesquels on tisse des vêtements ; on y trouve de l'or et de l'argent, ainsi qu'un métal jaune qui sent mauvais et avec lequel on fait des outils (le cuivre et le bronze). Quelques lignes plus loin, l'informateur guarani déclare que dans la Sierra de Acharagua, il existe une rivière dont on tire du métal jaune : « Preguntando qué es Araraguagua (sic) dijeron que es una sierra muy grande que duraba mucho, y que por la una parte alindaba con la una laguna muy grande, y que de la otra parte era una población muy grande de gente que no tenía más de un principal, que era señor de todos que se llamaba el *Candire* ; y que delante de éste se juntaban todos á cantar con los instrumentos de metal verdadero, a manera de cañas gordas, las cuales hacían un buen sonido (ce sont les bâtons de rythme guarani) ; y tenían otras que tocaban con la boca. Fuéle mostrado una trompeta ; dijeron que de aquel principal *Candire* tomó el nombre su padre, porque en aquella tierra mató muchos de los *candires*, los cuales mataron toda la demás gente que con su padre había salido ».

Le pays des *Candires* est celui où Dieu a mis tous le biens de ce monde, l'or y abonde, on y trouve des forteresses défendues par des fosses. Les guerriers *Candires* sont vêtus, leurs haches sont en métal et leurs boucliers en or et en argent. Dans l'intérieur on trouve du métal blanc et jaune, etc. La terre du grand *Candire*, géographiquement, est située au-delà du río Guapay ; pour s'y rendre on traverse la terre des *Timbu*, des *Baure* (Mbaure) qui reçoivent des objets en or des *Candires*. Près de la terre du *Candire* vivent les Chiriguano et d'autres *Candires*, des Guarani ceux-là et, en outre, parents des *Uratucere*, qui donnèrent ces informations à Nufrio de Chaves.

Il saute aux yeux que la terre des *Candires* n'est autre que le Pérou (1). Dans le grand *Candire* nous n'avons aucune peine à reconnaître l'Inca. Mais, pourquoi cette assimilation entre *Candire* et un chef gua-

(1) Dans les Commentaires d'Alvar Nuñez Cabeza de Vaca (Hernández, pp. 288 et 322) il est également question des *Candires*, comme d'un peuple que nous pouvons aussi identifier avec quelque tribu incasique.

rani, et ensuite l'idéalisation de ce personnage ? Enfin, quelle est cette migration à la recherche du grand *Candire ?* La clef du problème nous est fournie par un autre texte d'une époque légèrement postérieure (1589) qui concerne les Guarani d'Itati, émigrés dans la province de Santa Cruz de la Sierra, c'est-à-dire chez les ancêtres des Guarayú et des Pauserna actuels. Il s'agit d'une *Annua littera* des Jésuites (v. Métraux, 5, p. 924) où il est beaucoup question de ces Indiens désignés sous le nom d'*Itatines* à cause de leur pays d'origine. *Candire,* nous dit le Jésuite anonyme, auteur de cette lettre, est leur dieu. En effet *Candir* compte, aujourd'hui encore, parmi les dieux civilisateurs ou grands dieux des Guarayú. Dans un fragment de mythologie guarayú, publié par Cardús (p. 76), *Candir* apparaît au début du monde en compagnie de *Mbiracucha (Viracocha),* de *Zugugnagn,* d'*Abaangui* et du *Tamoi.* On attribue à *Candir* la création des nègres.

Il n'y a rien d'extraordinaire à voir l'Inca affublé du nom d'un Dieu ou Héros civilisateur guarani. Il a dû se produire là une confusion analogue à celle qui a été provoquée un peu partout en Amérique du Sud par l'arrivée des blancs. Comme l'on sait, ceux-ci ont été, presque toujours, assimilés aux Héros civilisateurs. De même que les Tupinamba et les Guarani ont vu dans les premiers Espagnols ou Portugais, les descendants du Dieu ou Héros civilisateur, il est possible que les anciens Guarani se soient représenté le Pérou comme la contrée mystérieuse où le Grand Ancêtre s'était retiré; et, dans le souverain de cet empire, ils ont sans doute cru reconnaître le Héros civilisateur lui-même, soit le *Candire.*

Tous ceux qui connaissent, pour les avoir vus, les indiens de l'Amérique tropicale, n'auront aucune peine à se représenter ce que furent ces migrations des Guarani vers les Andes.

Qu'un chef entreprenant ait réussi avec ses « soldats » à traverser le Chaco et à faire quelque fructueuse razzia chez les Chané, il n'en fallait pas plus pour qu'au retour la nouvelle se transmît de bouche en bouche et suscitât partout le désir de l'imiter et l'espoir de gains analogues. Dans chaque village l'affaire était discutée, les chefs parlaient le soir autour du feu ou lors des grandes beuveries collectives, et les jeunes gens rêvaient d'obtenir, à leur tour, des ornements d'argent, des haches de bronze, de longues chemises en laine dont se vêtaient ceux qui étaient revenus de la terre du *Candir.* Çà et là, on se décidait à partir à la bonne saison pour tenter sa chance. Les habitants de plusieurs villages se concertaient pour fixer la date du départ et l'on s'y préparait lentement. Les femmes s'occupaient des provisions, grillaient du maïs, en faisaient de la farine ou râpaient le manioc qu'elles transformaient en cassave. D'autres élaboraient de la bière de maïs en vue de la fête qui précéderait le départ.

Les contingents de plusieurs villages voisins se réunissaient, probablement pour affronter ensemble les périls de la route (1). S'ils étaient soumis à l'autorité d'un chef puissant, l'expédition gagnait en cohésion et en nombre. En aucun cas il ne faut voir en ces migrations un mouvement national, effectué selon un plan préétabli et entraînant simultanément l'ensemble des tribus guarani. Ces indiens, comme tous ceux de l'Amérique tropicale, n'ont jamais eu une conscience bien nette de leur unité et, même devant un danger commun, il ne leur est jamais venu à l'idée que la similitude de langue et de civilisation pût créer entre eux un lien de solidarité. A plus forte raison, cet individualisme du groupe ou de la tribu devait-il se manifester avec une acuité particulière lorsqu'il s'agissait d'une simple expédition de pillage.

Les colonnes de guerriers guarani qui s'enfonçaient dans la brousse du Chaco, ne comprenaient sans doute que peu de femmes. Les hommes avançaient marchant à la file indienne, arcs et flèches à la main, tandis que derrière suivaient quelques jeunes filles avec, sur le dos, une hotte pleine de provisions. Celles-ci venaient-elles à manquer, on chassait en cours de route, on pêchait dans les rivières, telles que le Pilcomayo, si l'on en suivait le cours. A défaut de gibier ou de poisson, on récoltait des fruits : les choux palmistes, les gousses de l'*algarrobo*, les fruits des *chañares* étaient là qui fournissaient un aliment substanciel, mais encore fallait-il choisir pour voyager la saison où ils étaient mûrs. On suivait des yeux le vol des abeilles pour trouver du miel et l'on ne dédaignait pas certains insectes ou leurs larves. Le problème de l'eau était le seul grave : on le résolvait en recueillant celle que contenaient à leur base les feuilles des *caraguatá* ; on suçait la racine de certains tubercules (les

(1) Au cours de la reconnaissance qu'il effectua sur le rio Paraguay par ordre du gouverneur Alvar Núñez Cabeza de Vaca, Martínez Irala eut l'occasion d'interroger, près du Puerto de los Reyes, des Guarani dont l'un lui donna les renseignements suivants qui éclairent bien la manière dont avaient lieu ces migrations : « preguntado sy ay algunas casas de su generaçión delante dellos, dixo que sy que ay çinco o seys principales ; preguntado sy han por el metal a la sierra donde se lo sacan, dixo quellos no acostumbran yr alla por que son pocos y tienen enemigos cerca, pero que los de las casas postreras van algunas vezes y quel ha ydo una vez alla ; preguntado que tanto tiempo tardan de aqui a donde ay el metal, dixo que tardan çinco lunas ; preguntado que con quien fue por el dicho metal, dixo que en tiempo pasado vinieron del paguay muncho prinçipales e yndios del puerto que llaman de ytatyn, y pasando por una tierra que se llama ytapua, que es quatro jornadas de las postreras casas desta su generaçión, yendo los de dicha casa en busca del dicho metal, se encontraron en el camino e se fueron juntos o dieron en una casa de yndios esclavos henemigos suyos, y que desde ally se bolvio con todos los suyos y tambien algunos de los de ytatyn, y los otros pasaron adelante y que oyo dezir que tardaban las dichas çinco lunas a donde estava el dicho metal... » (*Relación de Domingo Martinez de Irala*, pp. 349-350).

sipóy (1) du Chaco boréal) et l'on s'abreuvait aux petites mares rencontrées sur la route.

Parfois aussi on faisait un séjour de plusieurs mois en un endroit qui paraissait fertile pour y semer du manioc et du maïs dont on attendait la croissance avant de continuer la marche. García, au cours de son raid, avait laissé cinq de ses gens dans une tribu pour qu'ils pussent pourvoir à l'alimentation de sa troupe à son retour (2).

La marche était lente, car il fallait se frayer un chemin dans le fourré; et ce travail, difficile pour les blancs armés de coupe-lianes, devait l'être encore plus pour les indiens, à l'époque préhispanique. Avec leurs haches de pierre, leurs massues, le feu, s'il n'y avait pas danger à l'allumer, ils ouvraient un sentier que suivaient l'arrière-garde et les autres expéditions. D'ailleurs les Guarani, habitués dès l'enfance à la vie dans les grands bois, avaient certainement cette étonnante souplesse qui permet à leurs descendants de se glisser dans les plus épais taillis, en évitant branches et épines (3).

De temps en temps c'étaient des escarmouches avec des indiens Guaikurú, Samuko ou Matako, mais pour les Guarani, qui depuis longtemps étaient habitués à lutter contre les indiens sauvages du Chaco, ces combats ne les prenaient pas au dépourvu. On se contentait d'attirer le moins possible l'attention en évitant de mettre le feu à la brousse ou simplement de faire trop de fumée.

Aucun des détails que je viens de donner n'est le fruit de ma fantaisie. Pour décrire ces migrations, il m'a suffi d'évoquer à mes yeux les scènes dont j'ai été témoin chez les descendants de ces anciens Guarani et de glâner quelques faits dans les chroniques ou les documents où nous sont contées les traversées du Chaco faites par les Guarani avant ou pendant la conquête espagnole. En veut-on quelques exemples? Je les prends dans les Commentaires d'Alvar Núñez Cabeza de Vaca et dans la *Relación de Domingo Martinez de Irala.*

(1) C'est une bignoniacée ou une bégoniacée (?) Cette plante se présente sous l'aspect d'une liane dont le bulbe est plein d'eau fraîche. (*Diccionario Chiriguano-Español y Español-Chiriguano*, p. 192).

(2) *Relación de Domingo Martinez de Irala*, p. 318 : « preguntado que en cuantos dias le pareçe que podrian contar, dar por aqui en el camino del dicho garçia, dixo que no sabe, pero que le pareçe que conoçera la tierra e quel camino, es muy ancho y grande ; preguntado si avia que comer por aquel camino, dixo que sy y mucho de la comida quellos tienen, ques mandioca, y mayz, y calavaças, y manduuis, y quel dicho garçia dexo cinco esclavos suyos en el camino en cierta generaçion, para que le hiziesen de comer para quando el viniese ; ».

(3) Hernández, p. 300 : « Dijo (c'est un Guarani qui parle) que había mucho tiempo que anduvo por el camino, y cuando los de su generación pasaron, que iban abriendo camino y cortando árboles y desmontando la tierra, que estaba muy fragosa y que ya aquellos caminos le paresce que serán tornados a cerrar del monte y yerba... ».

Il s'agit de l'*entrada* que le gouverneur Alvar Nuñez Cabeza de Vaca fit dans le Chaco à la recherche d'un chemin vers le pays des Chané. « Les indiens Guarani que le gouverneur emmenait avec lui, se nourrissaient de ce que le Gouverneur leur faisait donner sur les provisions de réserve et du miel qu'ils tiraient des arbres. Ils se procuraient aussi quelque gibier en tuant des pécaris, des tapirs et des cerfs qui semblaient être abondants en cette terre; cependant, comme la troupe qui venait avec lui était nombreuse, ils faisaient du bruit et mettaient les animaux sauvages en fuite, ce qui rendait la chasse peu fructueuse. Espagnols et indiens mangeaient aussi les fruits des arbres sauvages dont il y avait grande quantité... ils tiraient profit également des fruits des palmiers qui abondaient dans cette région. Ils n'en mangent pas les dattes dont ils se contentent de briser le noyau. L'intérieur est rond et comme une amande douce. Les indiens en font une farine qui est un aliment excellent; ils consommaient aussi les choux palmistes qui sont forts bons. » (Hernández, p. 303.)

Ailleurs (Hernández, p. 241): « Les Espagnols, emmenant avec eux comme guides des indiens et quelques individus qui disaient savoir le chemin, marchèrent trente jours à travers des déserts où ils souffrirent beaucoup de la faim et de la soif, à tel point même, que quelques indiens en moururent... ils s'en retournèrent mangeant pendant tout le chemin des chardons sauvages. Pour boire ils extrayaient le suc de ces chardons et d'autres herbes ».

« *Araeare*... leur ordonna (aux Guarani qui accompagnaient une expédition espagnole dans le Chaco) de mettre le feu aux prairies qu'ils traversaient, ce qui équivalait à avertir les indiens ennemis, dont on parcourait le territoire, de venir leur barrer le passage et les tuer. Ils faisaient cela contre la coutume et la discipline qu'observent ceux qui font des expéditions dans ce pays et contre l'habitude des indiens eux-mêmes. » (Hernández, p. 228.)

Un Guarani de Puerto de los Reyes, qui avait pris part à une expédition partie en quête du métal, rapporta à Irala « qu'il avait entendu dire que l'on tardait cinq lunes avant d'arriver là où se trouvait le métal et il ajouta que ceux d'Itatin qui vivaient plus de cent lieues plus bas assuraient qu'ils ne prenaient pas plus de trois mois et prétendaient qu'ils faisaient ce voyage en cinq mois puisqu'ils devaient passer si près de l'endroit où étaient leurs maisons. Il dit que ce qu'il avançait là était la vérité, mais que la durée de ce voyage était dûe au fait qu'ils restaient souvent à manger dans les régions qui leur paraissaient fertiles et que du temps où il fut avec eux ils restèrent en place trois mois et que c'était pourquoi ils tardèrent autant ». (*Relación de Domingo Martinez de Irala*, p. 350.)

Contre la fréquence de ces expéditions guerrières des Guarani, on

m'objectera les insurmontables obstacles que présente le Chaco, les difficultés inouïes que les Européens ont éprouvées à vouloir le traverser, les sacrifices sanglants qu'ont dû faire toutes les expéditions qui s'y sont risquées. Je répondrai en rapportant le récit d'une migration contemporaine que me fit mon vieil ami et hôte, le « capitaine » *Taruiri* de Caipipendi. Il y a quelques années le vieux *Taruiri* ayant appris de quelques Chiriguano que les Brésiliens étaient « cariñosos », c'est à dire, généreux, eut l'idée de se rendre chez eux pour y trouver du travail qu'il espérait voir bien rémunéré. Il s'entendit avec 45 autres Chiriguano auxquels il fit miroiter la fortune qui les attendait dans le pays de l'est. Avec cet esprit aventureux et cette hardiesse qui caractérisent les Guarani, ils n'hésitèrent pas à se mettre en route vers l'inconnu. Ils passèrent d'abord par le territoire des Chané et suivirent le cours du Parapiti jusqu'au désert. Là ils se lancèrent audacieusement dans ces régions inexplorées, étendues desséchées, qui séparent l'Izozoc de Chiquitos. Ils étaient tous armés d'arcs et de flèches pour se défendre d'une attaque possible des Tsirakua dont ils virent souvent dans le sable les traces de leurs sandales carrées. Bien entendu, point d'eau mais seulement des racines de *sipóy* qui leur permirent de supporter la soif. Après 12 jours de marche cette troupe arriva à Chiquitos, puis de là gagna le río Paraguay et Corumbá. *Taruiri* ne fut pas peu étonné d'y trouver des frères « c'est-à-dire, m'expliqua-t-il, des gens qui parlaient ma langue, mal il est vrai, mais qui se faisaient néanmoins comprendre ». Quand je m'informai discrètement du succès de ses affaires là-bas, *Taruiri* me répondit, en hochant la tête et avec un ton où perçaient la tristesse et la désillusion: « Tout cela n'était que mensonge », *todo era engaño.*

Taruiri ignore, et ignorera toujours, qu'il a accompli là un exploit qui ferait l'orgueil et la gloire d'un explorateur. Pour lui, il s'agissait d'un simple voyage, à peine plus long et plus pénible, que celui qu'il entreprenait autrefois pour aller en Argentine.

Veut-on d'autres exemples modernes de leur esprit d'aventure et de cette facilité avec laquelle les Guarani se déplacent ? Je transcris tel quel le curieux récit que me fit l'indien Cipriano, de la mission d'Ivu, qui tout embrouillé qu'il soit, a trait à des faits certainement authentiques :

« Autrefois, de nombreux Paraguayens débouchèrent dans notre territoire du côté de l'Izozoc et ils s'en furent combattre du côté des Guarayú et de Santa-Cruz. De là ils passèrent à Cochabamba. Ils ont livré bataille là-bas, puis sont allés à Oruro. Leur colonel fut tué. Ils s'éparpillèrent de tous côtés. L'un d'eux vint à Macharetí où se trouvait le « Capitan grande », *Mandepona.* « Celui-ci dit à Cipriano qui était alors jeune homme : « Allons au Paraguay ». *Mandepona* avait donné à ce Paraguayen 10 « soldats ». Cipriano ne voulut pas les accompagner. Les dix descendirent le Pilcomayo et arrivèrent à un village près du Paraguay.

1:Métraux
SF10 Chiriguano
[Fuchs p. 312]

Un soldat, richement orné d'argent, avec un cheval dont les harnais étaient du même métal vint au-devant d'eux pour les examiner. Le Paraguayen qu'ils escortaient s'en fut parler à ce soldat, mais les autres n'entendirent pas ce qu'ils disaient. Pendant que ces deux conversaient, ils virent arriver les Toba avec une pièce d'étoffe entre les jambes et la poitrine et les bras peints avec du charbon. Les Toba leur demandèrent d'où ils venaient et où ils allaient. Les Chiriguano répondirent : « Vous faire visite ». Les Toba se refusèrent à les laisser continuer leur route, quoiqu'ils fussent à une lieue seulement du Paraguay. Comme excuse, ils leur dirent qu'ils étaient en train de faire la guerre. Le Paraguayen monta en croupe du soldat et les dix Chiriguano retournèrent à Macharetí. »

La première partie decette histoire semble une adaptation moderne de l'aventure d'Alejo García. J'ignore quel événement a pu donner lieu à cette légende qui, si dle eût été réalité, eût fort été du goût du Gouvernement paraguayen. Quant au voyage des dix Chiriguano de Macharetí, il a tout à fait l'apparence d'être authentique.

La traversée du Chaco n'est pas pour les indiens une entreprise aussi malaisée que pour les blancs. Jadis ces voyages des Andes au Paraguay ont dû être facilités par une plus grande densité de la population indigène. Il suffit de rappeler le voyage relativement facile de Juan de Ayolas allant du Paraguay au pays des Chané, et en revenant sans avoir eu à vaincre d'obstacles particuliers. L'exploration d'Alvar Núñez Cabeza de Vaca, continuée par son lieutenant Francisco de Ribera, est un second exemple qui montre bien que les randonnées des Guarani ne constituaient pas des faits exceptionnels et d'une réalisation dangereuse à l'extrême.

Arrivés à une certaine distance des contreforts andins, les Guarani pénétraient sur le territoire des indiens Chané.

C'est à une de ces nombreuses entreprises guerrières des Guarani que l'aventurier portugais Alejo García participa avec quelques autres camarades.

Je suis persuadé que les 2000 (selon Díaz de Guzmán, p. 26) Guarani que cet aventurier accompagna jusqu'au Pérou ne formaient qu'*une seule* des nombreuses bandes de guerriers de cette nation qui, chaque année, de tous les points du territoire des Guarani, franchissaient le río Paraguay, puis les déserts du Chaco.

Ruy Díaz de Guzmán, qui rapporte cet évènement, voit les choses sous un jour un peu simpliste. Une migration ne se fait pas en une fois, ni en une année. Celle des Guarani a duré, peut-être, plusieurs décades, sans toutefois qu'il faille parler de siècles. Vingt ou trente ans ont dû suffire pour que pût se constituer, entre le haut Pilcomayo et le rio Guapay, le noyau de la nation chiriguano. La pénétration des Guarani dans

le Chaco s'opérait d'une façon assez chaotique et incohérente. A chaque instant les conquistadors rencontrent sur leur route des groupes guarani qui, por une raison ou une autre, n'ont pu parvenir à rejoindre leurs frères établis au-delà du Chaco. Ces Guarani, qui jalonnaient les routes suivies par les envahisseurs, ont été des guides précieux pour les aventuriers espagnols et ce sont eux qui les ont conduits au Pérou. Pendant de longues années il a existé, entre le Paraguay et le versant oriental des Andes boliviennes, des communications ininterrompues et un va-et-vient incessant.

Faire l'étude critique de l'histoire d'Alejo García serait suivre des sentiers déjà tracés et sortir, en outre, du cadre de l'ethnographie. Cet épisode de la conquête, si étroitement mêlé à un phénomène ethnique, apparait aujourd'hui comme un événement capital dont le retentissement sur le développement des Provinces du Río de la Plata a été considérable.

L'expédition d'Alejo García se distingue des précédentes par son envergure. Non contents de razzier les Chané, les indiens Guarani qui formèrent cette colonne, eurent l'audace de s'attaquer aux forteresses incasiques du Cuzco-Toro et, après les avoir prises d'assaut, de pénétrer en pillards dans les provinces soumises à l'autorité de l'empereur péruvien. Les envahisseurs passèrent la frontière entre Mizque et Tomina et s'avancèrent vers l'intérieur sur une distance de 40 lieues. Près des villages de Presto et Tarabuco, non loin de Chuquisaca, ils furent arrêtés par les indiens Charcas, selon Díaz de Guzmán, par des troupes levées dans le Kontisuyu, suivant les chroniques péruviennes. Les Guarani se retirèrent en bon ordre, sans abandonner le butin conquis.

A la suite de cette invasion, qui eut lieu sous son règne, Huayna Capac fit restaurer les forts détruits et y mit de fortes garnisons.

L'invasion des Guarani dans le Tahuantinsuyu est rapportée à la fois par les chroniqueurs du Paraguay et par ceux du Pérou (1). Ils s'accor-

(1) Sarmiento de Gamboa, pp. 109-110 : « Mientras Guayna Capa estaba ocupado en esta guerra de los Cayambis, los Chiriguanas, ques una nación de montaña, desnudos y que comen carne humana y della tienen pública carnicería, se juntaron, y saliendo de la aspereza de los montes, entraron en la tierra de los Charcas, questaba conquistada por los ingas del Piru. Y dieron en la fortaleza de Cuzcotuyo, adonde el inga tenía grande guarnición de fronteros contra los Chiriguanaes. Y como salieron de repente, entraron la fortaleza y matáronlos á todos y hicieron en los de la tierra gran estrago, robos y muertes.

« Fué esta nueva á Guayna Capac al Quito, y dello recibió grande pesadumbre y luego despachó un su capitan llamado Yasca, para que viniese al Cuzco á hacer gente, y con ella fuese á hacerles guerra á los Chiriguanaes. El cual capitán partió para el Cuzco trayendo consigo las guacas Catiquilla de Caxamarca y Guamachuco y Curichaculla de los Chachapoyas y la guaca Tomayrica y Chinchayrocha con muchas gentes suyas de las guacas. Y llegó al Cuzco, adonde fué muy bien recebido de los gobernadores

[facing P. 314]

1. *Santos Airedyi*, le dernier « capitan grande » des indiens Chiriguano encore indépendants. *Airedyi*, est complètement assimilé à la civilisation et vit comme un riche fermier bolivien. C'est un homme de grand caractère. (Photo. A. M.)

dent sur le fait essentiel et sur la date approximative de l'événement. Cette coïncidence entre des traditions dont la source est si différente, et qui ont été recueillies indépendamment les unes des autres, dans des régions aussi éloignées, ne laisse subsister aucun doute sur le caractère purement historique de cette invasion. Nordenskiöld (5, pp. 70-77) put, au cours de son dernier voyage dans le Chaco (1913-1914) étudier les ruines des fortins de Cuzco-Toro (aujourd'hui Incahuasi), qui se dressent toujours à l'orée du pays chiriguano. Par leur style, ils appartiennent à la période incasique. Nordenskiöld (7) et moi-même avions cru que l'expédition de García était la première en date que les Guarani eussent dirigée vers le Pérou. En réalité d'autres exodes de Guarani l'ont précédée de quelques années, comme Gandía (2, p. 30) (1) est parvenu à

llamados Apo Hilaquita y Auqui Topa Inga, y hecha su gente, partió del Cuzco para los Chareas. Y de camino sacó del Collao mucha gente, con la cual llegó á los Chiriguanaes y les hizo cruel guerra y prendió dellos algunos, que embió por muestra á Guayna Cupac á Quito, para que viese la extrañeza de aquella gente. Y el capitán Yasca reedificó las fortalezas, que por allí había, y poniendo en ellas la guarnición necesaria, se tornó al Cuzco, adonde despidió la gente, y cada uno se fué á su tierra. »

Santa Cruz Pachacuti, p. 304 : « Y en este tiempo (del Inca Huayna-capac) llega la nueva que como los Cherigunaes abian salido á tomar tierras del yuga, de la qual nueba se aflexi el yuga, y assi lo despacha capitanes mas experimentados para la conquista de los Chiriguanaes, con veynte mill hombres Chinchaysuyos. »

Balboa, p. 105 : « Pero esta fiesta fué interrumpida por la noticia llegada del Cusco, de que los Chiriguanes, pueblo valiente y cruel habían dado muerte a las guarniciones de las fronteras y arrasado todo el país hasta Chuquisaca y sus alrededores. Guayna-Cápac se desconcertó con esta nueva, disimuló su pena tanto como pudo y llamó para el mando de su ejército a un hombre lleno de valor e intrépidas llamado Yasca, al que encargó castigar esta agresión. Yasca partió de Tumibamba a la cabeza de lo más escogido de los soldados incas ; además, tenía orden de reclutar desde Caxamarca a todas las gentes que encontrara para hacer la guerra que iba a emprender ; y para animar su valor, ordenó a cada nación el llevar consigo la gran Guaca de su país, que es ídolo más, y al cual acuden muy a menudo. Llegó al Cusco con un numeroso ejército compuesto de diversas naciones ; por todas partes los gobernadores le acogían con cariño, y le hicieron grandes honores. Provisto de todo lo que podía necesitar y aumentado su ejercito con los mejores hombres del Collao, continuó su camino con más rapidez en persecución de los Chirihuanas ; se libraron muchos combates sin que se declarase la victoria por ninguno de los dos ejércitos. Sin embargo, Yasca hizo algunos prisioneros, que envió a Quito. Reparó los daños que los enemigos habían hecho en el país, y dejó una nueva guarnición en las fortalezas y en las fronteras ; después regresó al Cusco, donde los gobernadores recompensaron a los soldados que se habían distinguido y les permitieron regresar a sus países, llevandose sus Guacas o ídolos. »

Cieza de Leon, p. 228 : « (Guayna Capac) envió capitanes con gente de guerra á los Chiriguanaes ; mas no les fue bien, porque volvieron huyendo. »

(1) Gandía (2, p. 30, note 1) cite divers passages tirés de documents anciens et dignes de foi qui semblent indiquer que l'expédition de García avait été précédée d'autres migrations antérieures qui, parties du Paraguay, avaient abouti à l'établis-

l'établir. Ce n'est pas non plus le raid d'Alejo Garcia qui fut la cause déterminante de la grande migration dont Diez de Gozmán (p. 29) parle en ces termes :

« A la suite de cet événement (voyage de Garcia) les Indiens de la Province du Paraguay se réunirent avec leurs caciques et décidèrent de faire une expédition et de retourner dans la région où Alejo Garcia s'était rendu. Quand ils eurent convoqué beaucoup d'Indiens de cette province, ils se mirent en marche par bandes et tribus. Les Indiens d'en-bas, qui sont ceux du Paraná, suivirent le cours du rio Araguay qui est, comme je l'ai dit, le Pilcomayo. Ce sont ces Indiens qui, actuellement, vivent sur les limites du Corregimiento de Tarija : les Indiens qui vivaient dans la région d'Asunción suivirent sur la droite du rio Paraguay, du côté de Caiguazú. Les Indiens de Jerusalem et de Caragaipera qui habitaient plus haut sur le fleuve, le quittèrent près de San Fernando. Ces dernières sont ceux qui aujourd'hui sont établis sur le rio

ment de groupes guarani au-delà du Chaco. C'est ainsi que les Tarapecuí rencontrèrent à Francisco Ribera que, dans les temps anciens, avant Garcia, les Guarani étaient venus les dépouiller et les massacrer.

Une *Relación anónima* de 1545 (pp. 310-311), rapporte en ces termes les propos des quelques indiens Chané qui furent interrogés par Alvar Núñez Cabeza de Vaca, lors de son expédition sur le haut Paraguay : « entre esta junta que hallo estan ciertos yndios que son de la tierra adentro dellos de la junta del chane que se vino a nosotros y otros de cabo su tierra, en que se conforman lo que ellos dizen con lo que este que esta con nosotros dice, y dizen aver sido cristiano que se vino desde la yslla de santa catalina en demanda de oro y plata y dizen quente los rio de sus generaçion oyeron que los traian por cristiano, y dezian el cristiano garçia, etc. », Ce passage semble indiquer que Garcia et ses compagnons trouvèrent déjà des Guarani établis au pied des Andes et que ceux-ci avaient déjà réduit des groupes chané en servitude.

Le plus significatif de ces textes est celui que nous trouvons dans la *Relación de Domingo Martinez de Irala*, pp. 316-317. Irala se trouvait à Puerto de los Reyes, sur le rio Paraguay, quand « entre en el vergantyn donde el estaba un principal con otros tres yndios que hablavan la lengua guarani ni mas ni menos que los mismos guaranis, el qual dicho principal dizo que se llama tibetaçe y un yndio de los que con el venian que hera pequeño de cuerpo, que dizo que se llamaua xaguani y los guaranys le llamavan moranna, syn le preguntar nada, dizo quel avia bivido y avia sydo esclavo de gracia, que los yndios le llamaban maratya y le nombró por los dos nombres; el y el dicho principal y toda su casa no hera del dicho puerto y quellos heran los que se nombravan chanes; preguntado por los dichos linguas que hera la causa por que se llamaban chanes, dizo que heran de la generaçion de los chanes questavan la tierra adentro y que se llaman çeitbeçi e que ayy se nombravan en los dichos chanes cada pueblo su nombre, aunque toda hera una generaçion; preguntado que como hablaban guarany y donde conoçio al dicho garçia, dizo que la causa por que hablaba guarany hera que en tiempos pasados, cuando garçia vinieze del brasil a los dichos guaranys, se hizo una grand junta de los dichos guaranys en el puerto que llaman de yatiye, para ir a buscar el metal y que pasando por su tierra dellos de norte, dieron en sus casas y mataron muchos de los vaçes e prendieron a sus mugeres e hijos y a ellos y los trayeron al dicho puerto

Guapay, à 20 lieues de la ville de San Lorenzo, gouvernement de Santa Cruz de la Sierra. »

Dans les Commentaires d'Alvar Nuñez Cabeza de Vaca (Hernández, p. 299-301), il est question d'une autre migration qui ne paraît pas avoir de rapport avec celle du Garcia qui lui est de quelques années postérieure. Je citerai ce passage en entier, car il illustre bien certaines péripéties de ce grand mouvement ethnique : Alvar Nuñez Cabeza de Vaca avait ravagé un détachement espagnol chez les indiens Xarayes pour tâcher de s'aboucher, par leur intermédiaire, avec un groupe d'indiens Guarani, frais depuis peu dans leur voisinage. Les émissaires échouèrent dans leur tentative, car Xaray et Guarani étaient ennemis irréconciliables. En guise de consolation, le cacique des Xaray les avait mis en rapport avec un indien Guarani, marié avec une femme xaray et qui vivait depuis longtemps parmi eux. « Cet indien, qui appartenait à la race guarani, avait été dans les villages de l'intérieur des terres et de guerre, y quando ellos en el dicho puerto por embarcos de los dichos guaranys, pues por allí el dicho garçia, con el qual el y otros dos hermanos fueron en busca del dicho metal con los dichos guaranys ; preguntado qp fue y anduvo con el dicho Garçia hasta que volvyo, dixo que qp ; preguntado hasta donde llego el dicho garçia y de donde vino el metal que traxo, dixo que llego hasta la generaçion que llaman payyaxan, y que los chanes y los dichos payyaxan le dieron el dicho metal y que desde ally se bolvyo por que supo que una generaçion que se llama çorocotoquis hazian grand junta contra el dicho garçia y los que con el fueron y que dixo que se bolvian por tener sus triqueçiones para volver con ellos por el dicho metal... ».

Ces témoignages, et quelques autres indices, donnent raison à Gandia, qui dans cette étude a fait preuve non seulement d'une vaste érudition, mais aussi d'une grande acuité. Il est un point cependant sur lequel je ne suis pas d'accord avec lui. Les documents qui font allusion à la migration des Guarani en parlent tous comme d'un événement récent dont les détails étaient encore présents à toutes les mémoires. Même si nous acceptons la version de Garcilaso et faisons remonter cet événement au règne de Tupac Inca Yupanki, il n'en reste pas moins certain qu'il n'a pu se produire que dans les dernières décades du 15e siècle. C'est en effet à cette époque qu'occupait régnait, selon Sulton, l'empereur Tupac Inca Yupanki. (V. Nordenskiöld, 6). La première migration des Guarani serait, en ce cas, antérieure d'une cinquantaine d'années au raid de Garcia. Pourquoi alors Gandia qui nous donne lui même ce chiffre, tient-il pour plus vraisemblable que cette invasion se soit produite plus d'un siècle avant la conquête ? Ayant exposé personnellement à Mr. Gandia les réserves que je faisais au sujet de la date qu'il assignait à l'établissement des Guarani au pied des Andes, il me répondit qu'il avait pris pour base de cette évaluation un passage de Lozano (*Descripcion chorographica ...*) et Mendibura (*Diccionario Histórico Biográfico del Perú ...*). Selon ce dernier l'Inca Yupanki serait mort en 1453. Je répondrai à cette objection en constatant que le témoignage de Lozano, qui s'est contenté de copier Garcilaso, n'a aucun valeur et quant au calcul de Mendibura, je ne lui accorde aucun crédit.

De cette controverse on avait fait cette enquête : Les Guarani avaient commencé leur mouvement migratoire vers le Pérou quelques années avant l'aventureux voyage de Garcia.

connaissait les chemins qui y conduisaient. » Le Guarani fut invité à suivre le détachement espagnol et, interrogé devant le Gouverneur par des interprètes, il déclara « qu'il était Guarani, originaire d'Itati,

sur le rio Paraguay, que dans sa jeunesse les siens convoquèrent et firent une grande levée d'indiens de toute la terre et se dirigèrent vers la terre et les villages de l'intérieur. Lui même y était allé avec son père et ses parents pour faire la guerre aux indigènes de cette contrée.

Ils leur prirent les plaques et ornements qu'ils avaient en or et en argent. Arrivés aux premiers villages, ils commencèrent aussitôt à faire la guerre aux habitants et à tuer beaucoup d'indiens. Beaucoup de villages furent détruits et les habitants se retirèrent vers l'intérieur. Ensuite, toutes les tribus de cette terre se réunirent et marchèrent contre les siens, les mirent en déroute et en firent un grand carnage. Les autres s'enfuirent de divers côtés et les indiens ennemis les suivirent, leur barrèrent le passage et les massacrèrent tous. Deux cents, à peine, purent échapper de tous ceux qui étaient partis et qui étaient si nombreux que les champs en étaient couverts. Parmi ceux qui se sauvèrent, se trouvait lui-même. La plus grande partie des rescapés restèrent dans la brousse par où ils avaient passé et s'y établirent, car ils n'avaient pas osé revenir sur leurs pas de peur que les Guaranéyo, Guato et autres tribus ne les extermainassent. Lui même n'avait pas voulu demeurer avec eux et il partit avec ceux qui décidèrent de continuer leur marche. En cours de route, ils furent aperçus par des indiens qui les assaillirent de nuit et les tuèrent tous. Il s'était caché dans l'épaisseur du fourré et, se glissant dans la brousse, il était arrivé dans le pays des Xaray qui l'avaient pris et adopté pendant longtemps. Enfin, comme les sympathies étaient réciproques, ils lui donnèrent pour épouse une femme de la tribu. On lui demanda s'il avait souvenir du chemin que lui et les siens avaient suivi pour aller dans l'intérieur. Il répondit qu'il y avait longtemps qu'il avait pris cette route et qu'alors les gens de sa tribu se frayaient un passage en coupant les arbres et nettoyant la brousse dont cette terre était couverte. Il supposait que, depuis ce temps, les ronces et les herbes avaient dû envahir le chemin. Il n'y était plus jamais allé, si n'avait été le revoir. Il lui semblait, cependant, que, s'il se mettait à la suivre, il pourrait continuer et que ce chemin commençait près d'une montagne arrondie que l'on pouvait apercevoir du Puerto de los Reyes. On l'interrogea aussi sur le nombre de jours nécessaires pour gagner le premier de ces villages. Il dit que, selon ses souvenirs, on pourrait y arriver en cinq jours et qu'on trouverait là de grands approvisionnements, car ces indiens sont d'excellents agriculteurs. Ceux de sa tribu, ajouta-t-il, au cours de la guerre qu'ils avaient eue avec ces populations, détruisirent et dépeuplèrent de nombreux villages, mais sans doute les avaient-ils déjà reconstruits. On lui demanda si sur la route il y avait de grandes rivières et des sources. Il répondit qu'il vit des rivières, mais qu'elles n'étaient pas d'un grand débit, toutefois qu'il y en avait d'autres très profondes, des sources, des lagunes, du gibier, cerfs et tapirs, des fruits et du miel. On lui demanda si au temps où les siens firent la guerre à ces tribus, il en avait vu qui avaient de l'argent et du l'or. Il dit que, dans les villages qu'ils pillèrent, il y avait beaucoup de plaques d'argent et d'or,

des labrets, des ornements d'oreille, des bracelets, des tresses, des hachas, de petits vases et que tout cela leur fit sujet quand ils furent mis en déroute. Ceux qui s'échappèrent purent emporter quelques plaques d'argent, des perles, des labrets, mais les Guaranyo les leur volèrent quand ils voulurent passer sur leur territoire et qu'ils les tuèrent. Ceux qui s'établirent dans la Yuruma, ou avaient un peu et il avait semble dire qu'à l'heure actuelle c'était les Xamy qui possédaient cet argent. Il déclare avoir vu les Xamy, quand ils font la guerre contre les Indiens, mettre des plaques d'argent qu'ils avaient emportées et pillées dans les terres de l'intérieur ».

Que vaut contre ce faisceau de preuves qui attestent la caractère récent de la migration guarani, la vague affirmation de Gustellum de la Vega (t. II, p. 179-181) qu'on veut lui opposer ? L'Inca Yupanki aurait, selon cet aimable conteur, entreprise la conquête du pays chiriguano dans le vaste dessein de les soustraire à la bonne religion naturelle des Péruviens. Les Chiriguano auraient été de véritables monstres, ne respectant de chair humaine, n'usant ni lamas, vivant sans foi ni loi, enterrant les os de leurs morts dans des cavernes ou dans la cours des arbres. Bref en tout, sauf l'anthropophagie et la mention de la mulas (1), il n'est dans le tableau du romancier Gustellum rien qui puisse permettre de supposer qu'il ait su juste ce qu'étaient les Chiriguano. Quant à cette conquête de l'Inca, on serait tout juste au sens de conquête... Gustellum confond les Chiriguano avec toutes les tribus du versant oriental des Andes dont il a vaguement entendu parler. Remarquons qu'il est le seul à attribuer à l'Inca Yupanki cette expédition, tandis que les autres chroniqueurs, mieux informés, se contentent de dire que l'Inca Yupanki fit une expédition contre les Antis, probablement du côté de l'Inca. Malheureusement, la vague doctrine jusqu'à ce jour centrale à une époque où l'histoire de l'Amérique était encore dans les limbes, en impose toujours à quelques critiques modernes qui vont jusqu'à préférer une de ces affirmations gratuites aux témoignages sérieux

(1) La description que Gustellum (t. II, p. 181) nous donne de la grande coutume des Chiriguano est parfaitement exacte et fort intéressante : « Ils ont les galeries grandissent, y mettent toutes sportsaliga coutume aux les vaches, y les peuples qui ne mêlent sale de les personnes, y les toute pleyer ou tiens ajouer, et trays de vente que mulas ou cuerno ». Un ethnographe moderne trouvera en bien petite même avec des détails propriétés, etc. (t. II, pl. CIV et de Lizárraga, t. I, p. 220) sur le même sujet. Les Guarani, tout comme les Tupinambá et d'autres tribus tupi, logeaient dans des maisons gigantesques bâties, capables de contenir plus de 100 personnes et qui servaient à eux seuls formaient le village. L'existence du ce type d'habitation chez les Chiriguano au XVI et XVII siècle constitue une nouvelle preuve du caractère récent de leur migration. Au XVIII siècle nous les trouvons déjà en possession de la petite maison individuelle qu'ils ont conservé de nos jours et où habite une seule famille. (Cf. Métraux, [illegible], p. 16).

et puiste du chronique qui conserve leurs informations de première main et de seconde mire.

En 1538, au cours de l'expédition que Domingo Martinez de Irala fit du Paraguay vers le versant des Andes, 100 indiens Guarani, de ceux qu'il avait avec lui comme troupes auxiliaires, se mutinèrent lorsqu'ils apprirent qu'ils se trouvaient dans le territoire d'indiens Chiriguano « qui sont de la même nation ». Ils désertèrent pour aller se joindre à eux. En 1548, le même fait s'était déjà produit (Díaz de Guzmán, p. 143).

Les Guarayó et les Pauserna sont frères des Chiriguano et, comme eux, venus du Paraguay à une date réservée pour s'établir dans la Bolivie orientale. Tarbuschkiñi (?), sans d'ailleurs en donner la preuve, met leur migration en corrélation avec celle des Chiriguano et en fixe la date au début du XVIe siècle. Les Guarayó n'arrivèrent dès entre que les descendants de ces Guarani qui, partis du Paraguay septentrional, remontèrent obliquement vers le nord-ouest, dans leur marche vers le nord-est. J'ai moi-même longuement partagé cette opinion, jusqu'au moment où mes attributions fut utilisée par ses cylindre de l'intérieur de la conquête qui m'obligea à reconsidérer mes erreurs, tout en me permettant de résoudre le problème de l'origine des Guarayó.

Les Itatin, comme antérieurement nous le sons de Guarayó et de Pauserna, sont effectivement venus de la province d'Itatin au Paraguay (1); mais il ne s'agit pas d'une migration en masse où en l'entend habituellement, et leur établissement dans la Bolivie orientale est postérieur à celui des Chiriguano.

Yaffrio de Charrua, qui conduisit en 1582 de Santa Cruz de la Sierra à l'Asunción, s'arrêta chez les Itatin et s'entendit avec les chefs de cette tribu pour transplanter les indiens de cette région au-delà du Paraguay. Ce projet fut exécuté l'année suivante quand le gouverneur du Paraguay, Vergara, et Yaffrio de Charrua organisèrent un fameux exode vers le Pérou. En passant par le pays des Itatin, Yaffrio de Charrua leva [illegible] à [illegible] indiens « qui quittèrent leur patrie pour aller se fixer en territoire étranger... Lorsque ces indiens arrivèrent à un endroit distant de 30 lieues de Santa Cruz de la Sierra, ils s'établirent et l'appelèrent Itatin, faisant ainsi allusion à la province dont ils étaient sortis. Ils cultivaient là et se mirent assurément à vivre ». (Díaz de Guzmán, p. 197.)

Quelques années plus tard, vers même Itatin commémorant Yaffrio de Charrua, qui était venu dans leur village accompagné d'Felipe de Caravajal et l'évêque d'Asunción, Francisco Ortiz de la Torre, qui résidaient au Paraguay. Il est étrange que ces indiens aient tué l'homme qui leur avait fait changer de patrie et fonder une nouvelle nation entre Xauxy

(1) L'existence guarayó d'Itatin au Paraguay s'étendait au nord-ouest du fleuve, environ [illegible] Guaraníes.

et Santa Cruz. Les uns disent que ce massacre est la vengeance peut-être [illegible]; d'autres, le violence de Nuñez de Chaves qui nécessa de sévères [illegible] avec eux.

Quoi qu'il en soit, les Espagnols tirèrent vengeance de la mort de ce conquistador, en massacrant coupables et innocents avec leur [illegible] habituelle, lorsqu'il s'agit d'un peuple plus faible. Cavarca et sa troupe eurent à combattre, sur le chemin du retour, les Itatin du Paraguay qui le harcelèrent et les mirent aucent dans une situation difficile. (Voir Diaz de Guzmán, pp. 205-215; Gonzaga, pp. 294-314 et Gandia, 2, pp. 124-129.)

Ce sont donc les Espagnols qui ont triomphé des Itatin en Bolivie. Il n'est pas impossible que quelques groupes guarani fussent déjà établis dans le pays, venus soit du Paraguay, soit des régions occupées par les Chiriguano.

La date exacte de l'établissement des Itatin entre le rio San Miguel et le rio Blanco explique ce passage d'une *Lettre* (v. Métraux, 5, p. 214) de 1589 où il est fait allusion à la douleur d'une femme qui mourut sans s'être vengée du meurtre qu'elle avait vu d'un Espagnol vingt ans auparavant au Paraguay. Cela nous reporte, plus ou moins, à l'année du voyage de Nuñez de Chaves au Pérou, soit en 1564. Si les Itatin ont suivi sans difficulté les Espagnols, c'est que les migrations antérieures des Guarani les avaient familiarisés avec des contrées et leur faisaient considérer une telle expédition comme chose facile et normale. En accompagnant les Espagnols, ils imitaient leurs voisins et ne coûtaient guère de leurs parents.

C'est donc en 1564 que se forma la nation guaraní.

En émigrant au pied des Andes, les Guarani durent conquérir leur territoire autant sur des populations qui, comme eux, étaient venues jadis du bassin des grands fleuves de l'Amérique tropicale.

En dépit de la similitude de leurs habitats primitifs, les indiens dépossédés par les Guarani leur étaient supérieurs par la civilisation. Les Chiriguano, aujourd'hui encore, les qualifient dédaigneusement de *tapii*, c'est-à-dire d'« esclaves », mais eux-mêmes s'appellent Chané et c'est sous ce nom qu'ils apparaissent dans l'histoire dès la première moitié du XVIe siècle.

Les Chané, agriculteurs laborieux, parmis maîtres dans l'art de la céramique, font partie de la grande famille linguistique arawak.

Le rôle des Arawak dans le développement de la civilisation en Amérique du Sud a été considérable. Malheureusement, tout travail de synthèse (1) faisant défaut, il est encore difficile d'apprécier à sa juste valeur

(1) La thèse de Max Schmidt (5) sur les Arawak contient quelques faits intéressants. Elle demanderait à être refaite sur de documentations est tout à fait insuffisante. Max Schmidt n'a trouvé presque aucun compte de l'analogie linguistique.

l'œuvre civilisatrice qu'ils ont réalisée en essaimant sur une grande partie du continent. Il est possible, sinon certain, qu'ils ont été les propagateurs d'éléments culturels empruntés aux peuples de l'Amérique centrale, plutôt que des créateurs originaux. Néanmoins, partout où ils se sont établis, ils ont constitué des centres de civilisation dont le rayonnement est indéniable. Dans toute la région à l'orient des Andes, où a fleuri ou fleurit encore une céramique de belle qualité, on est en droit de soupçonner l'existence ou l'influence d'une tribu arawak. En veut-on la preuve? Sur les rives de l'Amazone, de l'embouchure aux affluents de son cours supérieur, on trouve à chaque pas les vestiges d'une poterie d'une grande richesse d'ornementation et de formes variées : partout où la pelle a mis ces restes à jour, l'histoire atteste la présence actuelle ou passée d'une tribu arawak. La culture révélée par les fouilles effectuées dans les Mounds de la Bolivie orientale (Mojos) est nettement arawak, et il serait injuste d'oublier que les Taino de Cuba et des Antilles furent aussi des parents de nos Chané dont le nom est moins illustre. A cette liste, s'ajoutent presque tous les vestiges archéologiques de la Guyane, la céramique moderne de cette même région, celle du haut Amazone et du haut Xingú qui toutes trois ont pour artisans ou pour inspirateurs des indiens Arawak. Il n'y a rien d'impossible à ce que les curieuses appliques zoomorphes du bas Paraná soient autant de restes d'une ancienne population arawak ou « arawakisée » (v. Métraux, 4, pp. 181-183).

Selon une hypothèse développée par Max Schmidt, (1), la migration des tribus de parler arawak n'aurait jamais eu le caractère violent et rapide de celle des Tupi, par exemple. Les Arawak se seraient avancés lentement, au fur et à mesure de leurs besoins économiques. Agriculteurs à la houe, il leur fallait constamment de nouveaux terrains de culture, et c'est en défrichant sans arrêt des champs qu'ils abandonnaient une fois épuisés, qu'ils ont fini par couvrir cette vaste aire géographique qui va de la Guyane aux Andes boliviennes.

Dans chaque contrée, le passage ou l'établissement des Arawak fut un bienfait. Les Arawak apportèrent avec eux, sinon l'agriculture, du moins la connaissance de nouvelles plantes comestibles, le tissage et, comme nous l'avons dit, une céramique de type supérieur. Malheureusement pour eux, les Arawak, indiens généralement peu belliqueux, ont été en maints endroits assujettis à des populations frustes mais plus guerrières. Dans les Antilles, ce sont les Karib qui les ont asservis ou refoulés; dans les Guyanes, encore les Karib; les Guaikurú dans le Chaco boréal et, enfin, au pied des Andes, les Chiriguano.

Les Chané appartiennent à la branche moxo-mbaure de la famille arawak. Ils se séparèrent des autres tribus de ce sous-groupe à une date inconnue et, abandonnant le bassin du Mamoré et du Guaporé, ils se

glissèrent le long des Andes jusqu'au Chaco boréal, ne s'arrêtant qu'au sud du Pilcomayo. La limite extrême, atteinte par cette vague migratoire est marquée par les villages chané du río Itiyuro et par ceux de l'Aguaray (Province de Salta, Rép. Argentine). Décrivant un immense arc de cercle au-dessus du Chaco boréal, une partie des tribus émigrées s'écoula vers le Paraguay et le Brésil.

« Les indiens arawak du Chaco, que les linguistes ont reconnus comme étroitement apparentés aux autres indiens de cette famille, sont connus au XVIIIe siècle sous le nom de Chané et de Guaná. L'appellation de Guaná a été réservée à l'ensemble des groupes arawak de l'est et celle de Chané aux tribus de l'ouest. Comme les Chiriguano, ils font un contraste très net avec les autres peuplades du Chaco et cette antithèse est si forte qu'ils apparaissent à première vue comme un élément qui s'y est implanté : ils sont sédentaires et pacifiques et, pour autant qu'ils n'ont pas été contraints d'abandonner leurs coutumes ancestrales, ils vivent dans des villages solidement défendus par des palissades et se livrent à la culture intensive du sol. Ils savent filer le coton et, comme tous les peuples arawak, ce sont des potiers remarquables. Ils ne pratiquent pas l'infanticide et ne sont pas polygames. Les Jésuites les avaient en haute estime, car ils ne possédaient pas d'idoles.

Les deux tribus arawak du Chaco, les Chané à l'ouest et le Guaná à l'est, vivaient, les premiers à l'intérieur du territoire chiriguano et les autres, sur le domaine des Mbayá. Ils étaient, les uns et les autres, soumis à ces indiens et ils en dépendaient entièrement. Cet état de sujétion variait suivant le lieu. La condition des Chané, par rapport aux Chiriguano, était celle d'esclaves à maîtres, de prisonniers à vainqueurs. Chez les Mbayá, les rapports entre les Guaná et leurs voisins n'avaient pas un caractère aussi tranché, aussi brutal.

Les Guaná apparaissent, tantôt comme les vassaux et les protégés des Mbayá, tantôt comme leurs alliés, et ils sont groupés en petites communautés fermées, presque indépendantes. Les belliqueux Mbayá avaient coutume de prendre femme, de préférence, chez leurs sujets arawak ou chamakoko et ainsi se trouve expliqué le fait que les femmes et les enfants mbayá parlaient un langage différent de celui de leurs maris ou de leurs pères. Schmidel cite déjà un peuple des Zchennte (Chané) en qui, en raison de leur situation géographique, nous devons voir les Chané-Guaná : « Ils sont vassaux et sujets des Mayaiess (Mbayá) comme chez nous les paysans sont soumis à leurs seigneurs ». Nous n'avons également pas de peine à reconnaître les Chané dans les *Queasaes* (Guaná) qu'Alcide d'Orbigny mentionne d'après une ancienne relation, comme ayant été soumis par leurs voisins les Chiriguano et obligés par eux à cultiver leurs champs. Au XVIIIe siècle les Chané, en qualité de prisonniers de guerre des Chiriguano, avaient été cantonnés

SF10 Chiriguano
[facing p.324]

comme esclaves dans des villages appelés d'après eux *Chané*. Lorsque Lozano déclare que les Chiriguano appellent leurs esclaves *Chané*, il faut donner une valeur ethnique à cette phrase. L'état de sujétion dans lequel les Chané se trouvent par rapport aux Chiriguano s'exprime dans le domaine linguistique par le nom que les premiers donnaient aux seconds : *cheya* « mon maître », disaient les Chané s'adressant aux Chiriguano et ceux-ci traitaient les Chané de *tapii*, « mon esclave ».

Le peu que nous sachions des Chané qui vivent dans les régions perdues du Chaco boréal a trait exclusivement à l'activité des Missionnaires jésuites et franciscains du Collège de Tarija. Les premiers évangélisèrent les Chané au XVIIe siècle, en même temps que les Chiriguano; et en 1714, ils formèrent avec eux une « doctrina », dans le voisinage de Santa-Cruz. Elle s'appelait San Juan de los Porongos et en 1767 se trouvait sous l'autorité d'un curé. Ce n'est qu'à grand'peine que des Chané purent être assemblés, en 1767 et 1789, dans les deux missions d'Asero et d'Iti. Nous apprenons, par un rapport du Père Pedro Bartolomé adressé à Francisco Aguirre, que la Mission de Filipili se composait, en 1789, d'indiens Chané, dont les frères de race vivaient mêlés aux Chiriguano sur les frontières de Chuquisaca et de Santa-Cruz. Viedma, qui visita les missions en 1788, trouva dans les villages du Parapiti, des Chiriguano et des Chané qui habitaient ensemble, réunis sous l'autorité des missionnaires franciscains. L'activité des missionnaires parmi les Chané devait naturellement avoir pour conséquence une rupture des liens de sujétion qui les attachaient aux Chiriguano : de fait, au XVIIIe siècle, de grandes transformations sociales se produisirent et, petit à petit, ils s'efforcèrent de se libérer de leur servitude. »

Il y a peu de choses à ajouter à cet exposé de Kersten (pp. 69-71) si clair et si exact. Je voudrais cependant le compléter en citant quelques textes du XVIe siècle qui éclairent le drame dont les Chané furent les victimes depuis la fin du XVe siècle.

La guerre d'extermination que les Guaraní firent aux Chané, date de leurs premières migrations vers le pays du métal. C'est ainsi que le Chané qui, comme nous l'avons vu, raconta à Irala le grand exode des Guarani d'Itatí avant l'expédition de García, fut emmené par ceux-ci comme esclave sur les rives du Paraguay. Les Guarani, en passant par son pays de nuit, avaient attaqué les maisons des siens et pris femmes et enfants comme captifs. Plus tard, ce Chané fit partie de l'expédition de García. A la mort de ce dernier, les Guarani s'apprêtèrent à le tuer pour le dévorer comme ils l'avaient fait avec ses compagnons et quelques femmes. Lui put s'échapper et se réfugier chez les Guaxarapo (*Relación de Domingo Martinez de Irala*, pp. 347-348).

Dans le récit qu'un Guarani fit au même Irala de l'expédition à laquelle il avait pris part pour aller au pays du métal, il lui parle des

Chané exactement comme le feront un siècle plus tard les Chiriguano « ils tombèrent, dit-il, sur les maisons d'Indiens esclaves et ennemis ». Ce terme d' « esclaves » appliqué aux Chané caractérise bien les rapports que les Chiriguano eurent avec eux jusqu'à il n'y a pas longtemps encore *(Relación de Domingo Martínez de Irala,* p. 330). Au milieu de l'entretien, un Chané interpela notre Guarani pour lui demander s'il avait été présent lorsque les gens d'Itatí détruisirent sa tribu. Comme le Guarani s'informait qui il était, il répondit : « Je suis les chef des esclaves dont tu parles et, fait prisonnier à l'époque que tu dis, je vécus avec ces Guarani jusqu'au moment ou je m'absentai et vins ici. La terre dont tu parles est la mienne. Pourquoi ne dis-tu pas la vérité aux Chrétiens qui ne demandent rien d'autre que l'indication du chemin pour aller en quête du métal ? Le dit indien répondit : « Ils ne comprennent pas que je ne fais que leur dire qu'ils peuvent se rendre au pays des Chané en neuf jours ». Pendant qu'ils parlaient avec cet indien, le dit *Cheroçe,* chef des Chané, s'entretenait avec une femme de sa tribu qui, jeune fille, avait été enlevée par ces indiens dont le chef l'avait prise pour femme. Elle dit qu'il était exact que des dernières maisons des dits Guarani on ne tardait que quatre jours jusqu'à Ytapua et que de là, à ce que prétendait *Cheroçe,* on pouvait se rendre en son pays en trois jours. Lui connaissait fort bien le chemin car il s'était élevé là-bas, mais jusqu'à présent il n'avait pas eu de nouvelles de son pays. *(Relación de Domingo Martínez de Irala,* p. 350.)

Ces faits prouvent que bien avant l'aventure de García les Guarani razziaient le territoire des Chané et commençaient déjà à faire de ses habitants des esclaves.

« Lorsque les bandes guarani arrivèrent sur les versants des Andes, chacune chercha à occuper une position aussi forte que possible sur les points les plus escarpés et de là ils commencèrent à faire une guerre impitoyable aux naturels de la région, les traitant avec une cruauté telle qu'ils ne gracieraient personne et faisaient leur pâture des malheureux qu'ils capturaient. Ils se rendirent si redoutables, que de nombreux villages se soumirent à eux sans violence. Avec les esclaves qu'ils prirent pour en être servis, et avec toutes les femmes dont ils eurent des enfants, ils peuplèrent ces frontières, chacun choisissant la contrée qui lui parut la meilleure. Ces indiens sont ceux qu'aujourd'hui nous appelons au Pérou Chiriguana et qui procèdent des Guarani. Ils ne sortirent jamais de ce pays, soit à cause des grandes difficultés de la route et de ses risques, soit afin de conserver en leur pouvoir cette terre qu'ils trouvèrent conforme à leur nature et à leur goût. Elle est, en effet, très fertile, avec de grandes et merveilleuses vallées qui sont plutôt chaudes que froides et elle est traversée de rivières profondes qui viennent de la province voisine de Charcas. En possession de cette terre, ils y firent de nom-

breuses expéditions guerrières, ruinant les plaines au nord, au sud et à l'est. Ils tuèrent plus de 100.000 indiens. Au début, ils les mangeaient dans les fêtes et les beuveries qu'ils célébraient, mais depuis quelques années, ils ne le font plus et les vendent aux Espagnols contre la pacotille que ceux-ci leur donnent en échange. Ils jugent, en effet, plus profitable de les vendre contre des objets dont ils ont besoin que de les manger. Leur cupidité est telle, qu'il n'est pas d'année où ils ne sortent faire la guerre dans les plaines, à grand' peine et au risque de leur vie, uniquement pour se procurer des prisonniers. Il y a, parmi ces indiens, quelques individus qui sont si riches, qu'en plus de vêtements de drap et de soie, ils ont encore de la vaisselle d'argent, service qui coûte jusqu'à 500 marcs. Sans compter un grand nombre de chevaux sellés et frénés, avec de bons harnais et toutes sortes d'armes, qu'ils doivent aux vols et aux rapines qu'ils font au cours de ces guerres injustes et pernicieuses. On n'a pu, jusqu'à présent brider leur cruauté, ni remédier à ce désordre et à l'insolence de ces gens. Ils ont commis beaucoup de délits et manqué au respect de la Puissance royale, prenant les armes contre Francisco de Toledo qui fut viceroi de ce royaume. Ils ont, en outre, tué et volé les Espagnols et leur ont infligé des outrages de toutes sortes, dépeuplant les villages, tuant et pillant les champs et les fermes des vassaux de Sa Majesté qui résident sur ces frontières de Tarija, Paspaya, Pilaya, Tomina et Mizque, et le gouvernement de Santa-Cruz de la Sierra. » (Díaz de Guzmán, pp. 30-31.)

« Les Chiriguana *(sic)* vivent près de ces vallées (Tomina et Lagunilla) dans des montagnes chaudes et couvertes d'arbres où les chevaux peuvent à peine marcher. Ils ne sont pas originaires de ce pays, mais ce sont des étrangers venus du Río de la Plata. La langue est la même et n'en diffère en aucune façon... Les indiens auxquels ils sont le plus hostiles habitent une province derrière ces montagnes, terre très plane, qui manque d'eau et qu'on appelle Llano de Manso ou la province des Chané. Ces Chané sont gens inoffensifs, mais de bonnes dispositions, d'aspect plus sympathique et d'un meilleur naturel que les Chiriguana. Ceux-ci en ont mangé plus de 60.000 et je ne crois pas beaucoup dire, car ces plaines étaient très peuplées. A présent, il n'y a que peu d'indiens et comme ils n'ont personne pour les défendre, ces gens brutaux en font boucherie. Les Chané sont si soumis aux Chiriguana, qu'il leur suffit d'apercevoir un Chiriguana pour s'asseoir, sans résister, laissant le Chiriguana disposer d'eux à son plaisir. Les Chiriguana les emmènent comme des moutons en troupeaux, ils mangent ceux dont ils ont envie et, des autres, ils s'en servent pour le service de leurs maisons et de leurs champs. S'ils veulent en manger un, ils se contentent de lui dire d'aller se laver à la rivière et il le fait sans répliquer. Il revient nu et les Chiriguana ordonnent à leurs enfants de prendre arcs et flèches et le pauvre Chané s'effor-

ce d'échapper aux flèches, sans oser cependant s'enfuir de la place jusqu'à ce qu'il meure criblé de flèches, à la grande joie de tous ceux qui le regardent. Ils le coupent en morceaux et le mangent, soit grillé soit rôti, avec du maïs et beaucoup d'aji. Ils se servent, pour la guerre, des Chané qu'ils croient vaillants et robustes. Ils les traitent selon leurs coutumes barbares et les mettent devant eux; s'ils ne combattent pas bien, ils les tuent à coups de flèches par derrière. » (Lizarraga, t. I, pp. 259-260.)

L'année dernière, me rendant de Cuevo à Igitembé, j'avais pris un guide chiriguano qui parlait assez bien l'espagnol et qui, dans son enfance, avait vécu chez les Chané. Il me raconta à sa façon ces guerres du temps jadis. Son récit embrouillé rappelle celui du moine espagnol. Plus tard je séjournai quelque temps chez les Chané qui, à leur tour, me firent allusion à leurs combats contre les Chiriguano et aux coutumes anthropophagiques de ces derniers. « Les *Tapui* ne sont pas les *Ara*. Autrefois ils se battaient contre les *Ara*. » Les *Ara* prenaient les femmes et les gardaient en captivité. Ils se mariaient avec les captives. Des fils des *Ara* sont issus les *Tapui*, ils sont fils des femmes qu'ils ont enlevées. Les Chané sont fils des captives. Quand les Chané parlent entre eux, il est des paroles qu'on ne comprend pas. Autrefois les *Karai* (Blancs) se battaient contre les *Ara* du côté de Cochabamba. Les *Karai* les ont poursuivis jusqu'en bas et ils les ont laissés au Paraguay. Les Paraguayens sont fils des anciens *Ara*. Jadis les *Ara* mangeaient les *Tapui* lorsqu'ils faisaient la guerre contre eux. « Les *Ara* nous mangeaient », disaient les Chané, « et c'est pour cela que nous les détestons. »

Les Chané m'ont confirmé les dires de mon informateur et m'ont assuré que les Chiriguano les mangeaient autrefois (1).

(1) Matienzo (pp. 166-167) s'exprime au sujet des Chiriguano et des Chané presque dans les mêmes termes que Lizárraga : « En la tierra ay provincia de los Charcas y junto a la ciudad ay unos Indios advenedizos que se dizen chiriguanaes, gente de guerra, muy cruel, Indomitos y comen carne humana, habitan en las cordilleras, no tienen otro officio sino pelear y matar y comer Indios y servirse de ellos como esclavos, salen de noche a hazer saltos en los llanos que esta junto a las cordilleras, adonde habitan uno Indios sujetos a su magestad, hazen presas En ellos de mill y dos mill, y de ellos comen y tienen otros a engordar para comer, y de otros se sirven por esclavos; estos Indios de miedo de los chiriguanaes huyeron de su tierra, que heran unos muy buenos y fertiles valles, a treynta y quarenta leguas de la ciudad de la Plata y se fueron a unos llanos y arenales que solian estar desiertos faltos de agua, biven de sumo de yucas y cardones, son mas de ochenta mill, etc. ». Les déserts, dont il est question ici et où les Chané se sont réfugiés ne sont autres que ceux du bas Parapiti où vivent actuellement de nombreux Chané en dépit de la pauvreté de cette région aride.

Il n'y rien d'étonnant à ce que les Chiriguano aient conservé vivant le souvenir de leurs luttes avec les Chané. Celles-ci n'ont pris fin que dans les dernières années du XVIIIe siècle. En 1745, nous voyons les Chané de la province de Santa-Cruz venir demander aide et protection contre les Chiriguano qui les traquaient; en 1798, les

La tribu des Chané ne succomba pas à ces hécatombes et à la servitude. Elle put se maintenir sur deux points de son ancien territoire : sur l'Itiyuro et le Parapití. Là existent encore plusieurs villages dont la densité est assez forte. Les Chané de l'Itiyuro sont encore 1500 environ, ils vivent tous sur le territoire argentin, dans le province de Salta. Je ne possède aucune statistique pour la population chané du bas Parapití, mais je suis que ces indiens y sont encore nombreux.

Aujourd'hui les Chané ne se distinguent des Chiriguano, ni par leur civilisation matérielle ni par leur langue. Ils parlent le guarani, mais emploient certaines locutions et certains mots que les Chiriguano disent ne pas comprendre et qui sont peut-être autant de vestiges de leur ancien parler arawak. Ils ont conservé celui-ci comme langue secrète. Nordenskiöld (**2**, p. 157) put en recueillir un court vocabulaire chez les Chané du Parapití. Il s'agit bien, comme on le supposait *a priori*, d'un dialecte arawak étroitement apparenté au moxo-mbaure.

Les Chané modernes ne sont plus esclaves, mais leur condition primitive se manifeste encore dans leurs rapports avec leurs anciens maîtres. Les Chiriguano les regardent toujours avec un certain mépris et un air protecteur auquel les Chané répondent par une animosité non dissimulée. Un Chiriguano se sentirait offensé d'être appelé Chané, et un Chané Chiriguano. Le nom dont les Chiriguano désignent les Chané est toujours celui de *Tapii*.

Même si les traditions historiques ou si les faits ethniques ne s'accordaient pour prouver l'existence dans le Chaco occidental d'une population arawak, l'archéologie à elle seule suffirait à nous l'apprendre. A Tarupayu, Nordenskiöld (**5**, pp. 40-41) a mis à jour une céramique nettement arawak, par sa technique et maints détails de sa structure. Elle date d'une époque où les Chané, nouveaux venus au pied des Andes, n'avaient pas encore subi l'influence andine des populations du sud bolivien (Chicha, Atacama, etc.).

Les Guarani, lorsqu'ils arrivèrent chez les Chané, possédaient une civilisation à peu de choses près identique à celle de leurs frères de race, les Tupinamba de la côte du Brésil, dont l'ethnographie nous est si familière grâce aux vieilles chroniques françaises et portugaises. Ils différaient peu de leurs cousins actuels, les Kainguá du Brésil et du Paraguay qui sont des Guarani indépendants mais appauvris.

Au contact de la civilisation supérieure des Chané, les Guarani l'ont adoptée, telle quelle, introduisant cependant quelques éléments culturels d'origine paraguayenne. De cette fusion entre ces deux nations, s'est

Chané de l'Itiyuro faisaient encore des incursions contre les Chiriguano de la région d'Itáu et détruisirent presque complètement cette mission. (V. Corrado, pp. 98 et 225; Tamajuncosa, p. 211.)

formé un centre d'acculturation que nous pouvons désigner sous le nom de civilisation chané-chiriguano.

C'est par l'intermédiaire des Chané que tant d'aspects de la civilisation andine caractérisent encore la culture des Chiriguano. Car comment aurions-nous pu expliquer autrement une si forte action de la civilisation andine sur les Chiriguano, à l'époque où cette civilisation sombrait et disparaissait, partiellement du moins ?

Les Chané, par contre, installés depuis des siècles auprès des Chicha et autres indiens du sud de la Bolivie montagneuse, ont, grâce à leurs relations commerciales, subi l'attraction de la civilisation andine qui s'est infiltrée chez eux, comme chez les autres tribus du Chaco, sous forme d'objets de toilette, de joyaux, de motifs artistiques, de jeux, de mots et de vices. Ce sont ces multiples apports qui donnent à la culture chané cette apparence andine qui frappe tout ethnographe habitué aux peuples du Brésil. Mais, venus des grandes forêts du bassin amazonien, ces Arawak « quichuaisés » ont conservé fidèlement, jusqu'à nos jours, des meubles et des ustensiles qui trahissent cette origine et les rattachent directement à leurs lointains parents des Guyanes. La civilisation chané était, et est encore, une civilisation mixte, formée d'éléments de provenance différente et souvent d'un caractère opposé.

Les Chiriguano ont adopté, avec d'autant plus de facilité, cette civilisation d'un type supérieur en raison des nombreuses affinités qu'elle offrait avec la leur. Tout le côté amazonien et guyanais de la civilisation chané se composait d'industries, de techniques et d'habitudes que les Chiriguano venus des régions tropicales de l'Amérique, d'un pays de grandes forêts et de grandes rivières, connaissaient déjà en partie. C'est ainsi, par exemple, que les Guarani, en arrivant chez les Chané, retrouvèrent les hamacs, les cribles, les mortiers, les paniers, les armes auxquels eux-mêmes étaient habitués.

La contribution des Chané consistait précisément en éléments culturels qu'ils avaient reçus des peuples andins, soit : le vêtement *(camisetas,* bandeau frontal, etc.), le goût des ornements d'argent, quelques motif artistiques, certaines formes de céramique, etc., autant de choses qui commençaient à peine à s'infiltrer au Paraguay. Là où l'influence des Chané fut décisive, c'est dans le domaine de la céramique.

L'action civilisatrice des Chané sur les Chiriguano a eu pour agent les femmes chané que les Chiriguano capturèrent et épousèrent. Les Guarani n'avaient certainement emmené qu'un petit nombre de jeunes filles avec eux. Eux-mêmes étaient peu nombreux au début, 4.000 selon Lizarraga (t. I, p. 260). En s'unissant avec les femmes chané qu'ils enlevèrent par milliers, ils renouvelèrent avec leur sang, tous les aspects féminins de leur industrie. Ce sont les femmes, par exemple, qui fabri-

quent la céramique et un homme ne saurait s'en occuper sans déchoir. Aussi voyons-nous la céramique des Guarani subir de profondes modifications et changer du tout au tout. Aujourd'hui la poterie fait leur gloire, et de leur ancienne céramique ils n'ont conservé que les humbles marmites ou les cuves à *chicha*. Les Chané, malgré leur déchéance, ont maintenu leur supériorité traditionnelle dans cet art et ils continuent à produire des vases qui, s'ils ne sont pas comparables à ceux du passé, sont souvent fort beaux.

L'influence pernicieuse et corruptrice des blancs, qui fait tant de ravages chez les pauvres Chané, a épargné du moins leur industrie potière. Ils fabriquent encore des quantités considérables de vases qu'ils vendent aux autres indiens et aux blancs. En habiles commerçants, ils se sont pliés au goût de leurs nouveaux clients et les motifs dont ils ornent les pièces qu'ils exportent sont aussi hideux et criards que ceux qui agrémentent les tissus ou les paniers métis ou créoles.

Nous pouvons d'ailleurs saisir historiquement certaines phases de la transformation de la culture des Guarani lorsqu'ils se sont mêlés aux Chané. Les anciens Guarani vivaient dans la grande maison ou *maloca*, c'est-à-dire, dans des huttes gigantesques abritant plusieurs familles. Emigrés au pied des Andes, ils conservèrent jusqu'en plein XVIIe siècle un type d'habitation qui correspondait à une organisation sociale particulière (la grande famille maternelle et indivise). Au XVIIIe siècle, nous les voyons habiter dans des huttes semblables à celles qu'ils ont aujourd'hui encore, et qui sont destinées à loger une famille seulement. On peut assister, de même, à la disparition de l'anthropophagie qui au XVIIIe siècle n'est plus qu'un souvenir chez les Chiriguano. Certaines traces en ont survécu jusqu'à nos jours.

Ces pages justifient donc les assertions de la préface. Avec les Chiriguano nous avons affaire à une nation de formation récente dont la civilisation est un composé d'éléments guarani, arawak et surtout andins. L'aire géographique habitée par les Chiriguano peut être mise au nombre des diverses zones d'acculturation que compte l'Amérique. Point de jonction de trois cultures, elle en a réalisé la fusion.

RÉSUMÉ

Les Chiriguano appartiennent à la famille linguistique tupi-guarani.

Ils ont émigré du Paraguay au pied des Andes, dans le dernier quart du XVe siècle et dans la première moitié du XVIe siècle.

Cette migration a eu pour mobile l'attrait qu'exerçaient sur les Guarani les richesses en métal de l'empire incasique, et peut-être aussi certains facteurs mystiques (le mythe de la « Terre sans-mal »).

1:Métraux SF10 Chiriguano

La fameuse expédition de Garcia n'est, probablement, qu'un épisode de cette grande migration.

Au pied des Andes, les Guarani trouvèrent une population de parler arawak : les Chané, dont la civilisation avait fortement subi l'influence des tribus du sud bolivien soumises à l'Inca.

Les Guarani exterminèrent une partie des Chané, réduisirent les autres en esclavage et prirent des femmes chané pour épouses.

La nation chiriguano est issue de ce mélange ethnique.

Au point de vue culturel, les Chané ont exercé une influence décisive sur les Chiriguano et c'est par leur intermédiaire qu'aujourd'hui certains aspects de la civilisation incasique sont continués par les Chiriguano.

De leur côté, les Chané adoptèrent la langue de leurs vainqueurs, conservant longtemps leur parler arawak comme langue secrète.

Situation des Chiriguano au XVIIIe siècle et de nos jours

Au XVIIIe siècle le territoire des Chiriguano peut se définir de la sorte : « Selon Jolis et Hervas, leur domaine s'étendait de Tarija à l'est sur une longueur de 50 lieues (250 km.) et du nord au sud, sur 100 lieues (500 km.). Leurs frontières étaient les suivantes : au nord ils atteignaient le 17° de lat. sud et s'avançaient jusqu'aux missions jésuitiques de Chiquitos. Au sud, ils arrivaient au 22° de lat. sud. Dans la région de Salinas, d'Itáu et du haut Pilcomayo, ils avaient pour voisins les Matakos, Matagnayo et les Toba. Vers l'ouest, ils avaient des établissements jusqu'à Chichas, Pilaya, Laguna et Valle Grande. On trouvait là de solides villages sous le commandement de caciques héréditaires. Le Parapiti formait, en son cours moyen, leur limite vers l'est. Au XVIIIe siècle les Chiriguano constituaient la nation la plus importante et la plus remarquable du Chaco occidental. Les statistiques varient beaucoup en ce qui les concerne : les chiffres, donnés avec leurs habituelles exagérations, oscillent entre 41.000 guerriers et 15.000. Dans ce nombre sont compris les Chané, ce qui achève d'enlever toute valeur à ces statistiques ». (Kersten, pp. 68-69.)

Aujourd'hui les limites des Chiriguano sont restées à peu près les mêmes. Mais, s'ils habitent un territoire dont l'étendue a peu varié, leur situation n'en a pas moins subi de profonds changements. A l'intérieur de cette aire que nous avons définie, se sont établis plusieurs milliers de métis, venus de Tarija, de Santa Cruz et de Chuquisaca. Il n'existe plus de frontière chiriguano, mais uniquement des restes de villages et de petits groupes qui marquent encore l'ancienne extension de la tribu. D'autre part, le nombre des Chiriguano a terriblement diminué et diminue chaque jour, si bien que, d'ici quelques années, le véritable habitat

des Chiriguano sera compris entre le Parapiti et le Pilcomayo et se réduira aux anciennes missions franciscaines et à quelques vallées de la Précordillère, comme celles de Caipipendí et d'Igüembé (1).

CHAPITRE II

L'agriculture

Les Chiriguano sont, comme les Guarani et les Chaná, leurs ancêtres, d'excellents agriculteurs et le travail du sol représente leur principale occupation et leur grand souci. Le maïs a pour eux une importance capitale; il constitue le fond de leur alimentation, car il entre dans la préparation de la plupart de leurs plats et leur donne, en outre, leur boisson préférée, la *chicha* ou *kawi*.

Les terrains sablonneux du Chaco occidental et son climat, chaud et sec une grande partie de l'année, mais aussi pluvieux pendant les mois d'été, semblent particulièrement convenir à cette céréale. Nulle part je n'ai vu d'aussi beaux champs de maïs. Les épis sont grands, bien four-

(1) Quelques historiens peu au courant de la géographie ethnique de l'Amérique du Sud ont prétendu qu'au XVIe siècle les Chiriguano vivaient bien au-delà des frontières que j'ai indiquées. L'un deux (le Dr. Fulgencio Moreno) est allé dans ce sens si loin qu'il attribue aux Chiriguano la possession d'une grande partie du nord-ouest de l'Argentine et pousse la fantaisie au point de les situer presque jusque dans la province de Córdoba. Mr. Coni dans une excellente monographie a fait, documents en main, bonne justice de ces téméraires allégations et a démontré que ces hypothèses étaient dénuées de tout fondement.

Les arguments archéologiques de ceux qui croient à une vaste extension des Guarani en Argentine reposent sur l'occurence dans la province de Salta et de Jujuy d'enterrements d'adultes en urnes. Dernièrement j'ai effectué des fouilles dans plusieurs cimetières préhispaniques de cette région (département de la Candelaria, prov. de Salta) et j'ai pu me convaincre que les peuples qui nous ont laissé ces grandes nécropoles, n'avaient au point de vue culturel et anthropologique aucun point commun avec les Chiriguano. Les urnes funéraires que j'ai mises à jour sont entièrement différentes de celles des anciens Guarani et le mobilier funéraire ne comporte aucune pièce qui puisse être attribuée ni de près ni de loin aux Guarani.

L'enterrements d'adultes en urnes n'est en aucune façon caractéristique de la culture des Indiens tupi-guarani et je dirai même au contraire. En 1905 déjà Outes (1) dans une monographie fort bien documentée avait prouvé que les cimitières de Rosario de Lerma et de San Pedro de Jujuy que Boman (1) considérait comme guarani ne constituaient en aucune facon des preuves d'une migration guarani dans le nord-ouest de l'Argentine. Nordenskiöld (10, pp. 184-189) et moi-même (Métraux, 2, pp. 271-276), avons repris l'étude de cette question et nos résultats confirment entièrement ceux de Outes (1). Donc tant au point de vue historique qu'ethnographique l'on ne saurait donner aux anciens Chiriguano d'autres limites que celles que j'ai signalées.

nis en grains et extrêmement savoureux. Les métis boliviens et les colons, qui viennent de plus en plus nombreux prendre la place des indiens, s'adonnent comme eux à la culture du maïs qui, avec l'elevage, est leur principale ressource.

Mon voyage au Chaco, qui a eu lieu du mois de février au mois de juin, ne m'a pas donné l'occasion d'assister aux semailles qui se font au début de la saison pluvieuse. Pour maints détails, je me verrai donc forcé de recourir à Corrado (pp. 42 et 48), Campana (pp. 96-98), Nordenskiöld (**2**, pp. 181-184 et **10**, pp. 23-24), à Nino (pp. 237-241) et Rosen (**1**, p. 205).

Lorsqu'un Chiriguano veut cultiver une nouvelle étendue de terrain pour lui et sa famille, il parcourt les environs de son village à la recherche d'un emplacement qui puisse lui convenir et qui soit, en plus, facilement irrigable. Cette condition est généralement remplie par les terrains qui se trouvent au pied d'une colline ou d'une éminence. Les eaux de pluie, qui viennent s'y déverser, leur assurent la fertilité.

Avant de prendre possession d'un nouveau lopin de terre, le Chiriguano a toujours soin de constater s'il est vierge de tout vestige de culture antérieure, sinon l'ancien propriétaire ou ses descendants auraient le droit de porter plainte au chef du village.

Le Chiriguano manifeste son nouveau droit de propriété en plantant, avant la saison des pluies, n'importe quelle plante comestible, par exemple, les grandes courges *(gindako-waxu)* qui se répandent partout et ne sont pas étouffées par la broussaille. Il peut également s'assurer la possession du terrain choisi, en abattant des arbustes tout autour et en pratiquant de grandes entailles dans les arbres (1).

Au milieu de la saison sèche, soit en août, l'indien détruit avec un long bâton, tranchant des deux côtés, la broussaille qui encombre son futur champ et y met le feu. Cette opération a, en plus, l'avantage de fertiliser le sol grâce à la couche de cendre qui est un assez bon engrais.

Les champs cultivés sont d'ordinaire nettoyés après la récolte. On y lâche d'abord les animaux domestiques qui s'y alimentent à peu de frais, puis on y met le feu.

Les semailles ont lieu au mois de novembre lorsque les premières rafales de pluie ont amolli le sol. Cette époque est annoncée par l'apparition des Pléïades *(itiu)* au-dessus de l'horizon, le matin de bonne heure.

Le Chiriguano qui s'apprête à semer, a soin de sarcler son champ et de le débarrasser de toutes les mauvaises herbes. A cet effet, il se sert

(1) Comparer cette manière d'assurer ses droits de propriété avec la méthode observée par les Caxinawa dans les même cas : « J'ai vu (c'est un indien qui parle) une éminence qui se prête à faire une plantation. Je vais faire une plantation pour cet été. J'ai rompu beaucoup de branches sur cette colline pour marquer cet excellent endroit. Personne ne peut faire ses abattis sur cette colline. Cette colline est excellente, n'allez pas y faire votre plantation. » (Abreu, p. 69.)

d'une pelle dont je donnerai la description, en partie d'après Campana (p. 98), faute d'avoir vu cet instrument complet.

Les pelles *(sipe)* des Chiriguano étaient, il n'y a pas longtemps encore, entièrement en bois, de préférence en bois d'*urundei (Astronium urundeuva F. Allemao)* ou de palmier *sirípa*. Elles ressemblaient, quoique plus étroites et plus longues, à celles de nos boulangers. Les bords en étaient droits, presque parallèles, et seul le tranchant était légèrement arrondi sur les côtés. Vers le haut, elles se terminaient par une pointe, sorte de manche embryonnaire qui était prolongé par un bâton auquel il était attaché avec des liens faits en *charqui (Nilotica farnesiana)*, en lianes ou en fibres de *toborcii*. Les deux pelles examinées par Campana, mesuraient 70 cm. de longueur et 15 cm. de largeur, l'une d'elle, cependant, était moins large en haut qu'en bas de quelques centimètres (fig. 2).

Fig. 2. — Pelle (sipe) en bois, sans son manche en usage autrefois chez les Chiriguano (d'après Campana, pl. VIII, fig. 1).

Si les Chiriguano ont abandonné l'ancienne pelle de bois, ils ont cependant fidèlement conservé le long manche auquel elles étaient fixées et qui leur permet de travailler la terre sans avoir à se baisser. Une remarque d'ordre psychologique s'impose à ce propos. Les Chiriguano auraient bien pu acquérir dans les magasins des Syriens où ils se fournissent, des pelles déjà emmanchées et prêtes à être employées. S'ils ont senti le besoin de modifier le manche et de lui donner la forme traditionnelle, c'est qu'il ne correspondait pas aux mouvements et à la position du corps et des mains qu'une tradition séculaire avait fixés.

Dans chaque groupe humain, tout travail manuel exige certains gestes déterminés auxquels, dans une certaine mesure, s'adaptent les outils. Ainsi s'expliquent les variations que ceux-ci présentent de pays à pays et même de tribus à tribus. Le professeur Mauss avait coutume de nous citer, à ce propos, l'exemple suivant : pendant la grande guerre, les soldats français n'aimaient guère se servir des pelles anglaises différentes des leurs et vice-versa. Les Chiriguano que j'ai vu peiner sur les routes militaires de la Bolivie, manient nos pelles exactement comme n'importe quel terrassier européen, mais rentrés chez eux, lorsqu'il s'agit de labourer un champ, ils retournent immédiatement aux gestes ancestraux et sont contraints d'y adapter la forme de leurs instruments.

Le manche vient s'emboîter dans une poignée, sculptée dans un petit bloc de bois et rapporté avec le plus grand soin. Celui-ci affecte, généralement, la forme d'un croissant sur lequel la main s'appuye commodément. Les poignées à courbure élégante qui donnaient un caractère esthétique aux anciennes bêches sont devennes fort rares. Au cours de

Fig. 3. — Manche de pelle. Proc. : Ibopeyti. (1/4 de la gr. nat.)

mon voyage, je n'ai pu acquérir que deux manches de pelle qui en fassent pourvus. L'un provient d'Ibopeyti (fig. 3) et l'autre a été exécuté à mon intention par un vieil indien de la Mission d'Ivu. La facture de ce dernier spécimen est peu soignée, mais reproduit assez fidèlement les anciens modèles (fig. 4).

L'usage de la pelle chez les Chiriguano ne date, vraisemblablement, que de trois ou quatre siècles. Cet instrument était inconnu dans l'ancien Paraguay d'où nos indiens sont venus. L'emprunt que l'on pouvait supposer a *priori*, a été confirmé par la découverte dans la Quebrada de Humahuaca de pelles en bois en tous points semblables à celles que j'ai décrites ici. Ces trouvailles ont été faites dans les ruines de l'Alfarcito et du Pukará de Tilcara (Debenedetti, **4**, fig. 17 et p. 32) et à la Huerta dans la même Quebrada de Humahuaca. De nombreuses pelles en bois ont été exhumées à La Paya (Ambrosetti, **5**, fig. 236-237, pp. 457-458), et c'est à juste titre qu'Ambrosetti suppose qu'elles ont été emmanchées comme celles des Chirignano modernes. Debenedetti (**1**, p. 35) a obtenu un spécimen de cet instrument à Kipón, dans la province de Salta.

Ce type de pelle est particulièrement bien représenté dans le matériel archéologique de la côte du Chili. On en a rencontré de nombreux exemplaires à Calama, à Chiuchiu et à Pica, dans la province de Tarapaca (Boman, **2**, t. II, pp. 731-732 et pl. LXVIII*a* et Uhle, **3**, pp. 15-16 et pl. I).

Les métis et les indiens du haut plateau bolivien travaillent aujourd'hui encore la terre avec une bêche qui ne diffère en rien de celle de leurs ancêtres; en outre elle présente une grande

Fig. 4. — Manche de pelle. Proc. : Ivu. (1/4 de la gr. nat.)

analogie avec la pelle en bois des anciens Chiriguano (Chervin, p. 216, fig. 120).

Nordenskiöld (9, pp. 30-32) en étudiant la distribution de cet élément culturel, a établi qu'il était propre à la zone andine et aux régions limitrophes. La pelle chiriguano n'en a pas moins une particularité que nous chercherions en vain sur tous les exemplaires trouvés à l'intérieur des limites de l'empire incasique : c'est la poignée en forme de croissant. Elle correspond assez exactement aux béquilles qui terminent les rames en usage chez les tribus du Brésil, du Paraguay et des Guyanes et sur lesquelles le pagayeur pose sa main à plat.

Les Chiriguano ont vécu jadis dans une contrée riche en fleuves et en rivières et probablement ils s'aidaient pour les remonter ou les descendre de pagaies de ce type. Une fois établis au pied des Andes, la ressemblance entre leurs anciennes rames et les pelles qu'ils virent aux mains des Chané ou des Chicha dut les frapper et ils ont naturellement cherché à adapter aux nouveaux instruments ce détail de structure dont le pagayage leur avait montré la commodité. Une telle hypothèse n'a rien de trop aventureux, car n'avons-nous pas dans le Chaco des pelles qui ont exactement l'apparence de rames? (V. à ce sujet la pelle des Ashluslay publiée par Nordenskiöld, 9, p. 30, fig. 1.)

Fig. 5. — Corne de vache (*ocho-ouati*) dont les Chiriguano se servent en guise de cor. L'extrémité est taillée en forme d'embouchure. Pour. : Dupuyt. (1/4 de la gr. nat.)

Une fois leur champ libre de mauvaises herbes, les Chiriguano convoquent parents et amis. A la date convenue, tous se rendent aux champs de bon matin après s'être réveillés mutuellement avec des cris, des sifflements et en soufflant à qui mieux mieux dans des cornes de vaches qui leur tiennent lieu de cors (en chiriguano : *ocho-ouati)* (fig. 5). Le chef du village participait autrefois aux semailles et veillait à ce que tous s'aidassent mutuellement.

Les semailles se font d'une manière fort simple. Si le terrain est mou, l'Indien fiche sa pelle verticalement dans le sol après avoir donné deux ou trois coups pour l'enfoncer le plus possible. Il élargit la fente en poussant sa pelle en avant sans la retirer et glisse dans l'entrebâillement deux ou trois grains de maïs. Sans changer de place, il pratique à sa droite et à sa gauche deux ou trois trous analogues, fait un pas en avant et recommence. Les plantes poussent ainsi dans un certain aligne-

ment qui est bon, cependant, d'être parfait. Comme ils sont plusieurs à travailler simultanément, la besogne se fait vite. A midi, ou au plus tard vers deux heures de l'après-midi, ils ont fini leur tâche et s'en retournent au village où les attend la chicha au *ñeri* que le propriétaire du champ a fait préparer pour eux aides.

Le triste état de décadence où se trouvent actuellement les Chiriguano a mis fin au travail collectif et ce n'est plus qu'exceptionnellement que

Fig. 8. — Petite chiriguano abandonnée provisoirement par son habitante qui vient [illegible] travailler dans leur champ (Cuyapaipe). (Photo. A. M.)

les semailles se font en commun. Chacun doit pourvoir à ses besoins sans autre assistance que celle de ses proches parents.

Les Chiriguano cultivent les plantes suivantes :

Le maïs *(ereti)* : 11 variétés;

Les haricots *(kwanda)* : 11 variétés;

Les courges *(ondai et gindube ovoo)* : 3 variétés;

Les patates douces *(pri)* : 6 variétés;

La yuca ou manioc doux *(mandio)* (*Manihot utilissima*, Pohl);

Les arachides *(mandori)*;

Le piment *(kii)* (*Capsicum*), trois variétés cultivés;

Le maghu *(kiile)* (*Morphea cuculliformis*) (1);

(1) Le maghu n'est utilisé que dans une petite région. C'est sur Bianchini que les Chiriguano dressent des enfants qui en savent la tige.

— 309 —

Le coton à coque ;
Les maïsos ;
Les cocons d'ver (*mandioc*) ;
Les figues de barbarie (*sacta*) (*Opuntia spec.*) ;
Les figues ;
Les oranges (dans les missions).

Les Chiriguano ne cultivent que sur une très faible échelle les plantes qui, comme le sorgho, le coton à coque, les figues et les oranges, ont été introduites par les Européens. Parmi celles-ci les maïsos seuls jouissent d'une faveur générale.

Ils connaissent toujours quelques parcelles de terre chaque à la culture de plantes ayant une valeur purement industrielle. Ce sont : les calabasiers (*mendipi*), les cucurbitacées (*id*) qui poussent sur le sol à côté de leurs congénères et leur fournissent les récipients dont ils ont besoin, le roseau (*arwéé*) que l'on ne trouve guère que dans la partie septentrionale de leur habitat et enfin une espèce de tournesol (*Arendo donax*) avec lequel ils font les hampes de leurs flèches.

Ils plantent aussi le tabac (*pitl*), mais je n'en ai jamais vu dans leurs champs. Selon Zwebrokhlid (**12**, p. 23), cette culture serait intelligibile et exceptionnelle. Les Chiriguano ne sont pas de grands fumeurs et les nombreux paquets de cigarettes que j'avais emportés à leur intention ne rencontrèrent que peu d'amateurs. Chez les Tobas, les Matacos ou les Chorotis, leurs stocks eussent été épuisés en un clin d'œil, car ces Indiens aiment le tabac plus que tout au monde.

L'usage du tabac chez les ancêtres Chiriguano, comme chez leurs ancêtres du Paraguay ou du Brésil, était réservé aux hommes-médecins pour leurs opérations magiques. Son emploi en faisait une plante divine de nature « mystique » et dont la consommation était limitée (1).

J'ai visité, à l'époque de la récolte, les terrains cultivés par les Indiens de la région de Carapari, dans la vallée du Caipipendi. Dès la fin de février jusqu'au mois d'avril, les Indiens passent constamment la journée chez eux. La plupart du temps ils vont s'établir dans leurs champs, quittant le village dès que le maïs commence à mûrir pour n'y retourner qu'à la

(1) La P. Giannecchini (Dictionnaire Chiriguano-Espagnol, etc., pp. 189-190) nous donne à ce sujet des détails fort intéressants. Jadis, nous dit-il, le tabac était réservé aux magiciens et aux médecins et il semblait que notre enjoué'ini et son usage est plus répandu. Il n'est cultivé que sur une très faible échelle. Les Chiriguano n'ont pas la patience de le laisser mûrir et le font sécher sur le feu pour prévenir la moisissure.

Lorsqu'ils éprouvent appétits sexuels d'un malade, les hommes-médecins se mettent en état de transe en fumant tant et plus. Par ce moyen ils désorientent l'esprit du mal et lui livrent bataille.

Nous verrons plus loin (p. 312) le rôle du tabac dans les cérémonies magiques destinées à faire tomber la pluie.

fin de la récolte. La maison des chamis est pourvue de toute intimité désagréable par des haies d'roseau qu'ils élèvent tout autour en devant la porte seulement. Celle-ci peut être aussi fermée par un cadre en chaîne qu'ils devorent mettre elle et suspendre solidement (fig. 4).

Cette migration temporaire de toute la population d'un village aux champs, a rendu un trait de collectivisme partiel assez difficile. Il n'est

Fig. 1. — [illegible]

souvent arrivé de ne trouver dans des villages à peu près vides. Les rares indiens qui y étaient restés, se refusaient absolument, et avec raison, à me vendre les objets qui m'intéressaient, s'ils appartenaient à un absent. La propriété est chose sacrée chez les Chiriguano, et les personnes les plus proches ne peuvent disposer des biens dont leur [illegible] seul leur [illegible].

Lors de mon séjour à Carapari, je priai une fois mon ami [illegible], le « capitaine » Karaiguaipi de me conduire à mes champs. Il fut très sensible à

[facing P. 340]

l'intérêt que mon désir impliquait, et en un instant se montra prêt à m'en faire les honneurs.

Son champ se trouvait à 700 mètres environ du village sur le haut d'une des falaises qui bordent la « quebrada » de Carurutí. On y avait accès par un sentier abrupt à travers un éboulis. L'entrée du champ était fermée par une haie composée de troncs d'arbres et d'arbustes épineux que nous enjambâmes à l'aide d'une échelle dans le style indien, c'est-à-dire d'une grosse branche avec de profondes entailles en guise de marches. La *chacra* du capitaine *Karnapadyú* avait une extension de 200 mètres environ sur 70 mètres. A l'orée se dressait une petite hutte en bois couverte de paille.

Le « Capitaine » commença par me montrer quelques plants de manioc et me fit passer au travers d'un grand carré exclusivement semé de haricots et de citronilles. Les champs de *maïs leur faisaient suite*. Ils étaient partagés en deux par une seconde haie formée de troncs et d'épines. Entre les rangées de maïs poussaient des courges. Au *maïzal* succédait une seconde étendue couverte de haricots, de courges, de melons que *Karnapadyú* me dit appartenir à sa fille. Çà et là se dressaient quelques tiges de sorgho. Un nouveau champ de maïs faisait face au premier et sur sa lisière s'élevait une autre cabane. Dans l'une et l'autre de ces propriétés, les seules plantes qui fussent cultivées pour leur valeur industrielle étaient les cucurbitacées dont ces indiens font leurs tasses et leurs bouteilles.

Fig. 8. — Masque (*Iceremanga*) taillé dans une calebasse et pourvu de cheveux et de sourcils en crin. Il était accroché dans une plantation où il servait d'épouvantail. Prov. Carurutí. (1/4 de la gr. nat.)

Je visitai ensuite, sur la falaise d'en face, la *chacra* d'un autre indien du même village. Un chemin plus raide et plus difficile que le premier y conduisait. La plantation se trouvait, en contre-bas d'une colline sur laquelle était perchée une petite hutte. Ces champs étaient presque uniquement couverts de maïs entre les tiges desquels poussaient des courges. Comme précédemment, les *maïzales* étaient précédés de plantations de haricots et de courges.

Les perroquets sont de véritables plaies pour l'agriculture dans le Chaco et causent de grands dommages. Pour lutter contre leurs bandes voraces, les Chiriguano font des épouvantails en attachant à l'extrémité de perches flexibles les masques qu'ils portent pendant les fêtes du Carnaval et qu'ils dédaignent ensuite (fig. 8). C'est la nécessité d'être cons-

tamment aux agnets pour repousser l'intrusion de ces redoutables bandes de pillards qui oblige les indiens à venir s'établir sur leurs champs dès que le maïs mûrit. Les enfants et les jeunes gens ont mission d'effrayer, par leurs cris, ces insatiables marauderurs. Sitôt qu'ils voient ou entendent une volée de perroquets, ils émettent une longue modulation qui, paraît-il, a la vertu de les effrayer. Si les perroquets approchent trop ou se posent sur les plantations, les indiens les font fuir en les criblant de pierres avec leur frondes. Ils en ont de deux sortes. Partout où les Chiriguano sont en contact direct avec les Quichua, ces frondes sont en laine (pl. VII, 1 et 2); ailleurs, en particulier dans la vallée de Caipipendi, elles sont en fibres végétales et faites suivant la technique du filet (pl. VII, 3). Il ne fait aucun doute que les Chiriguano ont emprunté cette arme aux populations andines. Pour s'en convaincre, il suffit de comparer la fronde des indiens et des métis du département de Tarija avec celle des Chiriguano (Rosen, 1, fig. 267, p. 261).

Un autre moyen d'écarter les oiseaux est de tendre un fil au-dessus des champs. J'ignore l'effet que ce dispositif peut avoir sur eux.

Les champs des indiens Chiriguano sont toujours entourés d'une haie haute et épaisse qui les protège des animaux, vaches et chevaux errants, qui pourraient s'y introduire et les saccager. Les sauterelles leur font, parfois, beaucoup de mal. J'ai vu dans la vallée de Caipipendi un champ où elles fourmillaient et qui semblait avoir été abandonné pour cette raison (1).

Les femmes accompagnent leurs maris aux champs. Elles y passent la journée à filer, à coudre, à griller des épis de maïs ou à rôtir du manioc. Le soir, s'ils rentrent au village, la femme revient pliée sous le poids de son *ñapoka* ou filet à porter, plein d'épis de maïs. Les hommes les aident parfois. Ceux qui ont des ânes et des chevaux les emploient comme bêtes de somme.

Le transport du maïs se fait, généralement, à l'aide du filet à porter, mais des moyens de fortune leur permettent en cas de nécessité de s'en passer. Les épis de maïs sont réunis en paquets au moyen des feuilles qui les entourent et suspendus à une bagnette flexible, pliée en forme de 8. Lorsque les deux arceaux sont équilibrés on peut les soulever en les prenant par le milieu.

Au village, les épis sont soit emmagasinés dans les greniers sur pilotis auxquels conduisent des escaliers taillés dans un tronc d'arbre (fig. 9), soit gardés dans la hutte où un coin spécial a été aménagé en compartiment. Un tronc d'arbre, surmonté d'une fourche naturelle, peut servir

(1) Lorsque les sauterelles sont particulièrement nombreuses, les Chiriguano creusent des fosses dans lesquelles ils les font entrer et où ils les ensevelissent. (*Diccionario Chiriguano-Español*, etc., p. 83.)

A. MÉTRAUX, *La civilisation des indiens Chiriguano* PLANCHE VII

1. Fronde (tamembolo) en laine, jaune, violette, blanche et verte. Prov. : Cuevo (1/, gr. nat.); 2. Fronde en laine, brune, verte et blanche. Prov. : Ivu. (1/, gr. nat.); 3. Fronde en fibres végétales (écorce de *wembé*). Prov. : Cururuti. (1/, gr. nat.)

de dépôt à maïs. Les épis, liés par paquets, sont entassés entre les deux branches de la fourche (fig. 10).

Jadis, avant que ne commençât leur effroyable décadence, les Chiriguano avaient recours à des cérémonies magiques pour hâter la maturité du maïs et éviter la sécheresse ou une trop grande abondance de pluies.

Fig. 8. — Grenier à maïs sur pilotis (*asatiá*). Ivu. (Photo. A. M.)

Lorsque le soleil menaçait de brûler les récoltes, on faisait venir un ou plusieurs hommes-médecine qui étaient chargés d'amener les nuages récalcitrants. Munis d'un cigare, ils faisaient le tour des champs soufflant la fumée dans tous les sens (*Diccionario Chiriguano-Español*, etc., p. 167). Le symbolisme de ce rite de magie homéopathique est transparent : la fumée représente les nuages que l'*ipaye* doit réunir.

Le jeu du *mboté* constitue la survivance d'une cérémonie magique en relation avec la croissance du maïs et sa maturité.

Dans les missions des Chiriguano, ou dans les villages de la vallée de Caipipendi, on rencontre à foison, sur la grande place du village, des sortes d'oignons, faits en feuilles de maïs pliées ensemble (fig. 11). Les enfants se les lancent avec le plat de la main et cherchent à les rattraper avant qu'ils ne tombent à terre. Un voyageur pressé ne verrait dans ce jeu qu'une forme indienne de notre jeu de paume ou un tennis rudimentaire. En fait, telle est bien la signification actuelle de ce divertissement. Autrefois il n'en était pas de même, comme je l'appris dans la mission de Macharetí. Il y a quelques années encore, on ne jouait au *mboté* qu'à l'époque où le maïs commençait à mûrir. Les enfants formaient un cercle et se jetaient mutuellement cette sorte de volant. Si, par hasard, l'un d'eux le laissait tomber par inadvertance ou maladresse, il quittait aussitôt les lieux, poursuivi par ses camarades qui lui tiraient énergiquement les cheveux. Le joueur maladroit qui lançait la balle de telle façon que son partenaire ne pouvait la saisir, était assimilé à celui qui la laissait choir, à condition toutefois que son vis-à-vis n'eût pas fait le geste de la rattraper. Une fois le maïs mûr, on cessait de jouer au *mboté*.

Fig. 10. — Arbre fourchu sur lequel les Chiriguano entassent le maïs à l'intérieur de leurs huttes. Ce dispositif peut avoir donné naissance aux greniers sur pilotis.

Le jeu du *mboté* a une vaste distribution en Amérique du Sud, mais celle-ci est limitée aux populations du bassin amazonien et des Guyanes. Les Chiriguano l'ont sans doute introduit dans le Chaco (Nordenskiöld, 9, p. 168).

Ce jeu dérive, sans aucun doute, d'un rite magique dont le but était de favoriser le cours bienfaisant du soleil et de l'obliger à luire sans interruption pour faire mûrir le maïs. Le volant de paille représente le soleil. L'époque à laquelle ce jeu se pratique et la signification que les Chiriguano y attachent viennent donner une forte présomption à mon hypothèse. Preuss a démontré que dans toute l'Amérique centrale et même dans l'Amérique du Nord, le

Fig. 11. — Volant en paille (*mboté*) accessoire du jeu du même nom. Prov. : Carurutí (1/1 de la gr. nat.).

1:Métraux SF10 Chiriguano

jeu de paume était issu d'une opération magique destinée à influencer le soleil.

Les Chiriguano sont orgueilleux de l'étendue de leurs champs. Le «capitaine» *Karuapadyá* me fit parcourir le sien en entier, insistant sur son extension et sur l'abondance de ses produits. Un autre Chiriguano après m'avoir emmené au travers de toutes ses plantations, sans me faire grâce d'un lopin de terre, me dit en me reconduisant, d'un air à la fois orgueilleux et interrogateur: «Guapo yo». Je lui répondis qu'effectivement il était très «guapo». Il en parut flatté et heureux.

Le père défriche le champ de sa fille, qui représente pour celle-ci une espèce de dot. Le gendre doit ensuite s'en occuper, faire les semailles et la récolte (1). Mon guide, Cipriano, se plaignait amèrement de son gendre dont la paresse l'avait obligé à récolter lui-même le maïs de sa fille.

CHAPITRE III

La cuisine et l'alimentation

LES RESSOURCES ALIMENTAIRES

Ce n'est que fort rarement que j'ai mangé de la viande dans les villages chiriguano et je n'ai jamais eu l'occasion de goûter à un morceau de gibier. Ce n'est pas que celui-ci ait disparu de la région, exterminé par l'homme, mais les Chiriguano ne se donnent plus la peine de le poursuivre. Jadis ils étaient, comme presque tous les indiens de l'Amérique tropicale, des chasseurs passionnés. Lorsqu'ils attendaient des hôtes pour une fête de boisson, les hommes partaient dans la brousse et pendant quinze à vingt jours faisaient ample provision de chair de pécari, de cerf, de nandou, de pigeon, de tatou, de *chuña* et même de perroquet. Pour qu'elle se conservât, ils la faisaient sécher au soleil, sans sel (Nino, pp. 249-258).

En dehors de ces expéditions officielles, ils chassaient sans doute pour leur plaisir ou simplement pour interrompre la monotonie de leur menu.

Les quadrupèdes étaient tués avec des flèches à pointe lancéolée, primitivement en bois aujourd'hui en fer (pl. VIII et IX, 2); le menu gibier avec des flèches terminées par une tige de bois barbelée (pl. IX, 3-5). Les oiseaux étaient pris au piège ou assommés avec une flèche spéciale à embout évasé (pl. X-XI).

Quiconque a vu les petits chiens des Indiens Chiriguano, à museau

(1) Corrado (p. 155) assure que les jeunes mariés vivent aux dépens de leurs parents et qu'ils ne cultivent pas de *chacras* ni ne construisent de maison avant d'avoir un enfant.

allongé, à oreilles pointues, à poil ras et à queue arquée se demandera avec étonnement, comment des animaux aussi misérables, stupides et rageurs ont pu être dressés de façon à rendre des services à l'homme. Cependant, tel semble avoir été le cas. Pour chasser le pécari, par exemple, les Indiens emploient les chiens qui les traquent et les

Fig. 12. — Poinçon en corne de cerf (*ozupirasa*). Jadis les Chiriguano s'en servaient pour perforer la lèvre inférieure de leurs enfants. Prov. : Saladito. (1/1, gr. nat.)

forcent à se cacher dans leur repaire où on les enfume et assomme à coups de bâton lorsqu'ils cherchent à s'enfuir. C'est du moins de cette manière que les habitants du village de Saladito (haut Pilcomayo) me dirent avoir tué un pécari qu'ils me montrèrent au moment où je passai chez eux.

La chasse, chez les Chiriguano modernes, a perdu sa raison d'être en tant qu'activité ayant un caractère économique, excepté, peut-

être, pour ceux de cette nation qui vivent dans la région du haut-Pilcomayo. C'est, du moins, l'impression que j'ai eue après avoir examiné leurs huttes : les châlits ou cadres de bois étaient souvent recouverts de peaux de pécari, et les anciens poinçons en corne de cerf (fig. 12) assez nombreux pour pouvoir être échangés contre une bagatelle. L'abondance relative de ces objets prouve que la chasse, chez ces indiens, n'a pas été reléguée au rang d'un simple sport et qu'elle conserve, du moins en partie, son importance passée. Le contraste est saisissant si ensuite l'on se rend dans la zone des missions franciscaines : là, plus de peaux de pécari, plus de perforateurs en corne de cerf, plus de plumes d'autruche. Dans les villages du haut Pilcomayo, il n'est cabane, si pauvre soit-elle, où entre les poutres de la toiture ne soient glissés un arc et un paquet de flèches. Une fois hors de cette région, l'ethnographe aura toutes les peines du monde à acquérir ces armes pour ses collections. Si elles lui sont offertes ce seront, soit quelques souvenirs du temps jadis conservés par un vieillard, soit des exemplaires grossièrement faits sans autre valeur que celle d'un jouet ou d'un accessoire de sport pour quelque rare amateur de chasse.

Fig. 15. — Extrémité supérieure d'un *lorero* (longue baguette terminée par un lac, avec laquelle les Chiriguano attrapent les perroquets sauvages qu'ils ont attirés au moyen d'individus apprivoisés). Prov. : Ivu. (1/, gr. nat.).

Fig. 14. — Flèche de chasse. Chiriguano. La pointe est formée par une tige de fer contre laquelle un clou a été fixé en guise de barbelure. Cette pointe est maintenue dans la hampe grâce à une cheville de bois. Prov. : Sawirenda. (1/, gr. nat.)

Les indiens de la vallée semi-indépendante de Caipipendi sont encore, dans quelques villages, capables de tailler un arc et de s'en servir. Les flèches, que je leur achetai en assez grande quantité, appartenaient presque toutes à un seul type et étaient destinées, à ce qu'ils me dirent, à tuer les *yakú (paro del monte)* (*Penelope* sp.). Ce sont de longs roseaux armés de deux tiges barbelées en bois (pl. IX, 1). Il ne faut pas en conclure que les *yakú*, si abondants soient-ils, représentent une ressource alimentaire appréciable. La chasse, d'ailleurs, n'en est guère pratiquée que par les jeunes gens qui en font un divertissement. L'indien qui me céda le plus beau lot de ces flèches, en éprouva quelque remords; car, m'expliqua-t-il,

elles étaient à son petit garçon qui ne manquerait pas de pleurer lorsqu'il constaterait que son père les avait vendues sans son assentiment.

Les enfants chiriguano sont encore plus fervents que les nôtres au tir à l'arc. On peut les voir courir autour du village s'essayant à abattre, avec de petites flèches en miniature (pl. XII, 2 et 4), les oiseaux qui se posent à leur portée. Contrairement à ce qui avait lieu jadis, une fois adultes, ils ne bénéficieront pas de l'adresse qu'ils auront ainsi acquise.

Fig. 16. — Perchoir avec anneau pour perroquets apprivoisés dont les Chiriguano se servent pour attraper les individus sauvages. Prov. : Xawirenda. (1/4 gr. nat.)

Quelques indiens de la vallée de Caipipendi m'ont vendu de gros bouquets de plumes de nandou. Je n'ai pu savoir s'ils les avaient prises sur des bêtes tuées dans la région ou s'ils avaient été les chasser à l'est, plus près des grands déserts. Cela n'aurait rien d'invraisemblable, car les nandous ne sont certainement pas nombreux dans cette contrée ; en un mois de séjour je n'en vis aucun. Ces plumes servent à confectionner

Fig. 17. — Calebasses perforées dans lesquelles les Chiriguano mettent les poussins pour les préserver des oiseaux de proie. Prov. : a, Caruruti ; b, Itanjuti. (1/4 gr. nat.)

des plumeaux que les Chiriguano vendent dans les villages des métis. Pour les maigres profits que leur procure ce commerce, ils entreprennent de longs voyages et vont même jusqu'à Sucre, où chaque plumeau leur est payé de 2 à 3 pesos.

La chasse a perdu son importance du jour où les Chiriguano ont commencé à avoir du bétail. Il y a une vingtaine d'années déjà, ceux qui

[facing P. 348]

Flèches à embout évasé pour assommer des oiseaux ou de petits mammifères (*tempo*)
Les n°s 1 et 3 proviennent d'Ivu, les n°s 2 et 4 de Caipipendi. (1/1 gr. nat.)

possédaient quelques moutons, chèvres, vaches ou même quelques poulets, ne se donnaient pas la peine de suivre dans la brousse leurs camarades en quête de gibier. A quoi bon se fatiguer à courir derrière des pécaris pendant de longues journées et risquer de se faire éventrer ou de revenir bredouille, si tout en restant chez soi on peut régaler ses hôtes avec quelque rôti de viande ou un bouillon de poulet?

Le prix du bétail a beaucoup baissé ces dernières années et les indiens n'ont plus besoin d'aller aux fabriques de sucre de l'Argentine pour en revenir avec une vache ou deux en récompense de quatre à cinq mois de dur labeur. Les chèvres, les moutons et les porcs sont estimés de 2 à 4 pesos pièce et encore s'agit-il souvent de « prix pour étrangers ». Une vache s'achète couramment de 25 à 30 pesos et un indien économe a le moyen d'en acquérir plusieurs au cours de sa vie. Petit à petit, dans chaque village se sont formés de modestes troupeaux que les indiens soignent comme des trésors. Ils en sont fort ménagers, comme d'ailleurs tous les peuples primitifs qui pratiquent l'élevage. Ils ne tuent presque jamais leur vache et ils ne sacrifient que rarement une chèvre ou un mouton à leur gourmandise (1). En se montrant aussi économes, ils n'obéissent à aucune superstition, mais craignent, simplement, de diminuer leur capital. La richesse d'un indien se jauge au nombre de ses vaches et, dans leur jargon espagnol, « vacudo » est synonyme de riche (2). Il existe, chez certains d'entre eux, une tendance à estimer la valeur des objets en vaches. Ainsi un métier à tisser, avec un poncho presque fini, me fut offert « pour une vache » et la propriétaire du métier ne put comprendre qu'il m'était difficile de réaliser le troc.

Le *charqui*, ou viande séchée au soleil, remplace le plus souvent la viande fraiche dans les menus de nos indiens. Il ne s'agit pas de préférence, mais d'une nécessité. Le *charqui* est bon marché et s'achète dans toute *estancia*.

LA PÊCHE

A l'époque où je traversai les villages chiriguano du haut Pilcomayo et du Parapití, les rivières étaient en crue, le maïs mûrissait dans les champs et aucun Indien ne se souciait de laisser les perroquets lui manger ses épis, pour aller attraper des poissons au risque de se faire emporter par le courant. Si j'étais revenu dans ces mêmes villages en juillet ou en août, le spectacle eût été tout autre. Les rivières n'auraient plus été que de maigres filets d'eau et de tous côtés j'aurais aperçu des hom-

(1) Jadis ils éprouvaient pour la viande de porc une répugnance invincible qui se dissipe de nos jours (Nino, p. 252).

(2) Un indien de *Saurirada* avait jusqu'à 40 têtes de bétail.

mes et des femmes occupés à pêcher. La saison du poisson aurait battu son plein.

Les Chiriguano, venus d'un pays riche en cours d'eau, ont conservé à cet égard les traditions de leurs ancêtres du Paraná ou du Paraguay.

Les uns armés de grandes épuisettes (fig. 18) forment des barrages contre le courant et avancent en cueillant les poissons comme à la cuiller. Ils les empoignent ensuite et les attachent à la ceinture après les

Fig. 18. — Épuisette en fils de coton (pêche). Chiriguano. Prov. : Ibopeyti (Coll. gr. ind.)

avoir enfilés sur une corde au moyen d'une aiguille de bois (fig. 19). Il en est d'autres qui épient le poisson dans l'eau et lui décochent au passage une flèche armée de plusieurs pointes (fig. 20) ou simplement de deux longues tiges de bois barbelées. Quelques-uns, à l'aide de barrages de pierres, tâchent de faire converger les poissons vers l'ouverture d'une nasse en osier (1). Parfois un groupe d'individus détournent un cours d'eau, mettent les poissons à sec et les attrapent avec la main ou au moyen d'un crible (2). Les hameçons en fer sont également en honneur : les

(1) Comparer Lizárraga (t. I, p. 260) : « al verano echan (les Chiriguanos) un pedazo del río por otra parte; quedan los peces en el brazo del río desaguado; en agua hasta la cinta, entran en ella con sus arcos y flechas, allí los flechan, y el que se escapa de la flecha, los mujeres van detrás con unas redes en que caen. »

(2) Nordenskiöld (2, pp. 181-182) décrit une curieuse façon d'attraper les poissons qui est en usage chez les Chaná du rio Itiyuro. On plante dans l'eau des branches

Fig. 19. — Aiguille en bois (tiwoo) avec laquelle les Chiriguano enfilent les poissons qu'ils ont attrapés pour pouvoir les porter plus commodément autour de la ceinture. Pour. : Tintapew. (1/1, gr. nat.)

Fig. 21. — Épieu long de 4.70 mètres dont les Chiriguano se servent pour transpercer les grands serpents, lorsque ceux-ci saignent à leur partie. Pour. : Dupuyté. (1/10, gr. nat.)

Fig. 22. — Hache pour tuer des poissons. Pour. : Dupuyté. (1/1, gran. nat.)

Chiriguano les Ramé à l'extrémité du longues cordes. Une lance à une ou deux pointes leur sert à harponner les dauphins qui passent à leur portée (fig. 11). Inutile de dire que les Chiriguano sont de merveilleux nageurs.

Les Chiriguano sont friands de poissons (1). Il'ne viennent loin du Pilcomayo et ne peuvent s'en procurer directement, ils l'achètent aux Toba ou aux Matako qui sont d'habiles pêcheurs et mis, en plus, l'avantage d'habiter sur les deux mêmes du lac Pilcomayo.

A la même saison, on observe près du Pilcomayo un campement temporaire de Chiriguano, placé sous le petite de lauro Ilatu pleine d'épis de maïs, qu'ils vont toujour cuisire des poissons frais ou séché. Ils n'hésitaient pas, parmi (1), à faire 120 kilomètres pour s'en régaler (Ilau, p. 224).

Le poisson consommé par eux secondé ou cuit et assaisonné seulement (1 est bouilli ou cuit). Ils ce dernier cas, on l'accompagne entre les deux lèvres d'une baguette fendue sur les trois quarts de sa longueur (fig. 12). Pour que celle-ci ne s'ouvre pas complètement, on fixe solidement la partie inférieure avec des liens en écorce, et pour que le poisson ne tombe pas sous feu intensité dans l'intervalle, la partie supérieure. Chez leurs ancêtres les Guaycuri, une telle brochette était suspendue, sur, pour griller le gaudoit du leur pêche ou du leur chasse, du consommation des [illegible]. Les Chiriguano mangent aussi du poisson séché ou salé, et l'apprêtent sous cette forme combiné avec quelque plat de maïs.

qui descend de l'amont et attirent les poissons. Ils y placent aussi une nébélème avec un peu de farine de maïs. Les poissons entrent dans la nébélème dans le gaudet où ils restent. Lorsque plusieurs poissons y sont pénétrés, les femmes frappent avec le manche l'entrée de la nébélème et la retirent à la rivière.

(1) L'habitat des Chiriguano à la pêche avait déjà attiré l'attention des anciens chroniqueurs. Arsdale (1, 2, p. 250) rapporte qu'il vit l'occasion de les voir manier l'épée dont un spécimen est reproduit ici à la figure 10. « Une Chiriguano se mettait d'abord dit agna, y ondoyait une admirable pendant magnifiée les pieds, y restait [illegible], a frappant que Ilatu[illegible] en la même direction, ordinairement vers la hauteur du bottom et prendre; y est étonnant le nombre [illegible], que [illegible] ont mon pouvoir, que [illegible] de la [illegible] ».

Ilatu (1), fig. 111, p. 224. Il prétendait un Chiriguano venant à la mère ou de que [illegible] à deux pointes.

— [illegible] —

CHAPITRE IV

La mâche

LE FER

Les Chirigueno modernes ne savent bien plus en plus des alternative de la règle hallstatienne, dont la nouvelle qualité a nécessitant nécessité à maintenir le tréfond en bronze. Celui des Chirigueno, comparativement rétrocédant aux Ilkoro, se compose d'un silex et d'un morceau de fer avec [illegible] qui [illegible] sur les gens les [illegible] [illegible] qui gouvernent les frères du gale bernaka (*Eberlein rangiqui*). Cette drogue (*bela vindiuna*) est contenue dans un petit récipient fait avec l'extrémité d'une corne de vache ou d'une queue de la-

Fig. 10. — Pointe en grès du sud dans laquel on [illegible] gardait du tréfond [illegible]
Dess. : Chel (?), gr. nat.

Fig. 11. — Pointe de grès [illegible]
Dess. : Nesaiko (?), gr. nat.

ma. Il est hermétiquement fermé par une machôlle en bois, qu'une ouvertotto pénètre par l'intérieur de la nouvelle et sortant par en haut, enlaçgé à la pointe de la corne ou de la queue, permet de nouveau à un plomb d'un seul coup. Cet ingénieux *Bagaskiff* s'est que, cependant, d'invention récente : je l'ai vu adopter aux Ishigotto des environs dans la Bégoldique Argentine. Quelques Chirigueno fabriquent des aiguilles en étoile qui, à première vue, ressemblaient entière d'une de nos aiguillettes. Le tréfond et son ouverture est soigneusement garni dans de petites aiguilles en peau du serf, de chat sauvage, d'iguane, etc. (figs. 10 et 11).

Jadis les Chirigueno fixaient de fer exactement comme tous les Indiens de l'Amérique du Sud, en fixant dans lagoutton l'une extrémité

l'autre. Un de nos amis de Caraguatá me remettait un de ces appareils dans l'espoir de m'étonner et d'en tirer un bon prix. Il prit deux baguettes en bois tendre ou bois de fer (1), coupa l'une d'elles dans le sens longitudinal et pratiqua l'une de ses faces de deux gorges le long desquels il ménagea une rainure perpendiculaire. Ces deux petits sillons étaient destinés à conduire la sciure incandescente sur l'amadou placé par terre.

Fig. 21. — Instrument employé à faire du feu en frottant par un Chiriguano moderne. Pour [illegible] cf., p. [illegible]

L'autre baguette fut légèrement effilée pour lui permettre de pénétrer dans les gorges. Comme ce bâtonnet était trop court pour être manié avec commodité, il le fixa solidement à un autre bâton au moyen de fibres végétales (*tacuiro*) (fig. 22). Cela fait, il s'assit par terre, appuyant la plante des pieds sur le bâtonnet à gorges, et imprima avec la plus [illegible] main un mouvement de rotation à l'autre baguette. La sciure incandescente qui se détachait par l'effet de la friction, tombait sur du coton sèché placé auprès de l'appareil en guise d'amadou et qui, au bout d'un temps assez court, commençait à prendre feu.

Suivant la saison, les Chiriguano allumaient leurs feux dans la hutte ou dehors. Le foyer se composait de longues branches qu'ils disposaient comme les rayons d'une roue. Au fur et à mesure que leur extrémité brûlait, ils les rapprochaient du feu central. Le soin de chercher le bois mort est du ressort des hommes (fig. 26).

Devant les huttes, ils élèvent souvent un petit hangar dans lequel les femmes font la cuisine. Le toit de cet abri sert d'étagère pour y déposer provisions et ustensiles.

PRÉPARATION DES ALIMENTS

Les Chiriguano modernes ne semblent pas observer d'interdits alimentaires, du moins dans la vie journalière, sur la coutume de jeûner, pour les femmes à l'époque de la puberté et pour les hommes à la naissance d'un enfant, ne s'est pas encore perdue. Autrefois, certains ani-

(1) Selon le P. D. Giannecchini (*Diccionario Chiriguano-Español*, etc., p. 91), les Chiriguano employaient pour obtenir du feu par rotation des baguettes faites du bois d'une liane rouge dont la fleur porte 5 pétales jaunes avec une tache rouge sur l'un d'eux. Le nom chiriguano de cette plante est *ingo pinta*.

maux étaient tabous (1). Les hommes de quelques villages se réservaient ainsi le droit exclusif de manger de la chair de cerf qui leur transfusait ainsi l'agilité et la souplesse de cet animal. Les femmes pouvaient manger, sans inconvénient, du perroquet, oiseau lourd et stupide. Dans leur misogynie, les Chiriguano estimaient sans doute que cela ne changerait en rien leur naturel. (Campana, p. 92.)

La cuisine n'est pas une activité secondaire, elle est une forme impor-

Fig. 28. — Femme chiriguano allumant du feu. Haut Pilcomayo. (Photo. A. M.)

tante de la civilisation matérielle et un excellent indice pour juger du niveau culturel d'un groupe humain. L'art de préparer les plats décèle aussi bien que n'importe quel engin, les facultés d'invention et le goût. En Amérique du Sud, on peut fort bien classer les tribus suivant la plus ou moindre grande variété de leurs plats et le soin qu'elles apportent à leur confection. Cette hiérarchie correspondrait, certainement, à celle des éléments culturels.

Dans le Chaco, la cuisine des Chiriguano s'oppose par sa variété, sa

(1) Pour ne pas tuer un de leurs parents morts transformé en renard, les Chiriguano ne chassent ni ne mangent cet animal (*Diccionario Chiriguano-Español*, etc., p. 3).

Les hommes-médecine ne peuvent en aucun cas manger du piment. Si un homme refuse de goûter à ce condiment, l'on peut être sûr que c'est un magicien (*Id.*, p. 184).

Le maïs grillé est strictement prohibé aux personnes en deuil dont les larmes tariraient si elles mangeaient de ce plat.

saveur et sa propreté à celle des tribus plus primitives, comme les Tobu ou les Matako.

Avant de passer à l'étude des ustensiles qu'emploient les ménagères chiriguano, il convient de décrire leurs menus.

Lorsque les Chiriguano abattent une vache, une chèvre ou un mouton, la viande en est bouillie dans de l'eau, rôtie à la broche ou séchée au soleil *(charqui)*. Ils sont particulièrement friands de la tête des animaux qu'ils tuent et ils la mangent bouillie après l'avoir écorchée. Les morceaux de viande sont nettoyés avec soin avant d'être cuits; et les tripes, par exemple, qui sont un plat de choix, sont vidées au préalable.

Le maïs est préparé de diverses manières. Si les épis sont tendres et verts, ils sont bouillis dans de l'eau ou grillés sur le feu ou sous la cendre.

C'est lorsque le maïs est encore en cet état que les femmes préparent les *simbikuai* ou *kumitas* (en espagnol). Elles mordent à belles dents dans les épis encore tendres, en mâchent les graines longtemps et les crachent dans une calebasse. Cette bouillie blanche, imbibée de salive est enveloppée dans des feuilles de maïs et mises sous la cendre.

Les Chiriguano donnent le nom d'*atipii* aux grains de maïs rôtis dans un plat spécial appelé *tapuipe* (pl. XIII, 3) ou à l'intérieur de grands tessons qui de plus en plus tendent à remplacer l'ustensile primitif approprié à cet usage. L'*atipii* ne demande d'autre préparation que d'être constamment remué pour ne pas être carbonisé. Ce mets tient lieu de pain aux Chiriguano qui aiment à grignoter ces grains croquants et appétissants. Ils en font provision lorsqu'ils partent en voyage.

L'*atipii* pilé dans un mortier et passé au crible donne l'*atii*, farine brunâtre qui a un goût excellent. L'*atii* est aussi préparé différemment : les grains de maïs sont réduits en une farine qui est grillée dans la rôtissoire en terre cuite ou dans un large tesson. Selon Nino (p. 246), on donnerait le nom d'*atikii* aux grains de maïs grillés, puis transformés en farine, après avoir été passés au crible et moulus jusqu'à en être pulvérisés. Le même missionnaire réserve le terme *atii* pour la farine grillée, qui est obtenue avec le résidu laissé par les grains que l'on a traités de la façon suivante : après les avoir laissés une nuit entière tremper dans l'eau, on les verse, le matin suivant, dans un crible. Lorsque l'eau s'est égouttée on les pile dans un mortier. Cette farine est alors tamisée, puis grillée : cuite dans de l'eau, elle constitue le plat que les Chiriguano appellent *muinti* ou *kuinti*. L'*atii* serait donc fait avec le résidu de la farine *muinti* qui est moulue à nouveau, puis grillé comme elle, mais mélangé au préalable avec du sel ou du piment. J'ai souvent mangé de la farine de maïs grillée que les indiens me désignaient comme étant de l'*atii*, mais jamais je n'ai pu constater qu'elle fût assaisonnée. Les Chiriguano donnent le nom d'*abatikure* au son du maïs.

Voici comment se prépare le *muintimimo* : les grains de maïs sont

1 et 2. Bassine à fond perforé pour préparer le *masintsimo*, farine cuite à la vapeur. Prov. : Ivrs. (1/, gr. nat.). — 3. Bassine pour griller des graines ou de la farine de maïs (*tapuipi*). Prov. : Saindita. (1/, de la gr. nat.).

mis à tremper toute une nuit. Le matin suivant ils sont moulus et tamisés dans l'*urumpé* (crible aux mailles très fines). La farine est versée dans le *muitero* (pl. XIII, 1 et 2). Cet ustensile est une bassine en terre cuite dont le fond est percé de trous comme une écumoire (1). La farine est recouverte avec le son du maïs. Le *muitero* est placé ensuite sur la bouche d'une marmite pleine d'eau et le tout mis sur le feu. La vapeur qui s'élève pénètre par les trous du *muitero*, cuit le maïs tout en l'imbibant d'humidité. Pour que le vapeur ne s'échappe pas sur les côtés, on enduit d'argile la ligne de contact entre les bords du *muitero* et le col du vase.

J'ai donné la recette de ce plat d'après Nino (p. 246) car je n'ai jamais assisté à sa préparation. Les Chiriguano eux-mêmes doivent l'avoir oubliée : je ne me souviens pas d'avoir vu au cours de tout mon voyage, plus de deux *muitero* : l'un à Yumbía et l'autre à Ivu. Comme il est impossible de préparer le *muintimimo* sans cette bassine, il faut supposer que les Chiriguano de la décadence ont oublié jusqu'au goût d'un des mets les plus originaux de leur cuisine.

A Ivu, les Chiriguano m'ont fait goûter au *kāwi-rai* (petit *kāwi*), sorte de bouillie, faite avec les grains de maïs amollis par un plus ou moins long séjour dans l'eau, puis pilés et débarrassés du son. Cette bouillie est cuite dans de l'eau et mangée froide. On la laisse parfois fermenter pendant quelques jours et c'est de là que lui est venu, sans doute, son nom de « petite bière de maïs ».

Les indiens font des galettes de maïs *(mupape)* (2), dont il est question dans les mythes que j'ai recueillis, mais dont je n'ai jamais eu moi-même l'occasion de goûter. L'*avatindi*, ou maïs blanc, est amolli dans l'eau, pilé, puis pétri avec du sel et du piment et la pâte modelée en galettes que l'on fait cuire sous la cendre. Lorsqu'elles sont censées être à point, on les retire de dessous les braises, on les lave avec de l'eau et l'on a pour finir une sorte de pain de saveur agréable.

Une façon rudimentaire de préparer le maïs, mais peu appréciée aussi, consiste à en faire bouillir les graines longuement dans de l'eau jusqu'à ce qu'elles soient devenues molles *(atiruru)* (3).

(1) Lizné (2, carte 1, p. 23) nous a donné la distribution des vases à fond perforé dans toute l'Amérique. L'énumération qu'il en fait est fort complète, mais il y manque toutefois l'indication de La Rioja dans la République Argentine où Boman (5, p. 17) a découvert des fragments de vases dont la base était entièrement perforée comme un crible.

(2) Les beignets de maïs que j'ai vu rôtir sur la poêle, à Pipi, étaient sans doute des galettes *mupape*. Malheureusement je n'ai pu en connaître le nom.

(3) L'*atiruru* est un mets dont la consommation est intimement associée à l'observance d'interdits magico-religieux. C'est le seul aliment permis aux jeunes filles lorsqu'elles ont leurs premières règles, aux gens en deuil et aux accouchées pendant une période de dix jours *(Diccionario Chiriguano-Español*, etc. p. 14).

Avec de la farine de maïs *(api)* et de la viande, les Chiriguano font un bouillon qui n'est pas mauvais.

Ils n'emploient pas au hasard les onze variétés de maïs qu'ils cultivent. Chacune, selon sa qualité, est destinée à la préparation d'un plat déterminé. Le maïs jaune *(arati-kendi-raé* ou *arati-iyu-raé)* sert à faire la *chicha* ou bière de maïs; le maïs blanc *(arati-ndi)* est grillé ainsi que l'*arati-kanana*. Le maïs dit *katäintäi* ou maïs crépu, est généralement grillé ainsi que l'*arati-tiore* et l'*arati-saimpini* (maïs gris) que l'on destine à être rôti et transformé en farine.

L'*arati-rai* ou petit maïs n'est planté qu'en cas de disette, lorsque la récolte a été mauvaise. De petite taille, il ne donne qu'un épis de dimension réduite, mais a l'avantage de pousser vite (Nino, pp. 241-242).

Le repas d'un Chiriguano, en temps normal, ne se compose pas exclusivement de maïs, même si cette céréale figure à tous ses menus. La faveur dont le maïs est l'objet, est partagée par les haricots ou *kumanda*. Les Chiriguano en cultivent aussi onze variétés.

Les Chiriguano mangent les haricots soit secs, soit frais. En ce dernier cas il sont cuits avec leur gousse dans de l'eau ou sous la cendre. Les haricots bouillis avec leur gousse sont assaisonnés avec du piment. On a alors le plat appelé *sopirira*.

Pour débarrasser les haricots secs de leur gousse, les femmes en font un grand tas qu'elles posent sur une peau; puis, s'asseyant à côté, les martèlent avec un bâton comme avec un fléau. Les graines se détachent et pour les séparer de la gousse, elles en prennent des poignées qu'elles éventent (fig. 27). Elles recommencent l'opération à plusieurs reprises jusqu'à ce qu'il ne reste plus une seule graine adhérente aux gousses. Ensuite elles les rassemblent en tas avec un petit balais et les débarrassent de toute impureté en les faisant sauter dans un crible. Les haricots, une fois écossés, sont gardés dans des vases.

A Caruruti, chaque matin on m'offrait un plat de haricots qui était cuit de la façon suivante : une poignée de haricots, avec un peu d'eau, était placée sur le feu dans une poêle improvisée formée par un grand tesson. Au bout d'un instant, l'eau s'évaporait et les haricots commençaient à fumer; c'était le moment de les retirer et de les servir.

Le four souterrain, qui chez d'autres peuplades de l'Amérique est employé presque exclusivement pour cuire la viande, a été adapté par les Chiriguano à un usage plus humble : dans un trou qu'ils font dans la terre et qu'ils ont chauffé au préalable, ils enterrent les haricots frais et les laissent jusqu'à ce qu'ils soient à point (Nino, p. 243).

Après les haricots viennent, par rang d'importance, les courges ou citrouilles *(andai aukú*, et *ginda)*. Les indiens les font bouillir ou les rôtissent sous la cendre. Dans le premier cas, ils les assaisonnent avec du piment ou du sel pour faire le *gindaka-mikira* ou graisse de courge. Les

graines sont également grillées et mangées avec de la farine de maïs, de l'*atipii* ou des haricots.

Les indiens de la vallée de Caipipendi mangeaient quelquefois, mais rarement, des tubercules de manioc doux. Ils les faisaient bouillir dans de l'eau ou les grillaient sous la cendre.

Les patates douces ou *camote* (en chiriguano : *yeti)* sont rôties ou bouillies. Elles ne m'ont été servies que deux ou trois fois.

Fig. 27. — Jeune femme Chiriguano éventant des haricots Cururuti. (Photo. A. M.)

Les Chiriguano aiment les condiments et en assaisonnent tous leurs légumes : dans la marmite aux haricots, ils mettent du piment qui se présente chez eux sous la forme de petits fruits ovales verts et rouges extrêmement forts. J'ai également vu du piment rouge moulu. Dans les villages où les indiens emploient du sel cristallisé, ils le cassent en petits morceaux que l'on place près du feu pour les faire fondre petit à petit. Les cuisinières les trempent de temps en temps dans la soupe, puis les sortent. Si le sel est tiré des marais salants ou de l'eau par évapora-

tion, on le pétrit en grosses boules que l'on creuse au fur et à mesure de ses besoins (fig. 28).

La majeure partie du sel exploité en pays chiriguano provient d'une mine située dans la région de San Simon, entre San Luis (Entre Rios) et le río Salado, dans le département de Tarija. Les indiens accourent là de tous côtés avec des troupes d'ânes qui repartent chargés de gros blocs de sel cristallisé débités ensuite en petits morceaux.

Les indiens d'Ibopeytí, quoique vivant dans le voisinage de la mine de sel de San Simon, le consomment sous la forme des grosses boules dont je viens de parler. Pulvérisé, c'est un sel qui rappelle notre sel de table mais plus grossier. Les habitants de ce village m'ont assuré qu'ils le trouvaient près du Pilcomayo. Cela est fort possible, car les rivières qui coulent dans la contrée sont fort salées, comme leur nom l'indique (Río Salado, Saladito, etc.). Ces rivières, qui débordent fréquemment et changent souvent de lit, doivent constituer çà et là de véritables marais salants. Les Chiriguano d'Ivu et de Macharetí recueillent l'eau d'une source salée, la font bouillir, et par des refroidissements successifs obtiennent du sel qu'ils pétrissent en boules (Campana, p. 89).

Fig. 28. — Sel pétri en boule prêt à être consommé ou exporté. Prov. : Ibópeyti. (', gr. nat. ±.)

Les Chiriguano sont parcimonieux de leur sel. Je ne les ai vu saler que les haricots secs et lorsque ceux-ci sont cuits avec leur gousse, ils sont servis tels quels, sans condiments, de même que le maïs ou les courges.

Lorsqu'une femme chiriguano vous offre un plat de haricots ou de viande, elle met toujours à côté de vous de la farine de maïs. Il n'est pas facile de la manger selon les règles; les indiens eux, en prennent de fortes pincées entre les doigts et les lancent avec une merveilleuse adresse dans la bouche. A les voir si adroits, je pensais à leurs ancêtres du Brésil, les anciens Tupinamba et Guarani, qui excitaient l'admiration hilare des premiers navigateurs : « Mais quoy que c'en soit, nos *Tononpinambaoults*, tant hommes, femmes qu'enfans, estans dès leur ieunesse accoustumés de la (la farine de manioc) manger toute seiche au lieu de pain, sont tellement duits & façonnez à cela que, la prenant avec leurs quatre doigts dans la vaisselle de terre ou autre vaisseau où ils la tiennent, encores qu'ils la iettent d'assez loin, ils rencontrent neantmoins si droit dans leurs bouches qu'ils n'en espanchent pas un seul brin. Que si entre nous François, les voulans imiter, la pensions manger de cette facon, n'estans point comme eux stylez à cela, au lieu de la ietter dans la bouche, nous l'espanchions sur les iones & nous enfarinions tout le visage :

partant, sinon que ceux principalement qui portoyent barbe eussent voulu estre accoustrez en ioueurs de farces, nous estions contraints de la prendre avec des cuilliers » (Léry, t. I, pp. 143-144).

Ce rapprochement m'a permis de supposer que la farine de maïs grillé a simplement remplacé la « farinha » des Brésiliens. Comme on sait, la pulpe des tubercules de manioc, après avoir été soigneusement pressée dans le *tipiti* ou couleuvre, était grillée sur une plaque en terre cuite et transformée en farine sèche dont les Tupinamba accompagnaient tous leurs repas. Les Chiriguano pensent de même au sujet de l'*atŭi* : ils disent que la farine de maïs doit, pour être consommée, avoir un compagnon, un *istina*. A mon sens l'*atŭi* et le *muinti* sont deux substituts de la farine de manioc que les Chiriguano ont inventés ou adaptés après avoir émigré sur une terre où le manioc amer était inconnu. Ni les autres tribus du Chaco, ni les Quichua, ne mangent le maïs sous cette forme et il ne fait pas de doute que les Chiriguano, à ma connaissance du moins, ont introduit ces deux plats dans le pays, sans compter bon nombre de ceux qui ont été énumérés.

Les seuls fruits que les Chiriguano consomment sur une grande échelle, sont les figues de Barbarie ou *tuna (Opuntia)* que l'on voit dans tous leurs villages. Ils plantent aussi quelques figuiers et des orangers lorsqu'ils sont sous l'influence des missions. Ils sont aussi grands amateurs de melons, de *sandias* (melons d'eau) et lorsqu'ils en ont mangé une qui leur a plu particulièrement, ils en gardent la semence. Ils aiment à la passion la canne à sucre. Le sorgho est spécialement destiné aux enfants, pour qui ces graminées sont une véritable gourmandise. Ils en sucent le suc qui est aussi doux que celui de la canne à sucre.

Parmi les aliments que la nature leur donne spontanément, on peut compter les *caraguatá* dont les racines farineuses, rôties sur les braises ou sous la cendre, rappellent un peu les tubercules de manioc.

Les gousses d'une mimosacée (!) qui rappellent de gros haricots et qui pour cette raison sont appelés *iwira-kumanda* m'ont été désignées comme étant comestibles. J'ai trouvé ces indications confirmées dans l'article de Campana (p. 97) qui ajoute que ces fruits ont une saveur amère qu'ils ne perdent qu'après plusieurs cuissons répétées.

A cette liste il faut ajouter, les fruits de l'*algarrobo*, du *mistol*, de la *tusca*, de l'*algarrobo* aigre, de l'*ulala*, de l'*higuerilla*, etc. Les fruits du *chañar* peuvent aussi leur aider à supporter la famine. Comme ils sont doux, on peut les manger crus, cuits ou sous forme de pains après les avoir pilés dans un mortier.

Dans le *Diccionario Chiriguano-Español*, etc., du P. D. Giannechini on trouve énumérées un grand nombre de plantes qui poussent à l'état sauvage et que les Chiriguano consomment par nécessité ou pour varier leurs menus. Ce sont :

Les racines du *kaaratiro*, rouges et flandreuses extérieurement, mais blanches à l'intérieur. Elles sont comestibles et même d'une saveur agréable après avoir été cuites dans trois eaux (p. 18).

Les tubercules aqueux, de la grosseur d'un petit oignon, que les Chiriguano appellent *iwía* et dont les enfants sont fort friands. Une croyance veut que l'esprit qui habite cette plante la dissimule à ceux qui la cherchent si ceux ci n'observent pas le silence ou la montrent du doigt (p. 80).

Les fruits de l'arbuste *iwira-rorai* (p. 82).

Les tubercules d'une sorte de *yuca* sauvage qu'ils appellent comme l'espèce cultivée *mandio* ou *mandionui*. C'est une plante amère, piquante et vénéneuse. Pour manger cette racine, on la coupe en morceaux et on la cuit dans plusieurs eaux pour lui faire perdre son âcreté et son poison (p. 99).

Une sorte de pomme de terre sauvage connue sous le nom de *mangara* que les Chiriguano déterrent et mangent en temps de disette. Ce tubercule n'est comestible qu'après avoir été bouilli dans plusieurs eaux (p. 100).

L'herbe *monki* serait également comestible (p. 133).

Une certaine liane *(supúa)* dont les feuilles peuvent être mangées à défaut d'autre aliment (p. 193).

Les Chiriguano appellent *kumanara* une plante légumineuse, sauvage, qui ressemble à la *yuca* et qui après avoir été bouillie peut servir d'aliment. On n'y a recours que pressé par la faim. Le mot qui désigne cette plante a une étrange ressemblance avec le nom de la patate dans les dialectes quichua de l'Équateur et du nord du Pérou (Rivet, 3, pp. 583-590). Il s'agit peut-être d'un mot quichua qui s'est introduit dans la langue des Chiriguano pour désigner une plante dont ils n'avaient pas l'équivalent dans leur patrie d'origine. Le cas est cependant rare et l'on peut se demander s'il n'y a pas là une simple coïncidence.

Les Chiriguano ne dédaignent pas non plus le miel, quoiqu'ils ne le cherchent pas avec la passion de leurs cousins les Kainguá. Celui que j'ai goûté chez eux, était contenu dans des rayons minces et cartonneux. Il avait une saveur agréable.

Tout indien qui va en quête de miel *(ei)* ne doit faire part de son intention à personne et, si on lui demande où il va, il doit répondre : « Chercher du bois ». Si l'on ne prend pas ces précautions, l'esprit protecteur du miel est averti de votre dessein et cache les rayons dont il a la garde *(Diccionario Chiriguano-Español*, etc., p. 86).

Le missionnaire Corrado (p. 43) assure que les sauterelles, les cigales, les larves des abeilles sont autant de mets délicieux pour le Chiriguano. Il ajoute que ces insectes sont grillés. Nino (p. 247) reproduit les dires de son prédecesseur et complète la liste d'aliments étranges en y ajou-

tant les fourmis, les lézards, les feuilles de cucurbitacées, le suif fondu, etc. Personnellement je n'ai jamais vu les Chiriguano toucher à ces mets singuliers pour nos palais, mais je suis d'autant plus disposé à croire ces deux missionnaires que les goûts qu'ils indiquent sont bien ceux des indiens en d'autres régions.

Au XVIe siècle déjà les Chiriguano passaient pour être amateurs de serpents, même d'espèces venimeuses. Ils leur coupaient la tête et la queue, les écorchaient et en faisaient rôtir les morceaux sur la braise. Ils les mangeaient avec du piment. Sans doute les Espagnols ont confondu les serpents avec les iguanes dont aujourd'hui encore les Chiriguano sont friands à juste titre (Lizárraga, t. I, p. 260).

Pour terminer, on pourrait encore citer, parmi les aliments des Chiriguano, le fromage qu'ils fabriquent dans quelques villages. Ils ont soin, chaque fois qu'ils font boucherie, de garder la caillette pour faire trancher le lait. Les fromages des Chiriguano sont de même qualité que ceux des métis, qui pour une fois ont appris quelque chose à nos indiens. J'ajouterai que je n'ai jamais vu un Chiriguano boire du lait.

Le problème de l'eau ne se pose pas pour les Chiriguano comme pour les autres indiens du Chaco. De nombreuses rivières traversent leur territoire et plusieurs d'entre elles sont assez importantes pour ne pas tarir même au milieu de la saison sèche. Ces cours d'eau forment d'innombrables *quebradas*, gorges ou vallées, qui donnent son aspect caractéristique au pays habité par nos indiens. Parfois des villages sont construits auprès de sources ou de petits lacs comme la mission d'Ivu qui est abondamment pourvue d'eau.

A l'époque où je traversai la vallée de Caipipendí, la rivière qui en occupe le fond était presque à sec. Les indiens avaient creusé dans le sable de son lit de petits puits d'un mètre de profondeur environ qu'ils avaient entourés de dalles pour empêcher tout éboulement et préserver l'eau qui s'y accumulait, de la chaleur du soleil. Dans cette même vallée, dans un village situé au sommet d'une colline, les indiens avaient creusé une citerne de quatre à cinq mètres de diamètre où s'étaient concentrées les eaux des pluies.

Les Chiriguano ont trouvé un moyen pour clarifier l'eau bourbeuse qu'ils sont souvent obligés de boire. Ils écrasent entre deux pierres des feuilles de *caraguatá*, puis les font macérer dans l'eau dont toutes les impuretés se déposent sous l'action du suc de cette plante.

Les Chiriguano ne mangent pas à heures fixes. Le matin très tôt, ils font un petit déjeuner assez copieux, et vers le milieu de la journée prennent encore quelque aliment. Le soir, vers six heures, ils font une sorte de dîner. Comme les hommes sont servis d'abord, puis ensuite les femmes et les enfants, il s'ensuit que les repas traînent en longueur. A tout instant de la journée l'on peut voir l'un ou l'autre manger. Les aliments

sont présentés à chacun dans une calebasse ou une écuelle en terre cuite que chacun tient sur ses genoux. Ils attrapent les morceaux avec les doigts mais puisent les liquides avec une cuiller en bois (fig. 42 et 43). Après avoir mangé, ils se lavent les mains. J'en ai vu se rincer la bouche.

LES BOISSONS FERMENTÉES

Quiconque a voyagé chez les Chiriguano ou les Chané, a appris à apprécier la bière de maïs ou *kāwi*. Peu de moments au cours de mon expédition m'ont laissé de souvenirs plus agréables que ceux où, fatigué par une longue étape, je m'asseyais devant une hutte et recevais des mains de la femme du « capitaine », une calebasse pleine de ce liquide, légèrement piquant et un peu granuleux, qui apaise la soif et calme la faim. Le jour où les Chiriguano cesseront de faire du *kāwi*, ce sera signe qu'ils auront disparu de la face de la terre, et peut-être cette délicieuse boisson leur survivra-t-elle comme une spécialité créole dont les bons nationalistes tireront orgueil.

Le Père Corrado (p. 43) entendit une fois de la bouche d'un Chiriguano une admirable définition du rôle du *kāwi* dans la vie d'un indien : « Il est notre père et notre mère », lui dit-il. Effectivement, il est le père de la joie, le signe de l'abondance, le compagnon des plus beaux moments de l'existence comme des plus tragiques. Il a en lui une force mystérieuse et mystique qui pénètre l'individu, l'exalte et le protège contre les dangers surnaturels. Toutes les fêtes se réduisent, dans leur part essentielle, à la consommation du *kāwi ;* aucune entreprise collective n'est concevable sans qu'au préalable des jarres pleines en aient été bues (1). De la naissance à la mort, tout ce qui affecte la vie de l'individu ou de la communauté est associé à ce breuvage. Le principe divin que le *kāwi* a en lui ne lui enlève pas son caractère profane, et si dans les fêtes on s'en énivre, rien n'empêche d'en arroser les repas à l'époque où le maïs mûrit. Tout étranger est convié, en signe d'hospitalité, à en vider une calebasse pleine ; et les compliments qu'il adresse à la femme de son hôte, lui remplissent le cœur d'orgueil.

Les indiens m'ont toujours été reconnaissants du goût que je montrais

(1) Au XVIe siècle déjà les Chiriguano, comme les anciens Tupinamba, n'entreprenaient aucune expédition guerrière sans avoir célébré un *caouin* ou un *rin* pour nous exprimer comme les vieux chroniqueurs français : « Bebiendo de la chicha y del brevage, / Que había para ello el aparejo, / Celebrado con grita y con corage / De todos fué el acuerdo y el consejo / » (Barco Centenera, p. 262).

Quand les Chiriguano de Parapití et de Caipipendí se soulevèrent en 1799, ils célébrèrent avant la révolte de grandes fêtes de boisson au cours desquelles ils décidèrent du plan des opérations (Corrado, p. 254).

pour le *kâwi*, et mon vieil ami *Karnapadyú* ne manqua pas d'évoquer les grandes cuves pleines jusqu'au bord pour me décider à revenir parmi eux fêter Pâques ou, si l'on veut, la récolte du maïs, puisque ces deux dates coïncident plus ou moins. De telles promesses ne pouvaient rester sans effet, et *Karnapadyú* ne fut nullement surpris de me voir arriver peu avant la fête.

La plus grande animation régnait dans le village de Caruruti, autrefois si calme. Les hommes allaient et venaient, pliant sous d'énormes charges de bois. Toutes les urnes étaient alignées devant les huttes et enterrées au tiers de leur hauteur (pl. XIV, 1). Depuis longtemps déjà s'entassaient dans le village de grandes piles de maïs que tous, petits et grands, hommes et femmes étaient activement occupés à égrener. Les uns se servaient de leurs doigts, d'autres de couteaux ou d'une baguette pointue. Aucun n'avait songé à l'instrument si pratique utilisé par leurs ancêtres : un petit poinçon en bois avec une œillère en cuir pour y passer deux doigts. Il est curieux de constater qu'un objet aussi simple soit tombé en désuétude; un vieillard m'en vendit encore un spécimen en fer, mais calqué, pour ainsi dire, sur le prototype en bois dont il reproduisait les moindres détails (fig. 29).

Fig. 29. — Poinçon en fer avec une poignée en cuir servant à égrener les épis de maïs. Chiriguano. Prov. : Saladito. (1/1 gr. nat.)

Fig. 30. — Mortier chiriguano (*angué*) en bois d'*urundey* (*Astronium urundeuva Fr. Allemao*) avec son pilon. La partie inférieure en retrait est enterrée dans le sol. Prov. : Ivu. (1/5 gr. nat.)

C'est alors que commence le travail le plus pénible : la mouture des grains. Jour et nuit retentit dans le village le bruit sec des pilons écrasant le maïs. Souvent, pour que la besogne se fasse plus vite, trois femmes se groupent autour du même mortier et avec une surprenante rapidité élèvent et abattent leur pilon sans qu'une seule erreur de rythme n'interrompe leur pénible travail. Le maïs, une fois moulu, est tamisé dans l'*urumpeau*, soit le crible à larges mailles (fig. 31). La farine, un peu grossière, est versée dans les grandes urnes qui ont été remplies d'eau.

La préparation de la *chicha* n'est pas un jeu; il faut, non seulement

moudre une quantité énorme de maïs, mais encore aller sans cesse chercher de l'eau et souvent à une grande distance. A Cururuti, l'eau potable la plus voisine se trouvait au fond d'un ravin d'accès particulièrement difficile. A chaque instant les femmes s'y rendaient avec un *iru* (pl. XVII, 1) qu'elles transportaient sur le dos dans un filet *(uñapoka)* retenu sur le front par une courroie. Elles remplissaient la cruche et, la chargeant péniblement, remontaient la pente abrupte pliées en deux sous le poids. Pour ne pas perdre de temps, ces laborieuses créatures

Fig. 31. — Femme passant au crible du maïs qu'elle vient de moudre dans le mortier à côté d'elle. Cette farine est destinée à être cuite, puis mâchée pour servir de ferment au *kāwi*. Cururuti. (Photo. A. M.)

emportaient une calebasse pleine de maïs moulu qu'elles ne cessaient de mâcher.

Le maïs moulu est cuit dans l'eau et constamment remué avec des bâtons plats dont les bords étaient jadis découpés avec un certain souci artistique (fig. 32). Aujourd'hui une sorte de rame (fig. 33) ou une omoplate de bœuf (fig. 34) fixée à un long manche remplacent les ustensiles anciens où se manifestait si bien la tendance du Chiriguano à agrémenter même les objets les plus humbles.

Il n'est pas si facile qu'on le croit d'observer dans ses détails la préparation du *kāwi*, et je suis encore embarrassé pour en décrire les phases dans leur succession exacte. Cet inconvénient est dû au fait que le *kāwi* s'élabore en plusieurs jours (généralement trois ou quatre) et qu'il est

[facing P·366]

1. Grand vase (pandoi) dans lequel les Chiriguano font fermenter la bière de maïs. Pour. : Ivo. (1/4 gr. nat.)

2. Grande cuve (pandoi) pour faire bouillir la bière. Les Chiriguano enterrent leurs morts dans des urnes semblables. Pour. : Ivo. (1/4 gr. nat.)

alors malaisé de rester perpétuellement sur place pour ne manquer aucun détail. D'autre part, comme les différentes familles ne commencent pas simultanément à préparer le *kéri*, il en résulte une confusion, et l'on peut difficilement savoir à quel moment de l'opération l'on se trouve. Apparemment, je ne suis pas le seul à m'être heurté à cet obstacle, car il suffit de lire les diverses descriptions consacrées à cette importante occupation pour s'apercevoir qu'elles sont loin de concorder.

Au moment où l'eau est sur le point de bouillir dans les grandes cuves, on en écarte les morceaux de bois enflammés et les brûleurs et on y verse la farine de maïs que l'on brasse vigoureusement pour qu'elle ne forme pas de grumeaux. Pendant que s'effectue cette opération, d'autres femmes ont pilé sous une certaine quantité de maïs, l'ont tamisée, éventée pour la débarrasser de toute impureté, puis l'ont vidée dans un grand tronc. Au fur et à mesure que cette farine est retirée du feu, on en mâche une partie que les femmes crachent dans une calebasse. Cette pâte imbibée de salive s'appelle *tsaïée*. Selon Nino (p. 248), les indiennes mêlent la *tsaïée* à la bouillie de maïs qui cuit dans les cuves et dont elles remplissent un pot. La femme qui s'occupe de ce mélange (*ensepirai*) le laisse retomber d'une certaine hauteur pour lui « donner de la douceur ».

Fig. 22. — Bâtons pour remuer le *kéri* pendant sa cuisson. Le n° 1 provient de Tigüipa, le n° 2 d'Ivo, les n°s 3 et 4 de Saladillo (haut Pilcomayo). (1/1, gr. nat.)

L'*ensepirai* est additionné au *kéri* qui, à partir de ce moment, est sucré à une intense coloration. On allume autour de la cuve qui le contient un grand brasier qui brûle jour et nuit : les femmes veillent le brasier du temps à autre pour l'empêcher de s'éteindre.

La nuit, le village de Caranti a un étrange aspect : sur la place, devant les huttes, s'élèvent de hautes flambées sur lesquelles se profilent en noir les silhouettes des femmes qui, affairées et laborieuses, ne pensent pas le temps de dormir. Le lendemain matin, on laisse le feu s'éteindre et le *kéri* se refroidir. Il est alors transvasé dans des vases de moindres dimensions et toutes les femmes, y compris les fillettes, s'ensemblent pour prendre des poignées de maïs et les mastiquer à qui mieux mieux. Ces boules gluantes de salive sont recrachées dans le vase. Une assez grande quantité d'eau froide est ajoutée au *kéri* et celui-ci est passé à l'enchevêtrillage, si je puis m'exprimer ainsi. Le *kéri* est tamisé dans un crible aux mailles très fines. Le marc ou *siripi*

est jeté ou employé à nouveau, la bière, ou chicet, est distillée dans des vases que l'on ferme soigneusement avec une calebasse ou une écuelle renversée et on laisse ce liquide fermenter pendant deux ou trois jours. Pour qu'il soit complètement à l'abri de l'air, la ligne de contact entre le vase et son couvercle est enduite de terre glaise.

Fig. 32. — Vase pour conserver le *bôri* pendant la cuisson. Pour. : Pipé. (1/4 gr. nat.)

Une certaine variété de *bôri* se prépare en le faisant bouillir à nouveau après l'avoir passé au crible et en ne l'« embouteillant » qu'après l'avoir laissé refroidir une seconde fois.

Le *bôri* est généralement recouvert d'une épaisse couche huileuse que les indiens sont loin de dédaigner. Les maîtresses de maison prennent la précaution d'en verser une certaine quantité dans les vases qui n'en contiennent pas.

Giannecchini et Nordenskiöld se taisent, dans leur description de la préparation du *bôri*, sur le *tamiis*, l'*amapirai* et, en général, sur bon nombre de phases que le maïs traverse avant de se convertir en bière. Ce silence est dû, probablement, à la complication même de cette opération dont plus d'un détail leur a certainement échappé. L'élaboration du *bôri* est une occupation fatigante qui exige de grands efforts. C'est une science véritable que les indiens déploient dans sa fabrication. Il est plus facile de distiller de l'alcool et, en tous les cas, c'est une tâche qui demande moins d'activité physique. Il a fallu, peut-être, des siècles de tâtonnements pour arriver à déterminer le temps de la cuisson, les dosages de la farine grillée et mâchée, la qualité du grain, etc. Tout cela est le produit d'observations minutieuses, de quantités d'essais et aussi de réflexions. Ces considérations sont destinées à justifier la remarque faite au début de ce chapitre : une simple recette de cuisine en dit souvent tout aussi long sur la civilisation d'un peuple qu'un engin perfectionné.

Fig. 33. — Pelle fabriquée par une indienne de bœuf dont les Chiriguano se servent pour remuer le *bôri*. Pour. : Pipé. (1/4 gr. nat.)

Les fruits du *mistol*, du *chañar* ou de l'algarrobo peuvent donner une chicha dont les indiens du Chaco se montrent grands amateurs, mais que les Chiriguano dédaignent. Ils n'y ont recours qu'en cas de disette. Les Chané de l'Isanso, que je n'ai pu visiter, auraient la spécialité du *kéri* de patates. Les Chiriguano savent aussi tirer profit de ce tubercule pour en élaborer une boisson fermentée, mais ils le jugent de qualité inférieure et déclarent qu'il faut être un pauvre diable pour en prendre. (Nordenskiöld, **2**, p. 236) (1).

Le *kéri* est une boisson trop respectable pour qu'on puisse en boire n'importe comment. L'étiquette exige que l'on se plie à certaines règles, si l'honneur vous est fait de participer à son breuvage. J'ai eu l'occasion d'être quelquefois invité à ces réjouissances et j'ai pu faire, à cette occasion, les observations suivantes que je transcris telles que je les ai notées dans mon carnet de route : Les hommes sont seuls ou assis sur des chaises ou des bancs. Les femmes sont accompagnées d'enfants, sur des peaux étendues par terre. On apporte le *kéri* dans des vases en forme de tonneau et l'un d'eux est déposé au pied du « capitaine ». La jeune fille qui l'a apporté, remplit une petite calebasse et la tend au « capitaine » qui la vide. Ensuite il en sert et lui tend le vase. Il fait de même avec mes voisins, puis avec plusieurs des invités. Il tend ensuite la calebasse à sa femme et va s'asseoir. Celle-ci sert le reste de l'assistance masculine.

Un second vase, différent du *kéri*, est placé entre fois devant un autre indien qui jouit peut-être de quelque considération. Il boit le premier, puis s'occupe de ses compagnons. Deux grandes calebasses sont alors remises aux femmes et dès ce moment la distribution ne semble plus suivre aucun ordre. Hommes et femmes boivent et servent leurs voisins sans obéir à d'autre règle de bienséance que de ne pas oublier autrui. Ils s'acquittent parfaitement du ou devoir de politesse et personne n'est négligé, pas même les tout petits qui ingurgitent des quantités inquiétantes de *kéri*.

A Saint-Ivanda, le jour de l'Isanso, j'ai pu constater que le premier servi est toujours le « capitaine ». Comme précédemment, le vase plein de *kéri* est déposé à ses pieds. Il boit la première rasade, puis tend au tasse ou au calebasse à son voisin. Celui-ci vend la calebasse vide ou la remplit et la fait passer à son tour. Quelques calebasses sont mises en circulation, mais revienent toujours au premier qui l'a reçue et qui l'achève. Les hommes se dérangent à plusieurs reprises pour aller servir les femmes, qui elles, de leur côté, ne s'oublient pas et boivent suivant les mê-

(1) Baron Gondesarre (p. 313) mentionne déjà les différentes sortes de chicha distinguées par les Chiriguano : « Il vous dira sorti y de algarrobo, / De Mistol, y de sorte bien abundo, / Segunda que habiane sacó arrobas, / Que resulta é cada sacó la cantidad dicha. »

mais rien que les hommes. La boucherie se fait en une dizaine et dure [illegible].

Lorsque les pourlaines du bétail sont épuisées dans un village, on se met en lite indienne et, marque en tête, l'on va [illegible] ailleurs.

Jadis la préparation du bétail s'accompagnait de rites magiques. Aujourd'hui il n'en est resté que la coupure de ses barbaillés la face et les jambes en rouge. Dans certains villages, les femmes ne pressent plus même cette précaution. Cependant, entre l'amorcé et l'épigrandi, j'ai pu rencontrer trois quelques femmes ainsi tatouées et qui ressemblaient de « beaux diables », pour employer une expression chère à Jean de Lery.

DIVERS ASPECTS DES CONTENANTS DE CUIRS DE TRAIS CHEZ LES CHIRIGANOS

Rien ne frappe autant le voyageur qui arrive dans un village chirigano que l'abondance des pièces de poterie qu'il rencontre à l'intérieur ou à l'extérieur des huttes. La figure 1 de la planche XIV donne une idée du nombre des vases que l'on peut voir sur un bâtis auprès à l'époque où les Indiens préparent la bière de maïs.

Fig. 11. — Deux vases [illegible]

La céramique d'usage est même si, chez les Chirigano, on trouve autre variétés que celle des jarres d'apparat. Alors que cette dernière est nettement d'origine andine, avec quelques rares éléments amazoniens, la première a gardé un caractère général très marqué. Elle se caractérise surtout par les impressions digitales qui ornent le col de presque toutes les marmites ordinaires.

En regardant travailler les potières chirigano, je me suis rendu compte que les impressions digitales qui ornent si souvent leurs vases, résultent automatiquement du processus de la fabrication. En ramenant vers la potière forme le col du vase, elle est obligée de prendre le bourrelet qui constituera cette partie entre le pouce et l'index et non plus avec le plat de la main comme elle l'a fait jusqu'alors. Le vase est généralement trop étroit en cette zone pour permettre d'y introduire la main entière. Il en résulte toute une série d'impressions digitales qui font rapidement l'effet d'un ornement. Actuellement la potière les efface pour les remplacer par des vagues, avec plus de symétrie. A cela près, on montrait qu'avec le plupart des

1. Vase (?) dans lequel les Chiriguano puisent l'eau pour la mélange. Cet exemplaire provient du village-chaud de Tapiyuti, près de l'Aguaray (Charata-Salta, Rép. Argentine). La ref est sur d'exposition supérieure. (?), gr. nat.)

2. Vase (gourde) décoré d'une série de guirlandes sur la base du col. Pays : Bolivie (Santa-Cruz-Camiri). (?), gr. nat.)

vases d'usage commun chez les Chiriguano est obtenu, pour ainsi dire, mécaniquement. Du col, ces ornements se sont étendus au reste du vase dans un but esthétique, mais leur occurence sur la partie supérieure a prévalu.

Les marmites ordinaires servant à cuire les aliments sont, en règle générale, ornées tout autour du col de plusieurs rangées d'impressions digitales, ou onguiculaires. L'exemple le plus typique est le vase de la planche XVI, 3 qui, typologiquement, peut être rangé à côté des grandes urnes pour cuire la bière de maïs dont beaucoup ont, plus ou moins, la même forme.

Fig. 36. — Vase (*pupepé*) avec anses en tresse et orné de deux séries de petits galets gravés sur le col. Prov. : Yamiés (1/, gr. nat.)

Ordinairement, les marmites destinées à aller sur le feu sont pourvues d'anses (pl. XVI, 2 et 4 et fig. 36).

Certains vases (fig. 35) ont leur surface extérieure entièrement converte de ces dépressions obtenues par pression de l'ongle du pouce. Les Indiens appellent cette décoration *tatupire*, c'est à dire « carapace de tatou », comparaison tout a fait justifiée.

Fig. 37. — Vase tube en forme de gourde aplatie. Sert à transporter de l'eau en voyage. Prov. : Macheretí (1/, gr. nat.)

On peut considérer comme une évolution du procédé d'ornementation par impressions digitales, les angles ou chevrons qui agrémentent la surface extérieure du vase de la figure 2 de la planche XVI et qui ont été incisés dans l'argile molle avec un instrûment pointu. Ce type d'ornementation peut se réduire à sa plus simple expression; ainsi sur le col du vase de la planche XVII, 2, il se limite à une rangée de petites cavités faites avec une baguette acérée. Le petit vase de la figure 36 à panse aplatie de haut en bas entre, au point de vue décoratif, dans la même catégorie.

Sur un autre vase (pl. XVI, 1) les petits mamelons qui se détachent

tout autour de la panse constituent un décor sommaire qui complète celui du col formé d'impressions ongiculaires. Des pots de ce type se retrouvent chez les Ashluslay (Nordenskiöld, 9, fig. 65, p. 218).

Cette décoration est exceptionnelle en Amérique du Sud. Jijon y Caamaño (p. 6) la considère comme caractéristique pour le Nord de l'Équateur. Il en signale la distribution en Amérique centrale et dans la région des Mounds, aux États-Unis.

Le *iru* de la figure 2 de la planche XVIII a exactement la forme d'une calebasse; cette ressemblance était intentionnelle, car l'Indienne qui me le vendit, me le présenta en même temps que la calebasse qui lui avait, sans doute, servi de modèle. Des vases, qui sont presque des répliques de cet exemplaire, ont été trouvés à Jachal et à Calingasta, dans la province de San Juan, en Argentine (Ambrosetti, 1, pl. VII, et Debenedetti, 3, fig. 41, p. 69).

Fig. 38. — Vase ashluslay. Proc. : Estero Patiño. (1/1, gr. nat.)

Les Chiriguano appellent du nom quichua de *iru* les vases dans lesquels les femmes vont puiser l'eau dont elles ont besoin pour leur ménage. Les *iru* se caractérisent, non seulement par leur forme plus ou moins globuleuse, et par l'étroitesse du goulot qui les surmonte, mais aussi par la qualité de la pâte avec laquelle ils ont été modelés. Celle-ci est extrêmement fine, de fort bonne qualité et, une fois cuite, elle forme une masse compacte, dure et résistante. Cette argile est par elle même peu poreuse; pour la rendre plus imperméable encore, les potières chiguano soumettent le vase encore cru, mais cependant bien sec, à un long polissage qui s'exerce sur les parois extérieures du récipient et leur donne une apparence métallique et brillante qu'au premier abord on prendrait pour une engobe. Cette opération a pour effet de rendre le vase presque imperméable et d'éviter ainsi l'évaporation qui se produit avec plus ou moins de rapidité dans la plupart des récipients chiriguano. L'étroitesse du goulot dont ces vases sont surmontés, répond à une préoccupation analogue.

Les *iru* peuvent être de toutes les tailles : il en est de fort grands comme l'exemplaire cité de la planche XVII, 1 et d'autres très petits (pl. XVIII, 4) dont les fillettes se servent pour aider leur mère et

[facing P. 372]

2

3

4

Pots à eau (Ivo). Chiriguano. La surface extérieure des ivo n° 1, 3 et 4 à fini polie ou point d'un peintre glacée. Le ivo n° 2 à fini modelé en forme de calebasse. Le n° 1 provient d'Ivo, le n° 2 de Cuevoti, le n° 3 de Tumbia et le n° 4 de Macharetti. (1, et 2 = 1/4, : n° 3 et 4 = 1/6 de la gr. nat.)

s'initier aux travaux du ménage. Les vases 1 et 3 de la planche XVIII représentent des formes adhérentes, peu fréquentes, qui dérivent du type primitif, mais qui ont été perfectionnées. Les anses dont ces *iru* sont munis, permettent de les transporter en voyage en guise de gourdes.

Les prototypes des *iru* chiriguano nous ont été fournis par les fouilles de Debenedetti (2, fig. 119, p. 171) dans la Isla de Tilcara.

Nous devons ranger typologiquement les vases des tribus primitives du Chaco dans la catégorie des *iru*. Comme les Chiriguano ou leurs

Fig. 38. — Vase tolo avec bandes en relief imitant les cordes de compression dont les vases de ce type sont généralement pourvus. Prov. : Machareti. (1/1, gr. nat. ±.)

précurseurs les Chané, les Mataco, Tolo, Choroti et Ashluslay ont copié des modèles andins qu'ils ont adaptés à leurs nécessités. Il convient de remarquer que les peuplades semi-nomades du Chaco ont dû façonner leurs vases de façon à pouvoir les emporter avec eux au cours de leurs pérégrinations, tandis que les Chané et les Chiriguano, nations sédentaires, n'ont pas senti le besoin d'en modifier la forme primitive et ont conservé, sans y apporter de variations, le prototype andin. A titre de comparaison je reproduis ici deux vases du Chaco : l'un (fig. 37) provient du quartier tolo de Machareti et l'autre (fig. 38) d'une tribu ashluslay en voyage dans le nord de l'Argentine.

Le beau vase de la figure 39 provient de la mission de Machareti. Il est

l'œuvre de potières de la tribu des Toba. Trois détails lui valent une place à part : la base fort large et plate ; sa section horizontale presque quadrangulaire, ce qui constitue une particularité fort rare dans la céramique indienne ; et, en outre, les deux bandes qui courent le long du col imitant, en terre cuite, les cordes de suspension dont les vases toba sont généralement pourvus.

Fig. 60. — Petite écuelle (dat) avec 4 mamelons. Chiriguano. Prov. : Caipipendi. (1/3, gr. nat.)

Ce vase est un bon exemple de l'influence que le genre de vie peut exercer sur l'art et la technique d'une tribu. Les anciens vases des Toba étaient, comme je viens de le dire, toujours munis d'une corde de suspension pour pouvoir être transportés en voyage. Aujourd'hui les Toba sont sédentaires et cette corde, devenue inutile s'est transformée en ornement.

Écuelles

Les écuelles n'abondent pas chez les Chiriguano où les calebasses les remplacent avec avantage. Celles que j'ai pu recueillir, et qui n'étaient pas peintes, sont faites en une argile qui, après la cuisson, leur donne l'apparence d'être en bois. La base est plate et les bords, assez hauts, s'écartent vers l'extérieur sauf sur les exemplaires de la planche XIX, 3 et de la figure 49 où ils sont bombés. Ce dernier *paco* est surmonté de deux mamelons, restes d'oreilles stylisées. Ces proéminences peuvent être perforées et donner passage à une corde de suspension qui permet d'accrocher l'écuelle à une poutre de la hutte (fig. 41).

Fig. 61. — Petite écuelle en miniature avec corde de suspension. Chiriguano. Prov. Santa Cruz. (1/3, gr. nat.)

Les cuillers

Les cuillers sont très communes chez les Chiriguano. Leur forme les apparente *étroitement à celles que les Sioux exécutées sur le haut plateau bolivien et dans le nord-ouest de l'Argentine nous ont fait connaître. C'est chez les anciennes populations de cette région qu'il faut rechercher l'origine de cet élément culturel* (v. à ce sujet, Nordenskiöld, 9, pp. 91-92) dont les Chiriguano ont fidèlement conservé l'aspect primitif et même certaines particularités telles que les découpures du manche que

Ecuelles (*bol*). Chiriguano. L'écuelle n° 1 a été trouvée dans une urne funéraire de Caipipendi. Elle était primitivement peinte en rouge. Les n°s 2 et 4 proviennent de Saladito (haut Pilcomayo); le n° 3 de Carurati. (n° 1 = $^{2}/_{3}$; n°s 2, 4 = $^{1}/_{4}$; n° 3 = $^{1}/_{5}$ de la gr. nat.)

l'on voit sur un de nos spécimens et sur un exemplaire découvert dans la Puna de Jujuy (Pucara de Rinconada) par Boman (2, t. II, pl. LIX, fig. 142).

A côté de ces cuillers dont l'usage s'est répandu sous l'influence des peuples civilisés de l'ouest, les Chirignano ont conservé les formes les plus rudimentaires de cet ustensile : les valves d'un mollusque d'eau douce *(anodonta)* (en chirignano : *iata)* sont souvent utilisées par eux pour manger des plats liquides ; la coque du fruit d'une bignoniacée (?) ouverte dans toute sa longueur apparaît également dans le nord du territoire chirignano, comme la survivance d'une époque où les cuillers leur étaient encore inconnues (fig. 44).

Certaines petites calebasses, ovoïdes ou rondes, avec un pédoncule saillant, peuvent, une fois coupées par le milieu, remplacer avantageusement les cuillers en bois (fig. 45). C'est sous cette forme naturelle que la cuiller est répandue dans l'Amérique tropicale, là où l'influence andine ne s'est pas fait sentir. Les Chirignano ne dédaignent pas d'employer ces demi-calebasses pour puiser dans la marmite aux haricots ou dans le bouillon de viande. Des calebasses, comme celle de la figure 46, leur tiennent lieu de louches.

Calebasses

Dans chaque village chirignano, les calebasses sont aussi abondantes que les poteries (v. fig. 47). Les huttes en regorgent. Il y en a de toutes les formes et de toutes les grandeurs, depuis les cuillers dont nous avons parlé, jusqu'aux grosses bassines dans lesquelles le *kéri* se distribue les jours de fête.

Les calebasses ovoïdes, ou en formes de gourdes, sont généralement enveloppées d'une sorte de filet rudimentaire en fibres végétales ou en lanières de cuir qui permet de les transporter à la main ou de les suspendre (1). On y met, soit de l'eau, soit des graines et des semences, soit de la farine grillée, soit enfin du rocou ou de la poudre de *kalaspe* que l'on garde en réserve pour les jours de fête (pl. XX, 1 et 2, pl. XXI, 3 et 4).

Certaines calebasses sont pourvues d'un couvercle que les Indiens obtiennent en découpant dans le fruit encore vert une calotte aux bords étroits, et qui constitue comme une écoutoire hermétique. Le couvercle est fixé à l'aide d'une cordelette qu'il suffit de tirer pour clore la calebasse

(1) Nordenskiöld (18, p. 97) a donné la liste des tribus de l'Amérique du Sud qui mettent leurs calebasses à l'intérieur d'un filet pour les transporter ou les suspendre. Ce dispositif est largement répandu dans le continent et sa distribution est certainement plus grande que celle indiquée par Nordenskiöld, mais les voyageurs ne prêtent généralement qu'un faible intérêt à ces détails qui ont cependant de l'importance. Les Guaqués du Paraguay entourent leurs calebasses d'écorce de ceibé exactement comme les Chirignano (v. Ambrosetti, 2, p. 710).

(pl. XX, 4 et pl. XXI, 2). Les gourdes dont l'ouverture est d'un faible diamètre, reçoivent en guise de bouchon un fragment d'épis de maïs égrené.

Les calebasses peintes, pyrogravées ou incisées, feront l'objet d'une étude spéciale.

Écuelles et bassines en bois

Les Chiriguano emploient aussi des écuelles en bois (fig. 49). J'ignore s'ils les fabriquent eux-mêmes ou s'ils les reçoivent des métis de la

Fig. 48. — Calebasse suspendue au moyen d'une baguette transversale. Prov. : Ivu. (1/4 gr. nat.)

région de San Luis. Dans ce dernier cas, les Chiriguano de la région de San Luis (Entre-Rios) seraient les seuls à les confectionner. A Ta-

Fig. 49. — Ecuelle en bois (ana). Prov. : Camiriti. (1/4 gr. nat.)

Fig. 50. — Bassin en bois en usage chez les Indiens et métis Quichua du Département de Tarija (Bolivie) et parfois aussi chez les Chiriguano

rija, où ces écuelles sont très recherchées par les métis, elles m'ont été indiquées comme venant de cette zone. Les rares écuelles de bois que

j'ai vues à Caipipendi, avaient été achetées par les Chiriguano au cours de leurs voyages. La même origine doit être attribuée aux auges en bois que l'on trouve chez les Chiriguano qui vivent près des métis Quichua du département de Tarija. Ces bassins servent à laver les aliments et sont employés également comme baignoires. Les Choroti ont des plats en bois (Nordenskiöld, 9, fig. 20, p. 88) qui ont une forme très semblable à celle de l'auge reproduite ici (fig. 50) et qui, sans doute, ont été introduits chez eux, soit par les anciens Quichua soit par les métis. Chez les Araucan de l'Argentine, on trouve des bassins de bois qui sont en tous points semblables à ceux des Indiens et métis de la Bolivie et de l'exemplaire figuré ici.

CHAPITRE V

Outils des Chiriguano

Les instruments de travail dont se servent actuellement les Chiriguano sont, presque tous, de facture européenne. Çà et là, les anciennes formes se sont conservées, alors que la pierre ou l'os ont été remplacés par le fer. Témoin l'herminette de la planche XXII qui constitue une curieuse survivance de la hache à oreilles ou hache en forme de T que les Chiriguano ont sûrement adoptée après leur migration et leur établissement au pied des Andes. Ce type de hache m'est inconnu de tout autre tribu tupi-guarani et est peu fréquent dans l'aire occupée par les différentes nations appartenant à cette famille linguistique (v. Rivet, 1, pp. 149-155).

L'exemplaire que je publie ici rendait encore de grands services à son propriétaire qui ne me le céda qu'à regret et contre une forte somme d'argent. La présence de la hache à oreilles chez les Chiriguano modernes vient infirmer l'allégation de Nordenskiöld (14, p. 120) qui la met au nombre des éléments culturels ayant complètement disparu en Amérique du Sud. Elle a survécu grâce au prodigieux conservatisme des Indiens. Je suis persuadé que plusieurs des objets dont Nordenskiöld constate la disparition se retrouveront peut-être dans quelque tribu actuellement vivante, lorsque nous aurons de l'Amérique du Sud un matériel ethnographique plus abondant que celui dont nous disposons.

Une autre particularité fort intéressante de cette hache est la forme coudée du manche contre lequel le taillant est solidement fixé avec des lanières de cuir. La répartition de la hache à manche coudé a été tracée par Linné (2, p. 202). Les tribus de l'Amérique du Sud qui en ont maintenu l'usage jusqu'à nos jours ne sont pas très nombreuses. Ce sont : les Colorado de l'Equateur, les Tukano, les Tariana et les autres tribus de

Haches en pierre des indiens Chiriguano. Les haches à rainure n° 1 et 10 proviennent, la première d'Huapayti, la seconde d'Iva. Les haches à gorge complète n° 2, 3, 5 ont été recueillies dans la vallée de Guapay, à l'exception de la hache n° 4 qui a été acquise à Iva. La hache simple archéologique n° 11 provient de Guapayti. (Cf. pl. XXV, 1.)

1: Métraux

[Figure p 378, A]

ST 10 Chiriguano

Colony Cuepia, les Tebenkiks et les Quichos modernes. Chez les Indiens de Colony Cuepia, cet outil a perdu toute valeur pratique et a fini par se convertir en simple ustensile de danse (Kuch-Gréhlowy, **2**, t. I, fig. 223, p. 336).

La hache double a été trouvée archéologiquement au Pérou (Uhagulasta; vallée Marañon, près de Lima) et à Cumbinde dans la Pampa de Jujuy (République Argentine). Les ethnologues du Pérou sont désignés comme étant des hommes, ce qui est possible. Je tenai cependant remarquer que le spécimen chiriguano de Guiguanti est exclusivement un instrument de charpenterie dont les Indiens se servent pour tailler les pièces de bois dont ils font leurs meubles ou leurs armes.

Fig. 31. — Hache en pierre (angle) trouvée [illegible] sur [illegible] (Pérou archéologique [illegible] à Pérou, t. I, pp. [illegible])

Fig. 32. — Hache en fer du Chaco [illegible] (Collection archéologique [illegible] Chaco [illegible] Chiquanos, t. I, pp. [illegible])

La figure 31 montre évidemment des haches modernes, du type de la hache simple américaine, peut-être [illegible] prototypes en pierre. La similitude de cette hache avec celles de pierre utilisées jusqu'à nos jours par les Guaycuri, s'étend jusqu'à la forme en pro [illegible] de manche et à son extrémité [illegible] (Métraux, pl. [illegible], 3).

C'est de cette manière que sont encore [illegible] les haches en pierre des Indiens du haut Xingu (Meyers, **2**, p. 197) et des Kaingang du Brésil méridional (Nordenskiöld, **18**, fig. 14, p. 39) et les [illegible] en fer des Matako-Vejos (Nordenskiöld, **18**, fig. 19, p. 44) et des Tamoto (?) de la Pampa du Sud (id., **18**, fig. 45, p. 88) qui ont remplacé les anciennes celles de pierre.

La planche XXIII représente une série de haches en pierre provenant de la région de Guiguanti, d'Ivo et d'Itapuyti. Les haches de Guiguanti sont toutes pourvues d'une gorge. Les deux haches à talon sont des trouvées, l'une à Itapuyti et l'autre à Ivo.

[illegible]

Les modèles des tableaux des Chirigueno sont en chaîne. On les fabriquait avec [illegible] à l'aide du moule figuré ici (fig. 10). C'est une cuillère dont la partie [illegible] les allonges du tableau sont [illegible], alors que la partie centrale et [illegible] du cul-ornement correspondant à l'extrémité d'un tableau qui [illegible] la cuillère. La cavité que présente la partie centrale du tableau est [illegible] remplie avec de la cire dans laquelle on incrusta des perles de verre ou de turquoise provenant d'anciens [illegible], que les métis de Tocija vendent aux Chirigueno.

Fig. 10. — Moule avec lame des tableaux en [illegible] (Amérique). Pour : Chirigueno. [illegible] de [illegible]

Matériaux

Les Chirigueno du haut Dibumayo et de la vallée d'Iglesiaki appartiennent à une tribu [illegible] que les Ijiriches du haut plateau. C'est d'eux, d'ailleurs, qu'ils tiennent ce rites. Le fait est connu et n'a pas besoin d'être démontré. Cette constance d'aut répandue chez les Chirigueno à une chaîne vivante, car elle ne s'est pas encore étendue sur toute le territoire qu'ils habitent. Les Chirigueno qui vivent éloignés des propriétaires [illegible] en bulleuses de la Cordillère, ne sont pas « conquérants », et ce n'est qu'incorporé[illegible] que l'on rencontre chez eux quelques rites qui manque aux éléments de rites.

Ceci est le dernier point, vers l'est et vers le nord, où l'on distingue [illegible] pour [illegible] des provinces de rites. Nordenskiöld (18, pp. 93-95) a démontré à démontrer que le centre de ce matériel les droits affaits du pays avec celle du chiquer le rites et ses dérivés. Cette habitude a, en effet, une [illegible] fortes marquée et suit le cours de la culture de la rites.

Les Chirigueno mettent chaque chiquée de rites avec la moelle [illegible] d'un arbre (*iriche*) dont le nom scientifique n'est [illegible]. Cette moelle (*iriche*), qui correspond à la *Hoste* des Ijiriches, est [illegible] dans un petit sachet de rites.

La rites est non [illegible] de leur que des Indiens Ijiriches ou des métis [illegible] vendus aux Chirigueno. D'une [illegible] bonne [illegible] et bonne [illegible] de la part de [illegible] pas [illegible], les Chirigueno sont [illegible] à des Indiens de leur [illegible]. Ils les échangent à l'aide du

de deux extrémités suspendus par la section et formant «fléau de balance» (fig. 1/1 et 1/2). La balance à plateaux était en usage à l'époque préhis-

Fig. 1/1. — Balance à plateaux en usage dans les ports [illegible] de la région de Tanga
(Dess. : de Maniac, [illegible], gr. nat.)

panique dans l'ancien empire babylonien (v. Zwiedineck[illegible], [illegible]) avant et je crois d'abord qu'elle existait chez, les Chirigouas, une variétaure de

Fig. 1/2. — Balance [illegible] en usage dans les Chirigouas pour peser la [illegible]
(Dess. : [illegible] dans [illegible])

l'balance [illegible] dont [illegible] plus tôt l'importation. Cependant, chez les Chirigouas, cet objet est désigné sous le nom [illegible]

de ubéleuze, ce qui semble indiquer qu'ils l'ont empruntés aux métis. Ceux-ci et les Quichua s'en servent dans leurs transactions commerciales, mais l'emploient surtout pour peser la poudre aux. Peut-être en était-il de même aux temps préhistoriques. Rien ne prouve que seuls les métaux fussent pesés, comme on l'a supposé au sujet de ces anciennes balances.

Les Chiriguano usent, en guise de poids, d'anciennes monnaies boliviennes en argent et exprimant les monnaies suivant l'ancien système espagnol. Par une convention tacite, une pièce de deux sous modernes a la valeur d'une aune.

Les Chiriguano mesurent les étoffes que les colporteurs syriens viennent leur offrir avec des varas, c'est-à-dire une baguette dont la longueur est de 86 centimètres environ, soit celle de l'ancienne vara espagnole. Cet instrument a été emprunté aux métis boliviens.

CHAPITRE VI

L'art chez les Indiens Chiriguano et Chané

A Mr. le Professeur Otto F. Ortiz.

Le sens artistique chez les Chiriguano se manifeste dans la décoration de la céramique, dans la pyrogravure et dans la sculpture sur bois. Nous étudierons ces trois activités l'une après l'autre.

TECHNIQUE DE LA CÉRAMIQUE

La technique de la céramique chiriguano a été étudiée sommairement par Campana (p. 54) d'après les notes du P. Giannecchini ; par Outes (3, pp. 122-123) qui ajoute quelques détails qui lui ont été communiqués par le naturaliste Holmberg, à ceux qu'il a tirés de l'œuvre de Campana. Nordenskiöld (1 et 18, pp. 142-147) a complété, sur bien des points, le bref aperçu de Campana, si bien que pour mon propre compte j'aurai peu de choses nouvelles à signaler.

L'argile dont se servent les potières chiriguano, provient de gisements bien connus des Indiens où ils vont se ravitailler de temps en temps. Il suffit de voir autour d'une botte de vieux vases pleins de terre pour savoir que là vit une femme pratiquant encore l'industrie ancestrale. Là où manque une argile adéquate, la céramique est importée. Ainsi, dans le village de Tigüipa, tous les vases qui y sont en usage ont été faits à Machareti.

L'argile, pour être employée, doit être dégraissée avec de la poudre

provenant de tessons. Des fragments d'anciens vases sont broyés dans un mortier jusqu'à ce que, passés au crible, ils donnent une poudre fine qui est pétrie avec l'argile pendant un temps assez long. Cette pâte doit être débarrassée de toute impureté, ce qui s'opère au cours du pétrissage (fig. 56).

Lorsque la potière a obtenu une pâte élastique et collante, elle mo-

Fig. 56. — Fabrication d'un vase : l'argile, après avoir été mêlée à des tessons pulvérisés, est pétrie. (Photographie prise par l'auteur à Mosovi, dans la Vallée d'Igbembé)

dèle la base d'un vase qu'elle pose, soit sur un morceau d'étoffe soit sur une planchette. Le fondement du futur récipient se présente sous l'aspect d'une rondelle exhaussée sur son pourtour. Jamais l'on ne verra une femme chiriguano faire un seul vase à la fois : comme elle doit attendre, avant de continuer, que chacune des parties qui constituent la pièce de poterie soit sèche, elle occupe cet intervalle en commençant un autre vase qui sèchera pendant qu'elle reprendra le premier.

Lorsqu'elle juge que le fond a pris quelque consistance, elle roule entre ses mains un boudin auquel elle s'efforce de donner un diamètre régulier, puis elle l'applique sur la base formant un cercle parfait. Elle coupe la partie du boudin qui dépasse au point de jonction. Ensuite, elle aplatit le boudin avec la main, la compression se faisant de l'intérieur à l'extérieur, avec le dos de la main gauche et la paume de la main droite. Lorsque tout le pourtour a été ainsi exhaussé, elle en régularise le bord, comblant toutes les dépressions avec des morceaux de terre mouillée, puis elle lisse extérieurement le vase avec un épis de maïs égrené et un éclat de bambou. Ces deux instruments sont placés à côté d'elle et fréquemment trempés dans l'eau pour que la terre ne s'y atta-

Figs. 37-38. — Vases (poyipo). Les boudins d'argile dont ils se composent sont encore apparents et constituent un ornement rudimentaire. Le n° 37 provient de Cuevani, le n° 38 de Varutia. (1/4, gr. nat.)

cher pas. Les parois intérieures sont polies avec une valve de coquille *(anadonta)* (pl. XXIV, 2). L'argile crue, une fois modelée, est souple et résistante comme du cuir. Les vases ne peuvent se faire qu'au soleil. Un jour que la pluie menaçait de tomber, les femmes s'empressèrent de s'emparer d'un vase qu'elles étaient en train de faire et de le transporter dans la hutte. Il oscillait, pendant ce déménagement, de tous côtés, mais ne se rompit point.

De la base au col, le vase est construit de la même façon, le nombre des boudins superposés variant avec la grandeur du vase, mais n'étant jamais très élevé. Les anses sont ajoutées après coup; certaines sont en torsades et ont été obtenues de la manière suivante : un boudin long et mince est plié en deux et roulé sur lui-même.

Une fois fini, le vase est mis à sécher. Lorsqu'il s'est durci, la potière le frotte à l'intérieur avec une pierre luisante et polie *(tondua ou ita-ulua)* (pl. XXIV, 3-4) jusqu'à en rendre la surface brillante et comme

Accessoires d'une petite chiriguano. — 1. Valve d'un moulinque d'une dame (Sala) servant à lisser la sûreté intérieure des vases. Pour. : Dorpyth (?), gr. nat.). — 2. Fusaux fait de lattes de plumes rémiges avec de la cire. Pour. : Dorpyth (gr. nat.). — 3 et 4. Pierres servant à polir la surface extérieure et intérieure des vases avant la cuisson (cuite-cire). Ces deux pierres ont été trouvées à l'intérieur d'une urne funéraire à Caraverti (?), gr. nat.). — 5. Barrelamaux formée par un bouchon sur les bouchons d'épines d'ananas sauvage et que les Chiriguano utilisent pour tracer des figures noires et brunâtres sur leurs vases (barrotrin). Pour. : Dorpyth (?), gr. nat.)

glacée. Cette opération a pour but d'éviter la porosité des parois du vase, qui sans cela seraient trop perméables. Dans les vases ordinaires, l'extérieur est laissé tel quel. Les vases destinés à être peints sont, à ce qu'il semble, également glacés extérieurement. Le polissage du vase se fait en plusieurs jours et lentement. La potière y apporte un grand soin (v. fig. 66).

Si le vase doit être peint, la couleur est appliquée avec un pinceau fait en poils d'agouti ou en plumes réunis en touffe avec de la cire (pl. XXIV, 1).

Les matières colorantes employées par les Chiriguano et les Chané sont d'origine minérale et végétale. Les premières sont tirées de roches dont j'ai fait examiner les échantillons au point de vue pétrographique et chimique.

L'analyse chimique a donné les résultats suivants : les échantillons de couleur jaune contiennent de l'argile (silicate d'alumine et carbonate de chaux) et du fer sous forme d'oxyde hydraté ; les rouges sont de même composition, mais présentent moins d'oxyde hydraté de fer et plus d'oxyde de fer. Dans un spécimen d'ocre jaune brun, l'oxyde de fer abonde ; et dans un autre, dur et compact, d'une teinte rouge violet, le fer est presque entièrement à l'état d'oxide anhydre.

Les ocres jaunes, rouges et jaune sombre chauffées dans une éprouvette, changent de teinte et deviennent rouge sombre, à l'exception du spécimen violet qui reste inaltérable.

Deux minéraux gris sont des silicates d'alumine et de chaux avec des traces de fer. Ce sont des argiles presque pures.

Un minéral d'un noir de jais est un complexe calcaire manganésifère (bioxyde de manganèse sous forme d'oxyde traversé de filons de calcite).

Pétrographiquement, ces échantillons sont des ocres jaunes très compactes (manganésifères quartzeux) ou quelque peu sableuses, des ocres rouges très sableuses, et enfin des argiles un peu sableuses.

Les ocres donnent toutes une couleur rouge, le pyrolusite (?) fournit le noir et les argiles pures le blanc jaunâtre sur lequel se détachent les motifs rouges et noirs (1).

Les couleurs d'origine minérale sont appliquées avant la cuisson sur les parois du vase séché et poli.

La plupart des vases du haut Pilcomayo se distinguent par des motifs d'un noir luisant et compact, que les indiens obtiennent en les frottant peu après la cuisson avec l'excroissance résineuse, ayant l'aspect d'un manchon blanc, qu'une sorte de cochenille (?) forme autour des bran-

(1) Nordenskiöld (**3**, p. 143) : « The colours used by the Chiriguano and the Chané on the Rio Itiyuro are black, red, brown and white. The white is earths, the red, brown and black are obtained by pulverising whitish of these colours. »

chez des mimosacées (en chiriguano : *ikopati*) et dans lequel elle dépose des œufs (pl. XXIV, 5).

Selon le P. Giannechini (*Diccionario Chiriguano Español*, etc., p. 200), qui a été le premier à signaler l'emploi de cette matière, il s'agirait de la salive glutineuse d'une fourmi (?) qui se colle aux arbres. Les potières

Fig. 36. — Fabrication d'un vase : la surface horizontale est finie après avoir été aplatie avec la main.

chiriguanas s'en servaient pour peindre leurs vases après l'avoir mêlée à du rocou. En réalité, ces indications sont inexactes. Le mucilage mimosacé n'est pas de la salive, mais une sorte de manne ou de laque. Il est directement fixé contre les parois du vase pour produire le noir compact et luisant de certains motifs.

Les peintures de certains vases produisent un effet particulièrement

heureux, grâce à l'alternance d'un rouge brillant et dense avec un noir de même nature. La première de ces teintes est tirée du fameux roucou dont la pâte graisseuse est mêlée à de la résine, pétrie en forme de pain et fondue sur les parois brûlantes du vase.

Le nom de *tarawirisi* est également donné par les Chiriguano à des sortes de pains pétris à la main et qui se composent d'une matière résineuse mélangée à de la cire. Selon les explications qui me furent données par les indiens eux-mêmes, cette substance serait tirée d'une mimosacée qui, après avoir été arrosée d'eau bouillante, est pétrie et séchée au soleil. La couleur en est jaune ou rouge, mais après la cuisson elle devient noire.

Fig. 80. — Tronc d'arbre fourchu servant d'étagère pour placer des vases. (D'après un croquis de l'auteur.)

Je n'ai pu savoir si ce vernis noir était appliqué sur une couche de peinture noire ou s'il était étalé directement sur les paroi du vase. En tous les cas, les dessins produits par ce procédé sont beaucoup moins réguliers que ceux qui sont tracés au pinceau.

Mes collections de céramique, qui comportent près de 200 pièces, ne contiennent aucun spécimen verni. Nordenskiöld (10, p. 144) assure que les Chiriguano et les Chané du Parapitî enduisent leurs *gandui* avec une sorte de gomme appelée *tarawirisi*, mot qui, à une syllabe près, est le même qui désigne la substance résineuse dont il vient d'être question. Ceci me fait croire que, par vernissage, il faut entendre un procédé technique analogue à celui qui est en usage sur le haut Pilcomayo.

Les Indiens du Chaco tracent des ornements grossiers sur leurs vases avec de la résine de *palo santo* qu'ils appliquent après la cuisson. Selon Nordenskiöld (id. supra) les Chané de l'Itiyuro emploieraient le même moyen pour orner de dessins noirs certains de leurs vases.

Le vase une fois peint est mis à sécher pendant plusieurs jours à l'ombre. Ce n'est que lorsque les parois ont acquis une certaine dureté, que l'on procède à la cuisson. Les vases sont alors transportés en un endroit où il y a abondance de bois mort. On en ramasse une grande quantité dont on recouvre les vases de bas en haut. Généralement on choisit de longs fragments d'écorce qui brûlent avec une belle flamme.

On met le feu à cette pyramide de bois et, avec une longue perche, la

potière veille à ce qu'aucun tison ne brûle directement contre les parois, ce qui provoquerait un « coup de feu ». Lorsqu'elle constate qu'un vase rend un son métallique au toucher, elle écarte les brandons avec sa perche et en le roulant le fait sortir du feu.

Il peut arriver qu'au cours de la cuisson le vase subisse quelque craquelure. On y remédie en prenant un peu de terre humide mêlée à du crottin, et en l'appliquant sur la fente alors que le vase est encore brûlant. La fissure se ferme, mais reste apparente.

CLASSIFICATION DE LA CÉRAMIQUE CHIRIGUANO

Les figures qui illustrent ce texte, les planches publiées par Nordenskiöld (**10**, pp. 155-162) et les schémas de Outes (**3**), donnent une meilleure idée des formes plus courantes de cette céramique que toute description. Quelques remarques s'imposent cependant.

Les vases à panse subglobulaire surmontés d'un col bas et large, évasé du haut ,constituent, sans aucun doute, le type le plus répandu. (Pl. XXXV-LVII.)

Le bol à pied ou « compotier » (fig. 72) provient de la vallée de Caipipendi, de même que le vase à panse côtelée de la planche XXVI, 2. Ce sont les seuls spécimens de ce type que j'ai trouvés dans l'ensemble du pays chiriguano.

Les vases anthropomorphes ou zoomorphes sont rares. Ce n'est guère que dans la vallée de Caipipendi que la bière du maïs vous est ordinairement servie dans des vases modelés en forme de taureau. Leur facture en est, d'ailleurs, peu soignée. L'admirable vase anthropomorphe de la planche XXVI, 1 est une pièce exceptionnelle.

Les vases jumelés (pl. XXVII, 3) et ceux qu'un étranglement sépare en deux corps (fig. 74, 75 et pl. XXVII, 1) sont fort rares.

Les motifs peints sur les vases chiriguano ont, le plus souvent, un caractère purement géométrique.

Les exceptions à cette règle sont peu nombreuses. Comme exemple j'en donnerai le grand *gambai* de la planche LII, 1, sur la panse duquel ont été peints des chiens, des poules et des crapauds plus ou moins stylisés, le *gambai* de la figure 83 dont le décor principal se compose d'une série de *pakú (paca del monte, Peschge spec.)* et enfin quelques vases de mes collections que je n'ai pas voulu publier en raison de leur forme complètement européanisée. Sur l'un d'eux on distingue des silhouettes de mandons (pl. XXXIV, fig. 222) et sur un autre ont été figurés un homme et une femme dont les mains sont unies par une ligne rouge (symbole de mariage, d'amour ?).

Je me souviens avoir vu sur une jarre, dans la vallée de Caipipendi,

des nandous dessinés avec une particulière habileté. J'aurais volontiers acheté cette pièce s'il m'eût été possible d'en réaliser le transport.

Le vase de la figure 83 donne une excellente idée de ce que les potières chiriguano pourraient faire dans le genre « réaliste » si une lon-

Fig. 83. — Fabrication d'un vase : la surface extérieure est lissée avec un tribet de tamalous après avoir été enduite avec la suie

gue tradition ne les obligeait à ne borner à la représentation de motifs géométriques.

Le règne végétal n'inspire guère les artistes chiriguano. Le vase de la planche LII, figure 3, est le seul dont le décor soit nettement phytomorphe et encore ou ce cas je ne suis pas sûr qu'un modèle européen n'ait pas servi d'intermédiaire entre la nature et l'image que la potière a tracée.

Parmi les 200 vases que j'ai recueillis en pays chiriguano, il n'en est aucun qui comporte une figuration de la face humaine, à l'exception de celui auquel j'ai fait allusion et dont la forme trahit le désir de satisfaire la puérilité bête des touristes. A cet égard, Nordenskiöld (18, fig. 28, p. 137) a été plus heureux que moi : chez les Chané du Paraguay il a pu faire l'acquisition d'un pot sur lequel on distingue un nez en relief et les organes du visage peints d'une façon conventionnelle, mais où se reflète nettement l'influence andine.

Chaque région, souvent même chaque village, a son style particulier, et celui-ci varie encore suivant la fantaisie ou l'habileté de chaque potière. Ces différences sont souvent suffisamment accentuées pour permettre à un ethnographe quelque peu exercé de reconnaître la provenance de chaque pièce au premier coup d'œil.

Au point de vue du style décoratif, le pays chiriguano se divise en trois zones dont les caractéristiques sont les suivantes :

Sur le haut Pilcomayo, l'élément fondamental de la décoration est la spirale en forme de S couché qui se combine avec la volute d'une autre teinte se détachant du sommet d'un triangle (v. par ex., pl. XXXV; XXXVI, 1; XXXVII, 2; pl. XLVII-L, etc.).

Ce motif est disposé par zones parallèles; encadrées de figures géométriques (figures fractionnées, triangles alternés, traits hachurés, etc.) (v. par exemple : pl. XXXVII, 1; pl. XXXIX, 2; pl. XL, 2; pl. XLIV, 2). Rares sont les pièces de cette zone dont le décor principal ne comporte pas en spirales décroissant continûment. Le style de la céramique que j'ai recueillie dans la vallée d'Igiendei ne diffère que peu de celui du haut Pilcomayo : nous en retrouvons les principaux éléments, sous toutefois que la spirale y joue un rôle prédominant (pl. XXXIX, 1; pl. XLI; pl. XLII, 2; XLVIII, 1; pl. LI, 1-3; LIV, 2).

La poterie fabriquée par les Chiriguano des missions d'Ivo, de Macharetti et de Tarairi et par les Chané de l'Itiguaro, devenue une spécialité pour les outils féminins, se détachant en noir sur fond jaunâtre. Ce sont des figures anthropomorphes et zoomorphes qui occupent sur la panse du vase formant du grande triangles, des motifs de croisures qui, à leur tour, se terminent par des groupes en des spirales. Le triangle surmonté d'une volute est un motif qui apparaît souvent dans cette région. Les triangles à la surface pleine se combinent pour former, soit des bandes dentelées, soit des motifs de figures en forme de sablier dont l'effet est agréable à l'œil (pl. XXXIX, 1; pl. XL, 2; pl. XLI; pl. XLII, 1; pl. XLIII, 1; pl. LII; pl. LIV, 1 et 3-6; LVII, 3-6; LV, 1 et 3, etc.).

Entre les vases des Chané (pl. XXXVIII, 1; pl. LIII, 1-3) et ceux des Chiriguano en minimum, il est quelques différences qui tiennent moins au choix des motifs qu'à la manière dont ils sont traités. Les formes chané sont en général plus pures et elles font preuve d'une plus grande sécuri-

de main que les potières chiriguano. On sent bien que ces dernières ne sont que leurs élèves.

Il m'est difficile de dire ce qu'a pu être le style décoratif en vogue autrefois dans la vallée de Caipipendi (pl. LVII, 2; pl. LX, 4 et fig. 72). Les vases peints y sont devenus rares, et les quelques exemplaires que j'ai vus ou que j'ai acquis, étaient en fort mauvais état. Comme ailleurs, ils étaient couverts de figures géométriques : lignes brisées, triangles,

Fig. 41. — Décoration d'une grande cruche : le tracé d'angle est resté sous la peinture des mains. (Photographie prise par l'auteur à Macharetí, vallée d'Iguazuzú.)

bandes festonnées, etc. L'individualité de la céramique de Caipipendi s'exprime plus dans la forme de certains vases que dans leur décor.

Comme je n'ai pu visiter les Chaná du bas Paraguay, je n'ai aucune idée des caractères de leur poterie. Tembenchild (38, p. 144) qui a été plus favorisé que moi, déclare que leur céramique ne présente que peu de traces de l'influence araucane, et il explique ce fait par leur [illegible] et leur pauvreté.

Si a présent on fait du style, c'est-à-dire de la combinaison des motifs, dans [illegible] ce sentiment de diversité que

nous avons éprouvé succèdera celui de l'unité. Les mêmes dessins se répètent identiques sur l'ensemble du territoire chiriguano, et seule leur relative fréquence en une aire donnée, et l'importance qui leur est attribuée à l'exclusion des autres, crée ces distinctions de style que j'ai es-

Fig. 65 — Fabrication d'une grande corde : le bambou d'angle est gardé à côté exprimant les parcelles.

sayé de définir. Il est, cependant, quelques éléments décoratifs qui sont limités à une certaine région : la spirale est propre aux villages du haut Pilcomayo et de la vallée d'Igüembé. Le décor constitué par des lignes brisées et asymétriques ne dépasse pas la zone des missions franciscaines et la région de l'Itiyuro.

DÉCADENCE DE L'ART DE LA CÉRAMIQUE CHEZ LES CHIRIGUANO

De toutes les industries chiriguano la plus menacée est, sans doute, la céramique. Les Chiriguano peuvent revendiquer la gloire d'avoir été, jusqu'à une époque récente, les derniers indiens de l'Amérique du Sud

Fig. 101. — Fabrication d'une grande cuve : le boudin d'argile est placé sur le pourtour et aplati entre le pouce et les autres doigts de la potière. Il en résulte des bourrelets digitaux formant un dessin grossier.

à avoir une poterie qui méritait d'être mise au nombre des belles manifestations de cet art, si brillamment répandu dans certaines régions de ce continent. Aujourd'hui les choses ont bien changé. Les villages où l'on peut encore trouver des femmes capables de dresser des vases avec la maîtrise d'autrefois, sont devenus rares et se limitent à une aire res-

triste. C'est dans les *toldérias* du Tinkey, du Salado grande et du Salado chico, dans la région de Tumbia et dans la vallée d'Igiombé (haut-Pilcomayo, départements de Tarija et de Chiquisaca) que j'ai pu récolter les plus beaux exemplaires de ma collection. Ailleurs, c'est par exception

Fig. 66. — Fabrication d'une grande vase : le potier imprime à coups de rame dans l'argile encore molle pour obtenir un dessin régulier.

qu'il m'a été donné de mettre la main sur une belle pièce ; et, si à plusieurs reprises j'ai eu cette chance, il s'agissait presque toujours d'un vase entier conservé comme par miracle. Les missionnaires franciscaines, qui jadis ont donné à Nuestra-Señora et à Hohenberg de si beaux spécimens, ont contribué pour une modeste part à enrichir mes collections. Bien n'égalait même ce beau-mobilier était de décoration chez l'Indigène que ce que j'ai

pu constater dans la mission de Machareti. Après avoir parcouru presque toutes les huttes de ce grand village qui en temps normal compte près de 2.000 habitants, c'est à peine si j'ai pu y acquérir cinq ou six paniers ayant quelque valeur artistique. Les femmes qui savaient encore tresser ces paniers n'étaient plus que trois ou quatre et elles avaient à

Fig. 46. — [illegible]

pourvoir presque tout le village. Dans quelques années, l'artisanat ménagère privée n'existera plus qu'à l'état de souvenir dans le grand village où résidait le fameux « capitaine » Kondiguaso.

Cette désharmonie « phénomène complexe, dont la première est l'état de profonde désorganisation dans lequel se trouvent les Chiriguanos, la désorganisation totale du leur vie sociale et l'influence grandissante des blancs, [illegible] de nos efforts [illegible], enfin, l'introduction des produits manu-

[illegible] et, en tant qu'ensemble fixe, des bâtons d'[illegible]. La céramique [illegible] Chiriguano est devenue. L'apanage de quelques vieilles femmes qui ne font pas école et qui empêchent, dans la tradition le secret de leur art. Au [illegible] d'hui, déjà, obligées de subvenir à une grande demande, elles négligent à l'infini les mêmes motifs et font une fabrique toujours à les traces à la hâte sans [illegible]. Ceux-ci deviennent grossiers, grossiers et prennent une apparence primitive qui est loin de correspondre au goût et à la culture des Chiriguanos.

Dans certains villages il n'y a plus de potiers. Les habitants de la [illegible] d'Ingapirci, par exemple, sont obligés d'importer les vases [illegible] dont ils ont besoin pour utiliser les [illegible]. Lorsque je rendais les [illegible], on m'objectait généralement qu'ils avaient été achetés et [illegible] leur chez. « Tu peux et tu [illegible] [illegible], mais [illegible] [illegible], ou grâce d'[illegible] [illegible] [illegible], [illegible] [illegible] [illegible].

Dans [illegible] pauvre pour [illegible], la [illegible] [illegible] [illegible] [illegible] de vie à la poterie artistique des Chiriguanos. Déjà il devient difficile d'en faire des collections, du moins des collections ayant une valeur [illegible].

L'état de décadence et de régression où se trouve la poterie chiriguano, explique peut-être les différences [illegible] existant [illegible] entre la céramique des diverses régions habitées par les Chiriguanos. Les artistes étant peu nombreuses, vivs de [illegible] que leur production soit peu variée, et que de ce fait les vases d'un village présentent entre eux d'étroites analogies.

Enfin, lorsque les artistes se [illegible], le [illegible] des motifs [illegible] en [illegible] de changer. [illegible] devrait être plus grand et dans cette variété se [illegible], sans doute, [illegible] qui aujourd'hui sont [illegible] pour ne se [illegible] que dans une [illegible]. Il est probable qu'un ethnographe qui eût fait une collection chez les Chiriguanos il y a un siècle, en aurait établi une autre classification que celle que j'ai [illegible] à [illegible] ici.

[illegible] DES ÉLÉMENTS [illegible] DE LA [illegible] QUE L'ON [illegible]

1. *La problème de la civilisation [illegible]*

La céramique des Indiens Chiriguanos est l'image [illegible], avec celle des [illegible] populations [illegible], tant au point de vue de la forme que de la décoration, de ses grandes affinités, que leur [illegible] ne peut être [illegible] ici.

[illegible]

de poterie ordinaire dans la Quebrada de Humahuaca et celles que fabriquent encore les femmes chiriguanes en classe. A quatre siècles d'intervalle, la ressemblance entre la céramique de ces deux régions est [illegible] si prononcée, qu'elle avait amené l'archéologue de Mr. Debenedetti (2, pp. 114, 149 sqq.; et 150) qui soupçonnait s'agit, pour tout dégrant de comparaisons, à ce qu'il semble, que quelques rares pièces de poterie chiriguano fait simples, recueillies dans le Chaco et de provenance si incertaine que l'une d'elle était attribuée aux Chawti. Ces derniers ont, en réalité, une céramique d'un type nettement différent, quoique influencé aussi par la civilisation andine.

Les affinités de la céramique chiriguano avec certaines poteries de la Quebrada de Humahuaca, ont été établies scientifiquement par Nordenskiöld (8, p. 143). Un nouvel exemple fait actuellement ces similitudes comparatives par l'informant que les indiens de la région d'Humahuaca ont encore une forte relation immédiate avec l'ouest en Chiriguano, et par les relations commerciales que ces peuples entretenaient. Ces rapports entre Chiriguano et Indiens Humahuaca sont attestés historiquement. Lors des mouvements qui avaient lieu à l'époque de la conquête espagnole, Humahuaca et Chiriguano s'unissent pour résister à l'adversaire commun (v. Nordenskiöld, 8, t. 2, p. 77).

Leur parenté et propagé, dont j'ai fait ample collection dans la région du haut Pilcomayo, apparaît de diverses manières, plus conformantes encore, de ces possibilités frappant qui se manifeste entre l'art de la céramique chez les Chiriguano modernes et chez les populations préhistoriques du nord de l'Argentine. Actuellement ces différences diverses des indiens Humahuaca sur les ancêtres des Chiriguano actuels vivant sur le cours supérieur du Pilcomayo, dans le département de Tarija et de Chuquisaca, [illegible] un point du vue différemment détaillé. Le rayonnement de la culture de la Quebrada de Humahuaca n'a pu s'exercer que sur les Chiriguano du nord et les Chaco de l'Argentine. Quant à l'hypothèse qui ferait des Chiriguano les prisonniers du nord-ouest, elle est si absurde, si contraire à tout bon sens, qu'on ne peut l'envisager ici. A l'endroit où le Pilcomayo s'apprête à quitter la vallée qu'il creuse à travers les contreforts andins pour se répandre dans la plaine du Chaco, les Chiriguano avaient pour voisins immédiats des indiens Chiriba, dont le territoire s'étendait au nord de la Quebrada de Humahuaca, dans le sud de la Bolivie actuelle. Un nom nous qui ont transmis les formes particulières de leur céramique et que principaux éléments décoratifs aux Chaco qui, à leur tour, les ont légués à leurs successeurs et voisinages les Chiriguano. Sur l'hiver n'est pas été peut-être partout les intermédiaires obligés entre les deux cultures, en leur lieu-ou, des groupes chiriba ont dû nous [illegible] directement aux [illegible] les principaux produits de leurs industries industrielles et de leur arts.

Nous savons par les documents du XVIe et du XVIIe siècle que les Chiriguano faisaient constamment des incursions en territoire chiriba, qu'ils razziaient leurs villages, les obligeaient à payer tribut et commerciaient des groupes de ces indiens en esclavage, comme ils le faisaient avec les Chané. Ces contacts directs entre les Chiriguano et leurs voisins de l'ouest ont dû contribuer pour une large mesure à répandre la civilisation andine parmi eux et c'est ce qui explique que la culture chiriguano du haut Pilcomayo présente des affinités si étroites avec celle des Chiriba, des Hernhuaca et des Atacama (1).

Des femmes chiriba ont sûrement partagé le sort des femmes chané réduites en esclavage par les belliqueux Chiriguano et, comme elles, elles ont apporté à leurs maîtres les secrets de leur civilisation. Sur le haut Pilcomayo, j'ai acquis un vase (pl. XXV), une flûte de Pan (fig. 67) et une hache en forme de T (pl. XXIII, 1), trouvés sous bois du village d'Ibopeyti, en plein pays chiriguano. Ces objets révèlent, soit l'existence en cet endroit d'une ancienne population andine, chiriba ou autre, que les Chiriguano auraient asservie ou massacrée, soit des échanges commerciaux actifs. A défaut de ces témoignages concrets, l'action des tribus andines voisines serait vite mise en évidence par le style mixte de la céramique de cette région qui, plus que celui de tout autre point de territoire chiriguano, conserve une tradition propre aux peuples du sud de la Bolivie.

Aujourd'hui encore les Chiriguano reçoivent des métis descendants des Chiriba, des objets en argent qui faisaient probablement l'objet d'un trafic ancestral, et des perles de turquoise qui avaient si détourné dans les

(1) Par les frontières occidentales de leur territoire les Chiriguano étaient en rapport constant avec les Chiriba dont ils détournaient le tribut et qu'ils obligeaient à leur payer tribut.

Lozano (t. I, p. 202) : « subida la soldad del valle de Tarija, y la importancia de sus pobladas, para el Inca por aquella parte de los Chiriguanos, que por allí hacían su paso dado a los Chiriba, y con los pagaban tributo, sembrar por entrejilar, etc... ».

Lozano (t. II, p. 117) : « Del Mayamba y valles, y con él más de treinta estancias, Chiriguanos como veían, y los dando de servicio indios Chanaes y vaqueros dos Chiriguanos más principales, el uno Tocado Harasaya y el otro por sobrenombre Yaga Guaberito, y otro Indio de nación Chiriba, que mudaron sus vidas Chiriguanos... ».

Archivo de Indios (Ms.), cité par Cani, p. 95) : « y de los que a esta parte se llegaba otra nación de indios que se llama chiriguanos que son mismos que comunican a esta ciudad a dos leguas de potosí y se llaman en parte de indios chiribas que se llaman chiguanos ».

Cani (p. 95) : « En carta del Secretario Ruiseco que dice que los Chiriguanos vienen cuidando los llanos de Tarija y, además, haciendo Encomiendas cristianas a los Chuanos, donde se desempeñaban como diestros y soldados de la tierra hasta volver bien a los indios Chiribas. No contentaron con esto, se los comían y hasta a muchos sacerdotes públicos de varias personas ».

[facing p. 398]

A. Bénard, Le vestiaire du lutteur Chérigueux Illustration XXV

Vue anthropomorphe relevée sur les hanches du Chérigueux, après du village, [illegible] d'Ebenard, [illegible] de l'ordinaire au cette signée d'un [illegible] [illegible] Chérigueux. Le [illegible] au regards du visage et les [illegible] du protoxiqu sont [illegible] (1, pl. [illegible])

[illegible] de trois sandales. Les Chirigueno, de leur côté, vont vêtus [illegible] et ont [illegible] quantité des pièces d'autruche et des pièces de vannerie.

Le sud de la Bolivie est, en partie de vue anthropologique, fort mal connu. Les traités peu nombreux qui y sont [illegible], attestent que la culture propre à la vallée d'Urumbamba s'y [illegible] sous modification apparentée. L'homogénéité de la civilisation qui a fleuri dans cette vaste région, apparaîtra même [illegible] jour où l'on se sera décidé à entreprendre l'étude systématique de cet immense territoire qui comprend tout le haut plateau au nord de la frontière argentine et les vallées que forment les contreforts des Andes, à l'est du Chaco. Il est déjà évident que le mirage de la région d'Urumbamba présente des caractères

Fig. 41. — Pièce de bois en plante [illegible] trouvée sur la rive [illegible], près du village [illegible] d'Inapuyo, au même usage que la rive de la plante [illegible] (1/1, gr. nat.)

[illegible] du nord de Bajoy aux environs de La Quiaca. Les variétés locales ne semblent absolument originelles. Dennis (B. v. I, p. 77) déjà s'inquiétait de la façon suivante sur les rapports entre ces deux régions : « Si l'on veut comparer les objets extraits dans la région de Urumbamba avec les débris préhistoriques d'autres régions, on serait de ceux des Chiriguanos qu'ils se rapprochent le plus ». A Tolomosa, en Bolivie, dans le département de Tarija, le missionnaire Dennis (B, fig. 173, p. 112) a trouvé un plat anthropomorphe, stéatopyge exacte des femmes peintes de ce type découvertes à La Paya, dans la vallée Calchaquí.

La culture homolomaro-chiriguano ne forme pas un bloc isolé. Elle est plus ou moins étroitement apparentée avec celles dont les vestiges ont été [illegible] dans le nord-ouest de l'Argentine, en territoire diaguite, sur la Paya de Atacama et de Bajoy, dans le désert d'Atacama, dans le nord du Chili et l'extrême sud du Pérou. Il semble bien que, dans l'aire géographique ainsi définie, il ait existé jadis un centre d'acculturation dont l'existence a été signalée. Il n'y a que quelques années.

Bennett (**2**, t. II, pp. 102-124) est le premier à avoir décrit les caractères spécifiques de la plus importante de ces cultures, au point de vue linguistique, celle des Atacamas. En comparant les objets que ces peuples fabriquent, ou celles de ses collègues, usuels à Jujuy à Calama, à Chiuchiu dans le désert d'Atacama et dans diverses localités de la Puna de Jujuy, il put démontrer l'homogénéité de ces travailles. Il attribua, avec raison, bien ces cultes à un seul peuple, les Atacamas, dont l'habitat serait englobé, entre les régions que je viens d'énumérer, la Puna de Atacama et une partie de la vallée Calchaquí jusqu'à La Paya.

Il est, cependant, au sujet du problème auquel Bennett a donné une solution trop limitée. En cherchant à déterminer les frontières des anciens peuples du nord et du nord-ouest de l'Argentine, il a, à mon avis, trop insisté sur les divergences qu'offrent les vestiges de leur

Fig. 40. — Fragments de poterie lustrée trouvés à Copiapó. Les Chirigunos utilisaient de grands pots lustrés semblables à ceux de Copiapó. (, gr. nat.)

culture et pas assez sur les traits qu'ils ont en commun. Ces points de contact sont, cependant, trop nombreux et trop particuliers pour pouvoir être attribués simplement à une grande civilisation préexistante dont ces civilisations descendraient.

On ne peut nier qu'il existe, entre la civilisation d'Atacama et celles des peuples du nord et du nord-ouest de l'Argentine, du sud de la Bolivie et de la côte du Chili, des variantes assez importantes pour justifier la subdivision de cette zone culturelle en régions distinctes, correspondant peut-être à l'existence de tribus parlant des langues différentes. Mais à côté de ces variations locales, que de similitudes! Que d'analogies dans le matériel technique et dans les formes artistiques! J'aurai plus loin l'occasion d'insister sur quelques-unes de ces ressemblances et d'en donner encore quelques-unes lorsque je traiterai, au point de vue comparatif, des éléments fondamentaux de l'art chirigunos.

C'est à Uhle (**1**, **3**, **4**) que revient le mérite d'avoir mis en lumière les éléments communs à toutes ces civilisations et d'avoir cherché à les expliquer.

Déjà en 1913, ce savant (Uhle, 1, p. 497), à propos de tablettes provenant de Chinchin, déclarait « qu'il n'y avait pas eu une seule civilisation atacama, mais plusieurs appartenant à diverses époques ». Quelques années plus tard, à la suite des fouilles systématiques qu'il fit à Pisagua, Arica et Tacna, il aborda le problème « atacameño » dans son ensemble et en proposa une solution plausible. Comme la connaissance des résultats acquis par Uhle importe à l'intelligence de ce qui va suivre, je crois nécessaire d'en donner un résumé aussi complet que possible.

Près de Tacna, Uhle (4, p. 2) recueillit les vestiges de plusieurs cultures superposées qu'il classe de la façon suivante :

1° Période de l'homme primordial (objets du type paléolithique);

2° Période des aborigènes d'Arica (premiers siècles de notre ère). Les vestiges de cette époque appartiennent à une population de pêcheurs fort primitive;

3° Période contemporaine des ruines de Chavin qui va de l'an 400 environ à l'an 600 de notre ère;

4° Période de Tiahuanaco et la suite du style épigonal, de l'an 600 environ à l'an 900;

5° Période de la civilisation d'Atacama indigène, de l'an 900 à 1100 environ;

6° Période chincha-atacama, de 1100 à 1350 environ;

7° Période inconique, de l'an 1350 environ à la conquête espagnole.

Bien entendu, la chronologie de Uhle doit être acceptée sous bénéfice d'inventaire et, à première vue, cette division apparaît comme beaucoup trop subtile. La durée de chaque période me semble d'ailleurs être beaucoup trop courte. Je doute fort, également, qu'Uhle nous ait réellement donné la preuve de l'existence d'une culture contemporaine des ruines de Chavin.

Quelles que soient les lacunes de cette chronologie et ses faiblesses inévitables, il semble néanmoins certain qu'il a existé à Tacna, et probablement à Arica aussi, une civilisation nettement apparentée à celle de la région du désert d'Atacama (1) et des territoires andins que nous avons énumérés. Fort des analogies évidentes existant entre les objets

(1) Bennett (3, p. 41) « With the Arica culture the Calama-Chinchin area has many traits in common, considerably pointing to these districts being very closely connected, as has also been convincingly shown by Uhle. One quite obvious point of agreement exists in the before mentioned broadshouldered shirts, a type one hardly is able to suppose to have arisen independently in areas so adjacent as these. The technique called « coiled basketry » is, we know, common to both. The pottery types present, generally speaking, much similarity. In regard to ornamentation one may point to the occurrence of pyrograved spirals in calebashes, and to the ornament here called « wing-shaped. »

trouvés dans cette aire géographique, Uhle établit une théorie qui, si elle est par certains aspects trop audacieuse, doit néanmoins dans sa rigueur contenir une grande part de vérité.

Les indiens Atacama, dont le territoire primitif aurait été les environs des salines d'Atacama et d'Arizaro et une portion de la zone côtière près de Tocopilla, comprenant le cours inférieur du rio Loa, émigrèrent, à une date inconnue, du sud au nord. Ils occupèrent les provinces de Chicha et de Lipez, la région entre les grandes salines de l'ouest de la Bolivie et la Cordillère occidentale et s'étendirent à travers toute la province de Carangas et les districts à l'ouest du Desaguadero. Ils auraient également pris possession d'une grande partie du Titicaca et des plaines du nord. Leur culture se serait répandue au sud du Pérou moderne jusqu'à la latitude d'Ica, et jusqu'à Ayacucho dans la montagne. Sur cet ancien strate ethnique et culturel se firent sentir des influences venues du nord (Uhle, 3, p. 13).

Fig. 89. — Pot décoré de lignes incisées et percé de deux trous de suspension. C'est objet a été trouvé à Carpipendi. (1/1, gr. nat.)

Toujours selon Uhle (4, p. 38), dans l'époque qui suivit la période épigonale les habitants de Chincha et de Ica auraient créé une culture de caractère régional qui offre d'étroites analogies avec certains vases de Tacna dont nous aurons à nous occuper. Les indiens Chincha étaient des conquérants dont les entreprises guerrières sont souvent mentionnées dans les anciennes chroniques. Selon Montesinos, ils auraient fait des expéditions jusqu'en pays chiriguano. Avant les découvertes de Uhle, à Tacna et Arica, la limite de l'aire d'influence des Chincha s'arrêtait à Arequipa. La céramique de Tacna que Uhle attribue à la période des Chincha Atacama permet d'étendre vers le sud l'activité civilisatrice de ce peuple.

L'antique civilisation des Atacama enrichie par un apport chincha, aurait donné naissance à un nouveau type de culture auquel Uhle donne le nom de Chincha Atacama et qui aurait atteint sa maturité entre 1100 et 1350 environ de notre ère.

« La sphère d'influence de la civilisation chincha-atacama atteignit une partie de la côte (Pisagua, Taltal), du côté du sud, à l'est la région proprement atacama de Calama jusqu'à la province de Jujuy. Son action s'étendit au loin jusqu'en pays araucan. A l'est on en retrouve les reflets

[facing p. 402]

1. Vase anthropomorphe. Chaco. Il est recouvert d'une couche de peinture blanche. Pour. : Tayaoti (près de l'Aguaray) (1/4 gr. nat.)

2. Vase à panse aplatie, de couleur brune. Chiriguano. Pour. : Caipipendi. (1/4 gr. nat.)

sur de nombreux vestiges du bassin du Titicaca et de Tiahuanaco, et vers le nord on peut suivre son avance jusqu'au Cuzco.

« C'est par elle que s'expliquent les différents types d'ornements en usage chez les Incas. L'influence chincha-atacama embrassait donc une vaste région dont une partie (côte du sud, territoire atacama proprement dit, ouest du haut-plateau bolivien, conquêtes dirigées vers le Cuzco) fut parcourue par les Chincha-Atacama en personne. » (Uhle, 4, p. 39.)

Plus loin Uhle (4, p. 42) ajoute : « Auparavant, on ne s'expliquait pas la présence des volutes, des triangles dentelés, des losanges, des serpents, et de beaucoup d'autres motifs semblables dans la décoration des calebasses gravées de Calama, sur les vases mis à jour dans la province de Jujuy et sur ceux du type Pelko du Pucará de Tilcara, ainsi que sur les tissus actuellement confectionnés par les Araucans. Aujourd'hui tout s'explique par l'extension et l'action, dans des régions lointaines, de la civilisation chincha-atacama. »

Latcham (p. 5) dit également avoir eu depuis longtemps l'impression que la culture chincha avait joué un rôle très important dans le développement de l'art préhistorique du nord et du centre du Chili, spécialement dans la région diaguito-chilienne, soit les provinces d'Atacama et de Coquimbo et que ces influences s'étaient étendues jusqu'à Cachapoal au sud.

Après la parution du travail de Uhle, Latcham (p. 20) n'a pas seulement accepté ses conclusions, mais a encore démontré l'extension de la culture chincha jusqu'à Cabbera. Comme Uhle, Latcham (p. 20) est d'avis « qu'un examen de la céramique diaguito-argentine démontrait la preuve que les traces d'influences chincha et chincha-atacama sont fort communes dans l'art du nord-ouest de l'Argentine où tous les détails reproduits (par Latcham) se retrouvent seuls ou en combinaisons avec d'autres motifs locaux. Ces influences se firent sentir jusqu'au sud-est et même jusqu'au nord-est de la Bolivie, comme on peut le constater en consultant les travaux qui traitent des antiquités de ces régions. Dans la céramique actuelle des Chiriguano, beaucoup de ces mêmes éléments persistent, comme on peut s'en rendre compte en feuilletant le travail de Outes, 2 ».

Dans les pages qui vont suivre, je chercherai à démontrer que la céramique chiriguano présente des caractères qui nous obligent à la ranger au nombre de celles qui semblent avoir subi l'influence de la civilisation chincha-atacama.

Même si l'hypothèse de l'existence d'une civilisation chincha-atacama devait être rejetée un jour, il n'en est pas moins certain qu'à un moment donné les tribus préhistoriques de la région d'Atacama, de la côte septentrionale du Chili, du sud du Pérou et de la Bolivie, du nord et du nord-ouest de l'Argentine, ont été unies par des relations étroites qui

expliquent les nombreux points de contact de leur culture. La théorie de Uhle a pour elle l'avantage de rendre compte de ces analogies quelles que soient les réserves que nous puissions formuler sur la date que ce savant attribue à la civilisation chincha-atacama, sur l'importance et l'extension qu'il lui prête. A la zone d'influence chincha-atacama appartient, provisoirement, la culture des peuples andins Chibcha et Huancavaca que les Chiriguano et leurs prédécesseurs auraient connue pendant des siècles pour voisins.

2. *Analyse des influences qui se sont exercées sur la céramique de Isla des Chané et des Chiriguano*

Le critère de la forme. — Les influences qui se sont fait sentir sur la céramique des Chané et des Chiriguano, se manifestent à la fois dans la forme et la décoration. Dans les pages qui vont suivre, je me propose de signaler les affinités les plus frappantes que les vases chiriguano et chané offrent avec ceux des régions voisines, et déterminer également l'importance des survivances gaunoi ou autres que nous rencontrons çà et là.

1. Les vases à panse subglobuleuse, à col court et bords évasés, à base aplatie, constituent le type le plus commun de la céramique de Isla (pl. XXXV XL, XLVII-LIII, etc.). Les poteries de cette catégorie n'ont pas de pendants bien caractérisés dans la zone andine. Elles ressemblent par contre aux jarres à haïri que les Indiens de la Guyane et de l'Amazone employaient encore (Koch Grünberg, **2**, t. II, fig. 151, p. 227).

Un des pendants (pl. XLVIII, 3) de ce type porte en guise d'anses, une chenille entre du col, deux petits vases en miniature de même forme que lui-même. Dans ce qui n'est peut-être que la fantaisie d'une artiste indigène, se trahit nécessairement une conception propre aux peuples andins et qui s'accorde avec leur style.

2. Les pegapa (pl. XLV, 1 et 2; LIX et LX) sont des vases subglobuleux à col bas, muni d'une anse qui du rebord aboutit à la panse; ils peuvent être considérés comme des pendants en miniature. Cette catégorie de vases a son équivalent en plusieurs points de la zone andine limitrophe. Ainsi, à Colima (Mexet d'Ataxomo) et à Cagua (vallée de Tum, province de Pasto), ont été trouvées des poteries qui semblent être, au point de vue de la forme, des replques des pegapa chiriguano. (Rivet de Montlaur, pl. VII, fig. 9 et pl. VIII, fig. 11.)

Les environs de la Isla de Titicaca ont donné de nombreux spécimens de ce type (Debenedetti, **2**, fig. 98, p. 152; fig. 101, p. 154; fig. 104, p. 157; fig. 105, p. 158; figs. 109-111, p. 162; figs. 113-114, pp. 165-166; dont un exemplaire a été trouvé aussi à l'Altarito, dans la Quebrada de Humahuaca (Debenedetti, **4**, fig. 15, p. 29).

[facing p. 404]

Vases chiriguano (céramique). Dim.: 1 et 3, 24 cm; 2, 17 cm; 4, 13 cm. Musée de l'Homme, Paris. Terre cuite. Vases 1 et 2, noir sur fond blanc; vase 3, noir sur fond rouge. (Dim. en ½ grandeur nat.)

Au Chili, des vases dont l'aspect se rapproche sensiblement de celui de nos *paypo* ont été jadis en usage (Latcham, fig. 17, p. 11).

3. Le grand *yambui* de la pl. LV, 3 n'est pas un type courant en Amérique du Sud. Jijon y Caamaño (p. 24, fig. 15) n'en cite qu'un exemplaire, provenant d'Imbabura, en Equateur, qui lui fut connu en dehors du pays chiriguano.

4. Les deux *yambui* des pls. XLI, 1, et LV, 1 proviennent l'un et l'autre de la mission d'Ivu. La forme en est insolite en pays chiriguano, mais fort intéressante en raison de l'analogie qu'elle offre avec celle de vases exhumés dans la province de Catamarca, à Caspinchango (Debenedetti,

a b

Fig. 70. — Le *iru* ou figuré d'après Debenedetti a été trouvé à la Isla de Tilcara, le vase *b* est moderne. Il provient du village chiriguano de Yoshin. Il témoigne de la fidélité avec laquelle les Chiriguano ont maintenu jusqu'à nos jours les anciens types de céramique andine. (C., gr. nat.)

5, fig. 9 et 10, p. 23-24) et celle d'urnes funéraires de la Rioja découvertes et publiées par Boman (5, fig. 4b, p. 24).

5. Le *iru* de la fig. 70b rentre dans la classe des vases dits pseudo-aqueducs comme les appellent quelques archéologues argentins. Comme leur nom l'indique, ils sont étroitement apparentés, au point de vue morphologique, aux vases dits aqueducs ou plus simplement aryballes, qui constituent dans le nord-ouest de l'Argentine autant de témoignages concrets de l'influence incasique. Chez les Chiriguano et les Chané, ce type de poterie est exceptionnel et le spécimen de la fig. 70b, est une pièce unique, dont l'intérêt est considérablement accru par l'extraordinaire ressemblance qu'il présente avec un vase découvert dans les cimetières de la Isla de Tilcara (fig. 70*a*). Ces deux *iru* ont entre eux tant d'analogies qu'on pourrait facilement les croire sortis des mains de la même artiste. Dans les régions voisines de l'habitat des Chiriguano, de nombreux vases de ce type ont été exhumés. Odilia Bregante (p. 287)

énumère pour les spécimens trouvés dans la province de Jujuy les localités suivantes : Saruga, Tarauta, Puerto de Tilcara, Isla de Tilcara, et Cochinoca, pour la Puna de Atacama, Antofagasta de la Sierra. A La Paya, dans la province de Salta, ces urylaïles ou vases urylaïloïdes sont fort nombreux et l'un d'eux publié par Ambrosetti (**1**, fig. 42, p. 62) porte sur le haut de la panse une rangée de triangles à volutes que nous retrouvons sur notre exemplaire du haut Pilcomayo.

Les vases de cette catégorie sont, comme nous l'avons dit, caractéristiques pour la civilisation incaïque. De pareilles cruches apparaissent déjà à Tacna pendant la période chincha ou chincha-atacama (Uhle, **4**, pl. XVII, fig. 4; pl. XIX, fig. 1 et 1a; pl. XX, fig. 1 et 2).

Fig. 71. — Vase à pied en miniature (Pass. : Chaco, C., pl. ...)

Ce type est si peu répandu en pays chiriguano, qu'on ne saurait invoquer sa présence occasionnelle pour attester la forte influence incaïque de la civilisation sur ces indiens.

6. Le vase en miniature de la figure 71 est également une pièce unique. Si sa répartition sur le versant oriental des Andes n'était pas aussi sporadique, il constituerait une preuve éloquente de la persistance de la tradition incaïque dans la poterie chiriguano. Effectivement, comme Lizot (**1**, p. 161) l'a démontré à l'aide d'une carte, ces vases à pied, « kakrehaped » jalonnent toute l'étendue de l'empire incaïque de l'Équateur au Chili et à l'Argentine. C'est la première fois, cependant, que leur présence a été signalée chez les Chiriguano et en dehors des frontières, proprement dites de l'empire des Incas.

7. Comme Nordenskiöld (**18**, fig. 48, p. 162) l'a établi, les vases jumelés (pl. XXVII, 3) des Chiriguano diffèrent eux aussi sur bien des points. Il suffit pour cela de les comparer à ceux de la Quebrada de Humahuaca (Debenedetti, **2**, fig. 144, p. 196).

8. Quant aux vases à triple corps communiquants (pl. XXVII, 4), Jijon y Caamaño (p. 26) les croit d'origine centro-américaine. « Leur centre de dispersion, dit il, doit être situé en une région du sud de l'Amérique centrale, d'où, peut être par l'intermédiaire des Arawak, ils arrivèrent au Chaco et au Pérou ». Cette hypothèse est sédduisante.

9. L'origine centro-américaine du bol à pied ou « compotier » (fig. 72) ne saurait être mise en doute. Jijon y Caamaño (pp. 31-51), Rivet (**2**, pp. 8-9) et Lizot (**2**, carte 6, p. 182) l'ont amplement démontré. Au sujet d'une des variétés de ce type, Jijon y Caamaño (p. 34) fait l'observation suivante : « La dispersion et l'évolution d'un type de poterie dont

l'origine doit être placée chez les peuples voisins de l'Isthme de Panama, ne peut être due qu'aux Arawak qui l'ont répandue chez les nations vivant au delà des Andes, dans des régions aussi australes que le Chaco et le territoire de Misiones (1). Les Arawak ont été en Amérique du Sud les propagateurs de la culture centro-américaine parmi les tribus primitives situées à l'est des Andes.

10. La distribution des vases à pieds ombilic, dont j'ai acquis dans la vallée de Calipamali un merveilleux exemplaire (pl. XXVI, 2), est presque la même que celle des « coupelles » et nous permet, comme ceux-ci, les ranger parmi les poteries qui auraient une origine cen-

Fig. 11. — Vase à pied en « coupelle ». Motifs noirs et rouges sur fond crème. (Dim. : Cornetti, C., pp. 207.)

tro-américaine et dont la dispersion a été l'œuvre des Arawak (Dijon y Cuenca, p. 5, fig. 1 10).

11. Le vase de la planche XXVII, 2, se compose de deux calottes superposées : l'une hémisphérique, l'autre arrondie. Il provient d'Ica et est le seul spécimen de cette forme que j'aie rencontré au cours de mes voyages. Un vase identique a été exhumé sur le haut Paraná par Ambrosetti (2, pl. entre pp. 236 237, fig. 3). Des récipients semblables sont vendus en usage chez les Indiens Yuruna du haut Xingú (Steinen, I, pl. entre pp. 286 287). La présence de vases de ce type chez les anciens Guaranis nous autorise à supposer que notre exemplaire d'Ica représ-

(1) Ambrosetti (2, p. 714) figure en effet des vases hémisphériques munis d'un pied ombilic. Je doute fort que ces poteries représentent un type primitif. Elles sont soit unies, soit modelées, asymétriques, et le pied, qui est fait au vase lorsque celui-ci est tourné, s'en détache facilement.

Ces vases sont peut-être de grossières imitations de poteries européennes.

[illegible] la survivance d'une ancienne forme de la poterie graveuse, que les Chiriguano n'ont pas abandonnée. Il n'est aujourd'hui pas exclu que les Chané n'aient pas contribué à maintenir ce type, si ce sont bien eux qui l'ont fait connaître aux populations de l'Amérique tropicale à l'orient des Andes. *Zipa y Cuamaba* (pp. 11-13) en a étudié la distribution dans les deux Amériques et en a placé le centre de diffusion en Amérique centrale. Ils pays diagnitis, nous trouvons des poteries d'un aspect plus ou moins analogue, mais qui doivent vraisemblablement être classées de cette catégorie. Elles sont, en effet, pourvues, soit d'un appendice en forme de langue, soit d'une figuration anthropomorphe ou zoomorphe (Anchorena, **1**, pp. 372-380).

12. Le vase anthropomorphe de la figure 23 semble être sorti des mains des ancêtres potiers de la Isla de Tilcara qui, il y a plusieurs siècles, fabriquaient des pièces analogues, certainement inédites, sans doute, pour les Chané et les ancêtres des Chiriguano (v. Debenedetti, **2**, fig. 139-141, p. 192). Bennett (**2**, t. II, p. 186, fig. 183) publie lui aussi un vase en forme d'oiseau, peut-être du pays del [illegible] (*Pseudogyps albicans*, Vieill.) trouvé à peu de distance du village actuel de Humahuaca et qui, en plus de l'aspect général, a en commun avec notre exemplaire de Tumbri des décorations peintes sur les côtés qui représentent les ailes et la queue.

Fig. 23. — Vase anthropomorphe. Chiriguano (Bolivie). [illegible] Diam. : [illegible] (F. [illegible])

Les indiens Chiriguano de la Bolivie de Cuipipendi et de la mission d'Ivo se plaisent encore à servir la chicha dans des vases antiques ils donnent l'apparence d'un tamoin (pl. XXVIII, 7-9). Dans la Quebrada de Humahuaca, ont été découverts des vases en forme de lama (Debenedetti, **4**, p. 27, fig. 11 et Oblitas Bugueño, fig. 132, p. 147). Ils sont peut-être les prototypes des ceramiques chiriguano actuels. Pourquoi supposer que ces récipients aient eu uniquement un usage rituel, comme le fait M. Debenedetti, quand on voit les Chiriguano modernes en faire un emploi extrêmement profane ?

13. Le merveilleux vase de la planche XXVI, 1 est extrêmement d'inspiration andine. L'idée de donner au goulot des pots la forme d'une tête humaine, n'était pas étrangère aux anciennes populations de la Quebrada de Humahuaca (Bennett, **2**, t. II, fig. 190 et pl. LXXXII, fig. 7 et Debenedetti, **2**, fig. 136, p. 185). Cette région n'a, jusqu'à présent, donné aucun vase de ce type qui, par sa beauté et la sûreté du modelé

[facing P. 408]

[illegible], fait comparable à celle équivoque de l'Orinoque. La Guyane qui l'a [illegible] était une artiste de vases.

En Équateur, les vases à panse globuleuse surmontée d'une tête humaine sont fréquentes; mais peu d'exemplaires de cette région peuvent rivaliser avec ce chef d'œuvre chasé.

Fig. [illegible] — Vase-gourde en terre cuite. Pérou. (Tschudi [illegible], pl. [illegible])

14. Les vases des figures 74 et 75 et de la planche XXVII, 1, se caractérisent par un étranglement qui les sépare en deux corps globuleux superposés d'un diamètre plus ou moins considérable. Dans la vallée du rio Loa, on a trouvé un vase d'un type analogue et qui présente avec celui de la figure 74 la plus surprenante ressemblance. Montell (I, fig. 34 c, p. 29) qui le publie, fait à son sujet les remarques suivantes.

« Cette forme particulière n'est pas unique. Elle se rencontre dans les cultures supérieures de la côte du Pérou et son aire de dispersion s'étend jusqu'à Pachacamac et Ancon, comprenant Lambayeque, Chimorro et Trujillo. A l'est des Andes, ce type existe chez les Chiriguanos, les Ashluslay et les Lengua. Des spécimens en ont été exhumés par Debenedetti à Tilcara et dans la Quebrada de Humahuaca. La trouvaille de rio Loa constitue à former un chaînon de cette distribution unissant la zone de l'est à celle de la culture péruvienne dans ce type comme à coup sûr.

Fig. [illegible] — Vase-[illegible] de [illegible] [illegible] [illegible]. Pérou. (Tschudi [illegible], pl. [illegible])

Les potiches de ce type offrent une ressemblance frappante avec les trompettes à signaux de la Guyane. Des objets de cette sorte ont été décrits par maints auteurs et représentés par Gumilla et Roth. Si l'on fait abstraction de l'embouchure et de la base, on ne peut distinguer ces vases des trompettes en terre cuite. Il est probable que cet instrument a été découvert indépendamment en Guyane. En tous les cas, il est encore trop tôt pour rattacher théorie sur les connexions possibles de ces deux types, sans que des recherches préalables aient été faites pour justifier de telles rapprochements ».

A la distribution indiquée par Montell, il faut ajouter Molino del Puente et Cinquinhango dans la province de Cutamarca (Brown, 2, fig. 42, p. 24 et Debenedetti, 5, fig. 14, p. 27).

15. Les vases à panse globuleuse ou tronconique, à col cylindrique court et étroit d'où part souvent une petite anse qui vient s'attacher

sur le versant du Sangayal (pl. LVII, 1 [lire 4; pl. LVIII, etc.]), exactement ce type fut rencontré dans toute la région chiriguano qui est aux mains des sauvages. Les territoires voisins n'ont pas donné, jusqu'à présent, des vases préhistoriques qui aient pu servir de modèles aux Chiriguanos ou aux Ybaro à l'époque où ils ont occupé cet'ava l'habitant actuel. La seule trouvaille qui appartienne à ce type, en dehors du pays chiriguano, est ce vase trouvé au Chili, à Valdivia, que Medina (fig. 104) reproduit dans son grand ouvrage sur les antiquités de ce pays (1).

16. La petite tasse de la figure 16 est la seule de cette forme que j'aie pu recueillir. Comme les vases précédents jusqu'ici, elle consiste, par son aspect et sa dimension, une curiosité unique. Toutefois ce sont les vases qui ont été découverts dans le soubassement de l'Argentine. Quelques spécimens en ont été trouvés à la Isla de Tilcara (Debenedetti, B, fig. 148, p. 200) et à Andalgalá dans la Pampa de Ayapy (Lehmann Nitsche, pl. IV, 3 bis).

Fig. 16. — Vase [illegible] [illegible] (Pérou : Vallée d'Ica [illegible]).

17. Les ovoïdes ont une distribution si vaste en Amérique du sud que leur présence chez les Chiriguanos ne saurait pas à elle seule en argumenter suffisamment pour démontrer l'origine andine de leur culture. Cependant, chez ces indiens, les soubassements spéciaux de cette catégorie de vases prouvent que l'on trouve dans chaque village, offrant de telles similitudes avec les pays des régions andines limitrophes qu'on est obligé de les considérer comme des foyers d'émigrant.

Ainsi, par exemple, les pays de la planche XIX, 7 et 8 sont presque identiques à certaines pièces provenant de la Puna, province de Salta (Millrosen, fig. 7, pl. [illegible]).

Le pays chiriguano (figure XIX, 3) se rapprocherait, à peu de chose près, avec un spécimen de La Puya (Lehmann, 6, fig. 161, p. [illegible]) qui, comme lui, présente deux mamelons sur chaque côté du renflement.

La petite coupelle de la figure 17, posée sur le bord d'un bloc d'un monolithe, n'a lieu en point qu'on puisse l'identifier à rapprocher à un lieu ou à un peuple. Les deux appendices en relief sont perdus pour laisser passer une corde de suspension. On n'en trouvait pas d'exemples dans les territoires de la région andine qui sont situés du côté sud. Je ne l'entrevoit à rien, dans les pays limitrophes de l'habitat des Chiriguanos,

(1) Les vases de ce type offrent également une grande similitude avec ceux des Atacamas qui ont été découverts dans le territoire argentin de Tucuyaco. (Pico Matos, pp. 10-11, p. 131 et 132.)

Kleinfunde gestern Kleingefässe (Kat.). Maßstab 1:1. 1, 2, 3, 4, 5: Napfform Kante Kleingefässe. 6: Kantenform, 7, 8, 9, 10: Kleingefässe Kante Kleingefässe. [illegible]
[illegible]

quelques [illegible] analogues. Ailleurs, un plat du ce type a été exhumé à Vasadinda, sur la Pente-de-Jugay (Ambrosiaki), 4, fig. 494, p. 28, t. LIV) et à Les Pagos (Ambrosiaki), 5, fig. 165, p. 102).

Quelques-unes [illegible] pl. XXIX, 1 et 4) de nos collections sont pour-

a b

Fig. 71. — Plats à [illegible] de Chirignano. Pente. — Chirignano (1), pl. [illegible]

vues sur le côté de petits mamelons dont l'usage est, à première vue, énigmatique. Ils sont, comme Xanto (5, p. 109, fig. 167-168) l'a démontré, des appendices qui permettent de passer une corbelette autour du plat et de la suspendre. Sur quelques exemplaires chirignano, ces prémamelons sont perforés et une ficelle passée au travers. Par ce moyen,

a b

Fig. [illegible] — [illegible] de la vase de provenance de Chirignano. [illegible] le profil d'un vase trouvé à Xanto et [illegible] par Xanto [illegible] de la période hittite

l'anse-fil est comparable aux pastèques du tell. Quelques poteries de la Qorbanda du Hamadanara (Dabarnikiti), 2, fig. 60-63, pp. 111-112) présentent elles aussi des prémamelons dont l'usage devait être le même que celui des Chirignano antérieurs. Ces mamelons sont sans doute des anses ou des oreilles qui, ayant perdu toute utilité pratique, ont été réduites

à l'état de simples motifs ornementaux et non, comme ce l'est ailleurs, des signes vraiment cosmographiques.

10. Pour terminer nos comparaisons, je mets en regard deux vases (fig. 78 *a* et *b*) l'un acquis à Iza, dans le Chaco, et l'autre trouvé à Torna, et datant de la période incaïque (Uhle, 6, pl. XXVIII, 2). Un simple coup d'œil sur les deux figures permet de constater leur parfaite identité.

En résumé, de nos comparaisons et de celles que nous avons faites au sujet de la céramique d'usage commun, nous pouvons tirer les conclusions suivantes : la céramique chiriguano est étrangère, au point de vue encyclopédique, exclusivement appropriée à celle des nations peuplant du sud de la Bolivie et du nord de l'Argentine et celles, par conséquent, de nombreux points de contact avec les civilisations sédentaires andines. Elle comporte encore la trace de formes indigènes locales (vase à pied étalé-évasé), jarres-urnes, bulbiformes, vases anthropomorphes et anthropomorphes, cruches, etc.). L'ancien substrat ethnique avait se maintenir dans ce domaine par la survivance de quelques types de poterie particulières, vases en forme de coupes ou de bols (*compotiers*), vases à pieds étalés, vases à trois corps communicants, etc.).

La céramique d'usage commun est nettement d'importation guarani et c'est maintenant, dans ses traits généraux, identique à celles des nations guaranis de la Bolivie.

CÉRAMIQUE CHIRIGUANO
DÉCOR POLYCHROME À MOTIFS GÉOMÉTRIQUES DU LA CÉRAMIQUE À CHIRIGUANO À DÉCOR POLYCHROME À MOTIFS GÉOMÉTRIQUES

Le triangle à volute. — Dans la région du haut Pilcomayo, le motif fondamental de la décoration de la céramique est le triangle dont le sommet se prolonge en une volute ou en une spirale (pl. XXXII-XXXIII, 136-199). C'est vraiment décorativ est répété à satiété sur tous les vases que j'ai recueillis à partir du village de Balaiito jusqu'à la vallée d'Igüembé. Ailleurs il devient moins fréquent et affecte une forme plus rudimentaire que l'on peut considérer comme plus évoluée ou dégénérée.

Même sur le haut Pilcomayo, ce dessin offre, suivant les lieux ou les artistes, diverses variantes : sur certaines pièces la volute qui prolonge le triangle est nettement dessinée (pl. XXXV, 1; XXXVII, 2; XXXVIII, 2; etc.); sur d'autres ce n'est plus qu'un crochet plus ou moins fermé (pl. XXXII, 137-151). Ce dernier cas est le plus courant. Enfin, le crochet lui-même est tracé avec si peu de soin qu'il se transforme en simple arc de cercle, puis en ligne droite qui prolonge un des côtés du triangle (fig. 78 *a*).

Quelques vases, généralement en dehors de la région du haut Pilco

mayo, présentent le même motif, mais au lieu du crochet ou de la spirale, la potière a peint un élément de grecque (pl. XLI, 2 et XLIII, 1; LIV, 1 et 4) plus ou moins réussi. On peut donc suivre l'évolution de la spirale à la grecque en se transportant d'un point à l'autre du territoire chiriguano.

Le plus souvent ces triangles à volute sont disposés sur deux rangs et se font alternativement face. Lorsqu'une telle disposition intervient, la potière a toujours soin de tracer, le long de la ligne qui forme la volute, un trait parallèle de couleur différente qui, après avoir accompagné les inflexions d'une volute, va rejoindre celle du triangle opposé. La figure (pl. XXXIII, 178-194) ainsi obtenue est une double volute en forme de 8 couché. Elle est particulièrement caractéristique pour la céramique du haut Pilcomayo et de la vallée d'Igüembé. Cette double volute peut être traitée comme un élément décoratif indépendant, témoins les *yambui* de la planche XXXVI, 2 et LI, 3.

Parfois, mais rarement, le triangle à double volute est remplacé par un angle dont les côtés, en se prolongeant, forment une ligne continue qui unit ces motifs les uns aux autres (pl. XXXVI, 1; XLVII, 3; LIII, 3).

L'origine de ce motif se perd dans la nuit des temps. Il apparaît déjà fort stylisé sur des vases de l'époque de Tiahuanaco, provenant de Tiahuanaco même (Posnansky, pl. III, fig. E et F) et de la vallée de Mizque (Nordenskiöld, **5**, p. 95, fig. 40).

On le rencontre aussi sur la plupart des vases de Tacna et de Taltal, appartenant à la période dite chincha-atacama (Uhle, **4**, pl. XIX, fig. 1 et 2; pl. XX, fig. 1 et 2; pl. XXI, fig. 2; pl. XXII, fig. 4; pl. XXIII, fig. 1; pl. XXIV, fig. 2; et Guevara, t. I, pl. entre pp. 42 et 43 et entre pp. 48 et 49).

Ces analogies avec la poterie chiriguano deviennent plus frappantes encore si l'on considère les détails et l'agencement de ce motif. Sur un vase de Tacna (Uhle, **4**, pl. XX, 1), la volute se détache de deux lignes formant un angle comme sur le *yambui* de la planche XL, 1, publié ici. Les triangles à volute du vase de Tacna (Uhle, **4**, pl. XXI, fig. 2) se font face et les inflexions de la spirale sont accompagnées par une ligne parallèle d'une autre couleur. Un vase anthropomorphe trouvé à Tacna (Uhle, **4**, pl. XXIII, fig. 1) est décoré lui aussi de triangles à crochet qui s'opposent alternativement.

Quant aux grecques du vase chincha-atacama de Uhle (**4**, pl. XXII, fig. 4), ce sont sans doute des volutes que la fantaisie de la potière a modifiées.

On peut également considérer comme une dérivation du triangle à volute les crochets qui, sur plusieurs vases de Tacna et de Taltal et sur une calebasse de Calama, forment des rangées verticales et horizontales (Uhle, **4**, pl. XX, fig. 1; pl. XXII, fig. 2; pl. XXIII, fig. 3; XXIV,

fig. 3, etc.; Guevara, t. I, pl. entre pp. 46-47 et 48-49, et Oyarzun, fig. 11). Le triangle à volute a subi, chez les Chiriguano, un processus de simplification analogue, mais cette évolution ne s'est produite qu'en des cas fort rares et sur des pièces dont le décor a été tracé avec une certaine négligence (pl. XXXII, 138-140).

Les tissus d'Arica découverts par Skottsberg (fig. 41-42), et qui sont aujourd'hui conservés au Musée de Göteborg, présentent, entre autres motifs, le triangle à volute. Ces exemplaires, à en juger par leur style, appartiennent sans doute à la période chincha-atacama de Uhle.

Selon Uhle (4, p. 38), la volute et le triangle à spirale qui se combine avec son vis-à-vis sont figurés sur des étoffes de la région de Chincha et de Ica et rappellent aussi certains motifs de l'art Chimu.

Le triangle à volute est un des motifs tatoués sur la main d'une momie d'Ancon dont Montell (2, pp. 148-151) s'est occupé en détail.

Sur un grand nombre de vases du Chimu, à anse en étrier et appartenant à la catégorie des « lécythes », la décoration consiste en une série de triangles à volute.

A en juger par les planches de l'atlas de Baessler (pl. I-VI), la spirale est le plus souvent combinée avec un triangle dont un des côtés est en échelons ou en zig-zag. Baessler voit dans ces différentes figures des stylisations des bras de la poulpe. Je ne le crois pas. Ce motif dont la distribution est si vaste, ne peut être dérivé de la représentation d'un animal dont le rôle est secondaire dans la mythologie du Chimu et dont, en tous les cas, l'intérêt est purement local.

Le triangle à spirale est, dans la zone côtière du Pacifique, où s'est manifestée l'influence chincha-atacama, aussi fréquent sur les calebasses pyrogravées que sur la poterie. Ce dessin a été pyrogravé sur des calebasses trouvées à Arica par Skottsberg (Göteborgs-museum, n° 19.1.5), dans la vallée du rio Loa (Montell, fig. 40, p. 35) et à Calama où, sur quelques exemplaires, la volute a été substituée par une grecque qui prolonge le triangle classique (v. Boman, 2, t. II, pl. LXXV-LXXVI, fig. 176-177, et Oyarzun, fig. 4-9, 15 et 18). Les spécimens provenant de Calama sont remarquables par la variété et la hardiesse du décor et sont, sans aucun doute, les échantillons les plus beaux de l'art de la pyrogravure en Amérique du Sud.

Le même dessin est représenté sur le fond d'un *poncho* chilien de Conchali, sur les flancs d'un vase de Rivadavia et sur une écuelle ornitho-

(1) Boman (2, t. II, p. 746) assure que certains ornements pyrogravés sur les calebasses trouvées à Calama, comme, par exemple, celui qui se compose de 8 couchés, se retrouvent sur des calebasses gravées, provenant d'Arica, et dont une est reproduite dans l'œuvre de Stübel et Reiss à laquelle je n'ai pu avoir accès (Stübel, A.; Reiss, W.; Koppel, B., et Uhle, M., *Kultur und Industrie südamerikanischer Völker*. Berlin, 1889, t. I, pl. 25, fig. 19).

morphe de Freirina, Chili (v. Latcham, fig. 47, p. 19; fig. 53, p. 21; Medina, fig. 165). Si, comme je tends à le croire, la grecque ou l'élément de grecque qui surmonte les triangles dont un des côtés est en gradins, dérive du triangle simple à volute, la distribution de ce motif serait encore plus vaste. Au Chili il a été peint : sur des vases provenant de Ranten, San Francisco, San Felipe ; sur une urne de Chellepin; sur un *puco* de Paipote, de Tongoy et de Valdivia (Latcham, fig. 17, p. 11; fig. 26, p. 12; fig. 74, p. 32; fig. 55, p. 22; fig. 59, p. 26; Medina, fig. 166 et 171).

A Tolomosa, dans le département de Tarija, en Bolivie, les fouilles effectuées par la mission suédoise donnèrent, entre autres pièces, un plat dont le bord porte peint en noir des triangles à volute, enlacés. Ce spécimen est la réplique exacte de *puco*, de même forme, trouvés à La Paya et que je mentionnerai plus loin (Rosen, **2**, fig. 175, p. 112).

Les anciens habitants de la Puna de Jujuy aimaient à pyrograver sur

Fig. 79. — a, Écuelle de la Isla de Tilcara dont le bord est orné de triangles à volute opposés ; b, bordure d'un plat orné de triangles à volute (Isla Tilcara) (*D'après Debenedetti*).

leurs calebasses des bordures composées de triangles à volutes, disposés sur deux rangs et se faisant alternativement face (Ambrosetti, **4**, fig. 65-67, p. 66-67 ; fig. 68, p. 68, t. LIV). A Morohuasi, Rosen (**2**, fig. 117, p. 71) découvrit un récipient de même nature avec un ornement analogue.

Le triangle à volute est un élément, pour ainsi dire, classique dans la décoration des vases trouvés au Pucará de Tilcara (Debenedetti, **2**, p. 88, note 1. V. aussi Bregante, fig. 177, p. 170; fig. 223, p. 189; fig. 229, p. 191 ; fig. 230, p. 191 ; fig. 242, p. 198).

Les fouilles effectuées dans la Isla de Tilcara n'ont, par contre, donné que peu d'exemplaires de poterie dont l'ornementation fût curviligne. Debenedetti (**2**, p. 88) considère celle-ci, pour des motifs que je ne puis admettre, comme étrangère à la localité. Il fait figurer néanmoins dans son livre, le décor de deux plats qui est constitué par des triangles à volute opposés (Debenedetti, **2**, fig. 53 et 54, pp. 88-89) (fig. 79) et il signale le même dessin sur deux autres plats qu'il omet de reproduire. Dans la même publication (Debenedetti, **2**, fig. 113, p. 165 ; fig. 114, p. 166 ; fig. 115, p. 166) sont représentés trois vases, semblables aux *yapepo* chiriguano et également décorés de triangles à crochet.

La pièce la plus intéressante à cet égard est le *yuro* de la figure 70 *b* reproduit d'après un dessin de Debenedetti (**2**, fig. 124, p. 175). Nous avons déjà vu que sa forme est identique à celle d'un *ira* chiriguano que j'ai acheté sur le haut Pilcomayo. Il en est de même pour les éléments généraux de sa décoration.

Le triangle à volute se retrouve sur trois autres pièces de la Isla de Tilcara (Debenedetti, **2**, fig. 160, p. 217; fig. 161 et 163, p. 217) que Debenedetti (**2**, p. 218) classe parmi les poteries importées à la Isla de Tilcara et utilisées par des *curacas*. Nos *yambui* du haut Pilcomayo, qui au point de vue artistique sont très supérieurs aux exemplaires décrits par Debenedetti, ont souvent été achetés par moi dans d'humbles cabanes dont les propriétaires n'étaient certes pas des *curacas* mais de pauvres diables qui avaient la chance d'avoir une mère ou une grand'mère habile potière. Si le critère de Mr. Debenedetti était admissible, les poteries grossières et les vases de luxe que l'on peut acheter dans chaque village chané ou chiriguano seraient les produits de deux civilisations différentes. En réalité l'on se sert de la céramique de luxe les jours de fête pour boire la *chicha*; et l'autre, d'aspect plus humble, est adaptée aux besoins journaliers.

Fig. 60. — Plat provenant de Tilcara et orné de triangles à volute rouges sur fond blanc. (Cr. gr. nat. $\frac{1}{2}$).

Le triangle à volute est, d'ailleurs, plus fréquent à la Isla de Tilcara que Debenedetti ne veut le laisser entendre. En plus des exemples cités, il faut en ajouter sept autres (Debenedetti, **2**, fig. 21, p. 59; fig. 30, p. 63; fig. 40, p. 70; fig. 48, p. 80; fig. 165, p. 219; fig. 165, pp. 219-220). Un vase provenant d'Alfarcito, dans la même Quebrada, porte sur le rebord intérieur du col, un triangle à volute (Debenedetti, **4**, fig. 15, p. 29).

Quelques vases provenant de Yavi, au nord de Jujuy, offrent eux aussi comme principal motif décoratif le triangle à volute (Bregante, fig. 71, p. 82; fig. 72, p. 83; fig. 226, p. 190).

Un grand nombre de vases trouvés à La Paya (Vallée Calchaqui, province de Salta) portent des séries de triangles à spirale qui se combinent et s'opposent suivant le style du haut Pilcomayo. Des poteries de cette région présentant ce motif ont été figurées par Ambrosetti (**6**, fig. 36 et 37, p. 59; fig. 38-39, p. 60; fig. 41-43, pp. 61-62; fig. 50-52, pp. 70-73; fig. 128, p. 287; fig. 131, p. 291; fig. 138, p. 297; fig. 173-175, pp. 346 et 349-

350; fig. 218, p. 405) et par Boman (2, t. I, pl. X, fig. 22; pl. XI, fig. 23-24; pl. XII, fig. 25; pl. XIII, fig. 4).

Boman (2, t. I, p. 236), après avoir décrit ces pièces, ajoute avec raison que « la poterie de ce style occupe la première place à La Paya, ce qui est curieux, parce que le décor n'appartient pas du tout à la région diaguite. Effectivement, La Paya à la frontière des Palacos, tribu atacama, participe de la culture des indiens Diaguite et Atacama (Boman, 3, p. 510 et 4, p. 2). C'est sans doute à ces derniers, ou à leur influence, que doivent être attribuées les pièces dont nous avons donné la liste plus haut.

La distribution du triangle à volute dans le nord-ouest de l'Argentine a été étudiée très sommairement par Odilia Bregante (pp. 189-193) : « Le triangle à spirale est très courant dans le nord-ouest de l'Argentine, des régions les plus septentrionales jusqu'à la vallée Calchaqui. Dans le nord il est isolé, au sud il se combine avec des motifs qui expriment un haut degré d'évolution. Parfois il se présente en bandes de triangles consécutifs dont les appendices sont séparés. Cependant on rencontre plus fréquemment ces appendices enlacés deux par deux. Dans des localités aussi distantes que Yavi au nord de Jujuy et Amaicha dans la Province de Tucuman, nous pouvons constater que le motif est toujours le même, mais que dans chaque endroit il acquiert des caractères propres à la région.

Sur quelques pièces, le triangle à volute est associé au triangle avec prolongation rectiligne. Dans certaines régions du nord, on a trouvé le triangle à volute avec un singulier complément : c'est une série de lignes, plus ou moins parallèles, qui se détachent de la volute du triangle. Ce triangle à spirale et à raies apparaît, en dehors de notre territoire, sur un exemplaire de Quillagua (Chili). Dans les nombreuses fouilles effectuées dans la zone qui s'étend au sud de Jujuy, on n'a jamais trouvé d'exemple de cette curieuse décoration. Elle est, sans doute, propre aux cultures du nord.

Le triangle à spirale atteint son plus haut degré d'évolution et d'élégance, quand sur un de ses côtés il présente [illegible]ssin en gradin. Cette figure prédomine dans la zone calchaqui. O[illegible]t sur des urnes et des *paco* où elle constitue un motif géométrique des plus intéressants. Elle entre dans la formation des bordures admirables dont sont ornés, avec une extrême fréquence, les plats des vallées Calchaqui.

A Tinti, dans le pays de Salta, dans une zone où n'existent presque pas de vestiges de la culture calchaqui, et même plus loin, à Tastil au nord de la Poma, Boman trouva des poteries décorées exclusivement de triangles à volute et échelonnés, dont les appendices s'enlacent deux par deux.

La distribution du triangle à volute est la suivante : Jujuy, Salta, Tucuman et Catamarca.

« Dans la province de Salta, on l'a rencontré : à la Paya, à Kipon, à Angastaco et à Luracatao.

« A Tucuman il apparaît sur des poteries exhumées à Amaicha et à Tafi. Des spécimens de cette décoration proviennent des différents points de la province de Catamarca : Fuerte Quemado, Molino del Puesto, Pabellon, Andalhuala, Santa Maria, Loma Rica, Gusayaco, La Toma, Costa de los Reyes, La Cienega et Belen. »

Cette liste doit être allongée. D'autres points du territoire argentin ont fourni des vases ou des plats portant ce fameux motif. Ainsi, dans le matériel archéologique de Tastil, Quebrada del Toro, publié par Boman (**2**, t. I, pl. XXXI, fig. 83 et pl. XXXII, fig. 84) figure une calebasse coupée par la moitié et ornée de spirales pyrogravées se détachant d'un triangle noirci. Un vase peint, de la même localité, porte sur sa panse le même motif, mais là la spirale s'est nouée en grecque.

Pour que la distribution du triangle à spirale soit complète il faut ajouter : Caspinchango, dans la province de Catamarca (Debenedetti, **5**, fig. 10-12, pp. 24-25 et fig. 14, p. 27); San Blas de los Sauces y Los Manos, dans la province de La Rioja (Boman, **5**, pl. VI, fig. E; pl. VII, fig. F; pl. XX, fig. *a* et *b* et fig. 11, p. 65). Antofogasta de la Sierra (Ambrosetti, **5**, pl. I, fig. 31 et 32); Chañar Yaco (Catamarca) (Lafone Quevedo, **1**, fig. 17, p. 39); et enfin Barreal, dans la province de San Juan (Kühn, p. 21).

Les récentes fouilles de MM. Emile et Duncan Wagner dans la province de Santiago del Estero, leur ont permis de découvrir les restes d'une population dont la culture était étroitement apparentée à celle des vallées de la région diaguite. Il s'agit, sans doute, d'une tribu de langue kakan, établie dans la plaine traversée par le rio Salado. Là aussi nous retrouvons notre triangle à volute, à en juger par les planches où M. Duncan Wagner a tenté de reconstituer les pièces de poterie dont il a trouvé les fragments. Ici encore nous constatons le passage de la volute à la grecque.

En plus de ces adjonctions, quelques observations doivent être faites au passage d'Odilia Bregante. Le triangle dont le sommet se prolonge en un trait courbe ou droit, peut être considéré comme une dégénérescence du triangle à volute, comme il a déjà été dit plus haut (v. Lafone Quevedo, **2**, pl. IX, *b*).

J'ai, à plusieurs reprises, attiré l'attention sur le passage de la volute en grecque ou élément de grecque. Cette mutation progressive d'un motif en un autre, s'est produite en pays diaguite exactement comme chez les Chiriguano. Les urnes du type Santa Maria présentent, entre autres ornements habituels, un triangle, à gradins ou non, qui se termine en grecque. Or, sur plusieurs spécimens cet élément de grecque est une volute ou un

crochet plus ou moins fermé (1). Je doute fort que le triangle à volute et le triangle avec grecque aient une origine distincte. Le second dérive, sans doute, du premier.

A Tinti, dans la plaine de Salta, le motif dont parle Odilia Bregante est un triangle dont un des côtés est en gradins et qui se termine par une grecque qui, à son tour, s'enlace avec celle qui se détache du triangle suivant (v. Boman, 3, pl. XIV, fig. *b*). Je ne puis comprendre sur quels arguments Odilia Bregante se fonde pour affirmer qu'en cet endroit il n'existe aucun vestige de la culture diaguite. Le contraire semble être vrai.

En résumé, le triangle à volute a une distribution presque ininterrompue de la côte nord du Pérou à la province de San Juan, en Argentine, et jusqu'au Chili central. A l'est, il s'étend jusqu'au Pilcomayo et la Quebrada de Humahuaca.

L'importance de cet ornement va en augmentant à mesure que l'on se déplace du sud au nord. En pays calchaqui, il est au second plan et constitue un motif accessoire; à La Paya il gagne en prépondérance et celle-ci s'affirme dans la Quebrada de Humahuaca et sur la côte du Pacifique. En territoire chiriguano, sur le haut Pilcomayo, il triomphe.

A lui seul, ce motif constituerait une maigre preuve de l'existence de cultures apparentées sur toute l'étendue de cette aire géographique; mais combiné avec d'autres éléments, il acquiert une signification toute particulière.

Le triangle à volute semble s'être développé indépendamment dans les Guyanes, du moins je doute fort que son occurence dans cette région soit due à une influence occidentale. Ce motif orne des râpes à manioc provenant de la tribu des Patamona (Nordenskiöld, 14, fig. 19*c*, p. 53) et quelques calebasses wapisiana et taulipang (Koch-Grünberg, 3, t. III, pl. XIX, fig. 1-3).

La double volute en forme de S (pl. XXXII-XXXIII, 163-164, 167-197). — J'ai déjà eu l'occasion d'insister sur le fait que la double volute en forme de S était un motif étroitement associé au triangle à volute. En certains cas, d'ailleurs rares, cet élément décoratif apparait isolé (v. pl. XXXVI, 2).

La double volute a été peinte sur quelques vases de Tacna (Uhle, 4, pl. XXIII, fig. 1; pl. XXIV, fig. 2 et fig. 3; et Guevara, pl. entre pp. 46-47). Elle y est même une fois encadrée d'une ligne qui suit son contour exactement comme sur quelques vases chiriguano (pl. XXXII, 162-163).

Sur des vases trouvés à Calama et provenant sans doute de Cagua (Yura, province de Porco, Bolivie) et dans la région même de Cagua

(1) V. par ex. Bruch (2, fig. 32, p. 37; fig. 66, p. 71; fig. 70, p. 74; fig. 85, p. 85; fig. 90, p. 89; fig. 130, p. 152) et Lafone-Quevedo (2, fig. 60, p. 384).

(Créqui de Monfort, pl. VII, fig. 8 et pl. VIII, fig. 11) on voit un ornement en forme de S qui pourrait être rapproché de notre double volute si le style n'en était différent. Les extrémités de la courbure sont légèrement appointies et dans chaque crochet est inscrit un point.

Les potières chiliennes ont fait quelquefois usage de la double volute pour décorer leurs vases, mais un usage restreint (Latcham, fig. 38, p. 16; fig. 58, p. 25; fig. 59, p. 26). Ce motif est gravé aussi sur un bloc

Fig. 81. — Grand *ira* peint. Prov. : Saladito (haut Pilcomayo). Couleurs : blanc sur rouge (1/4 environ de la gr. nat.)

de pierre de la province chilienne de Autofagasta, entre Santa Fe del Toro et Quillagua (Plagemann, pl. III). Dans la Quebrada de Humahuaca, la double volute agrémente la surface extérieure du *yuro* de la Isla de Tilcara reproduit par Debenedetti (2, fig. 124, p. 175).

A La Paya, ce motif est figuré sur le fond de deux *puco* ornithomorphes (Ambrosetti, 6, fig. 131 et Boman, 2, t. I, pl. XV, fig. 29).

Un dessin en forme de S, mais constitué par une bande plus ou moins large, orne la base ou la panse d'un grand nombre d'urnes funéraires de la région diaguite et les écuelles qui les fermaient. Cet orne-

ment se dit que dire sculpteur avec subst qui nous a occupés jusqu'ici, car il n'est autre qu'une stylisation très poussée du fameux serpent à tête bipartite et cornichétique pour l'art de cette région. Cependant un peu provenant de Molino del Puente, province de Cotacaxa, présente une bordure petite en suite sur tout usage qui se compose de triangles à volute et de 9 quadrels. (Bruch, 2, fig. 41 a, p. 38).

Spirales (pl. XXXII, 163 et fig. 61). — Le décor de certaines vases du haut Pilcomayo et de la mission de Santa Rosa (Tordesillas, 14, fig. 78, p. 58) consiste en une grande spirale faisant de nombreux tours et qui occupe presque toute la surface extérieure du récipient. De même que la volute d'est, en certains cas, transformée en groupe, cette spirale a donné naissance au motif que l'on voit sur le vase de la planche LV, 3 et qui se compose d'une série de rectangles concentriques.

La spirale, comme élément décoratif indépendant, a une distribution beaucoup moins vaste que lorsqu'elle est combinée avec le triangle qu'elle surmonte. Dans l'aire géographique qui nous intéresse, elle n'est connue que sur quelques pièces de la Quebrada de Humahuaca (Debenedetti, 2, fig. 41 et 42, pp. 72-73; Brogante, fig. 170 et 178, pp. 170-171), sur une céramique de Calama (Oyarzun, fig. 10), de la Puna de Jujuy et de la vallée de Tucumán (Ambrosetti, 4, fig. 76, p. 68 et fig. 68, p. 72, t. LIV), sur un gant de Pelelíllos, dans la vallée de Santa María, province de Catamarca. (Outes, 1, p. 18, fig. 13).

Angles, triangles et lignes en zig-zag (pl. XXX, 1-48, pl. XXXI, figs. 75-108, 127). — Presque tous les goulots et pipes qui forment nos collections sont ornés sur le bord intérieur, à la base du col ou sur le haut de la panse, d'angles colorés, de séries de triangles à sommet pointu qui forment des bandes dentelées. Ce thème décoratif, simple et quelque peu monotone, varie d'un exemplaire à l'autre selon que le champ des triangles est orné ou entouré de points, que les sommets sont reliés par des angles ou des arcs de cercle ou, enfin, que ces triangles sont bordés ou non par une ligne brisée à laquelle ils font face.

Triangles et lignes en zig-zag ne constituent que rarement la décoration fondamentale des vases. Sur le haut Pilcomayo, le goulot de la planche LIII, 4, est le seul qui soit exclusivement orné de petites triangulaires et de lignes en zig-zag parallèles. Quelques pièces provenant d'Iruya et de Calipindi participent de la même simplicité.

A Tucma et à Tolloi, les séries de petites triangulaires ont constitué un motif particulièrement cher aux populations de la période chiriguanienne (Uhle, 4, pl. XVII, fig. 4; pl. XVIII, fig. 1, 2 et 4; pl. XIX, fig. 1 et; pl. XXII, fig. 4; pl. XXIII, fig. 3 et 4 et fig. 21 et 22, pp. 40-41).

Au Chili, sur les pièces influencées par l'art chiriguano, même abondance. (Latcham, fig. 38, p. 14; fig. 35, p. 27; fig. 58, p. 38; Medina, fig. 288).

Dans tout le nord-ouest de l'Argentine, les bordures composées de triangles peints, rayés ou réticulés, sont extrêmement fréquentes et ne forment pas un type assez nettement caractérisé pour qu'on cherche à en détailler la répartition. Celle-ci s'étend de la Quebrada de Humahuaca à la vallée de Yocavil (Bregante, p. 182).

Il est cependant une des variétés de ce motif qui mérite d'être examinée de près, car elle permet d'établir un parallélisme frappant entre la céramique chiriguano actuelle et celle du nord-ouest de l'Argentine et du sud de la Bolivie. Elle consiste en une bande dentelée ou série de pointes triangulaires et en une ou plusieurs lignes en zig-zag qui courent parallèlement à ces triangles. Ce décor figure dans mes collections sur les exemplaires de la planche XLI, 1 et planche LX, 4. La réplique archéologique de cet ornement est fournie par un vase de Tolomosa (département de Tarija, Bolivie), de Pabellon (Santa Maria, Catamarca), de Chañar Yaco (Catamarca) (v. Rosen, **2**, fig. 166, p. 169; Outes, **2**, p. 11, fig. 8; Lafone Quevedo, **1**, fig. 5 *e* et *f*; Huaca E., p. 42). Les fouilles des MM. Wagner à Llacta Mancta (province de Santiago del Estero) ont donné les fragments d'un plat dont les dessins rentrent dans cette catégorie.

Les triangles qui se détachent sur un fond semé de points (pl. XLVIII, 1) et qui forment une bande sur le *yambuí* de la planche XXXV, 2 ont leur équivalent préhistorique à Taltal sur un vase de la période chincha-atacama (Uhle, **4**, fig. 21, p. 40).

Les séries de triangles disposés horizontalement, sont très souvent associées à la décoration des vases apodes ou aryballes dont un si grand nombre ont été découverts dans le nord ouest de l'Argentine (v. par exemple, Boman, **2**, t. I, p. 297) et, en général, sur toute l'étendue de l'empire incasique.

Bandes festonnées (pl. XXXI-XXXII, 129-131). — Les séries de triangles, dont nous nous sommes occupés, sont souvent remplacées par des bandes festonnées (v. par ex. pl. XLIX, 3; L, 1 et LIII, 3). Le passage d'un de ces motifs à l'autre est, pour ainsi dire, imperceptible : il suffit que les triangles soient légèrement arrondis pour qu'ils prennent l'apparence d'une bande de festons. Dans le nord-ouest de l'Argentine, la même transformation s'est opérée à plusieurs reprises, et un bon exemple en sont les vases du Jachal (Bregante, pp. 179-181).

Triangles isocèles unis par le sommet (pl. XXXI, 116-122). — Deux triangles isocèles unis par le sommet, forment un dessin représentant schématiquement un sablier. Ce motif est assez courant sur la poterie chiriguano. Dans les régions voisines, il est moins fréquent et semble être particulier aux poteries d'origine incasique. Nordenskiöld (**14**, fig. 69 *a*, p. 157) a déjà signalé l'étroite ressemblance de cette figure, telle qu'elle apparaît sur quelques vases chiriguano, avec celle qui orne les plats or-

1:Métraux SF10 Chiriguano

nithomorphes du Cuzco. L'analogie s'étend aux lignes perpendiculaires qui séparent des suivants chacun des triangles affrontés. Cette décoration est typiquement incasique. Les ancêtres des Chiriguano ont copié ce motif sur quelques exemplaires incasiques, exactement comme les anciens habitants de Tilcara, de La Paya et de Catamarca qui les ont tracés : les uns, sur un vase à anse latérale (Bregante, fig. 320, p. 268), les autres, sur une tasse (Boman, **2**, t. I, pl. XII, fig. 26 et pl. XIV, fig. *f*), et les derniers sur un vase apode (Outes, **2**, pl. III, fig. 5). En dehors des « aryballes », ou des vases de type purement péruvien, le « sablier » est un motif d'emploi plutôt rare. Il a été peint sur un vase de Fuerte Quemado publié par Ameghino (t. I, pl. X, fig. 333) et sur un vase de Punta de Balasto (Lafone Quevedo, **2**, pl. VII, fig. *a*). D'autres exemples pourraient être cités, mais je n'ai pas l'intention ni les moyens d'être complet.

Cet élément décoratif n'est pas étranger non plus à la poterie chilienne (Latcham, fig. 42, p. 18 et fig. 45, p. 19 ; Medina, fig. 180, 202, 206, etc.). Il figure également sur la base d'un vase araucan trouvé dans le territoire du Neuquen. (San Martin, pl. 15, fig. 111).

Des dessins triangulaires en forme de dents, enserrant entre eux des losanges, ont été pyrogravés sur une calebasse de Calama dont l'ornementation constitue un pendant de celle de nos vases chiriguano.

Losanges concentriques (pl. XXX, 52-56). — Les séries de losanges concentriques, qui sont tracées sur bon nombre de vases de mes collections, avaient déjà été peintes sur les poteries de la période chincha atacama à Tacna et à Taltal (Uhle, **4**, pl. XX, fig. 2 ; pl. XXI, fig. 2 et Guevara, pl. entre pp. 42 43) et gravées au feu sur les calebasses de Calama (Oyarzun, fig. 6).

Ce dessin est, pour ainsi dire, classique sur les aryballes de l'Argentine (Boman, **2**, t. I, pl. XVIII, fig. 43 et Outes, **2**, pl. III, fig. 2).

L'appareil réticulé (pl. XXX, 59-64). — Plusieurs vases de ma collection portent sur la panse ou sur le col une bande réticulée. Sur le vase de la planche LIV, 2, ce sont des triangles qui offrent cette particularité. Au sujet de ce motif, Odilia Bregante (p. 162) s'exprime de la façon suivante : « La décoration réticulée se retrouve en pleine vallée de Yocavil, à côté de pièces qui portent le symbole du triangle à spirale et l'élément en gradins et même dans des cimetières modernes comme celui de Chañar Yaco (v. par exemple, Lafone Quevedo, **1**, pl. VII, fig. *a*). Mais c'est dans les régions du nord, à Salta et à Jujuy que ce réticulé se rencontre en plus grand nombre d'exemplaires et où il entre dans la composition d'ornements caractéristiques. A la Isla de Tilcara, au Pucará de Tilcara et dans d'autres localités, le matériel archéologique qui comporte cet appareil forme le type de céramique le plus intéressant et assez abondant pour être classé. »

Certains vases de la Isla de Tilcara et du Pucará de Tilcara ont, en

effet, comme nos vases chiriguano, une bande réticulée sur le bord. (Debenedetti, 2, fig. 45, p. 79 et Bregante, fig. 164, p. 166.)

Au Chili nous rencontrons des bandes, des triangles, des losanges, des rectangles réticulés et là encore s'affirme l'unité de ces différentes cultures en ce qui a trait à la céramique. (Latcham, fig. 25-28, p. 14 et Bregante, fig. 232, p. 192.)

Échiquier (fig. 76). — Une tasse que j'ai acquise dans la vallée d'Igüembé est décorée d'un dessin en échiquier brun et blanc. C'est le seul exemple que j'en connaisse en pays chiriguano. Dans le nord-ouest de l'Argentine, ce motif a une dispersion très vaste : il s'étend de la Quebrada de Humahuaca à la province de San Juan (Bregante, p. 196).

Fig. 82. — Le vase *b* provient du village chiriguano de Tintapaw (haut Pilcomayo). Il présente une extraordinaire ressemblance avec le vase *a* du Tilcara. (1/2 gr. nat.)

Il était courant au Chili (Latcham, fig. 7, p. 7; fig. 41, p. 18; fig. 55, p. 22, etc.). A l'époque postcolombienne il était encore en usage chez les Araucan du sud de Mendoza (Métraux, 6, fig. 12, p. 50).

Créneaux, lignes brisées, lignes en forme de Z (pl. XXXII, 154-155 et XXXIII, 200-206). — En essayant de définir, dans les pages précédentes, le style décoratif propre aux Chané de l'Itiyuro et aux Chiriguano de la région des missions franciscaines, j'ai mentionné ces lignes simples ou multiples qui, courant sur la panse du vase, forment des triangles, des crénaux et des Z à barres allongées ou unies. Au premier abord ces motifs, apparemment capricieux, semblent échapper à toute comparaison et l'on serait presque tenté de les croire autochtones ou constituant des réminiscences de l'art guyanais. On trouve, cependant, leur pendant dans l'archéologie du nord-ouest de l'Argentine et, comme prévu, dans celle de la Quebrada de Humahuaca.

Debenedetti (2, fig. 75, p. 132, et fig. 78, p. 135) reproduit un gobelet trouvé à la Isla de Tilcara qui, sur sa partie inférieure, porte une bande

Vases chiriguano en miniature (*yapepeni*) (servent de boîtes). Prov. : 1, 3 et 4, Yumbia ; 2 et 6, Ibopeyti ; 5, Saladito (haut Pilcomayo). Couleurs : motifs rouges et noirs sur fond blanc ; 5, fond rouge. (N° 1-3 = $^1/_3$ environ ; 4 = $^2/_3$; 5 = $^2/_3$; 6 = environ $^1/_3$ gr. nat.)

SF10 Chiriguano

composée de trois lignes parallèles qui se brisent à angles droits. C'est à juste titre que Mr. Debenedetti compare cette décoration à celle des vases chané dont il figure un exemplaire qu'il attribue erronément aux Choroti. La même remarque peut être faite au sujet de certains vases gravés de l'Arroyo del Medio qui, à certains égards, se rapprochent de nos vases chiriguano (Boman, 2, t. II, fig. 207, III, p. 843).

Beaucoup plus frappante encore est la ressemblance entre les *yambuí* chiriguano de ce type et deux vases de la région diaguite, trouvé : l'un à Molino del Puesto (Fuerte Quemado, Catamarca), et l'autre à Hualfin (Catamarca), et qui tous deux ont été publiés par Bruch (2, p. 87, fig. 88 et Id., 2, fig. 11, p. 8 et fig. 27, p. 13). Un *puco* de Llacta Manca, province de Santiago del Estero, offre un dessin similaire à en juger par un croquis de Mr. Duncan Wagner. L'origine andine de ce type de décoration ne saurait faire de doute.

Des motifs en forme de Z se distinguent encore sur un vase de Tacna de la période chincha-atacama (Uhle, 4, pl. XXI, fig. 1) et de San Felipe, Chili (Medina, fig. 68).

Les grands triangles qui courent sur la panse des *iru* et des *yambuí*, de la région des missions, ressemblent fort à un motif analogue qui couvre la surface extérieure de vases fabriqués par les Araucan du Neuquen (San Martin, pl. XV, fig. 3).

Dessin en forme de sourcil (pl. XLIX, 4). — Un vase de Saladillo (Pilcomayo) a pour seul et unique motif décoratif un étrange ornement en forme de sourcil stylisé qui se détache en blanc sur fond rouge et est situé sur le col. Ce dessin est constitué par deux lignes parallèles séparées par des points. En présence de ce curieux motif, on ne peut s'empêcher de penser immédiatement aux faces humaines peintes sur les urnes funéraires, de la région diaguite. Les organes du visage sont surplombés par une gigantesque arcade sourcillère qui, partant de la pointe du nez, descend à la hauteur des oreilles. La manière dont est tracée cette partie de la tête rappelle beaucoup la figure qui nous occupe ici.

Croix. — Le vase de la planche LX, 2, est orné sur la panse d'une série de croix inscrites dans des losanges. Ce signe constitue un élément décoratif dont les Chiriguano actuels font un emploi exceptionnel. Comme la plupart des motifs peints sur leurs vases, celui-ci n'a aucune signification précise. Une calebasse de la même région est décorée également de croix de Malte pyrogravées (v. pl. LXI, 1). On connaît la fréquence de cet ornement, symbolique ou non, sur les urnes funéraires du pays diaguite, principalement de la région de Santa Maria (Catamarca); fréquence telle qu'elle a motivé un livre de Quiroga dont quelques illustrations sont intéressantes.

La croix figure aussi sur un vase de Taltal de la période chincha-atacama (Guevara, pl. entre pp. 46-47 et 50-51), sur une calebasse de Cala-

ma (Oyarzun, fig. 16), sur une autre de la Puna de Jujuy (Ambrosetti, 4, fig. 70, p. 68, t. LIV) et sur une boîte de Morhuasi (Boman, 2, fig. 75, pl. XXVII), etc.

Figuration de la face humaine. — La face humaine n'est reproduite sur aucun des vases que j'ai recueillis. Nordenskiöld (10, fig. 28, p. 137) figure et décrit une poterie sur le rebord de laquelle était représenté un visage : le nez y était en relief et les autres organes peints. La similitude de ce motif avec celui qui orne certaines pièces de la région andine n'a pas besoin d'être soulignée.

Signe de signification inconnue. — Sur le *pambuí* de Macharetí (pl. LII, 2) a été peint un signe en forme de croissant, pourvu dans sa partie concave de deux traits figurant, peut-être, des pattes. Il s'agit, sans doute, d'un oiseau stylisé, présomption d'autant plus plausible qu'un autre vase de la même localité, et sorti de la même main, est décoré de figures d'animaux (chiens et crapauds) (pl. LII, 1).

Ce signe mystérieux a beaucoup d'analogie avec celui que l'on trouve sur un *puco* de Tolomosa, dans le département de Tarija (Rosen, 2, fig. 175, p. 112) et sur des plats de La Paya et qui, eux aussi, sont des stylisations plus ou moins poussées de l'image d'un oiseau. (Boman, 2, t. I, pl. X, fig. 22 et Ambrosetti, 6, fig. 33-40, pp. 56-61.)

Représentations zoomorphes. — Les figures d'animaux sont rares dans la poterie chiriguano, mais leur occurrence n'en accuse que mieux les similitudes de cet art avec celui des régions andines voisines. Les rangées de *paks* (*puco del monte*) sur le *pambuí* de l'Aguaray, forment le pendant des nandous des urnes funéraires diaguite et des oiseaux de La Paya. Le chien du vase de la planche apparaît presque identique au fond d'un *puco* de Molino del Puesto, Catamarca. (Bruch, 2, fig. 70, p. 72.)

Les comparaisons que nous avons faites pourraient, sans doute, être étendues, et maints autres rapprochements signalés entre la céramique moderne des Chiriguano et celle des populations aujourd'hui disparues du haut-plateau bolivien et du nord ouest de l'Argentine. Continuer une telle recherche serait superflu, car il n'est personne qui, connaissant l'art qui a jadis fleuri dans la région andine et celui des Chiriguano, hésiterait à établir un rapport entre les deux et ne fît dériver le second du premier.

Comme on pouvait logiquement s'y attendre, ces similitudes deviennent plus nombreuses et plus frappantes à mesure que, parti du sud, on s'avance vers le nord, dans la zone andine qui court parallèlement à l'habitat des Chiriguano et des Chaná. Le jour où la Bolivie orientale aura été explorée méthodiquement, on trouvera les modèles des vases que les ancêtres des Chiriguano ont admirés et copiés. A leur défaut, l'étude que nous avons poursuivie nous apporte la constatation d'un fait fort important. L'existence sur le haut Pilcomayo d'une céramique étroi-

tement apparentée à celle de la Quebrada de Humahuaca est un indice qui prouve, d'une façon certaine, que l'art propre aux anciens habitants de ces contrées était identique à celui de leurs voisins, et peut être frères de race, du haut plateau bolivien.

Je crois que c'est un tort de parler, à propos des Chiriguano, de culture andine ou incasique. Le premier de ces termes est trop vague et le second partiellement faux. Dans ce chapitre j'ai cherché à démontrer que la céramique chiriguano offre d'étroites affinités avec celle des civi-

Fig. 83. — Vase chané. Prov. : Tajnati (Aguaray, Chaco Salteño). Sur la panse : série de pubú (pasa del monte) en brun noir sur fond blanc. (1/, gr. nat.)

lisations qui, par leurs nombreux points de contact, semblent avoir subi une influence chincha ou atacama et qui ont précédé la culture des Inca. Si l'on compare la céramique actuelle des Chiriguano avec celle des Quicha du Cuzco, certaines analogies apparaîtront, mais elles ne seront ni assez abondantes, ni assez concluantes, pour établir une filiation directe. Les aryballes manquent ou sont rares, les plats ornithomorphes peu fréquents, etc.; par contre, nous avons vu combien multiples et étroits sont les liens de cette céramique avec celle de la période chincha-atacama. La céramique chiriguano se trouve, par rapport à celle du Cuzco, dans une situation analogue à celle du nord-ouest de l'Argentine : sur un fond andin, mais original, se sont superposées des influences venues du Cuzco. Cette action des Inca sur les Chicha est attestée aujourd'hui encore par

1:Métraux SF10 Chiriguano

la présence, chez les Chiriguano, de vases à pied du pôle par type iranaique et des vases ayoles de même origine. Relevant de la même influence, on peut ajouter certains motifs décoratifs dont je me suis déjà occupé.

La tradition arawak et amazonienne n'est guère représentée que par les bols à pied *(compoteras)*, les vases à panse cilaïée, ceux à corps tronconique et panse subsphérique, et peut-être par certains motifs (figurés en forme de T, pl. XXXVIII, 1).

La conclusion de ce chapitre sera : il existe aujourd'hui, pour quelques années encore, une civilisation qui, étroitement apparentée à celle des Chicha, continue un art antérieur à celui des Inca, mais influencé par eux. Puissa ce fait rendre les archéologues prudents.

CHAPITRE VII

Les calebasses

Le second art où les Chiriguano excellent est celui de la pyrogravure et de la gravure sur calebasses. Alors que la poterie était une activité essentiellement féminine, la pyrogravure était du ressort des hommes. Nordenskiöld (**3**, pp. 233-236) croit, tout à fait à tort me semble-t-il, que la pyrogravure est d'origine andine. Il avance à l'appui de cette opinion les avantages que la connaissance du métal offre à cet art. Cependant, les populations du haut Xingú, où l'influence andine ne s'est certainement jamais fait sentir, ont des calebasses pyrogravées, de même que les Guaté du haut Paraguay. La pyrogravure est également en usage chez les Indiens de la Guyane, chez qui une action de la civilisation inranique est fort problématique. La distribution de la pyrogravure démontre, à elle seule, qu'il n'est point besoin de posséder des objets en métal pour pouvoir pratiquer cette technique.

Si l'on compare les motifs qui ornent les calebasses que j'ai recueillies dans le Chaco avec ceux que présentent les calebasses pyrogravées trouvées dans le nord-ouest de l'Argentine, on est frappé de la similitude de leur style et des nombreuses analogies de détails qu'ils ont en commun. C'est ainsi que la croix de Malte qui orne une calebasse de Jujuy (Ambrosetti, **4**, p. 66, fig. 70, t. LIV) se retrouve identique sur les calebasses des planches LXI, 1 ; LXII, 1, et que les volutes d'un motif de Tastil (Boman, **2**, t. I, fig. 84 *c*) ont leur pendant dans les crochets incisés sur le spécimen de la planche LXI, 2. Sur le fragment d'une calebasse découverte dans la même région (Boman, **2**, t. I, pl. XXXII, fig. 64) et sur un autre exemplaire de La Paya (Ambrosetti, **4**, fig. 288, p. 324), nous avons le prototype de l'échiquier qui agrémente si souvent

les calebasses chiriguano (pl. LXI, 1 *a*, et pl. LXIV, 2). Les bandes réticulées qui encadrent le décor d'une des calebasses de Calama (Boman, 2, t. II, pl. LXXV, fig. 176 *b*) sont fréquemment incisées sur celles des Chiriguano (pl. LXVI, 1 et 4; pl. LXIX, 3, etc., par exemple) de même que les rangées de triangles à champ noirci qui figurent sur quelques calebasses de la Puna de Jujuy (Ambrosetti, 4, fig. 61-63, pp. 65-66; fig. 70-71, pp. 58-69, t. LIV) et sur le fragment de La Paya déjà mentionné. La ligne zigzaguée qui se détache en blanc sur l'appareil réticulé d'une des calebasses de Calama (Boman, 2, t. II, pl. LXXV, fig. 186 *c*) réapparaît presque identique sur la jolie calebasse de la planche LXII, 2.

Fig. 84. — Calebasse incisée et pyrogravée. Prov. : Caratindi (Vallée d'Iglesias). (1/1, environ de la gr. nat.)

Je ne puis donner meilleur argument en faveur de l'étroite analogie qu'offrent entre elles les calebasses de la région andine et celles des Chiriguano modernes, qu'en publiant la calebasse de la planche LXII, 3 *a* et *b*, trouvée en territoire diaguite dans la province de Catamarca (« La Quebrada », Valle del Cajón). Son décor se compose de bandes incisées et finement réticulées sur un fond noirci. Les crochets qui partent du cercle gravé sur le haut de la calebasse et des bords de celle-ci, rappellent étrangement les motifs analogues que nous avons vus sur les exemplaires chiriguano.

La spirale, qui semble avoir été un motif particulièrement cher aux pyrograveurs du nord-ouest de l'Argentine et du désert d'Atacama ne figure sur aucun des spécimens de mes collections, si l'on ne veut pas considérer comme des rudiments de spirales ou des spirales dégénérées, les crochets que nous voyons sur quelques calebasses chiriguano (pl. LXI, 2). Il est intéressant de constater que la spirale et le triangle à volute des calebasses andines sont typologiquement étroitement apparentés aux motifs analogues que les femmes chiriguano du haut Pilcomayo peignent sur leurs vases. Si ces dessins se sont mieux conservés dans la céramique que dans la pyrogravure, cela tient, sans doute, à ce que ce premier art est resté plus proche de ses origines. Les femmes, qui en ont le monopole, sont plus conservatrices que les hommes qui décorent les calebasses.

Sur presque toutes les calebasses de ma collection, les dessins pyrogravés alternent avec des motifs incisés. Il en est peut être de même pour les calebasses de la région andine. A en juger par les excellentes photographies que Boman (2, t. II, pl. LXXVI) nous en donne, et par

l'exemplaire de la vallée calchaquí que je publie ici, c'est à tort que on savant les considère comme ayant été entièrement pyrogravées. Lorsqu'un Chiriguano incise au couteau un dessin sur une calebasse, il a toujours soin de remplir les traits gravés avec de la cendre pour les faire ressortir. Ce procédé, à première vue, peut se confondre avec la pyrogravure proprement dite.

Un simple coup d'œil sur les planche LXI-LXXI permet de se rendre compte que la pyrogravure et la gravure sur calebasses n'obéissent pas à des règles stylistiques aussi rigides que la poterie. Ces calebasses diffèrent fortement les unes des autres et c'est à peine si quelques motifs semblent être préférés à d'autres. A quoi tient cette diversité? Je la crois artificielle et je suis persuadé que jadis cet art obéissait à des normes précises, en un mot qu'il y avait autrefois un véritable style de la pyro-

a b

Fig. 10a et b. — Calebasse gravée. Le bord seul en a été légèrement pyrogravé. Sur un côté on voit un être digne en pensée, sur l'autre de : un cerceau (?) et un oiseau. Prov. : Mazart (Vallée d'Iglesuela). (¼, environ de la gr. nat.)

gravure et de la gravure sur bois. Comment expliquerait-on autrement que ce sont précisément les plus belles pièces de ma collection qui soient en même temps les plus anciennes et les plus semblables aux prototypes andins (pl. LXI, 1 et 2; LXII, 1 et 2; LXIV, 2; LXVIII, 2 et 3, etc.). N'oublions pas que la pyrogravure est une activité masculine et que les hommes sont plus accessibles que les femmes à toutes les innovations. En outre, ceux-ci sont allés, pour la plupart, en Argentine et ils en ont rapporté avec une nouvelle mentalité, des modèles et des inspirations étrangères à leur ancienne tradition. Cette influence européenne est puissante en bien des cas : c'est ainsi que la calebasse de la planche LXVII, 3 et celle de la planche LXIX, 1 est ornée de chiffres arabes. Les calebasses de la planche LXIV, 1, LXV, 1 et 5, LXIX, 5 sont décorées de fleurs ou d'étoiles stylisées qui n'ont rien d'indien. L'action des blancs et de leur mauvais goût est évidente dans les motifs peints au ronon qui agrémentent la calebasse de la planche LXV, 3.

Les représentations anthropomorphes ou zoomorphes sont plus courantes sur les calebasses que sur la poterie. Un bonhomme fortement sché-

matériel est figuré sur la calebasse de la planche LXIII, 1 a et b, sur la calebasse de la planche LXIII, 2 a est été gravée des chiens, sur celles des planches LXIII, 1; LXVIII, 3 a et b; LXIX, 2; LXXI, 3, des oiseaux. Un lama a été représenté d'une façon fort expressive sur la calebasse représentée 2 b de la planche LXIII et sur la calebasse de la figure 3 b et b on reconnaît un cheval et un bœuf, paissant en jaguar. Trois poissons et un oiseau apparaissent sur l'exemplaire de la planche LXVII, 2.

Les indiens de la mission d'Ivo, et ceux de la vallée de Caipipendi, peignent leurs calebasses en rouge. Cette couleur ne s'efface que fort difficilement et ne s'étend pas en dehors du pourtour des dessins colo-

a b c

Fig. 1000. 1 et 2. — Calebasses en miniature. a vues à l'horizontale et b vues d'en haut. Chiriguano de l'Isoso. Photo. — 3. Tapanaki, porte de l'épaule droite (Kaiabi). 4. Tucumanda (Kaiabi) (Métraux, c. 32. 1). (Archives de la gr. mis.)

lorée. Pour obtenir ce résultat, les Chiriguano commencent par enlever l'épiderme qui la recouvre, sauf aux endroits qui doivent rester sans coloration. Ensuite ils enduisent la surface extérieure de rouge et graissent le trigonocarpe là où ils l'ont conservé. Les figures se détachent alors en rouge sur fond jaunâtre. Un procédé analogue est en usage chez les Tupinamba (Nordenskiöld, 5, p. 244). Les motifs qui ornent la plupart des calebasses peintes que j'ai recueillies à Ivo sont, malheureusement, fortement influencés par des modèles européens et, à côté de très jolis dessins, on en trouve d'autres de la plus détestable banalité.

CHAPITRE VIII

Le Tissage

Le tissage est une industrie très répandue chez les Chiriguano; malheureusement, à l'époque actuelle, ses produits sont quelconques et, depuis qu'ils emploient les couleurs à l'aniline (1), souvent fort laides. La plupart de leurs ponchos sont copiés de ceux des métis boliviens.

(1) Les Chiriguano extraient la couleur bleue d'une plante qu'ils appellent *tarabuni*, c'est-à-dire « herbe bleue ». Ils en peuvent également la cultiver. Pour colorer leurs fils ils ajoutent une sorte cendre mêlé sur le tipoy, de cette façon, mais cette recette simple, elles les transportent dans une décoction de cette herbe. Parfois ceux

— [illegible] —

Le type du métier à tisser qui prédomine chez les Chirigueno, est celui qui a reçu le nom de métier à tisser vertical. Le phonème LLLLLL en donne une idée. Deux fourches sont plantées en terre. Elle environnent deux

Fig. 41. — Femme Chirigueno [illegible] à tisser. (Photo. G. M.)

[illegible] parallèles dont l'une, celle d'en haut, est une moitié de mortier en bois dur et lourd. Une fibre de la chaîne [illegible] d'une, [illegible] à chaque bout environnant une [illegible] [illegible]

[illegible] à ce bastillon des fils [illegible] que le gaît [illegible] le gaît [illegible]. Les fourches d'un métier qui atteint facilement 4 à 10 mètres, l'Ierne [illegible], [illegible] également des [illegible] blanc, mais pour cela il faut qu'elles soient [illegible] et que l'ajoure soit en [illegible].

Avec le gaît, [illegible] qui [illegible] du tissu de l'algarrobo (*Prosopis*), les femmes Chirigueno [illegible] les fils qu'elles [illegible] [illegible] en blanc. (*Dictionnaire Chirigueno-Espagnol y Espagnol-Chirigueno*, etc., pp. [illegible] à [illegible]).

[illegible] parallèlement au sol. Une fois le tissu fini, cette feuille est retirée et d'un coup le pinceau d'étoffe, qui formait jusque là une bande sans fin, s'ouvre (fig. 91).

Le peigne du mon suitiere à tisser européens est remplacé ici par un

[illegible] du fils qui seulement alternativement un fil de la chaîne puis l'autre.

Le tissage est garanti à l'aide d'une navette dont le va-et-vient est facilité par un autre du tissement (*[illegible]*) qui écarte les fils de la chaîne. Ce dernier instrument est employé pour serrer le tissu chaque fois que la trame a passé. Un entrecroisée de manchon taillé en pointe (fig. 92) ou en bâtonnet pointu en fonctions (fig. 93 et 94) permet de déplacer les

fils de la chaîne d'avant en arrière une fois qu'ils ont été croisés à l'aide du peigne. La femme qui vient de passer la trame saisit à pleine main ce poignard et d'un coup sec soulève les fils de la chaîne après avoir tiré sur le peigne. Les travaux difficiles, probablement l'exécution de quelques figures compliquées, se font avec une aiguille en bois, dont malheureusement je n'ai pas vu l'emploi.

Fig. 69 a, b, c. — Fuseaux chiriguano du type *ba-ñiri*. Prov. : a, Tasiti; b, Tintapaw ; c, Tasiti (haut Pilcomayo). Ces fuseaux sont pourvus à leur partie supérieure d'une rainure qui permet de fixer le fil. La fusaiole de a et b est en terre cuite, celle de c en bois. (1/1, gr. nat.)

Les Chiriguano ont leur métier à tisser en commun avec nombre de tribus de l'Amérique tropicale et ils l'ont, sans doute, connu au Paraguay déjà, du moins sous une forme plus rudimentaire. On peut voir dans quelques villages chiriguano des métiers à tisser du type incasique ou quichua, c'est-à-dire, horizontaux. La chaîne est alors fixée à une cordelette le long d'une pièce de bois et le tissu est enroulé à mesure qu'il avance.

Les bandeaux frontaux et les ceintures sont tissés avec des métiers d'un type analogue à celui qui vient d'être décrit. Les fils de la chaîne sont fixés à une boucle en coton qui est attachée à un pilier de la hutte. Au fur et à mesure que le tissu se fait, on l'enroule autour de deux bâtonnets ou de deux épis de maïs qui sont attachés à l'extrémité inférieure de la chaîne (pour ce type de métier à tisser, voir Nordenskiöld, **10**, fig. 4, p. 175).

Je reproduis à la figure 95 un bandeau frontal *tiambi*. Aujourd'hui ces ornements sont devenus fort rares et seuls quelques vieillards les portent encore. Notre exemplaire est teint avec des couleurs naturelles.

Toutes les indiennes qui vivent hors de l'influence des missions portent encore le *tipoy*, c'est-à-dire, une sorte de long fourreau qu'elles attachent sur l'épaule à l'aide d'une épingle de nourrice actuellement et jadis

[facing p. 434]

Métier à tisser chiriguano, du type dit « arawak ». Prov. : Ivu. (1/14 gr. nat.)

d'une épine. Autrefois ces *tipoy* étaient tissés par les indiennes sur des métiers du type aruwak. Ils étaient en coton et teints en bleu noir. Il

Fig. 90. — Dessin indiquant comment les fuseaux sont arrangés à l'intérieur d'une hutte chiriguano. Ils sont enfilés dans les trous ménagés le long d'un bambou qui est suspendu contre les parois de l'habitation. (1/4 gr. nat.)

est presque impossible de nos jours de trouver une femme dont le *tipoy* ne soit pas en *chamalote*, sorte de cotonnade bon marché que les Syriens et les métis vendent à haut prix à nos Indiens. Dans la vallée de Caipi-

Fig. 91. — Schéma indiquant comment sont disposés les fils de la chaîne sur un métier chiriguano du « type aruwak » (*d'après Nordenskiöld*).

pendi, j'ai rencontré deux vieilles qui conservaient encore le *tipoy* des anciens temps. Elles ne voulurent me le céder à aucun prix. A Caruruti, un vieux bonhomme, désireux de faire une bonne affaire, me vendit fort

cher celui de sa femme pour s'acheter de l'eau-de-vie. Il fallait bien fêter dignement Pâques.

Les chemises *(tiru-kumbaé)* que les hommes arboraient jadis, n'existent plus que dans le souvenir des vieillards.

Les tissus actuels des Chiriguano n'offrent presque aucune originalité.

Fig. 92. — Métatarsien de mammifère taillé en forme de poignard que les femmes Chiriguano utilisent pour crouser et serrer ensuite les fils de la chaîne. Prov. : Ivu. (1/2 gr. nat.)

Figs. 93-94. — Poinçons (*tirsuni*) pour crouser et serrer ensuite les fils de la chaîne. Prov. : Salado grande. (1/2 gr. nat.)

Ils sont généralement unis et s'ils présentent quelques motifs linéaires, ceux-ci sont servilement copiés sur des modèles provenant de la région andine. Les tissus quichua, prototypes de ceux des Chiriguano, n'en sont pas moins d'une meilleure qualité et d'une plus grande richesse d'ornementation. Outre les dessins purement géométriques, ils sont fréquemment agrémentés de petites figures représentant des animaux ou des bonshommes. Rien de semblable chez les Chiriguano. La simplicité

de leurs tissus forme un contraste frappant avec la richesse et la variété de la décoration de leur céramique. Leur infériorité à cet égard est loin de correspondre à l'habileté qui leur est habituelle dans toutes leurs activités. Il suffit de voir les travaux admirables que les fillettes chiriguano exécutent dans les missions pour se rendre compte de ce dont elles auraient été capables si des traditions historiques ne les avaient pas tenues à l'écart de cet art. Leurs lointains ancêtres Tupi-Guarani ne connaissaient que des formes rudimentaires du tissage et l'on peut affirmer que

Fig. 85. — Bandeau frontal (tembé). Prov. : Yuruiba (1/2 gr. nat.)

cette industrie est restée étrangère à toutes les tribus tupi qui n'ont pas subi l'influence d'une nation plus civilisée qu'eux. Les Tupinamba de la côte du Brésil ne pratiquaient, à ce qu'il semble, que la technique du double fil *(Doppelfadentechnick)* au moyen de laquelle ils fabriquaient leurs hamacs. Les anciens chroniqueurs signalent l'usage du *tipoy* parmi les anciens Guarani du Paraguay, ce qui est un indice de l'existence du tissage chez cette fraction de la famille tupi. Leurs descendants actuels, les Kainguá, pourraient passer pour d'habiles tisserands à en juger par la finesse des quelques tissus qui ont été recueillis chez eux. Ce sont pour la plupart de larges ceintures qu'ils passent entre leurs jambes et nouent autour des reins. En réalité le tissage en est chez eux à ses dé-

buts comme en fait foi leur métier à tisser. Celui-ci n'est qu'un simple cadre autour duquel sont enroulés les fils de la chaîne. La trame est passée fil après fil comme pour le ravaudage.

Ce sont sans doute les Chané qui ont appris aux Chiriguano à tisser et comme probablement ils n'avaient pas atteint dans cet art un niveau

Fig. 98. — Bonnet en laine tricoté (*sakuiru*). Prov. : Xawirenda. Cette coiffure est une pièce unique et il est possible qu'elle ne soit pas chiriguano. (1/, gr. nat.)

très élevé, ils n'ont pu transmettre à leurs successeurs et suzerains, les Chiriguano, qu'une technique encore peu développée que ceux-ci n'ont guère améliorée.

Ce contraste entre une céramique très évoluée et un art du tissage encore rudimentaire est caractéristique pour les Indiens des régions tropicales et subtropicales de l'Amérique du Sud, du moins pour ceux qui peuvent passer pour relativement civilisés, comme les Arawak et les Karib.

CHAPITRE IX

La vannerie et ses techniques

1. CONSIDÉRATIONS GÉNÉRALES

La vannerie est loin d'être aussi abondamment représentée chez les Chiriguano et les Chané que chez les tribus indiennes du bassin de l'Amazone ou des Guyanes. Le rôle secondaire que celle-ci joue dans leur industrie est dû à la nature du sol sur lequel ils vivent et au climat dont ils jouissent. Les palmiers à feuilles pennées manquent, à ma connaissance du moins, sur toute l'étendue de leur territoire; quant à ceux dont les feuilles s'ouvrent en éventails, s'ils sont nombreux en certains endroits, leur répartition est loin d'être uniforme. Les palmiers que les indiens Chiriguano appellent *karandaí (Copernicia australis)* forment, par places, de véritables bosquets, alors que sur de vastes régions ils font défaut ou n'apparaissent que clairsemés. J'en ai vu un nombre considérable entre San Luis et le río Saladito et j'ai traversé quelques grandes palmeraies entre Yacuiba et Villamontes, sur le Pilcomayo, et au sud du río Parapití, allant de Cuevo à Pipi. J'ai constaté, en outre, que la répartition du *karandaí* coïncidait avec celle d'un certain type de vannerie *(twilled work)* pour lequel les indiens emploient ces feuilles.

Fig. 97. — Hotte employée par les indiens Guarayú pour transporter de lourdes charges. *(D'après Nordenskiöld.)*

Nordenskiöld (**10**, p. 169) conte une anecdote qui illustre bien l'influence que le milieu exerce sur cette industrie. Ce savant était accompagné, lors d'un de ses voyages dans le Chaco, de quelques indiens Guarayú qui le suivirent jusqu'en pays chiriguano. Les Guarayú ont coutume de charger leurs bagages et les produits de leurs champs dans des hottes d'un type spécial (voir fig. 97) qui ont une vaste distribution dans l'Amérique tropicale, des Guyanes au Paraguay (Nordenskiöld, **11**, p. 171 et carte 21). Leurs hottes étant en mauvais état, les Guarayú voulurent en faire de nouvelles et furent fort ennuyés de ne pas trouver dans la région où ils étaient parvenus, les palmiers à feuilles pennées dont ils avaient coutume de se servir à cet effet. Or, Guarayú et Chiriguano sont frères de race et de langue et ont émigré à la même époque du Paraguay pour s'établir dans le voisinage des Andes. En quittant leur pays d'origine, les uns comme les autres connaissaient ce type de hottes qui était utilisé par leurs ancêtres les Guarani, les Tupinamba de la côte du Bré-

sil, et est encore en honneur chez leurs cousins germains du Paraguay, les Kaingua (Métraux, **2**, p. 206). La disparition de cet élément culturel chez les Chiriguano est dû, uniquement, au manque de matières premières appropriées.

Pour suppléer à l'absence de hottes, indispensables à un peuple d'a-

Fig. 98. — Filet à porter (*aoapoka*) des indiens Chiriguano. Il est maintenu sur le front par une courroie qui ne figure pas sur la photographie. (Carnutt). (1/5 environ de la gr. nat.)

griculteurs, les Chiriguano ont emprunté à leurs voisins du Chaco, soit aux Mataco, soit aux Choroti, les filets à porter (en chiriguano : *añapoka)* dont l'emploi est si répandu chez ces derniers et est si caractéristique de leur civilisation. Les filets à porter sont aujourd'hui d'usage général chez les Chiriguano et, dans tout village, chaque famille en a au

Fig. 99. — Filet à porter *toba* employé par les indiens Chiriguano de la mission de Macharetí (1/5 environ de la gr. nat.)

moins un (fig. 98 et 99). En dépit de cette vaste diffusion, l'*añapoka* des Chiriguano trahit son origine par sa forme et sa technique (voir fig. 100 et 101) qui, l'une et l'autre, se retrouvent chez les peuplades que nous venons d'énumérer (Nordenskiöld, **9**, p. 298, technique I). Les Chiriguano, bien que considérablement plus avancés dans la voie de la civilisation que les peuplades semi-nomades du Chaco, ne les égalent en aucune

façon dans l'art de faire des filets. Les *añapoka*, que j'ai recueillies, ne peuvent se comparer aux profondes sacoches que les Matako ou les Choroti, par exemple, confectionnent dans le même but. Dans le village de Machareti, où des Toba vivent avec des Chiriguano, ce sont ceux-là qui fournissent à ces derniers les filets à porter dont ils ont besoin (voir fig. 99) (1).

Tout laisse donc supposer que, dans les premiers temps de leur installation sur les confins occidentaux du Chaco bolivien, les Chiriguano se procuraient par échanges les filets à porter destinés à remplacer les hottes qu'ils avaient utilisées jusqu'alors. Ce n'est que par la suite qu'ils ont appris à les faire eux-mêmes, n'adoptant d'ailleurs que la plus simple des techniques et la plus facile. Nous pouvons, grace à cet exemple, saisir sur le vif les causes qui ont motivé l'adoption d'un nouvel élément culturel après la disparition d'un autre qui rendait les mêmes services. Pour cela, deux facteurs sont entrés en jeu, le milieu physique et le milieu ethnique. Il y a eu, à la fois, adaptation et emprunt. Ce fait prouve aussi qu'un peuple relativement civilisé n'hésite jamais à s'approprier les inventions de tribus plus barbares quand il y trouve son profit.

Fig. 100. — Technique du filet de la figure 98 (Technique I selon Nordenskiöld, 9, p. 209)

La pauvreté actuelle de l'industrie de la vannerie chez les Chiriguano n'implique pas qu'elle soit insignifiante et dénuée de valeur. Peut-être, avant la décadence de cette nation, était-elle plus largement représentée dans chaque village. J'ai pu observer que la disparition de la vannerie

(1) Nordenskiöld (10, p. 163, fig. 49 A) donne le détail de la technique d'un filet à porter chiriguano. Cette technique ne se retrouve sur aucune des *añapoka* que j'ai rapportées du Chaco. Je suppose qu'il s'agit d'un filet à porter que les Chiriguano auront acheté à des Choroti qui, avec les Ashluslay et les Matako, semblent être les seuls à faire usage de cette technique. La technique que nous indiquons à la figure 101, est connue des Ashluslay, des Choroti et des Tapiete. Nordenskiöld (9, p. 208) ne la mentionne pas chez les Toba où elle existe néanmoins comme en témoigne l'*añapoka* de la figure 99.

allait de pair avec l'influence des blancs. Mais, pour les raisons que j'ai données plus haut, je ne crois pas qu'en aucun moment on ait pu trouver chez les Chiriguano cette abondance d'objets en vannerie que les voyageurs signalent chez les indiens de la Guyane ou du bassin de l'Amazone. Jadis, alors que les ancêtres des Chiriguano vivaient encore au Paraguay et au Brésil, ils possédaient une vannerie identique à celle des tribus habitant les régions auxquelles j'ai fait allusion. La preuve en est fournie par la survivance chez les Chiriguano actuels de types de paniers, de corbeilles, d'éventails à feu et de cribles, dont nous ne retrou-

Fig. 101. — Technique du filet de la figure 99. (Technique V selon Nordenskiöld, 8, p. 20e)

vons l'équivalent exact que dans la Guyane ou le bassin de l'Amazone. Comme nous le constaterons au cours de cette étude, l'identité entre ces deux aires ethniques est, à ce point de vue, parfaite. La seule difficulté est de savoir s'il s'agit, dans ce cas, des restes d'une industrie propre aux indiens Chané d'origine arawak et dont l'influence sur les Chiriguano a été considérable, ou si cette vannerie ne fait que continuer celle des anciens Guarani émigrés. A mon sens, le problème n'a pas besoin d'être posé. La vannerie des anciens Guarani ou des Tupinamba ne différait essentiellement, ni par sa technique ni par sa forme, ni par ses procédés d'ornementation de la vannerie du nord de l'Amérique méridionale (Métraux, 2, pp. 249-255). Elle devait offrir plus d'un point de contact avec celle des Chané et nous devons considérer la vannerie moderne des Chiriguano comme l'héritière de la vannerie commune à ces deux

nations. Remarquons, en passant, que la vannerie des populations de l'Amérique tropicale offre une certaine unité. C'est cependant dans les Guyanes qu'elle a atteint sa perfection.

Après leur grande migration au pied des Andes, les Chiriguano semblent avoir adopté une vannerie d'une technique nouvelle qui, sans doute, était ignorée de leurs ancêtres et frères de race du Paraguay et du Brésil. A cette technique appartiennent tous les paniers que dans les pages suivantes je range sous la rubrique de *wicker work*. Comme nous le verrons, cette technique existe aussi dans les Guyanes et il est possible qu'elle ait été apportée dans le Chaco bolivien par la nation arawak des Chané. Le centre de dispersion des Arawak doit être placé au nord de l'Amazone et avant l'invasion des Chiriguano, la tribu arawak des Chané était établie sur toute l'étendue du territoire que les premiers occupent actuellement.

A côté de cette technique il en existe une autre, connue des Chiriguano depuis des temps immémoriaux et bien avant leur grande migration; les ethnographes de langue anglaise, lui donnent le nom de *twilled work*. Aucun autre type de vannerie ne possède une telle extension. Cette technique domine dans toute l'Amérique tropicale, des Antilles au Paraguay, et vers le sud s'arrête au Chaco. Les Chiriguano sont les seuls indiens du Chaco où le *twilled work* soit d'un usage courant. Ce type de vannerie existait sur la côte du Pérou ancien, mais son importance n'y était pas grande et il n'apparait que sur des corbeilles à ouvrage.

La vannerie en *wicker work* et celle en *twined work* n'ont pas, chez les Chiriguano, une répartition identique. Les paniers du premier type abondent dans les villages du haut Pilcomayo (Saladito, Salado Grande et Chico, Ibopeyti et Yumbia) et vont jusqu'à la mission d'Ivu. Ils cessent, ou se font rares, dans le reste du pays chiriguano, notamment dans la vallée de Caipipendi où dominent, presque exclusivement, les paniers du second type *(twilled work)*. Ils y ont là une vaste diffusion et la beauté de leur facture, les ornements dont ils sont pourvus, les mettent bien au-dessus de la vannerie de n'importe quelle autre zone, et même de celle de tribus vivant dans des contrées plus riches en palmiers.

J'ai recueilli, dans les huttes du haut Pilcomayo quelques paniers en *twilled work*, mais ils y étaient rares, souvent incomplets et déchirés. J'ai eu l'impression qu'ils étaient parvenus là par voie d'échanges commerciaux. En tous les cas, les indiens ne tressent plus de paniers de ce type et il est possible que leur disparition ait donné de la valeur aux échantillons qui en restent. Cela expliquerait l'absence de tout exemplaire neuf et la conservation d'anciens paniers presque hors d'usage. Quoiqu'il en soit, à l'heure actuelle, le véritable centre de la vannerie en *twilled work* est la vallée de Caipipendi, et celui de la vannerie de

wicker work, la région du haut Pilcomayo. Comme dans les missions au nord et au sud du Pilcomayo, les conditions de vie des Chiriguano ont subi de profondes modifications, j'ignore quelle a dû être jadis la distribution respective de ces deux techniques. Nous trouverons cette difficulté chaque fois que nous aurons à nous occuper de la diffusion d'un élément culturel propre à ces indiens.

La vannerie en *wicker work* a subi fortement l'influence européenne. Les agents en ont été les métis du département de Tarija qui vivent en contact permanent avec les Chiriguano. Cette action étrangère sur les paniers appartenant à cette technique, se manifeste par des modifications des formes originales et des améliorations de détails, telles que les anses en fer à cheval.

Je n'ai trouvé chez les Chiriguano aucun panier tressé suivant la technique dite « en spirales » *(coiled basketry)*, bien qu'elle ait été autrefois en usage chez les populations andines qui vivaient et vivent en contact avec les Chiriguano. La vannerie « en spirales » s'est maintenue sur le haut plateau, comme l'atteste le panier de la figure 103 que j'ai acheté à La Quiaca.

2. VANNERIE EN « WICKER WORK »

Mason (p. 228) désigne sous le nom de *wicker basketry* un type de vannerie obtenu suivant la technique suivante : une armature rigide composée d'éléments épais et solides, est entrecroisée par des éléments plus minces et flexibles. Au cours de ce travail, j'appellerai *chaîne* les éléments rigides de l'armature, et ceux qui les croisent *trame*. La trame passe alternativement sur et sous chaque élément de la chaîne. Cette technique nous est bien connue : c'est celle de nos corbeilles, malles, paniers et hottes en osier (voir fig. 105).

En raison de sa simplicité même, on est en droit de supposer que cette technique est ancienne. Elle n'est qu'une variété du *checker work*, la plus élémentaire de toutes les techniques. Par *checker work*, on entend le procédé qui consiste à entrelacer des bandes flexibles de façon à obtenir un dessin en échiquier. La seule pièce de vannerie faite suivant cette technique, que je connaisse dans la région dont nous nous occupons, est un panier qu'Eric von Rosen (**1**, fig. 134, p. 122) a obtenu des Choroti qui campaient près de Tatarenda. Je partage l'opinion de cet explorateur qui considère cet objet comme étant d'origine chiriguano.

En dépit de son caractère simple et archaïque, la vannerie en *wicker work* est rare en Amérique du Sud. Selon Nordenskiöld (**10**, p. 171, et **11**, p. 198) on la trouve chez les Araucan, les Yurakare, les Atsawaka, les Tambopata Guarayú (Chama), les Yamiaka et chez les indiens de la Guyane, en particulier chez ceux de la région du Roroima.

Carte 1, indiquant la distribution de la technique dite wieber werk

1:Métraux SF10 Chirigu[illegible]o

TABLE DE LA CARTE 1

Distribution de la technique de vannerie dite « wicker work »

Numéros de la carte	Tribus	Auteurs	Remarques
1	*Chiriguano et Chané*		
2	*Diaguite*	Museo de Tucumán n° 305	Des empreintes sur le fond d'un vase m'ont permis de découvrir l'existence de cette technique dans cette aire géographique.
3	*Araucan* du Chili	Latcham, p. XXXV (1)	
4	*Araucan* de l'Argentine	Musée national de Buenos-Aires (collection Palavecino).	
5	*Yurakare*	Nordenskiöld, 11, fig. 30 p. 128	
6	*Atsawake, Tambopata-Guarayú*	Nordenskiöld, 11, p. 198	
7	*Palikur*	Nimuendajú, fig. 23, p. 49	
8	*Siusi* et *Kaná* du rio Ainry	Koch-Grünberg, 2, t. II, fig. 142*a-d*, p. 221	
9	*Patamona, Makusi, Arrkuna*	Roth, p. 140, pl. 105 B et C	
10	*Arawak*	Roth, pl. 104 B	

Ces indications demandent à être complétées. La technique dite *wicker work* était connue, à ce qu'il semble, des anciens Diaguite. Un vase provenant d'une des vallées andines de la province de Tucuman, porte gravées sur sa base les empreintes laissées par une claie ou panier en *wicker work* sur lequel la potière avait placé ce récipient lorsque l'argile en était encore molle (fig. 102). Cette découverte ne m'a pas surpris : depuis longtemps déjà j'avais supposé que cette façon de tresser les corbeilles n'était pas étrangère aux peuples des Andes. Comment aurait-on pu expliquer autrement l'occurence du *wicker work* chez les métis et les indiens du département de Turija, les Araucan et les indiens Chiriguano du haut Pilcomayo?

La Guyane forme une seconde aire de dispersion de cette technique, sans qu'elle y soit cependant très commune. Les sachets dans lesquels les Patamona mettent le coton dont ils pourvoient les flèches de leurs

(1) LATCHAM, R. E., *Ethnology of the Araucanos*, in *The Journal of the Royal Anthropological Institute of Great Britain and Ireland*, vol. 31, London, 1904 cité d'après Nordenskiöld, 10, p. 171.

sarbacanes avant de les souffler sont en *wicker work*, de même que les *pegalls* avec les motifs dits « armadillo » des Arawak, Patamona et Makuši. Les paniers en forme de carafes ou de bouteilles des Siusí et des Kauá du rio Aiary constituent également de bons échantillons de cette technique. (Sur les modalités et la distribution de cette technique, v. Roth, p. 140 et pl. 104, 105 et 106 et pp. 329-331.)

En Amérique du Nord, la distribution de cette technique est plus vaste. Elle est connue des indiens du Canada oriental et abonde dans le

Fig. 182. — Base d'un vase provenant de la région montagneuse de la Province de Tucumán et portant les empreintes d'une claie ou d'un panier en wicker work sur lequel il reposait pendant sa fabrication.

sud du Mexique et dans l'Amérique centrale. Elle apparaît clairsemée, de ci de là, sur la côte du Pacifique et dans le bassin intérieur.

C'est dans cette technique que sont faites la plupart des nasses à poissons, les enclos pour arrêter le gibier dans les battues et les paniers grossiers servant au transport de nombreux objets.

Si l'on examine les paniers de ce type chez les Chiriguano, on sera sans doute frappé de constater que plusieurs d'entre eux affectent la forme de pièces de céramiques. Cette ressemblance est encore accentuée du fait que quelques-uns (voir pl. LXXV, 2) sont munis d'anses latérales à l'instar de vases. L'interférence entre ces deux industries est évidente.

Les anses en fer à cheval qui surmontent certains de ces paniers (pl. LXXV, 1 et 3) me semblent provenir de l'imitation de vanneries européennes ou métisses. J'ai trouvé, chez les métis des versants orientaux des Andes, des paniers qui avaient leurs répliques exactes chez les Chiriguano (voir, par exemple, figure 108) et attestaient éloquemment l'emprunt de ces derniers. D'ailleurs, ceux-ci donnent aux paniers de forme européenne le nom espagnol de *canasto*.

Fig. 108. — Petit panier en vannerie en spirale (coiled basketry). Achetés à la Quiaca. (1/1, gr. nat.)

Parmi les paniers en *wicker work*, il en est quelques-uns (pl. LXXV, 4) qui rappellent singulièrement par la forme et la technique, ces paniers de la Guyane brésilienne que Koch-Grünberg (2, t. II, p. 221, fig. 242 *a*, *b*, *c*) compare à des carafes. (Cf. aussi Roth, pl. 104, fig. C.)

Description de paniers en « wicker work »

Figure 104. Longueur: 20 centimètres; largeur: 14 centimètres; hauteur: 14,5 centimètres. Provenance: Ibopeyti (région du haut Pilcomayo).

Cette petite corbeille a été faite suivant la technique dite *wicker work*, c'est-à-dire, que les tiges ligneuses qui la constituent ont été entremêlées de telle façon, que les éléments de la trame passent alternativement au-dessus et au-dessous de ceux de la chaîne. Ceux-ci sont au nombre de dix: quatre se dirigent dans le sens transversal et six dans le sens longitudinal. Ils sont *enjambés* et maintenus par les tiges de la trame. La planche LXXIII donne une idée très exacte de la technique que je viens d'essayer de définir.

Les tiges fibreuses qui constituaient la chaîne et dépassaient de beaucoup les bords du panier, ont été replicées en arc et assujetties dans le tissu. Elles y ont été glissées à côté d'un autre élément de la chaîne après

avoir enjambé l'élément voisin (voir fig. 105). Les petits côtés du panier que l'on voit sur les figures 104 et 105, semblent de ce fait être formés par une chaîne dont chaque élément serait double. La bordure est régulière et solide.

Le panier est muni d'une corde de suspension en fibres végétales. J'ignore le nom scientifique et vulgaire de la plante dont ont été tirées les tiges ayant servi au tressage de cette corbeille. Celles-ci sont plates, régulières et de section rectangulaire.

Nordenskiöld (10, fig. 53 B) a publié un panier de forme analogue et d'une technique identique.

Fig. 104. — Panier en sisal vert avec couvercle
Prov. : Ilopeyti. (1/2, gr. nat.)

Planche LXXIV, figure 1. Hauteur : 16 centimètres ; diamètre maximum : 14 centimètres. Provenance : Saladito (haut Pilcomayo).

La chaîne se compose de douze éléments se croisant à la base en forme de quadrilatère, c'est-à-dire, par groupes de trois (voir pl. LXXVI, 1). La trame, comme la chaîne, est faite de lanières fibreuses, plates et minces. Les extrémités de la chaîne qui dépassaient le bord ont été repliées et glissées dans le tissu.

Planche LXXIV, figure 2. Hauteur : 16 centimètres ; diamètre maximum : 18 centimètres. Provenance : Ivu.

La technique de ce panier est identique à celle de l'exemplaire précédent. La matière première en est seule différente. Les tigelles qui le composent sont très minces et se prêtent moins bien à la régularité du

tissu. C'est pour cette raison que les éléments de la chaîne sont doubles. Celle-ci se compose de 32 tigelles disposées par paires, ce qui, en réalité, donne 16 éléments. Ils se croisent à la base en forme d'octogone à peu près comme sur la planche LXXVI, 2.

Planche LXXIV, figure 3. Hauteur : 13,5 centimètres; diamètre : 11 centimètres. Provenance : Ivo.

L'armature de ce panier est faite de tiges inégales et grossières. La base se compose de four tigelles arrêtées. Certaines tiges de la chaîne ont été fendues, puis écartées pour former deux éléments distincts (voir fig. 106).

Planche LXXIV, figure 4. Hauteur : 13,5 centimètres; diamètre : 11 centimètres. Provenance : Tintapaw (Alto Pilcomayo).

Ce panier est identique à celui que nous venons de décrire à cela près

Fig. 106. — Détails de la technique du fond du panier de la figure 104.

que les tiges, rugueuses et cassantes, constituent un tissu épais et grossier.

Planche LXXV, figure 1. Hauteur : 19 centimètres; diamètre : 19 centimètres. Provenance : Tinlay (région du rio Saladillo).

Ce panier se distingue des précédents uniquement par la forme de l'anse en fer à cheval qui le surmonte. Celle-ci se compose de fibres tordues, exactement comme dans nos paniers de mélange. Les éléments de la chaîne sont au nombre de 12, disposés par groupes de 3, irradiant de la base et formant une figure quadrangulaire comme sur la planche LXXVI, 1. Quelques tiges de la trame ont été teintes en rouge.

Planche LXXV, figure 2. Hauteur : 16 centimètres; diamètre maximum : 17,5 centimètres. Provenance : Hoqeyti (haut Pilcomayo).

Ce panier mérite une place à part en raison de sa forme générale, des anses dont il est pourvu et du soin avec lequel il a été tressé.

Les anses dont il est pourvu sont constituées par un élément de la trame qui, après avoir fait le tour de la chaîne, s'en détache pour passer à trois reprises, perpendiculairement, sous l'armature du panier.

[facing P. 450, D]

1. Base du panier de la planche LXXIV, 1

2. Base du panier de la planche LXXV, 2

L'anse ainsi obtenue est renforcée par une tigelle supplémentaire qui entrelace les éléments, tout comme le fait la trame (voir fig. 107). La plan-

Fig. 106. — Détails de la technique fond du panier de la planche LXXIV, figure 3

che LXXVI, 2, nous montre la façon dont le vannier s'y est pris pour grouper les éléments de la chaine qui sont au nombre de 15.

Planche LXXV, figure 3. Hauteur : 16 centimètres; diamètre maximum : 15 centimètres. Provenance : Nawirenda (embouchure du rio Salado).

L'armature se compose de tiges plates et cassantes allant toujours par groupes de deux. L'anse rapportée est faite de fibres tordues. La forme générale de ce panier trahit une influence européenne.

Planche LXXV, figure 4. Hauteur : 15 centimètres; diamètre : 12 centimètres. Provenance : Nawirenda (embouchure du rio Salado).

Fig. 107. — Détails de l'anse du panier de la planche LXXV, figure 2

La chaine est constituée par des éléments plats et minces plus larges que ceux de la trame. Les anses

sont rapportées. Elles sont formées par une tige enroulée sur elle-même et passant par trois fois sous les éléments de la trame. Une tige s'y entrelace exactement comme la trame s'entrelace à la chaîne.

Fig. 108. — Panier en sisère vert huilé de roux des métis. Prov. : Iva. (1/4 environ de la gr. nat.)

Planche LXXVII, figure 1. Hauteur : 8 centimètres; diamètre : 16 centimètres. Provenance : Ibopeyti (haut Pilcomayo).

Fig. 109. — Panier en miniature (jouet d'enfant) (1/1, gr. nat.)

Cette petite corbeille légèrement arrondie est remarquable par sa rigidité et sa solidité. La technique est toujours la même que nous avons examinée jusqu'ici. La chaîne se compose de 15 éléments disposés à la base exactement comme sur la planche LXXVI, 1.

Planche LXXVII, figure 2. Hauteur : 9 centimètres; largeur : 11 centimètres. Provenance : Tintapaw (embouchure du rio Salado, haut Pilcomayo).

Ce petit panier s'apparente étroitement au précédent par sa technique. La chaîne est faite de quatre bandes fibreuses qui se croisent en octogones et sont ensuite partagées en trois

[facing P. 452]

1

2

Pintura chiriguana en wáder, ocré. Prov. : 1. Tiapyá (haut Pilcomayo) ; 2. Tiaipaw (haut Pilcomayo). (1/5 gr. nat.)

1/5

ou en deux éléments divergents qui constituent la chaîne (voir fig. 106).

Figure 108. Hauteur : 12 centimètres ; diamètre maximum : 28 centimètres. Provenance : Ivu.

Il ne fait aucun doute que ce panier est une imitation pure et simple des paniers européens. Chez les métis du département de Tarija, j'en ai vu d'identiques, au point de vue de la forme et de la technique.

3. VANNERIE EN « TWILLED WORK »

Le terme de *twilled work* désigne la technique de la vannerie dans laquelle les éléments de la trame passent au-dessus de deux ou plusieurs éléments de la chaîne, de façon à produire avec la contexture du tissu des motifs en diagonales et une infinité d'autres motifs ayant tous pour base les changements de rythmes dans le nombre des éléments de la chaîne qui ont été enjambés (Mason, p. 224).

Dans les pages où j'ai traité du *wicker work*, j'ai déjà eu l'occasion de signaler les affinités qu'offrent, non seulement la technique, mais encore la forme des paniers chiriguano avec ceux de la Guyane. L'analogie est encore plus frappante avec les paniers en *twilled*. Nous avons chez les Chiriguano le pendant exact des fameux paniers télescopes ou *pegall* de la Guyane. Ce sont des paniers rectangulaires en deux parties, rentrant l'une dans l'autre et fermant hermétiquement (pls. LXXVIII, LXXX et figs. 110 et 111). Nordenskiöld (**10**, p. 173) nous a donné une carte indiquant la distribution des paniers munis d'un couvercle dans lequel ils s'emboîtent plus ou moins complètement. Ces paniers « télescopes » sont particulièrement abondants au nord de l'Amazone. Je soupçonne que les fameux *karamesa* des Tupinamba, où ceux-ci serraient leurs plumes, devaient appartenir à ce type. Parmi les Tupi-Guarani, les Guarayú, les Pauserna, les Mauhé, les Oyampi sont les seuls chez qui ce type de fermeture ait été signalé (Métraux, **2**, p. 253).

Un autre point de contact entre la vannerie des Chiriguano et celle des indiens de l'est et du nord de l'Amérique du Sud est l'occurence, chez les uns comme chez les autres, de paniers en *twilled work*, où sont combinés des éléments de deux couleurs, suivant un rythme changeant, pour produire des figures géométriques. Le panier de la planche LXXVIII, avec les grecques qui se détachent en noir sur les côtés, est représentatif de cette forme d'art, qui, dans les Guyanes, a brillé d'un vif éclat.

Les paniers du type *pegall* ou « télescopes » se répartissent en deux catégories suivant le principe de leur tressage. Pour faire les uns (pl. LXXIX et fig. 111), le vannier a commencé par entrecroiser les éléments de la chaîne de façon à ce qu'ils irradient d'un centre unique. Ensuite il a entrecroisé suivant un rythme binaire les tigelles qui se

détachaient, comme autant de rayons, du centre commun. Les paniers de la seconde catégorie ont été tressés en entremêlant les éléments de la chaine et de la trame à angles droits, de façon à obtenir le fond du panier sans qu'il y ait eu de point précis d'où les éléments se détachassent (pl. LXXX, 2). D'ailleurs les photographies (pl. LXXIX et LXXX, 2) rendent mieux que toute description ce que j'entends.

Les tiges qui servent à la fabrication des paniers en *twilled work* sont tirées des feuilles du palmier *karandaí (Copernicia cerifera* Mart. ou *Copernicia australis).* Les feuilles découpées en fines lanières sont assouplies par immersion.

Il faut ranger, dans la vannerie dite *twilled,* les cribles et les éventails à feu, dont je traiterai cependant dans un chapitre particulier.

Description des paniers en « twilled work »

Planche LXXVIII, figures 1 et 2. Hauteur : 7 centimètres; diamètre : 17.5 centimètres. Provenance : Caipipendí.

Ce panier appartient à la catégorie de ceux dits « télescopes » ou

Fig. 110. — Panier circulaire en *twilled work.* Prov. : Caipipendi. (1/4, environ de la gr. nat.)

pegall de la Guyane. La planche LXXIX qui nous montre le détail de sa face supérieure, en indique aussi la technique avec une clarté suffisante pour qu'aucun schéma ne soit nécessaire. La chaine se compose de 32 éléments flexibles irradiants d'un centre commun. Ils commencent par s'entrecroiser pendant deux tours, puis le vannier ayant introduit dans le tissu des lanieres de couleur noire, celles-ci à leur tour vont se croiser

[facing P. 454, A]

Panier chiriguano en tressé work. Prov. : Calpipendi. (1/, gr. nat.)

[facing P 454, B]

Fond du panier de la planche LXXVIII

[facing P. 454, C]

1. Panier du type téhuape en *treillis ouvert*. Prov. : Caipipendi

2. Détails de la technique de ce panier

avec les premières et permettent d'obtenir les figures que l'on voit sur la planche LXXVIII, 1 et 2.

Figure 110. Hauteur : 14 centimètres; diamètre : 35 centimètres. Provenance : Calpipendi.

Fig. 111. — Panier circulaire du type « tikampo » en feuillet sec[illegible]
Prov. : Calpipendi. (1/1, environ de la gr. nat.)

Ce grand panier est, au point de vue technique et décoratif, exactement semblable au précédent. Malheureusement, les lanières sombres se distinguent à peine des autres, soit que leur couleur se soit effacée, soit qu'elles aient été toujours ainsi. Le détail d'un des côtés est représenté sur la planche LXXXI, 1.

Fig. 112. — Chapeau en feuillet sec[illegible] (Prov. : [illegible])
(1/1, environ de la gr. nat.)

Figure 111. Hauteur : 9 centimètres; largeur : 12 centimètres. Provenance : Carurati.

Ce panier rentre dans la même catégorie que ceux que nous venons d'examiner, sauf qu'il ne présente aucun motif provenant d'un entrecroisement de tiges sombres et claires.

Planche LXXX, figure 1 et 2. Hauteur : 8 centimètres; largeur : 12 centimètres. Provenance : Caruruti.

Les fines lanières de feuilles de palmes qui composent ce panier sont plus larges et plus cassantes que celles qui constituent le précédent, de forme identique mais de technique différente. Les fibres, au lieu de s'irradier d'un seul centre, se croisent simplement suivant le rythme que la figure 2 de la même planche permet d'examiner.

Figure 112. Hauteur : 10 centimètres; diamètre : 36 centimètres. Provenance : Caruruti.

Ce chapeau est fait exactement suivant la technique des paniers de la planche LXXVIII et figures 110 et 111.

Fig. 114. — Porte-cigarettes chiriguano en *twilled-work*. Prov. : Caruruti. (1/1 gr. nat.)

Un chapeau à moitié fini (fig. 113), que j'ai pu acquérir à Caruruti, montre bien le processus de la fabrication. Le vannier commence par faire le sommet du chapeau entrecroisant 36 tigelles et ajoutant, peu après, d'autres tiges supplémentaires dont on voit dépasser les extrémités. Le chapeau fini, on coupe toutes celles qui affleurent du tissu. Le rythme des éléments qui se croisent est de deux.

Figure 114. Longueur : 10 centimètres; largeur : 8 centimètres. Provenance : Caruruti.

Ce porte-cigarettes est fidèlement imité de ceux que les Chiriguano ont vus aux mains des métis ou des créoles. La technique en est cependant intéressante, car elle est purement indigène. Les

[facing p. 456]

1. Détails de la technique du panier de la figure 110.

2. Détails de la technique du crible de la planche LXXXII

tigelles en feuilles de *karandaí* se croisent suivant un rythme de deux.

Les Chiriguano ne sont pas de grands fumeurs et il est rare de trouver parmi eux des cigarettes, aussi ces étuis me semblent-ils plutôt être faits en guise d'amusement que pour leur utilité pratique.

Cribles

Il n'est pas une ménagère chiriguano qui n'ait à sa disposition au moins deux cribles. L'importance de cet ustensile de cuisine correspond au rôle considérable que la farine de maïs joue dans leur alimentation. Des douze plats différents que les Chiriguano préparent de cette céréale, il en est six ou sept où elle apparaît sous forme de farine. Le *kūwi* lui-même, se fait avec du maïs pilé dans un mortier et passé ensuite au crible. Les cribles servent également à nettoyer les haricots et à les débarrasser des pierres et de la poussière qui les accompagnent. Enfin, ces tamis sont employés pour passer le *kūwi* après la cuisson et séparer le liquide qui doit fermenter, du marc ou *temiśu*. Le rôle de simples paniers peut aussi leur échoir et j'en ai vu qui contenaient des graines de coton.

Les cribles sont de deux sortes. La première catégorie comprend ceux dont les mailles sont serrées et composées de fines lanières de feuilles de *karandaí*, s'entrecroisant suivant un rythme binaire. Les cribles de ce type rentrent dans la vannerie dite *twilled*. Les Chiriguano leur donnent le nom d'*urumpé* et les emploient de préférence aux autres dont l'usage est restreint.

La seconde catégorie comprend les tamis dont les mailles sont larges. Les lanières qui les forment se croisent en « échiquier », c'est-à-dire, que la trame passe alternativement au-dessous, puis au-dessus d'un élément de la chaîne. Les Chiriguano désignent les cribles de ce type sous le nom d'*urumpesa* et ils s'en servent pour passer le maïs moulu lorsqu'ils veulent obtenir une farine grossière.

Certains de ces cribles sont de véritables œuvres d'art, mais ne peuvent se comparer aux magnifiques exemplaires de la Guyane, où l'alternance des éléments noirs et blancs produisent des figures géométriques du plus bel effet. Il est probable que jadis les Chiriguano avaient des cribles identiques, comme on peut le supposer d'après le crible de la planche LXXXII qui se compose d'une chaîne et d'une trame dont les éléments gris et blancs sont disposés de manière à former des bandes sombres et claires, sur lesquels se détachent des carrés concentriques.

Le crible a une vaste diffusion dans toute l'Amérique tropicale où il sert, non seulement pour la farine de maïs, mais encore pour celle que les indigènes tirent du manioc amer. Il est inconnu des populations primitives du Chaco qui n'ont pas même senti le besoin de l'emprunter aux Chiriguano ou aux Chané. Les populations de l'empire de l'Inca

en ignoraient l'usage. L'*urumpé* est un ustensile commun à presque toutes les tribus tupi-guarani : il a été décrit ou signalé chez les Tupinamba, les Guarani, les Kaingná, les Guarayú, les Pauserna, les Apinká et les Parintintin. Il est donc certain que les Chiriguano l'ont emporté avec eux lorsqu'ils ont émigré du Paraguay, ce qui n'exclut pas qu'ils l'aient trouvé aussi en usage chez les Chané.

J'ai assisté, dans la vallée de Caipipendi, à Carurutí, à la fabrication d'un crible. Voilà ce que j'ai noté à ce sujet : « La matière première est fournie par les feuilles du palmier *karandai* (*Copernicia australis*), que l'on découpe en fines lanières. Le tressage se fait fort simplement : on forme un carré en croisant à angle droit les éléments de la trame et de la chaine, suivant le rythme de 1 (un élément dessus, l'autre dessous, etc.). Pour glisser les éléments de la trame, il suffit de relever chaque fois toutes les lanières de la chaine qui ont été précédemment enjambées par la trame. Une fois le tamis tressé, on choisit une branche flexible et droite que l'on fend en deux soigneusement. On arque en cercle chacune de ces deux moitiés, de façon à ce que l'un des cerceaux puisse entrer dans l'autre. Les éléments de la chaine et de la trame non tressés, sont insérés entre les deux arceaux (voir fig. 115) puis solidement ficelés. Les arceaux ayant un diamètre un peu plus faible que la largeur du carré en vannerie, il en résulte qu'une fois inscrit dans le cercle, il se bombe. Tous les bouts qui dépassent sont coupés.

Fig. 115. — Détails du bord du crible de la planche LXXXIV, 2

La ficelle qui sert à attacher le crible aux cerceaux est faite de la façon suivante : « L'écorce d'un arbre *(cambira)* est enlevée en larges et longues lanières, à leur tour divisées en longes plus fines. On prend deux de ces longes, on les humecte de salive et on les roule sur le mollet droit, chacune séparément, puis les deux ensemble. Lorsque la corde doit être d'une certaine longueur, on est obligé d'ajouter de nouvelles longes. Ces raccords doivent se faire sans que le diamètre de la cordelette se change et sans qu'il y ait de solutions de continuité. Pour cela on a toujours soin d'enrouler ensemble deux tronçons d'inégale longueur. Lorsqu'un d'eux a été enroulé jusqu'au bout, un autre tronçon est ajouté. Toute possibilité de rupture est ainsi évitée. Le mouvement de la main est de haut en bas lorsqu'on forme un tronçon, et de bas en haut et de haut en bas lorsqu'on roule les tronçons ensemble pour faire la corde. La corde d'abord tire un grossissant à mesure, mais brièvement ».

Planche LXXXII. Diamètre : 43 centimètres. Provenance : vallée d'Igüembé.

[facing P. 458]

Cédule monogyne. Dess. : Vallée d'Igbamba (G., gr. nat.)

Cet *urupé* est un exemplaire remarquable à tous les points de vue. Les éléments qui le composent se croisent selon un rythme binaire, c'est-à-dire, que chaque élément de la trame passe sous un sur deux éléments de la chaîne. Des tiges plus sombres alternent par sections avec des tiges plus claires et constituent des bandes grises et claires qui courent parallèlement et se croisent à angles droits.

On remarquera que, arrivés au diamètre vertical, les éléments de la

Fig. 138. — Détail du tissu du [illegible] (Chiriguano). [illegible]
(1/1, [illegible])

trame qui avaient *alors* jusqu'alors à un rythme binaire, le changent brusquement. La première fois la tige enjambe, la seconde elle passe sous trois éléments de la chaîne, la troisième elle repasse sous un seul élément, puis de nouveau ce sont trois éléments enjambés, puis seulement un, pour recommencer à passer sous trois éléments, puis de nouveau sous un élément. Ce nouveau rythme se continue tout le long du diamètre vertical et horizontal et permet de former les cinq des carrés concentriques (voir pl. LXXXII, 2).

Planche LXXXIII, figure 1. Diamètre : 43 centimètres. Provenance : Iva.

La technique et les premières décorations sont exactement les mêmes que pour l'exemplaire précédent, à l'exception, toutefois, de l'alternance des lanières étroites sombres et claires.

Planche LXXXIII, figure 2. Diamètre : 33 centimètres. Provenance : région du San Luis.

Cet *urupé* est fait suivant le même principe que les autres cribles, mais on compte pas le changement de rythme le long des deux diamètres. Par conséquent, il n'apparaît agrémenté d'aucun motif géométrique. Les éléments de la chaîne et de la trame se croisent toujours par paire.

Planche LXXXIV, figure 1. Diamètre : 42 centimètres. Provenance : Saladito.

Les *urupes* se distinguent des *urupé*, non seulement par la plus grande largeur des lanières étroites qui en composent le tissu, mais aussi par la technique de ce tissu. Les éléments de la trame croisent régulièrement ceux de la tissure, passant tantôt dessous tantôt dessus, mais n'enjambant chaque fois qu'un seul élément. Cette technique est celle que Haeen appelle *chodar ouré*.

Les intervalles entre les éléments sont aussi plus grands et facilitent le passage des gros grains du maïs.

Planche LXXXIV, figure 2. Diamètre : 40 centimètres. Provenance : Saladito.

Le principe de la technique est le même que pour le crible précédent, à cela près que les éléments de la chaîne et de la trame sont très larges.

Éventails en mosaïques

Grande a été ma surprise lorsqu'arrivant dans les villages des Chiriguano de la région du haut Pilcomayo, j'ai trouvé chez eux des éventails à fins identiques à ceux des tribus du Brésil et du Uaçaïdes. Ressemblance (12, p. 16) ne fait à peine que les mentionner et insiste sur leur rareté. Le fait s'explique par l'absence de cet élément culturel dans tout le reste de la zone habitée par les Chiriguano. Dans la plupart des villages, ils se servent, pour activer le feu, de vieux chapeaux ou de fragments de cuirasses.

Planche LXXXV. Longueur : 28,5 centimètres ; largeur : 31 centimètres. Provenance : Saladito.

La confection de ces éventails est assez simple. Les feuilles qui les composent se croisent suivant un rythme de deux. Sur le bord, les tiges sont *dédoublées* et passent de nouveau à travers le tissu sont entrecroisées de façon à former, sur chaque face, une perle. Les extrémités libres

ont été tressées sur le haut, et une partie passée dans une baguette fendue formant la poignée (fig. 117).

Au sujet de ces éventails, une remarque importante s'impose. Ils

Fig. 117. — Détails de la poignée du seulle feu de la planche LXXXV

diffèrent peu des éventails faits avec une seule feuille de palmier, pennée, tels qu'on les trouve au Brésil et au Paraguay. Les Chiriguano, n'ayant pas dans leur nouvelle patrie de palmiers de cette espèce, ont dû

Fig. 118. — « Fleur », ornement en feuilles de palmier tressées que les Chiriguano font bénir et dont ils ornent leurs huttes. La technique de cet objet est fort ancienne et se retrouve en Guyane. (1/1, gr. nat.)

adopter les feuilles palmées des *karandaï*. Ils ont remplacé le pétiole qui forme le manche par la baguette fendue à laquelle j'ai fait allusion. (Max Schmidt, 2, fig. 106 et 107, pp. 219-220.)

« *Fleurs* »

Les Chiriguano des missions franciscaines décorent, les jours de fête, l'église avec des « fleurs » artificielles qu'ils fabriquent en feuilles de palmier *karandai*. Ces ornements sont d'origine ancienne et dérivent directement des jeux de paille que les indiens font encore en diverses régions de l'Amérique, notamment dans les Guyanes. Les indigènes de cette dernière région les suspendent souvent dans leurs maisons où ils font peut-être office d'amulettes et, en tous les cas, d'ornements. (Roth, pp. 497-499, fig. 241-244 et p. 270; Koch Grünberg, 2, t. II, p. 244). De même les indiens Chiriguano décorent leurs huttes avec ces figures qu'ils ont soin de faire bénir. Ils gardent comme porte-bonheurs, exactement comme en Europe les branches de buis bénites. Rosen (1, p. 61, fig. 51) publie un jeu de paille semblable qu'il a trouvé chez les Choroti et qui lui fut indiqué comme un ornement porté sur le front. Cet explorateur met en doute l'exactitude de ce renseignement, et suppose qu'il s'agit d'un objet rituel. En réalité, ce n'est qu'une « fleur » que les Choroti, décrits par Rosen, auront reçu ou acheté dans quelque mission chiriguano. Il suffit de comparer la figure qu'il nous en donne et la nôtre pour s'en rendre compte.

Fig. 119. — Couronne en paille tressée (jeu ou ornement ?). Ashluslay. Prov. : Rodero (Salta). (1/4 gr. nat.)

Les figures en feuilles de palmes ne sont pas, cependant, inconnues des autres indiens du Chaco. Les Ashluslay m'ont vendu un diadème tressé suivant ce principe (fig. 119) et Rosen (1, fig. 44, p. 48) reproduit un ornement de tête identique qu'il a acheté à une tribu choroti.

CHAPITRE X

Les masques

Les beaux masques, dont je donnerai plus loin la description, sont portés au cours des fêtes de Carnaval. Des difficultés avec les autorités boliviennes m'empêchèrent d'arriver dans les villages chiriguano au moment où celles-ci avaient lieu. Lorsqu'enfin je me trouvai parmi mes amis chiriguano, ils avaient vidé les dernières cuves de *kheri* et se trou-

valent dans leur état normal. Grâce à la proximité de la fête, je pus recueillir les masques publiés ici ; d'ordinaire ils sont détruits ou employés dans les champs comme épouvantails.

Mon hôte, M. Alberto Torrejon, qui vit à Ibopeyti sur le haut Pilcomayo, dans un village indien, me donna quelques détails fort intéressants sur les cérémonies et les réjouissances auxquelles il venait de participer. Je les transcris tels quels.

A l'approche de toute fête, du Carnaval par exemple, le premier acte consiste à faire fuir les âmes des morts. Si l'on ne prend cette précaution, les veuves et les parents des personnes décédées devront s'en abstenir. Dans le but de purifier l'air, on bat du tambour et toute la famille

Fig. 120. — Indiens Chiriguano portant des masques. (Photo. de R. P. H. Cattanéo)

qui a perdu l'un des siens, pleure et crie. Lorsque les esprits ont déguerpi, le tambour donne, sur un rythme joyeux, le signal des réjouissances.

La fête est ouverte par un homme et une femme qui, tenant à la main un bâton orné de fleurs, s'avancent vers le milieu de la place suivis de tous les habitants en longue chaîne. Arrivé au milieu du terrain qui s'étend entre les huttes, le couple plante cette enseigne donnant ainsi le signal de la fête.

La chaîne se disloque et de petits groupes se forment qui dansent en rond. Leur danse consiste à avancer et reculer en trois temps au son de flûtes et de tambours.

L'attrait du carnaval consiste dans l'énorme consommation de *bâri* et d'alcool qui se fait alors. Hommes et femmes boivent à qui mieux mieux ; et, sous l'influence de la boisson, les vieilles colères, les haines secrètes se réveillent, et les plus échauffés se provoquent et en viennent aux mains,

Le «capitaine» doit alors les rappeler à l'ordre et séparer les combattants.

D'aucuns augmentent le tumulte en siffant dans leurs *sisiwi* (longs sifflets).

Les passions sexuelles s'exaspèrent et les hommes commencent à tournoyer autour des femmes qu'ils sollicitent, une calebasse de *bari* à la main, en leur récitant, sur un ton de mélopée, des pièces de vers du type de ceux ci :

Epeke, peke meipere	Ris harmonieusement
Ñere ne	Pour moi
Epeke, peke meipere	Ris harmonieusement
Ñere ne.	Pour moi.
Eya ikwema	Viens m'embrasser
Ikwirike mi	Ma petite femme
Ikipara eweie	Donne moi ta bouche
Teiña dipete	Je t'aime beaucoup
Ike ñenge pe	Avec mon cœur
Ime dereua ikari	Tu as de jolis yeux
Ime dipara misirey	Tu as une petite bouche
Teiña dipete	Je t'aime beaucoup
Paiceme eppere dere.	Pour cela je vais te demander.

Pendant ce temps, des jeunes gens ou des vieillards, le visage couvert d'un masque (*ñéeruna*), courent de ci de là, forçent les gens à danser à coups de bâton, leur font des niches et leur adressent des plaisanteries.

La fête dure tant qu'il y a du *bari* ou de l'alcool. Au moment où elle est sur le point de se terminer, une cérémonie finale a lieu. Le rite de sortie est analogue au rite d'entrée : le couple qui a planté le bâton fleuri l'arrache du sol et sort du village suivi des *ñéeruna* et de tous ceux qui ont participé à la fête. Le cortège s'avance, au son des flûtes et des tambours, jusqu'à une certaine distance du village. On jette les masques, on lance des pierres en poussant des cris. Le carnaval est fini et chacun rentre chez soi. Quelques uns emmènent leur nouvelle femme, car c'est à ce moment que se célèbrent le plus de mariages.

La fête de carnaval, telle que je viens de la décrire, ne comporte que peu d'éléments empruntés aux métis ou aux créoles, en dehors de la coïncidence de dates. C'est une ancienne fête d'un caractère purement agricole, que les Chiriguano ont pris l'habitude de célébrer en même temps que le carnaval bolivien. Les indiens d'Ituqueyti sont d'ailleurs païens.

Les hommes masqués sont censés représenter les esprits des morts, comme leur nom l'indique (*ñée* : esprit; *runa* : grand). Comme dans les fêtes des Guyanes et de l'Amérique centrale, ils viennent nombreux

1:Métraux SF10 Chiriguano

[Facing P. 464]

Visages : 1 (Hypogée d'Iro-mangi). Pour : 1. Cierra ; 2. Visages dans l'hypogée. (... cm. 500.)

pour assurer à leurs descendants ou parents la fertilité des champs et l'abondance de la future récolte. Ces fêtes masquées ont leur pendant dans les fameuses cérémonies des populations du rio Negro dont Koch-Grünberg nous a fait connaître les détails. D'ailleurs, il est probable que les Chiriguano ont emprunté ces cérémonies, et surtout les masques, aux Chané. Ce sont, précisement, les frères de race des Chané, les Arawak du rio Negro, qui célèbrent ces fêtes avec le plus d'éclat. Les Chané du Parapiti donnent encore à ces antiques rites plus d'importance que les Chiriguano, et leurs masques couronnés d'immenses panaches de plumes sont, paraît-il, plus somptueux que ceux de leurs vieux ennemis guarani.

Dans les missions, le carnaval a perdu sa signification purement païenne et s'est contaminé d'usages que les Chiriguano ont empruntés aux métis. Nino (pp. 267-270) en a donné une bonne description dont je résumerai les principaux traits.

La fête est dirigée par un personnage portant un masque de vieillard. Il s'arrête à chaque angle de la place, recommandant à tous paix et harmonie.

On se livre alors à différents jeux : des personnages masqués répandent sur les danseurs des cosses de haricots ou du son de maïs.

Des jeunes gens masqués, mais presque entièrement nus, se barbouillent de boue et cherchent à salir tous ceux qui ont des vêtements neufs. Ces deux coutumes ne peuvent avoir qu'une origine bolivienne.

Des individus également masqués mènent un combat entre un tigre et un taureau qui, finalement, est mis à mort par un boucher de fantaisie. Ensuite on passe aux plaisirs de la danse. « Les danseurs forment un grand cercle en se prenant des deux mains et dansent ainsi par trois fois. Par trois fois aussi ils s'accroupissent, et encore par trois fois ils passent sous les bras tendus d'un couple du même cercle et enfin le même nombre de fois ils se serrent les uns contre les autres formant un grand tas, le visage tourné vers l'extérieur et les mains croisées. Ils restent dans cette position jusqu'à ce qu'un autre couple danse autour d'eux. Ceux-ci ne se tiennent pas par la main. L'homme poursuit la femme et cherche à la saisir. Elle l'évite et va se cacher au milieu des autres. »

Vers la fin de la fête, les hommes improvisent une chaise à porteur en croisant des bâtons. Ils y font asseoir un enfant et, avec des bambous lui forment un rempart. Les autres viennent faire pleuvoir sur lui une grêle de coups, sans toutefois le blesser. Ensuite, ils le font descendre et recommencent trois fois cette cérémonie en divers endroits.

Au second tour, les individus masqués vont de maisons en maisons et reçoivent de chacun les objets les plus hétéroclites : des cosses de haricots, des pelures de melons d'eau; et, au troisième tour, jeunes et vieux se mettent à pleurer.

Pour finir, on va en procession jeter les masques et tous se lavent le visage et les mains.

DESCRIPTION DES MASQUES

Planche LXXVI

1. Masque en bois de *tarabuki* (bois léger et tendre). La face est peinte en blanc et encadrée d'un ruban noir fixé avec de petites chevilles de bois. Les sourcils, la bouche et les raies parallèles qui traversent le dos du nez, ont été peints en noir. Les bords de celui-ci sont soulignés de deux traits verts. Sur chaque joue deux cercles concentriques, l'un noir et l'autre vert avec un point central noir. Sur chaque côté, un trou par lequel passe un cordon servant à maintenir le masque sur le visage.

Fig. 121. — Masque chiriguano provenant de Tolomal (prov. d'Otuzi). Musée National de Buenos Aires, d'histoire Paléontologie. (1/4 gr. nat.)

De petites cavités sur le pourtour semblent indiquer qu'au moment de la fête des plumes étaient fixées sur le bord du masque, exactement comme sur l'exemplaire suivant.

2. Ce masque est celui qui, dans ma collection, est en meilleur état. La face blanchie avec une substance semblable à de la chaux est bordée de plumes enfoncées dans le bois. Les sourcils sont peints en noir ainsi que la lèvre supérieure. La bouche est représentée par une fente. Les peintures faciales sur les deux joues et le front sont vertes, sauf le point central, qui dans chaque disque est brun.

Le masque de la figure 121 provient de Tolomal, prov. d'Otuzi où il a été acquis par M. Palavecino chez des indiens Chiriguano établis dans la région. Ses dimensions sont considérables. Il mesure 32 centimètres de longueur sur 16 centimètres de largeur. Il est peint en blanc et le visage est encadré d'une frange de plumes. J'ignore la signification des grandes oreilles qui le surmontent.

CHAPITRE XI

Les peignes

Jadis, au temps où ils accomplissaient la conquête de leur territoire actuel, les Chiriguano portaient une tonsure à l'instar de leurs parents du Paraguay et de la côte du Brésil, les Guarani et les Tupinambas, qui se rasaient avec un éclat de bambou toute la partie antérieure du crâne

(v. Métraux, 2, p. 181-185) (1). Plus tard, probablement sous l'influence des Chané ou des Quichua, les Chiriguano abandonnèrent la tonsure et laissèrent croître leurs cheveux qu'ils faisaient flotter sur la nuque et le dos. Ils se contentaient de les tailler sur le front d'une tempe à l'autre.

Cette coiffure, usuelle encore au siècle passé, tend à disparaître à son tour. Seuls lui sont restés fidèles quelques vieillards et les habitants de plusieurs villages perdus dans les vallées du haut l'Ilomayo.

Les Chiriguano qui continuent à observer l'ancienne mode, nouent leurs longs cheveux autour de la tête et les dissimulent sous un chapeau ou une sorte de turban lorsqu'ils vont travailler chez les blancs par crainte d'être tournés en dérision.

Les femmes ne coupent jamais leurs cheveux suivant l'habitude des autres indiennes du Chaco, aussi ont-elles de longues chevelures remarquablement soupes. Elles rassemblent leurs cheveux sur la nuque au moyen d'un ruban rouge ou bleu qu'elles nouent sur le front après lui avoir fait faire le tour de la tête (v. pl. VI, 1 et 2).

Fig. 122. — Mortier chiriguano en pierre pour broyer les graines du fétiche. Pour. : Dim. (?), environ de la gr. nat.

Les femmes chiriguano sont extrêmement soigneuses de leur chevelure et la lavent presque tous les jours. Elles emploient en guise de savon des graines du fétiche qu'elles écrasent dans un petit mortier (fig. 122) spécialement destiné à cet usage. Les graines du fétiche, qui sont riches en saponine, moussent facilement.

C'était toujours pour moi un spectacle plaisant le matin que de voir les femmes revenir de la rivière avec leurs cheveux tordus sur le devant de la tête et serrés en un chignon conique. Elles les laissaient sécher puis se mettaient à les peigner lentement jusqu'à ce qu'ils fussent soupes et lisses.

Deux types de peignes coexistent chez les Chiriguano. Sur le haut l'Ilomayo, dans la vallée d'Igbeubé et à Ivo, ils sont taillés dans une planchette, et souvent la partie plane qui sert de poignée est découpée

(1) *Annexe littérat*, page 487 : « Cette coutume singulière valait, comme la tonsure contemporaine [Sarambiéhoin chaoiéro], [illegible] [illegible] pendant a longtemps ; coupes stylistiques variés dépeignent coiffures ».

(Leur apparence [des Chiriguano] est vraiment singulière. Ils usent d'une tonsure semblable à celle du sou [illegible] et d'autres laissent pendre leurs cheveux sur le dos jusqu'à une longueur d'une aune et demie. Ils se teignent le corps de couleurs différentes).

avec art. Dans la vallée de Calpipouli et chez les Chané, à côté des peignes du type précédent il en est d'autres composés de fines aiguilles de bois coincées entre deux éclats de bambou et maintenues en place par un habile tressage de fils de coton formant un dessin. Les peignes de cette catégorie présentent, généralement, une double rangée de dents, mais parfois l'une d'elle est entièrement recouverte par le tressage et se transforme en peigne (Nordenskiöld, 2, fig. 109, p. 204). Ces deux types de peignes se retrouvent dans la zone andine; mais, alors que le premier est limité à cette aire géographique, et spécialement au nord-ouest de l'Argentine, le second, qui comprend toutes les variétés de peignes composés, a une vaste distribution dans toute l'Amérique du sud, dans l'empire incaique comme au Brésil. Les Chiriguano s'en servaient, sans doute,

Fig. 155. — Peigne composite fait de fine lattes de bambou. Chiriguano. (Métraux, 1), pl. [illegible]

bien avant de s'être établis dans leur territoire actuel. Il n'en est pas de même du peigne de bois sculpté qu'ils ont emprunté aux Chiriguano ou aux Homolomco. Dans une collection figurent deux peignes, dont l'un (pl. LXXXVII, 14) a une poignée taillée en forme de chien, et l'autre du cervidé (pl. LXXXVII, 15). Ils ressemblent fort à un peigne trouvé dans la Quebrada de Humahuaca et qui, lui aussi, est orné de la silhouette d'un quadrupède (Debenedetti, 2, p. 267, fig. 146). A Kipon, dans la Vallée Calchaquí, Debenedetti (2, p. 27, fig. 16) a découvert un peigne dont la partie supérieure représente une tête humaine dans laquelle notre auteur veut voir une idole à l'expression douloureuse (?). Les ruines de cette vallée ont conservé, jusqu'à notre époque, les seuls peignes indigènes en bois d'algarrobo.

A la Paya, Ambrosetti (3, fig. 224, p. 444) a découvert des peignes décorés dans une fabrique de bois et des peignes composites. Au lieu de constater simplement la coexistence de deux types de peignes différents,

en un même endroit, phénomène fort naturel en raison du caractère hétérogène de la culture de La Paya, Ambrosetti émet l'étrange hypothèse que ces peigne servaient à carder la laine sans prendre la peine de s'enquérir si cet instrument était connu à l'époque précolombienne.

La fabrication des peignes, comme tout ce qui est sculpture sur bois, est un travail essentiellement masculin.

Le tableau de la planche LXXXVII indique comment s'est fait, selon moi, l'évolution morphologique des différentes formes de peignes que j'ai recueillis.

CHAPITRE XII

Mobilier

Comme les divers éléments culturels qui constituent le mobilier des Chiriguano ont été complètement étudiés par Nordenskiöld (10, pp. 8-22), je me bornerai à les questionner ici, insistant seulement sur quelques points de détail.

Fig. 124. — Porte chiriguano. Intérieur. (Sous l'Hommeyre) (Photo. A. M.)

l'intérieur dans une hutte des Chiriguano. La porte que nous savons est une sorte de claie de roseaux ou une peau de vache durcie au soleil. Le jour pénètre à l'intérieur par cette ouverture. Le seul meuble important est le cadre de bois (fig. 125), sorte de châlit occupé généralement par deux personnes entre lesquelles ou en dessous enfants viennent se

faciliter tant bien que mal. Les Chiriguano n'hésitent pas non plus à coucher par terre sur une peau de lama qu'ils étendent devant leur maison. Sur le haut Pilcomayo, dans presque toutes les habitations on peut

Fig. [illegible]. — Cadre en bois [illegible] des deux indiens Chiriguano. Haut : [illegible] (1/[illegible] environ de la gr. nat.)

voir ou on avait hamacs qui servent soit de sièges pendant la journée soit de berceaux pour petits enfants. Leur technique, celle du double filet (*[illegible]*), continue une vieille tradition guarani et arawak. Quelques hamacs, peu nombreux, sont grossièrement tissés. Les fils qui

Fig. [illegible]. — [illegible] environ de la gr. nat. [illegible]

les composent sont en laine; parfois ils étaient aussi faits de coton (pl. XXXVIII).

C'est une affaire délicate que de permettre à une mère chiriguano que de nous vendre le hamac de son nourrisson. Elle craint qu'une personne

(facing P. 490)

malintentionnée ne profite de ce que le tissu est imprégné d'urine pour se livrer à des pratiques magiques qui feraient périr le nouveau né.

Le long des parois sont alignés des vases de toutes dimensions qui

Fig. 125. — Dessin indiquant la technique des corbeilles du type du relief de la figure 126

Fig. 126. — Partie du mur arrière du relief et ses vases du modèle des corbeilles. Pour : Schultz. (?), corbeille de forge (suite)

sont là en réserve pour les fêtes de boisson; les uns contiennent des semences, d'autres servent d'ornières à linge ou de sac à provisions. Ces sacs, généralement aux quatre angles, pendent des chaînes de vasques ou des nervures en feuilles de palmier qui tiennent lieu d'étagères (figs. 126 et 127). On y trouve tout ce monde : des petits vases, des paniers, des boîtes, des paquets soigneusement enveloppés d'étoffe, enfin, mille petits objets que les femmes chiriguano considèrent comme leur trésor. Du toit pendent des crochets auxquels sont suspendus des effets ou des provisions. Ces crochets sont généralement en bois, mais il en est aussi qui sont formés par une patte de cerf repliée et séchée au soleil (fig. 128).

Fig. 128. — Sac à double poche. Pour : Chapacó (?), corbeau de la gr. suiv.

Tout intervalle, dans les parois, se transforme en niche où les femmes mettent leurs vêtements, les hommes leurs ustensiles ou leurs pei-

gnes. Les uns et les autres sont glissés entre les tranches de la tablette.

Deux variétés locales dont les parois sont antipies de bois, les Indiens entouragent des sticks en forme de stèle d'hémicycle qui leur donnent leur d'armoires radiomorphes. Y avait-il là une hésitation entre des sticks qui sont si homéotéliques pour les nativités humaines? Cela est possible.

Les habitants de chaque hutte s'entourent sur les rochers, en mer dans

CHAPITRE XIII

Jouets et jeux

Tous les jouets que les parents chérigueno font pour leurs enfants, ou que ceux-ci confectionnent eux-mêmes, sont importants dans une collection. J'estime cependant inutile d'en donner la description, car Bardendzéhi (B, pp. 181-189) s'en est beaucoup occupé et les a reproduits tous. A simple titre de curiosité, je figure une poupée réduite du traditionnel *Ugeg* en bois. Les cheveux sont matérialisés d'un ruban à la manière chérigueno (fig. 131). Un petit sac (fig. 132) contient tout un assortiment de *Ugeg* en miniature. Les vases et poulies miniaturisés (fig. 133) ont été faits à l'image du petites filles qui en jouent, apprennent ainsi petit à petit à devenir d'excellentes ménagères.

Fig. 131. — Poupée chérigueno dénommée *ugeg* (bois). Photo : Gouguenheim (?), gr. nat.

Jeux de feuilles. — Je n'ai jamais vu d'enfants faire des jeux de feuilles (*ant ewéddi*), mais je sais qu'ils les connaissent. A Cheroutti, un Indien s'amuse à m'en exécuter toute une série, dont quelques-uns ont été amenés par les Indiens vers mienne sur les feuilles de mon calepin. Suivant la figure qu'ils veulent produire, ils se servirent des deux mains ou n'utilisent de la bouche et des pieds (figs. 134 et 135). La « grande tente » (pl. XXXIX, 3), a été faite par mon Indien qui, n'étant assis, n'eut servi des pieds et des mains.

Fig. 132. — Sac à usage en miniature, gonflé de petites *ugeg*. Chérigueno. Photo : Gouguenheim (?), gr. nat.

Les jeux de feuilles proprement ou point du vue de l'ethnographie comparée ou intérêt extraordinaire. S'ils n'existent identiques dans deux régions différentes, ils permettent témoignent d'indiscutables ou de migrations à l'instar du cerfolain jeux qui passent d'une contrée à l'autre sans modifier leurs caractères ou leurs modalités. Les jeux sont de tous les éléments culturels les plus stables puisqu'ils sont indépendants du milieu, du lieu et du genre de vie, du moins en général. Il serait urgent de rassembler un dictionnaire

du fleuve, le plus grand nombre possible de jeux de ficelles pour pouvoir en étudier la distribution. Nous n'en connaissons pour ce continent qu'un très petit nombre, mais celui-ci, si insignifiant soit-il, permet déjà de faire des constatations fort intéressantes. C'est ainsi que parmi les jeux de ficelles que j'ai obtenus, il en est trois exactement semblables chez des tribus du haut rio Negro et des Guyanes. Le premier est celui que les Chiriguano appellent « grande lune » (*guaiowa*) (pl. LXXXIX, 1) et que nous retrouvons chez les Bororó du rio Jékery sous le nom d'« intes-

Fig. 145. — Indien [illegible] le jeu de ficelles appelé « chemin du serpent » [illegible] Tucunaca. (Photo. [illegible])

tins de tapir » (Koch-Grünberg, **2**, t. I, fig. 69c, p. 123), chez les Tukano, dialectal comme disent ces « tapir avec ses quatre pattes » et chez les Bororó simplement comme « un tapir » (Id., t. I, p. 252 et t. II, fig. 14, p. 121).

Notre « étoile » (*guai-tata*) (pl. LXXXIX, 1) est interprétée comme une « araignée » par les Bororó (Id., t. I, fig. 69g, p. 123) et les Kaduveo (Id., fig. 74, p. 131), mais les Wapishana voient en cette figure une « étoile » exactement comme les Chiriguano (cf. Roth, fig. 207, p. 312).

Les « dessins du serpent » (*ñaiai ñoetin*) (pl. XC, fig. 2) ont leurs équivalents chez les Akawoi, les Arawak, les Wapishana et les Patamona (Roth, fig. 208, fig. 209), mais représentant selon ces Indiens : « 4 poissons marchant » (*ñiñ*). Dans aucun livre sur les Indiens du Chaco, Ter

Jeux de ficelles chiriguano. 1. « dessins de *ñiñui* » (*ñiñui-kwatia*) ; 2. « marque de couverture de cheval (*jerpón*) » (*karuna-kwatia*) ; 3. « dessin du serpent » (*mboi-kwatia*)

denskiöld (2, fig. 23, p. 71) donne la photographie d'un enfant Choroti qui vient d'exécuter un *cat-cradle* identique à notre « dessin du serpent ». Il est regrettable que Nordenskiöld n'en ait pas donné la signification.

Le jeu de ficelle de la planche XC, 2, représente la marque que portent les couvertures de laine *(jerpón)* que les créoles mettent sous leurs selles. Il ne fait aucun doute que la signification indigène de cette figure a été oubliée et remplacée par une nouvelle appelation. C'est probablement ce qui s'est produit aussi pour le *cat-cradle* (fig. 136) dénommé : *culo de caballo*.

Fig. 136. — Indien exécutant le jeu de ficelles mobile appelé « culo de caballo »

Les jeux de ficelles peuvent se subdiviser en deux catégories. La première comprenant tous ceux qui forment une figure stable à l'instar d'un dessin et la seconde ceux qui représentent un objet, un animal ou un organe en synthétisant son mouvement caractéristique.

Ainsi les jeux de ficelles des planches LXXXIX-XC appartiennent à la première des classes, mais celui que l'Indien de la figure 136 est en train d'exécuter à la seconde. Ce dernier *cat-cradle* consiste à ouvrir ou à fermer un petit cercle de ficelle qui est censé de représenter les contractions de l'anus d'un cheval.

Chez les Siusi, il existe aussi des jeux de ficelles mobiles qui symbolisent un animal en imitant ses mouvements typiques (la « chenille » par exemple) exactement comme chez les Chiriguano.

Les ressemblances entre les jeux de ficelles des Chiriguano et ceux des

tribus guyanaises pourraient s'expliquer par une influence arawak et nous pourrions supposer que les Chané ont conservé les jeux communs à toute la famille. Les jeux de ficelles voyagent très rapidement et seule leur signification change. Il est donc possible que les Chiriguano les aient connus avant d'avoir été en contact avec les Arawak.

Dessins. — Sur les planches XCI-XCIII on peut voir réunis un certain nombre de dessins qui ont été exécutés à mon intention par des Indiens Chiriguano. Pour les obtenir, je me suis d'abord adressé à quelques vieux qui refusèrent d'un air outré comme si je leur demandais de faire une chose qui fût au dessous de leur dignité. Un garçonnet d'une douzaine d'années, *Cosito*, deux jeunes gens *Aerasio* et *José Miguel* et une jeune fille *Iraruari*, se montrèrent disposés à couvrir d'esquisses de toutes sortes les pages de mon album.

Cosito ne se fit pas prier : je lui proposais là un jeu non seulement plaisant mais fructueux et il eut tôt fait de remplir deux pages (pl. XCI, 1, 2, 4, 9 ; pl. XCII, 2, 4 ; pl. XCIII, 1, 3, 10). *Aerasio*, mon frère ami, me donna aussi entière satisfaction. C'était un curieux personnage qu'*Aerasio* et je garde de lui un souvenir particulièrement vif et sympathique. Il avait de 25 à 30 ans et se distinguait par une activité et une ingéniosité extraordinaires. A n'importe quel moment de la journée, on pouvait le voir occupé à tailler ou à sculpter une pièce de bois qui devenait ensuite un outil ingénieusement conçu ou plus souvent encore un instrument de musique. *Aerasio* taillait des violons qui à première vue paraissaient être sortis d'une fabrique européenne. Inutile de dire qu'il était le menuisier attitré du village et le grand pourvoyeur d'articles de ménage. Quand *Aerasio* eut compris le but qui m'avait conduit chez lui, il transforma sa hutte en atelier d'objets ethnographiques et je dois à son esprit d'entreprise d'avoir pu recueillir maintes pièces, aujourd'hui hors d'usage, qu'il reconstitua à mon intention.

A l'époque où je me trouvais dans son village, *Aerasio* avait reçu de grandes commandes de flûtes pour la prochaine fête de l'équeo et je m'amusais à le regarder travailler. Une fois son instrument fini, il avait coutume de l'enjoliver d'animaux gravés.

La matière sur laquelle *Aerasio* (v. pl. XCI, 5, 7 et pl. XCII, 3, 6) incrustait ses figures n'a pas été sans exercer une influence indirecte sur les dessins au crayon qu'il traça sur mon calepin. Ceux ci se distinguent par leurs caractères anguleux, mais aussi par leur netteté.

José Miguel (v. pl. XCI, 8 ; pl. XCII, 1, 5, 7, 9 ; pl. XCIII, 2, 4, 6, 8, 11, 12), que l'exemple d'Aerasio avait encouragé, me demanda de lui céder cahier et crayon et il me fit toute une série de dessins qui, quoique assez flous et hésitants, ne manquent pas parfois d'un certain mouvement. *José Miguel* avait voyagé en Argentine : le train et l'automobile (qu'il dessina de mémoire) attestent bien son admiration pour les ser-

vrière du « Progrès » (pl. XCII, 7, 8). Grâce à Dieu, son modernisme ne lui avait pas fait oublier sa mythologie et il eut me dessiner un épisode mythique que l'on voit sur la planche XCIII, 12, A, B, C : le jaguar bleu (*yapacuri*, personification des tâches de la lune) s'apprête à dévorer la lune et le soleil.

Quand j'eus terminé avec les hommes, je voulus avoir quelques dessins féminins, m'imaginant que les femmes se prêteraient volontiers à ce jeu puisqu'elles sont les artistes attitrées de la tribu. Toutes, unanimement et à ma grande surprise, s'y refusèrent en criant au milieu de fumées de rire : *Aiknó* « Je ne suis pas capable, je ne suis pas ». Une seule, une jeune fille *Iwaraní* se laissa persuader par la promesse d'une lubine de fil. Sa maladresse n'était pas feinte comme je pus m'en rendre compte dès le début en voyant l'air embarrassé dont elle prit le crayon. Une fois prête à dessiner, l'inspiration lui manqua brusquement, elle resta à court jusqu'à ce que je lui aie indiqué un vase à copier. Comme sa confusion ne faisait que croître elle demanda à Cosme, le petit garçon qui me fit mes premiers dessins, de l'aider. Celui-ci dessina le vase de la planche XCIII, 10, qu'elle se mit consciencieusement à reproduire en série. Je protestai et elle me fit ensuite un cheval et sur le dos du cheval, un homme et un enfant, puis une femme (pl. XCI, 3 et XCIII, 7). Je ne sais pas très où que tous les dessins qu'elle me dit avoir faits, soient d'elle, car mon attention ayant été distraite par une visite, elle se fit aider en cachette par Cosme.

Les dessins que les Chiriguano extrairent à mon intention rappellent non seulement ceux de nos enfants, mais se rapprochent sensiblement de ceux qui ont été recueillis en diverses régions de l'Amérique du Sud, notamment chez les tribus du rio Negro (Koch-Grünberg, 1); les Tonlipang et les Mehuit (Koch-Grünberg, 3, pl. 26-32, pp. 128-161); les Indiens du haut Xingú (Steinen, 2, pl. III-IV), (Max Schmidt, 2, fig. 245-247, pp. 396-398); les Choroti et les Ashluslay (Nordenskiöld, 2, fig. 65-66, pp. 130-132); les Kaingná (Ambrosetti, 2, pl. I-III, pp. 674-692), etc.

Il ne saurait être question de faire une étude comparée de ces dessins tant leur style est uniforme. Les seuls détails qui méritaient d'être rapprochés sont ceux qui révèlent des particularités psychologiques semblables et encore ces traits communs ne sont ils pas caractéristiques d'une mentalité primitive. C'est à peine si j'aurais à signaler le fait qu'un Indien Kaingná pour dessiner une femme, a pensé exactement comme deux de mes artistes chiriguano (pl. XCI, 3 et 7) : il a commencé par représenter la femme nue, puis ensuite l'a habillée.

Les Chiriguano sont trop civilisés pour qu'on puisse espérer découvrir dans leurs productions artistiques des traits intéressants ; certaines de nos représentations conventionnelles se manifestent dans leurs

dessins (v. les figures 12 B, C de la planche XCIII figurant la lune et le soleil).

A mon avis, la valeur scientifique de tels dessins est faible et ne témoigne que d'une chose : les difficultés qu'éprouvent les Indiens à reproduire avec des moyens qui leur sont peu familiers des objets naturels. Je citerai à ce sujet une remarque fort judicieuse de Boas (p. 62) : « Lorsqu'on donne un crayon et du papier à un primitif et lui demandant de dessiner un objet d'après nature, on l'oblige à se servir d'instruments qui lui sont peu familiers et on lui impose une technique qui lui est inconnue. Il doit faire abstraction de ses méthodes de travail habituelles et résoudre de nouveaux problèmes. Le résultat ne peut donc être une œuvre d'art — sauf dans des conditions exceptionnelles. C'est exactement ce qui a lieu pour l'enfant ; l'artiste amateur doit affronter une tâche pour laquelle il lui manque une préparation technique et les difficultés qui embarrassent l'enfant sont précisément celles qui embarrassent le primitif, d'où la ressemblance apparente entre les dessins d'enfants et ceux des primitifs ».

Il ne fait aucun doute que les Chiriguano ne soient aussi bien doués pour le dessin que les Bororoïens. Sur un des murs de la mission de Machareti, j'ai vu des fresques tracées au charbon par un Indien qui prouvaient un réel talent chez leur auteur.

Planche XCI

Figure 1. Hutte (*ba*). Les tresses sur lesquelles reposent les traverses de la toiture, quoique invisibles, ont été soigneusement indiquées par Cesalio, auteur de ce dessin.

Figure 2. Femme (*kuba*) vue de face. Elle porte une robe. Elle a quatre doigts à chaque main et les oreilles sont démesurément grandes (Cesalio).

Figure 3. Femme (*kuba*) dessinée par *Iovanni*. Au début elle se contenta de faire une tête dessus surmontant un corps rabougri et de longues jambes fines. Sur un remarque que cette femme était nue, *Iovanni*, par pudeur l'habilla en entourant ses jambes d'une sorte d'ovale qu'elle gribouilla en noir. Elle termina son dessin par les cheveux lorsque je lui manifestai mon étonnement pour la nudité de cette femme.

Figure 4. Chien (*grinki*) dessiné par Cesalio. Le corps est de profil et la tête de face. Les pattes antérieures se terminent par deux griffes, celles de derrière par deux boules.

Figure 5. Iguane dessiné par *Aarmin*. Celui-ci avait une préférence pour cet animal qu'il gravait sur ses flèches et il s'empressa de le reproduire sur mon calepin en gardant le style un peu anguleux de ses dessins rupestres.

Figure 6. Personnage masculin (*ñáy*) dessiné par *José Miguel*. Sur une main quatre doigts, sur l'autre cinq.

Figure 7. Femme (*kolo*) dessinée par *Aswain*. L'artiste commença par la figurer nue et ne n'est qu'ensuite qu'il eut l'idée de l'habiller, dessinant sa robe comme si elle était vue en coupe.

Figure 8. Chiriguano tissant à l'arc. Il saisit le bois de l'arc avec la main droite et la corde avec la gauche suivant l'habitude chiriguano (dessin de *José Miguel*).

Figure 9. L'auteur de cette figure vu par Cesalto. Son chapeau à large aile se trouve transformé en calotte de marin américain et ses lunettes, qui frappaient évidemment les Indiens, sont indiquées du fait qu'ils l'auteur soit point de profil, la tête renversée en arrière. Les parties noircies représentent son costume.

Planche XCII

Figure 1. Ura, poule (*José Miguel*).

Figure 2. Ñandu (*nandou*), dessiné par Cesalto qui sur une partie lui a donné le nombre réglementaire de doigts, mais en a oublié un sur l'autre.

Figure 3. Ce nandou aux traits angéliques contrastant le nombre d'*Aswain* habitué à dessiner sur une matière aussi ingrate que le bambou.

Figure 4. Ce dessin est aussi douteux l'image d'un ambou (*kwiñ*) dont la queue suspendant contrairement plutôt à un renard et la face à un lemur (Cesalto).

Figure 5. Un garçon (*mañáy*) et l'auteur reconnaissable à son chapeau et aux talons de ses bottes (*José Miguel*).

Figure 6. Tigre (*jaguar*), dessiné par *Aswain* qui lui ensuite a reproduit une figure qu'il avait sans doute l'habitude de graver sur ses ditos. Le tigre qui est vu de profil n'a naturellement que deux pattes.

Figures 7 et 8. Ces deux dessins représentant l'un une ente et l'autre un train sont dûs à *José Miguel* qui a voyagé en Argentine. Ils constituent un bon exemple de son d'observation et de la minutie des Chiriguano. L'ente a trois roues, c'est-à-dire que celles de devant ont été représentées de profil, mais comme si elles étaient vues de face.

Figure 9. Femme marchant dessinée par *José Miguel*.

Figure 6. Cerf (roue) (*Aud. Bigot*).

Figure 7. Cheval et dessus en bamboo et en enfant. On réalise 6 d'après des deux dessins distincts que l'artiste, la jeune *Zoumaré*, a rapprochés par mégarde.

Figure 8. Poissoniller (*Bigot*) (*Aud. Bigot*).

Figure 9. Chien (grande) (*Aud. Bigot*).

Figure 10. Tour (grande) avec de triangles à volutes (*Gamelé*).

Figure 11. Gouvernante (*Aud. Bigot*).

Figure 12. (A) : jaguar blanc qui vit dans le ciel (personnification des taches de la lune) s'apprêtant à manger la lune (B) et le soleil (C), personnages aimés en enfigan.

CHAPITRE XIV

Le traitement des maladies

Médecins et sorciers

Magiciens. — Les Guaranis-Méthodistes sont devenus si rares chez les Chiriguanos, que du tout mon voyage je n'ai pas eu admirative occasion. Ce n'est que sur le haut Pilcomayo où j'ai fait allusion devant moi à un *pajé* de talent qui vivait dans un village du voisinage.

S'il n'existe plus de grands magiciens doués du pouvoir surnaturel et célébrés d'un grand prestige, dans chaque village il doit y avoir encore un homme ou une femme capable de guérir certaines maladies et de pratiquer des incantations.

Une vieille dont je fus témoin en Tiabuy (où Saladé, haut Pilcomayo), démontre bien que la profession de magicien, si diminuée soit-elle, n'a pas reprendant disparu. Je logeais chez un métis bolivien dont l'enfant avait le corps couvert de boutons purulents. Des parents commencèrent par s'adresser à un sérieux médicale, mais je me déclarai incompétent pour traiter un cas si sévère entre. Ils apportèrent alors une vieille Indienne qui apporta ou matin une plante à la main, sorte de citronnelle sylvestre que les métis appellent *anadis del monte*. Cette plante pilée et mêlée à de l'eau chaude sert à des lavages extérieurs. On étendit l'enfant par terre et on lui ordonna de ne tenir immobile. La vieille s'assit auprès de lui et se mit à murmurer des incantations imperceptibles qu'elle n'interrompait que pour cracher sur les membres du petit patient. Elle reprenait ensuite sa récitation, tout en étendant la salive sur le corps, de la tête aux pieds. Nordenskiöld (**5**, p. 44, fig. 16) assiste à Yumbia, non loin du Saladé, à un traitement analogue pratiqué

[illegible] par une femme médecine sur un enfant. Elle le frictionnait et soufflait sur son corps (1).

Le père du jeune malade me raconta que, souffrant une fois de maux de tête prolongés, il avait eu recours à une magicienne, vieille femme aux cheveux crépus, qu'on appelait la *Sambo*. Elle mâcha la place où était localisé le mal et en tira des vers. Le métis guérit, bien entendu.

Dans la bidonville de Yuvizenda, où il y avait un enfant malade de la fièvre, sa mère lui avait fait manger des *parrapatos* (tiques) pilées. Le malheureux en avait les lèvres violettes.

Je consacrerai une brève médecine chiriguano une étude spéciale dans un prochain volume de cette Revue. En attendant je me bornerai à citerai d'après le *Diccionario Chiriguano-Español y Español-Chiriguano* (pp. 166-167) la manière dont procédaient habituellement ces puissants personnages quand ils étaient appelés au chevet d'un malade. Je suis fondé d'avoir recours aux observations faites par un autre fonctionnaire d'avoir pu assister moi-même au spectacle que le P. Giannechini évoque avec autant d'exactitude que de vivacité. Les grands *papa* chiriguano sont généralement tous dans l'*Iroda* où ils soignent des morts et aucun ethnographe n'aura plus le privilège d'assister à leurs *paperia*.

« Lorsqu'un Indien est gravement malade, ses parents s'empressent d'appeler un homme médecine dont le premier soin est de faire une enquête sur les origines du mal. Il demande à son client si les symptômes de son infirmité n'ont pas coïncidé avec une fête, s'il n'a pas d'ennemi particulier ou si un frère ou ses enfants ne se sont pas pris de querelle avec un de leurs voisins. Lorsque le magicien a reçu une réponse à toutes ces questions, il se met à faire des grimaces, à hocher la tête, à prendre un air absorbé et finit par énoncer sur un ton emphatique le résultat de son diagnostic : *Ahoa, pardi ôa! aramôi ubegaôi ambi kiaanaga ubere!* « Mon ami, c'est sérieux, quelqu'un t'a peut-être empoisonné ». Il hésite un « Nous allons voir »

« Il demande alors du tabac, bourre sa pipe et fume. Lorsqu'il a terminé, il commence aussitôt et continue à fumer... Il devient triste, perd la parole, jette partout les regards convulsifs, fait des gestes comme s'il voulait écarter des fantômes en fuite, s'évanouit, agonise... Pauvre magicien, il semble mort... Non l'imposteur vit... oui il vit et il revient

(1) Dans le *Diccionario Chiriguano-Español y Español-Chiriguano*, etc. (p. 72), nous trouvons le mot *kaapi* traduit par « frotter, masser » et la phrase : *ôipari ôeranga-ranga ôiu, ôeôi é ôeôi ôiu*, le sens suivant : « Ma grand'mère m'a soulagé [illegible] mais je n'ai pas guéri. » Les guérisseuses, ajoutent les auteurs du dictionnaire, emploient le mot *kaapi* pour exprimer l'action de frotter avec la main toute partie douloureuse du corps, spécialement la poitrine sans autre remède que la salive qu'elles crachent sur la main. Ces femmes attribuent à la salive une vertu spéciale.

à lui. « Oui, dit-il au malade, je connais l'auteur de ton mal, celui qui par haine ou par esprit de vengeance, cherche à t'enlever à ton enfant, à jeter ta femme et tes parents dans le deuil et la douleur. C'est un tel... je l'ai vu, j'ai dû lutter contre lui et je crois pouvoir mort. Ale ombone, je l'ai vaincu : tu ne mourras pas. »

« Le magicien demande alors aux hommes qui considèrent ce poulet, ou vertus, ou chevaux, etc., que les parents du malade n'avent lui refuser de peur d'être à leur tour victimes de ce poisonnée magique. On a vu des familles entières se ruiner pour payer les dépenses des magiciens.

Si le malade meurt, le sorcier n'est pas en peine pour trouver une excuse, mais parfois il doit rendre une partie des biens qu'il a reçus en paiement. »

Fig. 137. — Calebasse contenant de la graisse de serpent. Pour : Sakaïtin. (1/4, environ de la gr. nat.)

A en juger par ce texte, le magicien chiriguano, comme son collègue tupinamba ou sélérien, se mettait en état de transe pour que son esprit, libre des liens du corps, pût aller livrer bataille contre l'âme de l'individu malintentionné qui s'acharne contre son client.

L'*ipia*, c'est-à-dire la force magique, est indispensable à qui prétend être un bon sorcier. C'est du moins le sens que je donne à ce mot traduit dans le *Diccionario Chiriguano-Español y Español-Chiriguano*, etc. (p. 72), par : « remède, antidote », mais dont il est dit que la possession est indispensable à tout homme médecine. Ce mot utilisé à un sens quelconque exprime la faculté, le pouvoir, la facilité de faire ou d'obtenir la chose signifiée par le nom. Ainsi un chien dressé à chasser le cerf est *cuasi-ipia* (*cuasi* : cerf), un guerrier est *tarabio-ipia* (*tarabio* : ennemi), etc.

Remèdes. — 1. La graisse de serpent (*sakaïtin*) est efficace contre la lèpre. Les Indiens la conservent dans une petite calebasse fermée avec de la cire (fig. 137).

2. Un peu de coton imbibé d'huile de ricin (*pandi*) et frictionné sur la peau est un onguent excellent contre le rhumatisme.

Fig. 138. — Flacon de bambou contenant de la graisse de poule. Pour : Chiriguano. (1/4 gr. nat.)

3. Une vertu analogue est attribuée à la graisse de poule (fig. 138). Dans la vie journalière on a recours à la graisse de poule ou à l'huile de ricin pour s'oindre le corps, que l'on frotte ensuite avec de la pâte de roucou. Les femmes ont généralement la face et les jambes huilées de cette façon, ce qui leur donne un teint rougeâtre et luisant des plus étranges. Cette coutume, qui est déjà si-

guère au XVIe siècle chez les Tupinambas de la côte du Brésil, tend à tomber en désuétude.

Le coronu, sorte de pâte, est contenu dans un petit sachet en feuille de maïs (fig. 139), ainsi que la kalaupa, substance composée d'un mélange de coronu et de graines pilées d'urucu, qui donne une couleur violette.

Fig. 139. — Sachet en feuille de maïs contenant de la pâte du coronu. (Paro. : Métraux photographe. 1/1, environ de la gr. nat.)

4. La graisse de jaguar (*pepopiri*) guérit toute « ligne » (*kowetè*) si l'on s'en frotte après l'avoir chauffée.

5. La graisse d'iguane fait pousser les cheveux et cicatrise les blessures. L'usage en est externe.

6. Le pétale séché du coronu fait pousser les ongles des doigts et les cours d'oreille. Il suffit pour cela de toucher la partie malade avec l'extrémité de ce matériel. Les Indiens le tiennent pour fort embêtant et ne le touchent qu'avec répugnance. Pour éviter cet inconvénient ils le pourvoient d'un manche et l'enferment dans un étui de bambou (fig. 141).

Fig. 140. — Corne de cerf contenant des graines de coronu. (Paro. : Métraux photographe. 1/1, environ de la gr. nat.)

7. Les cornes de cerf chaudes, et appliquées contre le cou, font passer le torticolis. L'usage médical des cornes de cerf (*ronu*) explique la présence fréquente des bois de cet animal dans les gisements archéologiques des régions andines voisines. C'est ainsi qu'on en a trouvé dans les ruines de l'Allerüto, dans la Quebrada de Humahuaca (Debenedetti, **4**, p. 21), à Tilcara (Debenedetti, **2** p. 232), à La Paya (Ambrosetti, **6**, fig. 255, p. 633), à Tastil (Boman, **2**, t. I, pl. XXIX, fig. 78 *f*).

Fig. 141. — Étui contenant un pétale de coronu séché. (Paro. : Métraux photographe. 1/1, environ de la gr. nat.)

Il faut soigneusement distinguer les cornes mentionnées à un fragment du crâne et dont l'usage n'a pu être que magique ou médical, de celles que les Indiens travaillent en forme de poinçons. Ces instruments sont encore en emploi rituel et sont réservés pour la perforation de la lèvre inférieure des enfants, lorsqu'ils sont en âge de porter le labret. C'est du moins ce que nous apprend Cunqueno (p. 66). Les Indiens, d'ailleurs, m'ont tous confirmé ce détail. Jadis, les Tupinambas du Brésil pratiquaient cette opération avec un poinçon de même nature (v. Métraux **3**, p. 105).

Cependant, ces sécaus sont trop abondantes dans chaque village pour que leur utilisation fût seulement sporée. Il est probable que les Chirigunos n'ont servant comme d'un simple outil pour des fins uniquement pratiques.

A Tilcara, Debenedetti (2, fig. 170, p. 222), a découvert des spécimens en usage de cuif identiques à nos exemplaires chirigunos.

8. *Je* pensée dans mes collections des graines dont les vertus sont quelqu'un: elles sont en remède excellent contre les douleurs intestinales, les vésicules et les maux de dents.

9. Contre les maux d'estomac, les Chirigunos recommandent l'absorption de particules de lacs (*adelgiada*).

10. L'intuiteur gruisse (d'une grenouille?) dessinée dessous sur pâte ou sur pendre avec laquelle on soigne les animaux dont les plaies sont nettoyées par les vers.

11. Lorsque le sabot des vaches tend à se dénoller, on les lave avec des fragments de roche calcaire (*Dolor*).

12. La graisse extraite de la patte d'une vache est en usagent efficace pour les cas de rhumatismes.

13. Le lou du tonnerre pense pour jouir de grandes propriétés médicinales. On le cuit et on boit la pendre qui s'en détache dans de l'eau (*Lempeno*, 111).

Les points de côté et les fics du ventre se traitent avec un morceau de carapace de tatou bébé, mouillé et dissout dans de l'eau que le patient boit.

Dans le *Dictionnaire Chirigunos-Espagnol y Espagnol-Chirigunos*, etc. (*passim*) et le livre de Nino (pp. 200-208), on trouve maints renseignements fort intéressants sur la pharmacopée des Chirigunos. Je les résumerai pour compléter mes propres observations.

1. L'huile qui flotte sur le *Mori*, une fois chaleur, est un bon remède pour les maux de tête.

2. Le sel mouillé et bu, mêlé à de l'urine de petit enfant, calme les douleurs stomacales.

3. Le rhumatisme se soigne en appliquant sur la partie malade une bouche de *ciela (dondoriou)* dont on a enlevé les épines et que l'on fait chauffer.

4. Pour soulager la *dysenterie*, il faut boire une décoction composée de maïs et de graines de melon d'eau mouilles ensemble.

5. Les points de côté se traitent en buvant un fragment de carapace de tatou pilé et en frictionnant la partie malade avec une portion de cette même substance chauffée.

6. On fait disparaître les tumeurs et les enflures de la gorge en en gonflant en appliquant sur la région enflammée les feuilles d'un arbuste appelé *ordoro* chauffées dans une marmite. Une autre herbe (*pendriendoy*) a la même vertu.

Les feuilles d'arnébaua, mises en macération sur le cœur, diminuent les maux de tête, préservent de la congestion et guérissent de l'hémiplégie. Les feuilles du gandjan (*Sedimadilla*) participent de toutes les vertus de l'arnébaua.

7. Les bétacringhas sont artichts en nagrus du lotus ou de la feuille grillée de la liane engangangu.

8. La dan-ngugu est une herbe efficace en cas de maladie d'estomac et la racine dite sotu guérit les douleurs du pieds (rhumatisme ?).

9. La gangu est une liane qui guérit toute enflure de tête.

10. Le gaïtra, mare chez les Kaïtaua, est utilisé par eux en salad. On le cuisine avec la verte, fruit jaune qui rappelle une prune, ou ne doit jamais saisir du sirô des sangsues du sang de gallinaus, de mamelle ou de bandaïrtia, mêlée de lymphes.

11. Les ophtalmies ou conjonctivites sont soignées avec des gouttes extraites du l'inaua d'algarrobille ou avec la gôte (lait du lamina de la phantômarbrtia. Les feuilles du gandi-ungu sont excellentes pour les cas d'ophtalmie.

12. Une variété du mangaurtil fait passer la diffilia.

13. La Bore bée ou (*Barbe ancien*) guérit les dangérous entamba et est aussi bonne pour la malaria.

14. L'herbe (*nati ghoni, d'ouai*) est un remède contre la coqueluche qu'on peut soigner aussi avec une infusion faite du gadjan bouillie en mêlée et bon vinée.

15. L'inaua de kagi attendrie autour du vomre ou stérile excellente pour hâter montre l'hydrophtie du mêmes que les feuilles de l'aduva (*gada de ladaj*), arbre rappelant le laurier, ou l'herbe ken-pugu, prise en le Orniua.

16. La gouverbide se traite avec la racine bouillie du mémel et la graines de kapik.

17. Les mores d'aurtite passent, si l'on verse dans le sandale auditif des gouttes de graines du pesto, de mamelle et de ripale.

18. La racine de chirigaqu del mamie (*arrêtée*), est un bon antidote si l'on se sent empoisonné.

19. Les morsures du serpent perdent de leur gravité si l'on applique sur la plaie de l'herbe mamie, du pesjo, du tabac ou de la mémélée.

La mire de la laine *nipu-pary-mingi*, quelque vénéneuse, n'est cependant pas moins un excellent antidote pour les mêmes cas.

20. En mettant sur la blessure de la cire fondue, on ne craint pas de périr lorsqu'un chien enragé vous a mordu.

21. Les plaies produites par un instrument tranchant se cicatrisent si on étend dessus des plumes de poule brûlées.

22. Il suffit à une femme de faire dans de l'eau la poudre d'une coquille pour remettre en place un matrice descendue.

[illegible]. Les feuilles vertes de l'abbittiaire, l'écorce d'arbre-ro (*gambrache [illegible]*), la plante figurée [illegible], [illegible] en infusion, sont autant de remèdes contre la fièvre.

[illegible]. Des compresses de feu [illegible] font crever les abcès.

[illegible]. En cas de constipation, il est bon de boire le latex du *ken-ai (ne[illegible], [illegible])*.

[illegible]. Après toute chute grave, il faut boire de l'eau dans laquelle on a fait infuser une sorte de [illegible] (*[illegible]-ei*), préalablement pilée. Les [illegible] ne se font pas [illegible] si l'on applique sur les régions endolories, des cataplasmes faits avec cette même plante soigneusement [illegible].

[illegible]. Un [illegible] d'[illegible] sur les douleurs des feuilles de [illegible] en vue [illegible] que l'on obtient en faisant bouillir l'écorce d'arbre *pitiga* [illegible]. L'autre [illegible] est également bonne pour les fractures.

[illegible]. Les Chirignanos utilisent l'écorce d'arbre *pitiga* [illegible] pour faire [illegible] toute sorte de dents et pour rendre leurs dents plus solides.

[illegible]. La [illegible] en usages de la façon suivante : on fait bouillir les feuilles de [illegible] et on lave avec cette infusion la tête du patient. Ensuite on prend avec des pinces en [illegible] un [illegible] le fiel du poisson [illegible] et on en frotte les yeux du malade jusqu'à ce que la cataracte tombe.

[illegible]. Le tanin contenu dans l'écorce du *kurupil* est un désinfectant qui [illegible] la cicatrisation des plaies.

[illegible]. Les feuilles du *kurupil-i* (petit *[illegible]*) prendre et mises en compresses sur une tumeur agissent d'une façon [illegible] définitive.

[illegible]. La plante [illegible] (sorte de pourpier), est un laxatif. Elle donne une [illegible] que les jeunes filles font sécher et pulvériser pour [illegible] les joues en rouge.

[illegible]. L'écorce d'[illegible], pilée et grillée, est un bon remède contre toute douleur affectant les membres. Les [illegible] tirés des épines de cet arbre [illegible] la cicatrisation des blessures.

[illegible]. Les [illegible] de l'ail pulvérisé [illegible] font tomber les dents.

[illegible]. La racine de l'*aigo-para-ainga* [illegible] moulue et pétrie avec du sel et du [illegible] est un [illegible] que l'on [illegible] sur les tumeurs.

[illegible]. Lorsqu'ils [illegible] des [illegible] aux membres, les Chirignanos appliquent sur la partie malade, un cataplasme fait de racines d'[illegible], [illegible] et grillées.

[illegible]. Les [illegible] du [illegible] sont [illegible] par doses de deux ou de trois [illegible] en bon [illegible].

[illegible]. Le [illegible] est un arbre rappelant notre noyer. Son écorce intérieure [illegible] que l'on [illegible] sur les éruptions cutanées.

[illegible]. Une plante grimpante appelée *[illegible]-ruru* passe pour avoir des pro-

prêtée médicales. On le prend sous forme d'infusion ou on en fait des cataplasmes après l'avoir pilée.

40. Une autre plante grimpante, le *tua-tui (herbe de chiente)* est un anodique fort actif qui peut provoquer des lésions si l'on garde trop longtemps les compresses que l'on fait avec ses fleurs, ses feuilles et ses brindilles mentions ensemble et mêlées avec de l'eau. Si l'on se frotte les mains avec cette plante on les rend insensibles.

41. Les racines de l'arbusto *ubajipina* bien entre dessous en bouillon qui combat l'atrophie.

42. Une espèce de pensée *(wanlapin)* s'emploie dans la pharmacopée indigène comme anodique.

43. Les Chiriguano ont une grande confiance dans la vertu de l'eau chaude. Tout Indien malade a à côté de lui un petit vase, grand comme un œuf, plein d'eau chaude. Ceux qui l'assistent humectent leur doigt et trempent aux lèvres (Campana, p. 110). Le patient doit aussi boire dette eau.

La médecine chiriguano au XVIIIe siècle. — Un manuscrit du XVIIIe siècle, écrit par le P. Manuel Mingo, et conservé à la Bibliothèque du Collège de Tarija, contient des renseignements de plus haut intérêt sur la manière dont les Chiriguano se soignaient à l'époque où ils étaient encore indépendants. Voici la traduction du passage en question :

« La manière dont ils se soignent où ces de maladie est curieuse. Parfois, lorsqu'ils se sentent malades, ils vont aussitôt se baigner à l'intérieur de leur maison dans des jarres ou dans une baignoire en bois. Parfois ils se font appliquer quelques herbes qu'ils vont chercher dans les champs en fourrés, parfois aussi ils se laissent administrer un lavement ou clystère. Cet instrument (d'après ce que j'ai pu voir à Tariquea) est aussi fort curieux. Il se réduit à une petite calebasse ou courge creuse, avec en haut une ouverture circulaire et en bas un petit trou. Dans la partie inférieure on fixe ou on met une canule creuse ou un petit roseau creux correspondant à la canule. On verse par le haut (c'est-à-dire par l'ouverture ronde et grande, ménagée dans la partie renflée de la calebasse) un bouillon d'urine avec du sel. Après quoi, celui qui fait office d'infirmier ou d'infirmière, souffle fortement par la partie supérieure ou du haut en appuyant ses lèvres sur l'ouverture ou fenêtre de la calebasse et la force du souffle fait passer le liquide dans les intestins du patient ». (Fol. 107-108).

Nordenskiöld (14, pp. 184-185), qui dans un livre récent s'est occupé tout au long des divers instruments utilisés par les Indiens de l'Amérique pour effectuer les lavements, en distingue deux types : ceux qui sont pourvus d'une poire en caoutchouc, en cuir ou d'une vessie, et ceux qui se réduisent à un simple tube. Celui qui nous est décrit avec un tel luxe de détails par notre missionnaire, se rattache au second type, tout en

présentant quelques analogies avec le pressoir. Il peut être considéré comme un intermédiaire entre les deux.

L'explorateur Sitz von Essen, a cherché à démontrer que certaines objets trouvés dans le nord-ouest de l'Argentine sont des tubes ou canules de clystères. Nordenskiöld se range aussi à cet avis. Pour mon compte, je crois d'autant plus tenté d'adopter cette hypothèse que je ne pourrais autrement expliquer la présence de cet instrument chez les Chiriguano. Aucune tribu tupi, en effet, à l'exception des Guaraqui du haut Amazone, ne semble avoir eu connu aux lavements en cas de maladie, du moins aucun des voyageurs qui se sont occupés de ces Indiens ne mentionne cette opération chez eux. Il est aussi douteux que les Chiriguano aient emprunté aux peuples andins voisins cette méthode curative et l'instrument correspondant ; mais autant que les Quichua s'adjoint [illegible] des lavements, comme en fait foi la découverte d'une seringue en cuir dans une tombe préinquique de la vallée d'Ullachou dans le Pérou oriental. (Nordenskiöld, 14, fig. 74, p. 106.)

TRIBES OF THE EASTERN SLOPES OF THE BOLIVIAN ANDES

By Alfred Métraux

INTRODUCTION

Five tribes live along the slopes of the Bolivian Cordillera from the Argentine border to Perú: The *Chiriguano*, the *Yuracare*, the *Mosetene* and *Chimane*, the *Leco*, and the *Tacana*. The *Chiriguano* belong to the *Tupi-Guarani* group; the *Yuracare*, *Leco*, and *Tacana* represent still isolated linguistic families. The *Mosetene* and *Chimane* form a single linguistic group. 101

CHIRIGUANO AND CHANE

HISTORY

The *Chiriguano* (*Avá Chaháuanco*) (map 1, *No. 3*; map 2; map 8, *No. 5*) are the descendants of the *Guaraní* who in historic times migrated from Paraguay and crossed the plains of the Chaco in successive waves to settle along the foothills of the Andes from the upper Pilcomayo River to the upper Rio Grande (Guapay River). (Lat. 18°–23° S., long. 63°–64° W.) Seven migrations are alluded to in historical documents. 175 167 101

The first migration (1471 or 1476), reported by Garcilaso de la Vega, took place during the last year of the reign of Inca Yupanqui. Another, between 1513 and 1518, can be surmised from the testimony of a *Guaraní* Indian who spoke to Alvar Nuñez Cabeza de Vaca. A *Chané* Indian captured by the *Guaraní* and brought to Itati told Domingo de Irala in 1542 of a third migration, between 1519 and 1523, which probably came after the 1513–18 invasion and certainly before that in which Alejo García took part. The *Guaraní* migration described by Diego Felipe de Alcaya, curate of Mataca, may perhaps be this third one, though many details are certainly fanciful. According to Gandía (1935 a, p. 24), this was the migratory shift which took the *Guaraní* from the region of Itati to the Province of Santa Cruz and which contributed to the formation of the *Guarayú-Pauserna* tribe.

The fourth *Guaraní* invasion, about which we have the most complete information, occurred between 1521 and 1526. It is famous because a few White men, shipwrecked sailors of the Solís armada, accompanied the invading Indians. One of them, Alejo García, seems to have played a conspicuous part in this migration, although Díaz de Guzmán's (1914, 9:26–30) statement that García was the organizer of the raid may be doubted. With a strong force of *Guaraní* he crossed the Chaco, probably at lat. 13° S., and invaded the borderlands of the *Inca* Empire. The raiders advanced as far as Presto to the northeast and Tarabuco to the southeast of Sucre. Fearing a victorious return of the *Charcas* (*Chicha*), the invaders retreated, carrying their booty. On reaching Paraguay, with *Chané* and *Tarapecosi* (*Chiquito*), Alejo

2 Métraux E-5 (1929) 1948 SF10 Chiriguano SF10

175 169 Garcia was killed by the *Guaraní*. The historical character of Alejo García's expedition is amply proved by several passages in documents of the Conquest of Paraguay, mainly in the "Comentaries" of Alvar Nuñez Cabeza de Vaca (Hernández, Pedro, 1852, pp. 379-580). The success of this raid prompted many more *Guaraní* to migrate westward. Those from the Río Paraná followed the Pilcomayo River. Those from the region of Asunción entered the Chaco north of that city. The Indians of Jerugainba and Caraysapera, that is to say of the country of Itatí, entered the Chaco near San Fernando (lat. 20° S.). According to Díaz de Guzmán, these Indians were the ancestors of the *Guarayú* or *Itatines*, who lived 90 miles (30 leagues) from Santa Cruz.

In a letter written by Martin González from Asunción in 1556, there is the following passage which confirms the continuous migration of the *Guaraní* toward the Andes: "These Indians [the *Guaraní*] go and come back from the lands of Perú. As they have no roads and avoid their enemies, they reconnoiter the land ahead of them, settle long enough to sow crops and harvest their food, and go on. So went those who for long had been settled in the Peruvian sierras and those who go today to meet the Christians.

"In Asunción are many Indians who with their wives and children have gone there two or three times from opposite that city, along a river [the Pilcomayo] that flows 2 leagues from here and comes from the city of La Plata. The Indians from Paraguay have settled by that river and along the Cordillera, over a space of 100 leagues. Some *Cario* [*Guaraní*] have gone to the mountains along another river, 42 leagues down the Paraguay River, which is called the Ypití [Bermejo River]. *Cario* are established in the mountains near the Ypití River, which also leads, according to what those who came from Perú say, to the city of La Plata." (Quoted by Gandía, 1935 a, p. 37.)

Several thousand *Guaraní*, serving as auxiliaries and porters, accompanied Domingo de Irala and Nuño de Chaves on their expeditions from Paraguay to the foothills of the Andes. It is historically attested that the 2,000 or 3,000 *Guaraní* of Itatí who followed Nuño de Chaves in 1564 were in part the ancestors of the modern *Guarayú-Pauserna*.

The *Guaraní* not only invaded and conquered the foothills of the Andes from the upper Bermejo River to Santa Cruz de la Sierra, but certain groups went even farther to the north and settled near the border of the *Mojo* and *Baurí* country. The *Pitaguari* (*Piritaguari*) were a *Guaraní* group established in the Sierras de Chiquitos, north of the first Santa Cruz. There were also *Chiriguano* around the town of San Francisco Alfaro in the Province of Chiquitos, near the Jesuit mission of San Xavier.

The *Guaraní* invasions, which started as plundering raids along the *Inca* frontier, were prompted by the desire to obtain gold and silver ornaments and copper tools from the *Carangas* (*Charcas, Chicha*) and from the *Chané* of the foothills, who were amply provided with these metals. Probably metal objects first reached the *Guaraní* of Paraguay through the *Chané*, whose villages were scattered across the Chaco from the Andes to the upper Paraguay River. Although the prospect of rich loot was certainly the predominant cause of their invasions, the old *Guaraní* dream of a land of immortality and abundance, the abode of the Great Ancestor, also may have played some part in determining their migrations.

175 648 The *Guaraní* finally became such a threat to the *Quechua* towns of the Province of Charcas that an *Inca* Emperor, probably Huayna Capac, built fortresses at Samaypata (Sawaypata), Saigpuru, and Guanacopampa to halt their inroads. Sarmiento de Gamboa (1906, p. 105) speaks of Huayna Capac's wars against the *Chiriguano*, of the *Chiriguano's* capture of the fortress of Cuzcotuyo (probably Incahuasi), and their defeat by Huayna Capac's general, Yasca. The ruins of these

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10
Chane SF8

Inca fortresses were visited by Nordenskiöld (1915 a, 1924 a), who described them under the names of Incallacta and Incahuasi. They bear witness to the accuracy of the various traditions concerning the *Guaraní* invasions, recorded by the chroniclers of Perú and of the Rio de la Plata. C 175 648

Along the Andes, the *Chiriguano* found a peaceful *Arawakan* population, the *Chané*, a branch of the *Chané* or *Guana* tribe, which occupied the northern part of the Chaco along the Paraguay River. The western *Chané*, after centuries of close contact with the Andean cultures, had been deeply influenced by them. They dressed like their neighbors, the Andean *Chicha*, produced a pottery which resembled that of Southern Bolivia and of the valley of Humahuaca, wore metal ornaments, and used metal tools. The *Chané* fell easy prey to the *Guaraní*, who slaughtered and ate many of them and reduced the remaining population to a condition of serfdom. The *Guaraní* invaders, having brought few of their own women, however, took *Chané* wives. The fusion of these two tribes produced a civilization in which Andean, *Guaraní*, and some *Arawak* features were intimately blended. The *Chané* did not entirely lose their identity, however, for along the Parapetí River, in the Caipipendi Valley, on the Itiyuro River, and in the Province of Salta (Argentine), *Chané* villages survived under their own chiefs. But even these have adopted the *Guaraní* language and today cannot be distinguished from their conquerors. The *Chiriguano*, nevertheless, consider the *Chané* somewhat inferior, while the latter remember the forays and cannibalistic habits of their former masters. The *Chané* language, probably extinct now, was spoken by a few persons as late as 1908. C C 648 175 C C [191] C [266] C [186] C [197]

The number of *Chané* is said to have greatly exceeded that of the *Guaraní* invaders. They extended from the Rio Grande (Guapay River) to the Argentine along the foothills of the Andes. At the beginning of the 17th century, according to Ruy Díaz de Guzmán, in the region of Machareti, 400 *Chiriguano* ruled over 5,000 *Chané*; in Charagua, 350 *Chiriguano* owned 4,000 *Chané* serfs; and on the Guapay River, 200 *Chiriguano* kept 1,000 *Chané* in subjection. C C 175 648 162

The first White settlement in the land of the *Chiriguano* was the ephemeral town of Santo Domingo de la Nueva Rioja, founded in 1564 on the upper Parapetí (Cordorillo) River by Manso and destroyed a short time later by the *Chiriguano*. In 1571 the *Chiriguano* attacked the *Chicha* and the natives of the Provinces of Condorillo and Barranca. To punish them for their "arrogance," the Viceroy of Perú, Francisco de Toledo, led an expedition against them. The Indians avoided battle and harassed the troops of the Viceroy until he was obliged to retreat in shameful defeat (1574). San Lorenzo de la Frontera, which became the modern Santa Cruz de la Sierra, was founded primarily to keep the *Chiriguano* at bay. C 175 648

The first attempt to convert the *Chiriguano* to Christianity was made in 1609, when two Franciscans, Augustín Sabio and Francisco Gonzalez, built a church in the valley of Salinas, but the reduction was soon abandoned because of Indian opposition. The Jesuit fathers founded a college in Tarija in 1690 and undertook the spiritual conquest of the *Chiriguano*. In 1691, Father Arce founded a mission in the valley of Tariquea, which lasted only 3 years; another mission, established on the Guapay River by Fathers Zea and Centeno, met the same fate. At the beginning of the 18th century, the Dominicans founded three missions in the valley of Chiquiacá, Nuestra Señora del Rosario, San Miguel, and Santa Rosa, while the Augustins formed the Mission of Santa Clara in the valley of Salinas. In 1715, the Jesuits reestablished their ancient mission of Tariquea. In 1727, all the missions in the *Chiriguano* country were destroyed by the rebellion of the chief, Aruma, and his followers, who feared being taken into slavery. The revolt was crushed by an armed expedition sent from Santa Cruz and composed of Spaniards, "tame" *Chiriguano*, and *Chiquito* auxiliary troops. The *Chiriguano* had been aroused against the missions by the fear of being taken into slavery. C 175 797 648

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10
Chane SF8

In 1732, the conversion of the *Chiriguano* was entrusted again to the Jesuits. Fathers Julian Lizardi, José Pons, and Ignacio Chomé entered the southern part of the *Chiriguano* territory and founded the missions of Concepción and Rosario in the valley of Salinas. About the same time, the Franciscans built a missionary center in Tarija and in 1757 they sent missionaries to the *Chiriguano*. In 1767, they reestablished the mission of the Purísima Concepción de Pilipilí. After the expulsion of the Jesuits in 1767, the Franciscans continued their work with great success. Between that time and the end of the 18th century, the Franciscans founded many new missions north of the Guapay River (Río Grande): Ahapo, Mazabi, Cabezas, Piray, Igmiri, Tacurú, Iti, Parapetí, Itau, Tapera, Iguirapucuti, Tacuaremboti, Piriti, and Obaig. Some of these were annihilated when the Indians rose in arms in 1796 and 1799. During the war of independence, the Franciscan missions were completely abandoned. In 1845, the Franciscans resumed the conversion of the *Chiriguano*, and built a series of new missions from Itau to the Parapetí River. The more important of these were San Francisco, Tarairi, Macharetí, Santa Rosa, San Antonio de Huacaya, Ivu, and San Francisco del Parapetí. In 1886, a messiah called the *Chiriguano* to arms against the Bolivians by assuring the Indians that they had nothing to fear because their oppressors' guns would only "spit water." The messiah and his followers were defeated near Cuevo.

In 1929, the last missions were secularized, and the *Chiriguano* lost the protection of the Franciscans. Many of them migrated to the Argentine where they were employed as skilled workers in the sugar factories. The Chaco war spread havoc in the *Chiriguano* villages at the foot of the Andes. The *Chané* of the Parapetí River then put themselves under the protection of the Paraguayan army, and today they live around the fort of Toledo, intermarrying with Paraguayans, whom they consider to be their kinsmen, "because of the close relationship between both *Guaraní* dialects." These *Chané* are sometimes erroneously designated as "*Guarayos*."

The 16th- and 17th-century chroniclers estimated the *Chiriguano* population at only a few thousand, exclusive of their *Chané* vassals. In 1810, there were 23,936 *Chiriguano* in the Franciscan missions. This figure includes only half the *Chiriguano* tribe, as the pagan members south of the Parapetí River were not reckoned. Cardús (1886, p. 242) gives the following estimate of the *Chiriguano* during the second half of the 19th century: In the province of Acero, 18,000; in the Cordillera and in the region of Izoro, 20,000; in the Chaco, from 5,000 to 6,000. Of these, only 8,000 were baptized and 3,187 lived under missionary care. In 1928, the total *Chiriguano* population was said to be 20,000. Today, after the Chaco war and constant migrations to the Argentine, their number must be greatly reduced.

ARCHEOLOGY

Few archeological finds were made in the region occupied by the *Chiriguano*. Nordenskiöld (1924 a, p. 40) mentions burial urns and ancient sites on the Parapetí River, and similar burials were discovered at Tarupayu. In some graves the dead were seated and were covered with several inverted bowls piled on one another. These bowls have hollow rims filled with pellets. Nordenskiöld refers also to direct burial in urns which show the characteristic corrugations of the *Chiriguano* and *Guaraní* ware.

At Yumbia, in the Province of Tarija, at the borderline between *Chiriguano* and *Quechua* territory, the present author obtained fragments of pots with hollow rims, an anthropomorphic vessel with ring-shaped body covered with a red slip, and a specimen of beautiful stone panpipes with

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10

typical *Inca* designs. At Caipipendi (pl. 41, *top, right*), near Charagua, he found a *Chiriguano* cemetery consisting of large, corrugated urns, identical to modern *Chiriguano* chicha jars, covered with smaller jars. Near the surface was found a vessel with incised decoration which has no resemblance to any modern *Chiriguano* ware. The same site yielded a small pot with thin incisions and two suspension holes. 172

SOURCES

Short descriptions of the *Chiriguano* appear in the early literature. Garcilaso de la Vega's picture of *Chiriguano* culture is on the whole quite inaccurate, but for a few details. Díaz de Guzmán (1914), Barco Centenera (1836, 1912), and Lizárraga (1909) speak briefly of *Chiriguano* culture, but the earliest firsthand account of it is Father Chomé's letter (1819 b). Tamajuncosa's report (1910) about the state of the missions at the end of the 18th century is also an interesting document. Weddel (1853), who visited the *Chiriguano* in the middle of the last century, published a few notes about their culture. The best sources are the reports and books written by the Franciscan missionaries, Cardús (1886), Corrado (1884), and especially Campana (1902). Nino's (1912) much-quoted book is based in great part on Campana's monograph. 113 114

Nordenskiöld dedicates several chapters of his "Indianerleben" (1912) and of "Forschungen and Abenteuer" (1924 a) to the *Chiriguano* and *Chané*. His data are accurate though somewhat superficial. Great stress is placed on the economic life and the material culture, but social organization and religion receive only cursory attention. However, the collection of *Chané* and *Chiriguano* myths is fairly large and of great interest. Nordenskiöld made a comparative analysis of *Chiriguano* material culture in one of the volumes of his ethnographical series (Nordenskiöld, 1920). More minute details about *Chiriguano* artifacts may be found in Eric von Rosen's (1924) luxurious publication based on a collection he made among these Indians at the beginning of the century.

Several aspects of *Chiriguano* history and material culture were studied in some detail by the writer (Métraux, 1930 b), who also published new *Chiriguano* myths (1931 a) and two sociological essays (Métraux, 1931 b and 1935).

Several monographs deal with *Chiriguano* pottery, which is today one of the best in South America. (Outes, 1909; Nordenskiöld, 1920; Métraux, 1930 b; Paulotti, 1942.) Recently, Max Schmidt (1938) again published and described *Chiriguano* artifacts and techniques.

Knowledge of *Chiriguano* religious and social life is meager and is limited mainly to Campana's monograph (1902) and to observations made by Nordenskiöld (1912) and the present author (1930 b) at a time when aboriginal *Chiriguano* culture was already decadent. The Paraguayan-Bolivian war accelerated its breakdown and little of it now survives.

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10
Chaco SF8

The migrations, wars, and the religious conversion of the *Chiriguano* have been the subjects of many historical monographs. The most important of these are by Corrado (1884), Serrano y Sanz (1898), Domínguez (1918), Gandía (1929 a, and b), Métraux (1930 b), Cimi (1925), Moreno (1929), and Finot (1939). The Jesuit missionary work among the *Chiriguano* has been described by Lozano (1941) and Muriel (1918).

CULTURE

SUBSISTENCE ACTIVITIES

As today *Chiriguano* and *Chané* share in the same culture, the following data may apply to both tribes.

Farming.—The *Chané*, conquered by the *Chiriguano*, were proficient farmers who, though practicing a tropical type of agriculture, were probably acquainted with many of the methods of cultivation of the Andean area. The *Chiriguano* adopted their traditions. The new habitat of the *Chiriguano* did not offer the same resources for hunting and fishing as had their homeland. Therefore, these Indians depend on farming to a larger extent than any other *Tupi-Guaraní* tribe. The basis of their livelihood is maize, of which they have 11 varieties, all related to those of Paraguay. Then follow in order of importance: Pumpkins, beans (11 varieties), sweet potatoes, sweet manioc, peanuts, and some Barbary figs (*Opuntia* sp.). Sweet potatoes were grown on a large scale by the *Chané* of the Parapetí River.

These Indians also raise cotton, tobacco, urucú, and, in the Parapetí region, reeds for arrow shafts (*Arundo donax*). Plants of the Old World adopted by the *Chiriguano* include melons, watermelons, oranges, sugarcane, and sorghum.

Chiriguano men clear the fields and surround them with a tall fence as a protection against the inroads of wild or domesticated animals, a task which is considered to be particularly strenuous. They also till the soil, but at harvest time they are assisted by the women and children. The latter, armed with slings, drive away the parakeets and other birds which prey on the crops. Nordenskiöld (1912, p. 183) observed that among the *Chané* of the Isiyuro region, large maize fields were tended by men while pumpkins and beans were raised by the women.

Collecting wild food.—When their crops fail, the *Chiriguano* subsist on the same species of pods and fruits as those collected by the Chaco Indians: Algarrobo, tuna, mistol, caraguatá, and other plant foods.

Hunting.—Hunting is a very secondary economic activity, at least in modern times. Peccaries, which are the main game animal, are hunted with specially trained dogs and killed with bows and arrows or with clubs. Rheas, which are abundant in the Chaco plains, are caught with bolas. Pigeons are captured with clap nets. Special arrows with two points are used for hunting yacu birds (*Penelope* sp.).

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10
Chane SF8

Fishing.—Fishing is worth while only for those *Chiriguano* and *Chané* who live along the upper Pilcomayo or Bermejo Rivers and, to lesser extent, for the *Chané* of the Parapetí and Itiyuro Rivers. Methods of fishing vary somewhat with the regions. Along the Pilcomayo River, fish are caught with iron hooks, with dipnets, similar to those of the Chaco Indians, with the bow and arrow, and with long two-pronged spears. Fishing baskets are used in combination with stone dams (fig. 57). C Ce 226 Ce [171]

C 226

FIGURE 57.—*Chiriguano* fish dam in the Pilcomayo River. *A* is entrance; *B* are pockets where fish are caught. (Redrawn from Nordenskiöld, 1920, fig. 14.)

Among the *Chané* of the Itiyuro, fishing is done almost exclusively by women and children. They use hooks, but more often they capture fish in small ponds which they cut from the main stream by means of weirs. They also catch small fish in narrow-necked gourds into which they place chicha dregs as a bait. The *Chané* of the Parapetí scoop fish with nets or shoot them with arrows tipped with a bundle of cactus thorns (Nordenskiöld, 1912, pp. 184–185). Ce 226 [462]

Domesticated animals.—Modern *Chiriguano* raise sheep, cattle, horses, and chickens. Their dogs are so completely mongrel that their European or Indian origin cannot be ascertained. The *Chiriguano* were probably acquainted with chickens when they arrived in their present territory, for they use a *Guaraní* term for them. Pets are not numerous in their villages; most of them are parrots which were captured by means of a noose attached to the end of a long pole. In order to approach the wild birds, the Indians use tame parrots and decoys. C 231 C [223]

Cooking.—Maize is prepared in a great many ways. The grains are eaten on the cob, roasted in special pans, boiled in water, or ground into flour, which is served with every meal. One method of preparing maize flour is to steam it in a perforated bowl. C 252

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10

252 415 412 264 *Chiriguano* mortars are of the cylindrical type; the pestle is long and heavy. Maize flour is sifted in round basket sieves very similar to those used in the rest of tropical South America. Meat is boiled or broiled on a spit; the habracot is conspicuously absent. Food is served in clay bowls and more rarely in wooden dishes, and eaten with wooden spoons. [319 263] Salt is extracted from mines near San Luis, or obtained by evaporating the water of salty brooks.

VILLAGES AND HOUSES

342 178 592 **Dwellings.**—Until the 17th century, the *Chiriguano* built large communal houses, "150 feet [46 m.] long," in which many families lived together, each occupying the space between two wall posts (Linárrage, 1909, p. 552). A hundred years later they were lodged, as they are now, in small rectangular houses, with a steep gable roof and wattle-and-daub walls. Sometimes the roof projects in front to form a small veranda. A house belongs either to a single biological family or to two or three closely related families, generally parents with their married children.

361 178 [343] [712] The ancient villages were composed of three to five long houses, grouped around the plaza. Modern villages also have a central plaza. A storehouse is built on piles near each dwelling and serves to protect crops against rats and dampness. Like the settlements of their Paraguayan ancestors, some ancient *Chiriguano* villages were protected by a single or double palisade.

352 **Household furniture.**—The *Chiriguano* sleep on platform beds of reeds and use their woolen or cotton hammocks to recline on during the day or as cradles for babies. The typical *Chiriguano* hammock is made of long warp threads twined together at set intervals by weft strands; a few caraguatá specimens are made in a net technique. Other items of furniture are benches carved of a single piece of wood, large vessels to store clothes and food, and crude shelves hanging from the roof. A tree trunk with three radiating branches serves as supports for vessels or for piles of corn.

DRESS AND ADORNMENT

291 177 **Clothing.**—*Chiriguano* men, wearing only a G string (chiripá), were a common sight before shirts and pants came into general use. The cotton tunic (cushma), which was adopted from the *Quechua* after the *Chiriguano* migrations, disappeared long ago, but the poncho, a more recent acquisition, is still popular. As early as the 18th century, *Chiriguano* horsemen, in true Spanish style, wore skin breeches and leather coats. They wear sandals when they have to walk over stony ground or through thorny bush.

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10

Chiriguano women still dress in tipoys, a long, sacklike garment, fastened on both shoulders with thorns or sometimes with luxurious silver pins (pl. 42, *right*). Some tipoys (tiru) are so long that they need to be folded. 291

Anciently, *Chiriguano* men shaved their foreheads, as did the *Guarani* of Paraguay. At a later period, men and women wore their hair long and carefully groomed it with combs. These were artistically carved from a single piece of wood; some of them were cut into the shape of animals. Men wrapped their hair around the head and kept it in place with a headband. 302 412

Women part their hair in the middle and tie it over the neck with a tasseled fillet, or with a ribbon across the forehead.

Body painting.—Both sexes formerly painted their faces and their bodies with urucú. In more recent times, women were content to smear their cheeks with urucú before taking part in a feast. Men stained their teeth black with a special grass. 302 178

Ornaments.—The distinctive ornament of the *Chiriguano*, even in modern times, is a tin labret studded with turquoise fragments (pl. 43; fig. 59, *e*). Originally, labrets were made of rosin, as were those of the *Guarani* of Paraguay. Wooden labrets or a piece of reed inserted in the lower lip remains common among children and also among men too poor to acquire a metal labret. Some of the round tin labrets are more than an inch in diameter without including the flanges which hold them on the inside of the lower lip. 301 178

Feather ornaments almost disappeared after the migration and were replaced by typical Andean woven frontlets studded with metal plates. Men hung elongated silver plates from their necks; these ornaments probably originated from small metal tweezers worn in the same fashion (fig. 59, *a*). The most valued necklaces are composed of turquoise or chrysocolla beads which are traded from the Mestizos of Tarija or taken from the sepulchers of the people who preceded the *Chiriguano* in their habitat. Ordinary necklaces were once strung with shells or seeds, but now consist of glass beads. 301 177 [439]

Miscellaneous.—The *Chiriguano* have the deserved reputation of being among the cleanest Indians of South America. Men and women bathe several times a day, washing themselves with crushed fruits containing saponin. Soap is in great demand throughout *Chiriguano* territory. 515 824

Men depilated their faces and bodies with metal tweezers. 302

TRANSPORTATION

Boats.—The rivers in *Chiriguano* territory are not suitable for navigation; the only watercraft are crude rafts used to cross the Pilcomayo River. 501

Carrying devices.—In contrast to other Guaraní, the Chiriguano do not have basketry knapsacks; women use large carrying nets with a tumpline. Babies are carried in a woven sling, straddling their mother's hip.

Chaco SF-8

REFERENCES

Pottery.—Chiriguano pottery is, for the beauty of its painted decoration and the variety of its forms, outstanding in modern South America. The mixed origin of Chiriguano culture is reflected in the two types of earthenware vessels. The plain pots for cooking and the large jars for chicha, which did not differ from similar vessels of the Paraguayan Guarani, were ornamented with fingernail impressions (pl. 41, bottom, right).

C 415 531

The de luxe vases and dishes, typologically related to vessels in the archeological pottery of southern Bolivia and northern Argentina, were decorated with distinctly Andean patterns (figs. 36, 60). The most common vessel is the *yuchal*, a subglobular vase with ears, in which chicha was served. The motifs are mainly geometrical and most of them

FIGURE 60.—Chiriguano pottery. Specimens at top, right, a Huancharo archeological specimen included for comparison. (Approximately 1/7 actual size.) (Redrawn from Métraux, 1929 b, fig. 70, pls. 21, 22, 44.)

Chane SF8

are based on a triangle surmounted by a scroll, which is multiplied in countless variations. C 323 [531]

Women potters (pl. 41, *top, left,* and *bottom, left*) tempered the clay with crushed potsherds and built up their vases by coiling. They painted them with several kinds of ocher and with black obtained from rosin. [C 462 386]

Spinning and weaving.—Among the *Chiriguano,* wool is more commonly used than cotton for textiles, but *Chané* fabrics are generally of cotton. The fibers are spun with a drop spindle weighted with a clay whorl (pl. 42, *center*). Although garments are in part Andean in shape, the loom remains of the vertical type. Formerly, indigo was the favorite native dye; today aniline dyes have entirely replaced it. The ornamentation of the fabrics is limited to a few stripes. C C 286 283 171 386 [531]

Netting.—Fishing nets and carrying nets are made by means of a wooden gage in a reef-knot technique. C 285

Basketry.—Fans, round baskets with overlapping lids, and sieves are twilled with palm leaves in the best Guiana fashion, but wickerwork basketry is very common. No large baskets for carrying or storing food are made.

Gourds.—The painted, incised, or fire-engraved (fig. 61) gourds (*Lagenaria siceraria*) used as cups are, after pottery, the best expressions of *Chiriguano* art. The motifs are mainly geometrical, with occasional realistic representations. C 415 531

FIGURE 61.—*Chané* calabashes. *Left:* Specimen with lid (approximately ¼ actual size). *Right:* Pyrograved specimen (approximately ⅓ actual size). (Redrawn from Nordenskiöld, 1920, fig. 50 and Métraux, 1930 b, pl. 62.)

Chane SF8

C Ce 372

Fire.—For several generations the *Chiriguano* and *Chané* have used steel and flint for making fire. The fire drill is, however, remembered in their mythology.

C 411

Weapons.—The *Chiriguano* bow has an average length of 4 feet (1.2 m.); the stave is flat on the belly and convex on the back. Both ends are sharpened to prevent the string of twisted hide from slipping.

C [223] Ce [226] [411] [824] Ce 411 824

Arrows are tipped with carefully barbed rods, with two rods barbed along the outer edges, (fig. 59, *b*) with flat lanceolate heads, or with a conical knob (bird arrow). The arrows armed with two diverging rods are used to shoot large birds, such as the yacu (*Penelope* sp.). Fishing arrows of the *Chané* bristle with cactus thorns. Today arrows ending in a sharp wooden rod are rare, as the modern arrows are usually tipped with heavy wires. The shafts are made of cultivated reeds (*Arundo donax*). Formerly, the *Chané* used the uva grass (*Gynerium sagittatum*). Feathering, which is of the cemented type, is sometimes omitted.

C 411 [171] [178]

The clubs of the *Chiriguano* in the 17th century were short and ended in a flat, oval head, a shape somewhat related to the ancient *Tupinamba* club. These clubs have disappeared (only a single specimen could be obtained in 1929 by Métraux) and have been replaced by simple cudgels that serve only to knock down wild pigs.

Ce [411] Ce [524]

Chiriguano in direct contact with the *Quechua* have woolen slings; those living farther to the east have slings made of caraguatá fibers, which they use mainly to chase birds from the fields. The pellet bow is common among the *Chiriguano* and *Chané*, but is merely a toy for boys.

SOCIAL AND POLITICAL ORGANIZATION

C 621 613 596 594

Originally, the *Chiriguano* community consisted of a few extended families or lineages, strictly patrilineal. Modern villages are composed of many small biological families bound by relationship ties or by their allegiance to a common chief.

C 622 [643]

Chiriguano chiefs (mburubicha) of old were men distinguished by their courage, their eloquence, and often by their magic power. They enjoyed considerable prestige and held no little authority. Some of them (tubicha rubicha) extended their influence over a wide area and were recognized as a supreme chief by the local chieftains. The main function of a chief was to settle quarrels within the village, to punish thieves, to see that people worked in the fields at the proper time, to arrange feasts, and to lead his men in war. Chiefs also had right of eminent domain over the land. Sometimes a chief was assisted by an informal council consisting of shamans and of the oldest and bravest men of the community. As a rule, a chief, even if he was powerful, led the same type of life as any of his subjects; in recent time some chiefs had servants. Some aristocratic pride was evidenced by the members of their family.

C 623 756 357 565 622

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10

Chane SF8

Chieftainship was inherited in the male line, but the title was bestowed on a chief's son only if he were worthy of it. There are only a very few cases of women ruling a *Chiriguano* group, but the *Chané* remembered the names of several women leaders. According to a genealogy of a *Chané* chiefly family recorded by Nordenskiöld (1912, p. 229), power was inherited successively by the brothers and sisters of a deceased chief before it passed to his son. In the village visited by Nordenskiöld, the brother's son of the chieftainess was the actual ruler, but her son by a commoner was the heir apparent. This system of succession is probably the same as the one prevailing among the eastern *Chané* (*Guana*).

Chiriguano chiefs of the past wore conspicuous ornaments and were entitled to carry the yanduwa, a pole with a bunch of feathers tied at the end, and a carved stick.

Property.—A plot that had once been cultivated by a man belonged to him and to his descendants, but could not be alienated by him. In order to insure new ownership rights, a *Chiriguano* would plant a few pumpkins on the land which he intended to clear.

Justice.—Thieves were expelled from the community or sometimes were flogged. A man convicted of adultery could lose his property. Murderers were sent into exile, unless the victim's family had time to kill him first. Wronged individuals often took justice into their own hands and challenged the offender to a duel. The settlement of old accounts occurred generally during drinking bouts.

LIFE CYCLE

Childbirth.—Soon after childbirth, the mother went to the river to wash and smear herself with urucú. Both parents observed various food taboos. The father rested for a few days on his bed and refrained from any work, lest he harm the baby. One twin, as well as any malformed infant, was killed (Campana, 1902, p. 72).

Puberty.—Menstrual flow was attributed to the bite of a mysterious serpent. At her first menses a girl was hoisted in her hammock to the roof of the hut, where she was compelled to stay for 5 days without uttering a word. Then she remained for a month or more enclosed in a corner of the hut. Her hair was clipped short, and she was put on a diet of boiled maize. During her seclusion, she spun and wove wool and cotton so that she would be diligent for the rest of her life. Meanwhile, she became pallid, which was greatly admired when she returned to normal life. Henceforth, she used the affirmative "é, é" instead of the childish "ú, ú."

In ancient times, the confinement of a pubescent girl lasted for several months or even for a year[1] (Campana, 1902, p. 86).

[1] According to Father Chomé (1819 b, p. 202), the pubescent girl was hoisted in her hammock near the roof. During the second month, the hammock was lowered, but the confinement ended only in the third month, when a group of old women entered the hut with sticks to start a symbolic hunt for the serpent that had bitten the girl.

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10

852 304 **Initiation rites.**—Some time between the ages of 7 and 12, a boy had his lower lip perforated by a shaman, who used for this purpose a sharp deer horn. The ceremony was performed only when a sufficiently large group of boys in the village was ready for it. Before they underwent the ordeal, the boys were told that they must show fortitude and that subsequently they could give up the affirmative "ú, ú" for the masculine "tà." A short period of fasting followed the operation.

851 171 **Marriage.**—In contrast to the free life led by Chaco girls before marriage, *Chiriguano* girls were expected to keep their virginity and were carefully watched by their mothers.

583 171 Chomé (1819 b, p. 202) says that a suitor provided his prospective father-in-law with crops and game. This statement suggests bride service, a custom widely spread among *Guaraní*-speaking tribes and one observed by the *Chané* of the Parapeti River a few decades ago. The bridegroom settled temporarily or permanently with his wife's family. 591

595 622 556 Polygyny, at least in recent times, was restricted to chiefs or to men of wealth. A man's wives generally lived together in harmony, but in many cases they were kept in separate villages. Polygynous wives were often sisters or a mother and her daughter.

763 **Death.**—If the condition of a person was deemed fatal, he was surrounded by a group of women who gave vent to the most spectacular outbursts of grief. This anticipation of the funeral was regarded as a manifestation of affection and respect. The deceased, painted and 764 dressed in his best clothes, was placed squatting in a large chicha jar and was buried, accompanied by his possessions and some food, in the hut where he had lived. The urn was covered with a large jar or plate. 765 The closest female relatives cut their hair and deposited it on the grave. The widow, her head covered with a rag, mourned for a whole year, wailing at certain hours during the day with all the appearance of profound sorrow. She could not resume normal life until a close relative of her dead husband had suggested that she forget her grief. A drinking bout marked the end of mourning.

775 The soul on its journey to the land of the dead (iwoka) faced many ordeals. It had to walk under a wall of fire, over a boiling lagoon, between two onrushing rocks, and between the blades of gigantic scissors. Finally, the deceased reached a land where the dead lived in abundance and joy. This pleasant heaven was open only to those who had never violated traditional custom.

WARFARE

721 **Intertribal warfare.**—Raids to steal crops or cattle or to kidnap women were the main causes of intertribal warfare. The head chief convoked the lesser, i.e., village chiefs, harangued them and listened to their advice. Women performed a special dance and sang to stimulate the courage of the warriors, whom orators constantly exhorted to fight.

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10
Chane SF8

the warriors, whom orators constantly exhorted to fight. The main tactic was to surprise and not to be surprised. Scouts were sent ahead of the army and sentries were placed on guard at night. The attack was carried out at dawn. During the battle, the women of the attacked village danced and sang to help their men resist. The victorious party returned with the heads of their slain enemies, which were subjected to all sorts of outrages.

000 c 726 c [727]

CANNIBALISM

In the past, prisoners were ceremonially killed and eaten. The victims were usually the *Chané*, of whom, according to Lizárraga (1909, p. 552), the *Chiriguano* had eaten about 60,000 during the 16th century. Warriors delivered the captives to their children, who shot them with arrows. Prisoners whom they spared were incorporated into the *Chiriguano* tribe. In more recent times, the prisoners who were not put to death were kept as slaves.

c 727 266 c 567 727

ESTHETIC AND RECREATIONAL ACTIVITIES

Musical instruments.—*Chiriguano* musical instruments are mainly copies of European or Andean instruments, such as the transverse flute. The transverse flute is Spanish, but the quena or end flute (pl. 43, *bottom*) is Andean. Among the most prized possessions of these Indians are round wooden whistles with two stops, and sereres, elongated pieces of wood, perforated lengthwise and blown by stopping the lower aperture (fig. 59, *d*). The clarinet with a slit reed tongue and the cowhorn bell are post-Columbian. The hide-covered drums beaten during feasts is of Spanish origin. Panpipes occur only among the *Chané* of the Parapeti River.

c 534 177 cc 534

Dances.—Dancers of each sex form a separate line, holding hands with their neighbors. Under the leadership of a master of ceremony who beats time with a feather tuft, men dance on the same spot by bending the knee slightly while women move forward and backward or dance around the men, shaking rattles.

c 535

Drinking bouts.—Drinking bouts, in which enormous quantities of chicha are consumed, are attended by friendly communities, which are ceremoniously invited.

c 273 628 527

Narcotics.—Formerly, tobacco was grown in small quantities by the *Chiriguano* for ceremonial purposes. Today some *Chiriguano* smoke cigarettes, but seldom the pipe. A pre-Hispanic clay pipe was unearthed by Nordenskiöld at Caipipendi. Only a few *Chiriguano* who live near the *Quechua* chew coca, which, however, they do not cultivate.

c 276

Fermented drinks.—Maize chicha is the favorite beverage of the *Chiriguano*, who practically subsist on it during the weeks following harvest. Its preparation, entrusted to women, is a lengthy and com-

c 273 462

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10
Chané SF8

plicated affair: the grains are crushed in the mortars, and chewed flour is added to the meal, which is thoroughly boiled for many hours in large jars. The *Chané* of the Parapeti River make a fermented beverage of sweet potatoes.

Gambling.—*Chiriguano* and *Chané* are acquainted with the suka game of the Chaco Indians, which undoubtedly has an Andean origin.[8] Another favorite dice game is called chukareta: a bunch of sticks with one face concave and the other convex are thrown to the ground, after one of the partners has chosen one of the sides. If, e.g., the thrower has decided on convex, all the sticks with the convex side up go to him. The one wins who gets most sticks (Nordenskiöld, 1920, p. 99).

European dice games are also known. The dice are of bone or clay and have special markings. Many *Chiriguano* ruin themselves at the famous taba game of the Mestizos. It is played with an ox astragalus, which is thrown in turn by the gamblers, who bet on which side the bone will fall.

Games.—Young boys acquire marksmanship by shooting at a rolling wheel. Boys also play hockey, as do their neighbors of the Chaco. They also hurl darts made of a stick and a corn husk. A popular game among children consists in casting a stick so that it rebounds. The one who throws it farthest scores a point, and the first to score eight points in succession wins (Nordenskiöld, 1912, p. 197).

They also throw at each other a shuttlecock made of maize leaves and strive to keep it in the air as long as possible.

Formerly, the *Chané* of the Parapeti River, like so many Guiana tribes, played a ball game with rubber balls which they butted with their heads. They seem to have used two kinds of rubber balls, black solid ones and white hollow ones which they obtained from the region of Santa Cruz or from the Province of Chiquitos.

Chiriguano women had a game (itarapoa) in which they threw a stone ball or a hollow clay ball filled with pellets at rows of maize grains placed by twos, one above the other.

Small children whirled tops made of a calabash or played with wax or rag dolls.

RELIGION AND SHAMANISM

During 200 years of close contact with missionaries, many Christian concepts have crept into *Chiriguano* religion. Tunpa, or Iandapoha ("Our Creator"), is commonly held to be the "real god." Aguaratunpa, the Fox God, is a mythological trickster with some features of a culture hero. He was regarded by many missionaries as the functioning god of the *Chiriguano*. There is some evidence of a solar cult, just as there is among the *Guaraní*. Aboriginally, the *Chiriguano* were mainly concerned with "iya," nature spirits, and with "ana," the souls of the dead.

[8] The dice are made of four pieces of wood, flat on one side and convex on the other. The rules of the game are described in the chapter about Chaco games (Handbook, vol. 1, p. 337).

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10
Chane SF8

The shamans (ipaye) enjoyed considerable prestige. When invited by a village to assist its inhabitants in some predicament, they were received with marks of great respect and were lavishly entertained. They served the community as rain makers and as doctors. In the latter capacity, they treated patients or protected the whole village against epidemics. Their curing technique followed the usual South American pattern of blowing and sucking the sick person. They retired to small cabins to communicate with spirits. Blowing tobacco smoke played a large part in the shamanistic ritual. The medicine men were expected to discover the evil charms that threatened the individual or the community as a whole. Shamans were often put to death for their failure to bring rain or to dispel an epidemic. Old women were often called to cure diseases which required the administration of drugs.

During carnivals, which, under the Bolivian influence, have become a period of wild rejoicing, young men wearing masks (pl. 44) of soft wood amuse the spectators by their antics and tricks. As the best masks are those carved by the *Chané*, it is likely that the clown interludes are survivals of dances by masked persons representing nature spirits or ghosts, such as are performed by many *Arawak* tribes. The *Chané* and *Chiriguano* masked characters collect food and depart amid the tears of old people.

MYTHOLOGY AND FOLKLORE

Cosmogony.—The Sun is a man and the Moon is his wife. In the evening the Sun enters a river which he follows until he rises again. An eclipse of the Sun or of the Moon is caused by the attack of a "purple" or "yellow" jaguar. Everybody then makes as much noise as possible to frighten off the celestial feline.

The appearance of the Pleiades, which the *Chiriguano* call "a swarm of bees," announces the harvest season. Their yearly course serves also to reckon time. The *Chiriguano* identify Scorpio with a fenced field, in the center of which is the miraculous spade of Aguara-tunpa. In the black skies near the Milky Way (the road of the rhea), they see a celestial ostrich (rhea), the head of which is the Southern Cross. The Magellanic Clouds are the ashes of a fire built by a couple who went to the sky. (See Lehmann-Nitsche, 1924.)

Folklore.—Most of the *Chiriguano* folklore recorded by Nordenskiöld (1912) was obtained from a *Chané* of the Parapeti River region. The collection of myths and tales made by Métraux (1930 b) in *Chiriguano* villages shows that both groups, in spite of their different origin, share substantially in the same folklore. Certain motifs in the *Chané* version, however, have not been recorded among their ancient *Chiriguano* masters, and may well be *Arawak* traditions which have survived among them. An example is the theme, which is well known in the Guianas, of the

2:Métraux E-5 (1929) 1948 SF10 Chiriguano SF10
Chaue SF 8

C
Ce
773

"tree-of-life," or "mother-of-all-trees," which was placed by Tunpa on the earth and then disappeared, leaving all food plants as its offspring.

A flood, which once covered the world, was caused by the curse of a young woman who was insulted by her mother-in-law. In another version of this myth, the flood resulted from a storm brought about by a man with wings (Thunderbird). A boy and a girl were placed in a jar with all kinds of seeds and, when the waters subsided, they planted these seeds and repeopled the world.

There are two versions of the myth of the origin of fire. In one, fire was stolen from Sun by the children who escaped the flood; in the other, fire, which was the property of the Vultures, was stolen by a Toad who, pretending to be cold, came near the fire and stole some embers.

The leading characters of *Chiriguano-Chané* folklore are Armadillo (Tatu) and Fox (Aguara), whose names, when mentioned in the various stories, are always followed by the adjective, "tunpa" (sacred). Armadillo is a wise and powerful character, always well disposed toward mankind. Aguara-tunpa (Fox) is a trickster, though in many cases he also plays the part of a culture hero. For instance, Fox steals algarroba seeds from Viscacha (*Lagostomus maximus*), he captures Vulture and forces him to yield the original rubber ball as his ransom. Tatu-tunpa and Aguara-tunpa have several adventures together. On one occasion Aguara-tunpa changes Tatu-tunpa into a repulsive man in order to marry the pretty daughter of a chief while his companion gets the ugly one. Tatu-tunpa shows his greater power by magically tilling a huge field which is instantaneously covered with all kinds of foods. Aguara-tunpa is then unmasked.

Aguara-tunpa kills Tatu-tunpa and puts on his skin, in order to deceive the latter's wife. Again he is unmasked and punished.

C
773
171

The old *Tupi-Guaraní* myth of the Twins was also recorded among the *Chiriguano* (Métraux, 1930 b). A girl is magically impregnated by Tatu-tunpa. She is expelled from her village and wanders in search of the father of the Twins who she bears in her womb and who speak to her. The Twins show her the path to their father's house, but, becoming angry at her, they mislead her to the house of the Jaguars, who kill her. The Twins are brought up by their grandmother. Later they hear about the murder of their mother from a yacu bird. They take revenge on the Jaguars by attempting to drown them when they cross a river by making it wider and wider. Finally, the Twins climb up a chain of arrows to the sky, where they become Sun and Moon.

The *Chiriguano* also have a version of the old *Mayan* and Andean myth of the rebellion of manufactured objects against their masters.

THE YURACARE, MOSETENE, AND CHIMANE

TRIBAL DIVISIONS

Culturally, the *Yuracare, Mosetene,* and *Chimane* are closely related (map 1, *No. 3;* map 2). The *Leco* probably belonged to the same cultural area, but information on them is scanty and, therefore, it is presented in a special chapter.

The *Yuracare* (*Conis, Cuchis, Enetes*) territory was defined by D'Orbigny (1839, 1:354–355) as the large zone of Tropical Forest at the foot of the Andes, extending from Santa Cruz in the east to Cochabamba in the west (lat. 16°–17° S., long. 63°–66° W.). In more recent times, *Yuracare* settlements were scattered along the Mamorecillo, Chimoré, Chaparé, Securé, and San Mateo Rivers and their tributaries.

The *Yuracare* were divided into two mutually hostile groups: The *Soloto,* or eastern *Yuracare,* and the *Mansiño* to the west, on the slopes of the Andes. The *Oromo,* though exterminated by the *Mansiño,* seem to have belonged to the latter nation. The *Soloto* of the Mission of San Carlos were called *Mage* by the inhabitants of Santa Cruz.

The contacts of the *Yuracare* with the Whites go far back in time. On several occasions in the 17th century, they raided the Spanish settlements near Mizque and Cochabamba. The first missionary to visit them was Father Francisco Marcos who, in 1776, founded the Mission of Asunción de Maria Santissima on the Paracti River, between the Coni and Chaparé Rivers. This mission was soon abandoned but was restored for a few years in 1784. The Mission of San José on the Coni River was established in 1795 by Father Tomas Anaya, but was deserted by the Indians in 1805, after it had been shifted to the Mamoré River. The Mission of San Francisco, founded on the Mamoré River in 1793, was also soon abandoned. At the beginning of the 19th century, Father Lacueva tried to restore the Mission of Asunción, but it was in ruins when D'Orbigny passed through it in 1831.

The *Yuracare* language is still regarded as unrelated to any other group.

Homage that the author presents to the XIX International Congress of Americanists, which is to meet in this city of La Paz in the year 1914. /Page ii is blank. Page iii is omitted in the translation./

/iv/ Author's Acknowledgement to the Supreme Government of Bolivia

Gratitude is a virtue by means of which the blessings received on this earth are acknowledged; it is natural and supernatural; the former is based in nature and the latter in a divine principle through which a grateful person becomes worthy of even eternal blessings.

The ingrate becomes an abomination before humanity and before God; thus does he show us the bitterness that Jesus, the man-God, felt when He received the affront of Judas, who had received so many blessings from his Divine Master.

Does the world ever lack persons who in times of tribulation, troubles, and unhappiness will come to others for consolation, declaring themselves to be friends and later, their ends gained, will turn against same, gossiping about their benefactors and accusing them of what is not so, because their perverse eye makes them see white black and black white? There is no lack of these, and the history of the Nations provides us with innumerable examples of this.

Religion cannot do anything but reprove ingratitude and approve the opposite virtue, from which it is necessary to deduce that the Christian, who professes the true one, ought to show his gratitude to those who do him a favor.

/22 I began this work, which will soon be printed, with the expectation of being assisted in its publication by the present Mandatary Most Excellent President of Bolivia, the Eminent Doctor don Eliodoro Villazón, who encouraged me to do it by letter in 1909. And my expectations have been fulfilled.

/iv cont./

122 In fact, at the beginning of this year 1912 I had occasion to address myself to the Most Excellent President, to the Ministers of Instruction, Finance, and Colonization, Messrs. M. B. Mariaca /v/, Carlos Torrico, and Julio La-Faye, with the assistance of the Chancellor of the University of Potosí, Dr. don Nestor D. Morales; and the Supreme Government, which so highly esteems scientific works, has decided to have my work printed at its expense in the print shops of La Paz.

This eminently patriotic and national act greatly honors the Most Excellent President and his illustrious Cabinet, and places a great debt of gratitude on the author of Etnografá Chiriguana, which was completed in the same region that it describes.

By means of these few lines, then, the undersigned shows his deep gratitude to the Supreme Government of Bolivia for the consideration with which he has been honored, the publication of his work having been accepted in the manner set forth in the communication which I reproduce literally, as follows: "Ministry of War and Colonization -- Bolivia -- Department of Colonization -- Nov. 410 -- La Paz, February 23, 1912. -- To Reverend Father Bernardino de Nino. -- Potosí. Sir: In reply to your kind letter of January 11, together with which you have been so kind as to send me a copy of the proposal brought before the Supreme Government, for the publication of a work prepared by you on the eastern region of the Republic and the ethnography of the races who people it, I am obliged to inform you that the lack of funds available in the National Budget for such purposes prevents us from accepting the first part of the proposal you suggest, the second being more feasible, in accordance with which the Government can recommend the publication of your work in the War Administration of this city, which has the necessary means; in which case you will have the right to the 500 copies which you request, with the intellectual rights to the work being reserved.

/v cont./

122 "Your proposal thus having been accepted in one of the proposed forms, I trust that you will be so kind as to send /vi/ the respective original copies to this Ministry with such instructions and documentation as may be necessary for the purpose already indicated.

"With this in mind I greet you and repeat that I am your obedient and humble servant. —For the Minister, José Lavadenz, Deputy Secretary of Colonization."

Although in the preceding original letter only the Minister of War is represented, other official communications which I have in hand show that the Most Excellent President and his Cabinet took an active interest in the publication of my work, for which reason my gratitude for this extraordinary favor is addressed especially to the Most Excellent Señor Villazón first of all and then to the Honorable Ministers.

Potosí, March 15, 1912.

Father Barnardino de Nino.

Note. -- For justifiable reasons, instead of having the publication of the present work done in the War Administration, it is being done in another location, for which the Supreme Government looked favorably upon my petition that they help me with the amount of 2,000 bolivianos, which I have already received, with myself being obliged to deliver to the Minister of War 250 copies of the work when the publication is completed. /Page vii is omitted in the translation. Page viii is blank./

/ix/

Introduction

History is a remembrance of the past, counsel for the present, and a warning for the future; it gives us rules for avoiding misfortunes, it permits the present generations to avoid surprises and those yet to come to know of past events.

The peoples without history, without a public consciousness, do not merit the honor of glory or of universal respect. The history of peoples is twofold, political and religious. The first may be considered and judged on origin, their customs, the clothing that they adopted, their relationship with others, wars and hunts, public and private rejoicings, going from this world to the other; and the second, on the relationship which is maintained with invisible beings, spirits, or marvelous beings, the Divinity or Supreme Being, their pious practices, the external worship that they render to God, recognizing His power and goodness; all of which gives rise to Ethnography itself. /The last paragraph of p. ix, pp. x-xi, and the first paragraph of p. xii are omitted in the translation. The remainder of p. xii follows./

If this /vices and excesses/ happens in civilized nations, what can be expected among the peoples and tribes of barbarians, among the peoples and tribes of savages? There are such almost everywhere in the world where true civilization has not penetrated, but let us not go too far astray, let us confine ourselves to the land of Columbus and select from among all the nations of the New World our own beloved Bolivia, where we have spent the best time of life...youth.

What is there in this beautiful land of the Great Bolivar? Endless country, torrential rivers, and endless forests, where innumerable tribes swarm. If we fix our eyes on the north, we find natives, if on the south, barbarians, if on the west, savages; but let us concentrate our gaze on the northeast and on the east, and our memory will become confused without being able to enumerate them: the ferocious Sirionós continually waylay the poor traveler who goes to Guarayos or to Corumbá on business, or who returns with his drove loaded with merchandise; they endanger the roads by land as well as by water; the Toba and Mataco fight over the two banks of the Pilcomayo, despite the

/xii cont./

arms of the Delegation and the forts, which they know how to burn frequently; the Tapiete continually threaten the farthest outposts and all their personnel, because the cannon and bayonet are powerless to civilize and to implant in the iron breast and crude heart of the savage /xiii/ humanitarian ideas, philanthropical ideas, because the cannon destroys, it does not civilize.

121 [197] I shall not concern myself with these tribes in the course of my pages; a book could be written about all of them, studying their origin, their customs, their relations with the other tribes and even with the whites, their relations with invisible or imaginary beings, their language and their deeds, but I renounce this arduous task and concentrate upon the Chiriguano race, which was conquered by the missionaries of Tarija long before South American Independence and later by the fellows of the Colegio de Potosí from the year 1870 through a region closed to trade and civilization.

The first thing I shall do in the course of these lines is to set down a description of the Chiriguano region, after which will follow: the origin of the tribe or race, language, statistics, physical and moral character, religion, political organization, the people, customs, imposition of the tembeta /lip plug/ on the males, fasting on the maidens, sicknesses, wars, songs, gatherings, and, finally, death and mourning. I shall try to make this little work pleasant and for that reason I shall allow myself to insert an occasional fable which was formerly held to be a fact and which even today is taken as such in certain regions.

Word to the Reader

114 This little work, which some will call not only useless but also a waste of effort is now born, but perhaps others who like to study races will find it useful for Ethnography, despite the fact that it is inadequate to give a perfect idea of the race among which I have lived since the year 1893.

Before beginning this third work I have tried to acquire some knowledge. I am not the first to write about these Indians; I have been preceded by D'Orbigny, Pelleschi, /xiv/ Mantegazza,

/xiv cont./

114 the Franciscans Conrado, Cardús, Martarelli, Giannecchini, and Señor del Campano, etc. But in Bolivia no complete work is known, notes or pages by authors definitely worthy of every respect and very competent hardly exist, nor have explorers witnessed all that they have written about, from which have come errors which would certainly have been avoided if the reports had not been made so hastily.

121 [124] With all possible calm, patience, and unlimited time, I have set out to talk with the oldest and most knowledgeable Indians, who have explained some points to me, corrected certain others, and made me add still more; but I have already said that with my writing I do not pretend even to equal the luster of those who have preceded me. I shall only give more extension to the ideas which have been set forth by others, ideas which in the majority have been confirmed by the Indians to whom I have addressed myself.

Finally, I must state that since the Chiriguano are in contact with the mission Indians, and these, both old and new, exist in considerable number, I shall add by way of conclusion, after having finished what I have proposed to do, a chapter concerning the heathen Chiriguanos, the neophytes, or new Christians, and the method that the Missionaries use to reduce them religiously and civilly, and the effort required to maintain them in the Catholic faith.

121 128 Everyone will understand that, in order to avoid confusion, this small work will be divided into chapters, and the chapters into sections, for greater clarity and so as not to tire the reader. Certain terms that I must print here by necessity will be written in the Chiriguano language with their corresponding explanation, so that each one may understand the impact of the language. I could also formulate some general propositions with the corresponding Spanish, but the nature of this somewhat voluminous book does not permit it, nor is it necessary, because /xv/ there are various small handbooks which have been printed in this Republic of Bolivia.

/xv cont./

121 Lovers of Ethnography are asked to overlook as much as they can the faults that they will find; rather I pray that they will only note the facts which I set down with all candor and exuberance. With the remarks that precede I am going to begin.

San Buenaventura de Ivo, May 20, 1911.

Father Bernardino de Nino, Missionary, O. F. M.

/Page xvi is omitted in the translation./

/xvii/ Foreword

114 Je prends mon bien partout
où je le trouve.

The Reverend Father de Nino, Franciscan Missionary of the Colegio de Propaganda Fide of Potosí, has honored me by charging me with the presentation to the public of the book which today sees the light, the preparation of which we have already announced in several numbers of the Boletín of the Repartición Nacional under our administration.

A very special reason compelled us to accept such a pleasant task: it provides for us, and for the scientific interest of the country, valuable collaborative material which is brought us by the learned Missionary whose intimate knowledge of the Chiriguano Indians, among whom he has lived as a catechist for many years, is indisputable.

There likewise weighed heavily upon our mind another powerful reason for welcoming the Etnografía Chiriguana with deserved applause: we had in mind the fact that in 1914, by an arrangement arrived at in London at the close of the sessions of the XVIII International Congress of Americanists it was decided that the meeting of the XIX was to be in Washington and this City of La Paz, as was done with the XVII, which held its sessions in commemoration of the Argentinian Centennial of 1810 in Buenos Aires, finishing in Mexico City.

We had to prepare ourselves for the session which was to be /xviii/ held in Bolivia, and this suggested to us the idea that the worthy work of the Reverend Father de Nino might be dedicated

/xviii cont./

114 in the nature of a homage, which its author has done, to the XIX International Congress of Americanists.

It is generally believed that knowledge of the flora, fauna, geology, and export products are quite enough to carry out the work of colonization. Technicians and engineers can be sent in to go over a region in every respect and thus sketch an exact picture of its sources of wealth; meanwhile the human element, that essential element, will just as many times have been overlooked.

The opinion that we propound will be the same one that will be formed by the Americanist reader who reads with the careful study it deserves the missionary's important book with which we are concerned. Undoubtedly the catechist's living there, with daily observation of the neophytes of his reduction, permitted penetrating more intimately into the nature or soul of the beings in his charge. Anyone who reads the very numerous details and facts observed and set down in the present book, we do not doubt, will say that we are right. Can an exploring naturalist, a geographer, observe all that the Reverend Father de Nino relates to us? We believe that the wise perspicacity of a D'Orbigny could not very well see into a face hidden from him.

So it was when the same eminent explorer whose name we have just cited, in his studies of Mójos and Chiquitos, always had recourse to the printed and manuscript sources that the Fathers of the Society of Jesus had left us until their banishment in 1767.

What has most interested us in dealing with the modern Americanist science is the subject dealt with by the author: Chiriguano Ethnography, which is to say, the study of the primary material with regard to their language, practices, customs, traditions, beliefs, etc.

Very serious propositions have been adduced on questions which, among uncivilized races, are frequently hidden. /xix/ are an arcanum. Mr. Tarde has said quite correctly: "That which is unseen among primitive people, as among ourselves, is often more essential to take into consideration than what is seen. Thus, what is normally not seen among them, because

/xix cont./

114 it is an impenetrable secret, is what is related to their internal relations, what is going on in the depths of their hearts." Thus, in support of our judgment of the book by the Reverend Father Bernardino de Nino, we have the opinion of the Reverend Father Froberger, who says that "all the missionaries of the Congregation of Cardinal Lavigerie, who preach the Gospel in the region of the Great African Lakes, unanimously state that only after a stay of many years in the midst of those groups of Negroes is it possible to penetrate the mentality and, above all, the psychology of those uncivilized tribes. It seems, thus, that the expansion of civilization to new countries is not possible without the prior study of such peoples, that is, without ethnography."

This science dates from yesterday, being, in its form and in its field of concentration, legitimately called an American science, whose centers of study are the Societies such as the "Smithsonian Institution," and others of the American Union. Our Hemisphere is a fertile field for investigation, in which remain remnants of primitive peoples, like the Chiriguano branch with which Father de Nino deals.

To the intelligent contributions which we have previously received from other illustrious Franciscans, the Reverend Fathers Rafael Sans, Nicolás Armentia, and Fernando de M. Sanjinés, whose works on history, geography, exploration of our rivers, linguistic ethnography, etc., we have published, there is added today the valuable work which we are presenting to the public and which will certainly be appreciated to a high degree by the members of the Congress of 1914.

Now all that is left for us to do, as we have done for the Missionaries Sans and Armentia, is to set down, although briefly, /xx/ some biographical information about the Reverend Father Bernardino de Nino.

This wise observer of everything concerning the Indians of the reductions which have been in his charge was born August 29, 1868, in Abruzos Aquilanos. He took his elementary education in his native country, Prátola Peligna. From there he went on to pursue advanced studies and other

114 /xx cont./
subjects in the Episcopal Seminary of Sulmona, where he received the four minor orders initiating him for the priesthood. He entered the Franciscan Order, putting on the habit of a novice in 1886. In 1891 he was ordained a priest and then embarked for our country.

It was in 1893 that he was assigned to the reductions of Chiriguano Indians.

In 1901 he was elected Prefect of Missions, and when the period of six years had elapsed, during which he opened the Missions of the Parapiti Grande, he was elected Vice-Prefect in the year 1907.

The fruit of what he had observed in his career as a catechist began to be known in 1905, with the publication of Nene Chiriguano /Chiriguano Infant/, to be used in the teaching in the schools of Neophytes.

Next, in 1908, he undertook a greater task, writing the continuation of the "Historia de las Misiones de Potosí."

From 1909 to 1911 he wrote the Ethnografía Chiriguana, which is now being published.

In 1911 he made an inspection of the Missions of Tarija, during which he wrote "Rasgos historicos de las Misiones de Potosí" /Historical Features of the Potosí Missions/, by order of the Most Reverend Father Commissioner and Delegate General, Father Wolfgango Priewasser, in order that this document might be published in the Archivo Franciscano, which is in the process of being published.

In 1911 he was elected Delegate of the Commissioner in Bolivia for Missions, Convents, and Schools, a post which he held for nine months.

At present, since May, 1912, we have counted /xxii/ on his assistance, entrusting him with editing "Guía del Chaco," which he has studied for such a long time and which is unfamiliar to our general public and deserves to be known.

The aforementioned "Guide," presented by us to the Minister of War and Colonization, will be published very shortly, in accord with the authorization which we have requested.

/xxii cont./

114

This will not be the last thing which we may receive as a contribution from the Missionary Fathers, inasmuch as we expect another addition which we have requested of them: the arts and vocabularies of the native languages of Bolivia which are still spoken by the tribes reduced by the Colegios de Propaganda Fide. Such matters are very fundamental and of primary importance to Americanist investigation, and already, with the support of the distinguished Director of the Museum of La Plata, we have made known the languages of the Tunscaré, Leco, Tacana, and Cavineño, more of the same sort being needed.

We shall leave it to the public to make a judgment on the work which we are presenting to it, not doubting that there is much to learn in it if we wish to know about the life and manner of being of the Indian who dwells in the remote regions of the Republic, on our frontiers with the neighboring States.

La Paz, December 1, 1912.

Chapter One

Description

Introduction

121

When an historian or an ethnographer proposes to write the history or ethnography of a tribe or race, he must naturally begin with a description of the region occupied by the human beings who are for a greater or lesser time to occupy the writer's mind. The general description of the region is almost as necessary as the origin of the tribe, but during the course of the undertaking, whether it be large or small, it does not prevent the one who is burdened with the work from letting his preoccupied fantasies go from time to time andcarrier hither and yon lilies and fragrant roses, whenever an unexpected opportunity to sketch a delightful panorama, like the one which unfolds before the traveler on the peak of Huacaveta Hill and the one from Iteata Hill descending toward Cuevo, might present itself to him.

In my little work "La continuación de la Historia de Misiones del Colegio de Potosí," I said that in order to bring forth a chapter like the present one, one needed time, elucidation, an abundance of material, and tranquility of spirit, things or properties hard to find together in an obscure missionary like the one who is writing.

/2/ Could my readers perhaps believe that my situation could have changed in so short a time? If they do believe this, it is due to the goodness of their hearts, since the situation of he who writes, instead of improving, seems to have become aggravated. Nonetheless, unpretentiously, I am going to concern myself with a description of the Chiriguano region, only because by its nature the work requires it. In my previous one I never foresaw that I should write this third one, which will cost me a little work and time, because, I repeat, in order to write, tranquility is needed, and the Indians, with their continual grievances, do not allow this for a missionary, which leads to the diversity in style, smooth to harsh, lucid to obscure.

/3 cont./

121 elegant or labored, natural or stilted, which can be observed in one book by a single author. But the fact is that I can only write it here, since only the Indians are able to smooth out the difficulties which naturally will arise in the course of these pages.

I am familiar with almost the entire region inhabited by the Chiriguano, with the exception of a few small areas, but this is of little importance, as much because they are not of historical importance as because I have obtained data about them which show them to be like the rest. It would even be easy to make a map of the region, but I am embarrassed to say that I am not competent to do this.

General View

133 The region which the Chiriguano Indians occupy today is composed of many little valleys /cañadas/ which run from north to south; they are separated by mountain ridges which vary in size, height, precipitous slopes, deep gorges, and incalculable depths. Its length is quite considerable, while its breadth is not over 180 kilometers. The mountains rise to 3,000 meters and more above sea level, but at that altitude there is no longer any vestige of forest, while at 1,200 meters the woods are exuberant.

In the midst of the valleys low hills cross in every direction, and there are some which from a distance look like larger hills or on their way to becoming such; others are completely isolated and quite small, but they attract the attention of the traveler because of their conical shape, like the traditional "Tunapuqui", located at the beginning of the pampas of Tru. There is no hill which does not make room upon its breast for a multitude of trees of every size and description, like a grove, and /b/ another multitude of vines like the bejuco and low-lying plants of the cactus family, which the Indian uses by eating their fruit, whose combined acidness and sweetness would make them please and be preferred by the most aristocratic lady of the city of Paris.

(142)

/3 cont./

133 The Indian makes full use of the valleys, laying out his
132 field with its own fence; his cow also grazes there, with her
311 calf running and playing across the level ground, and the wild animals live everywhere there, the dauntless foxes, the inoffensive armadillos, and the timid little deer /corzuelas/, while the monkeys seek the woods and the brambly, craggy ground of the hills to entertain themselves in raucous clamor, and the condors love to soar through the air to an extraordinary height, even considering that they launch themselves from the peaks of the highest hills.

133 While the ridges run from north to south, the course of the rivers is quite capricious: they run to the north, regress southward, direct themselves eastward, advance intrepidly westward, but the dominant course of them all as far as the pampas of the Gran Chaco is from west to east, overcoming every difficulty set in their way by the ridges, from which they leap with an extraordinary din, such as at the "Pirapo" (cataract of the fishes) or the waterfalls of the Pilcomayo and Parapiti rivers.

In the land of the Chiriguano, torrents and streams abound; more numerous are the rivulets which quickly lose their waters because within a few kilometers they run into endless sandy areas. If the hidden water should fail to appear occasionally in the ravines, which are small arroyos in origin, life here would be all but impossible, since places like Yvu, which without having a river or anything similar, possesses abundant and excel-
312 lent water, are numbered. The springs which appear in the beds
(157) of the torrents are of the greatest benefit in those places where there are no lakes or ponds, for the Indian, because of his laziness, is not capable of building artificial lakes for his water
(158) supply. In Ratiqui, for instance, not long ago there was a group of some 150 Chiriguano families; they could have made a lake in order to have such a necessity, but neither did they do it nor will they on their own initiative, and they go five kilometers to get it or at least there is the Chiriguano woman with her jug waiting for the forming of the drops which exude from the western slope, from which comes the name "Ratiqui," the stone that drips.

/3 cont./

133 The lakes are natural, but not permanent; they are
[135] many and large; in some the water is very good, but from
[132] others not even the cattle /4/ drink, because it contains so
much saltpeter. They all receive water from the sky, which
sometimes falls with great force and fills them at a single
time. White Christians are now making artificial lakes,
especially in the Gran Chaco and in the vicinity of Caipipendi.
271 When water is completely lacking, the Indian scratches the
824 ground, looking for the root of the "sipoy," samolo, which is
as large as a watermelon; he cuts it at the top, squeezes the
pulp with his hand, it turns to water, and he drinks; thus the need
is met, but when this drink is taken for a long period, it gives
rise to sickness.

311 The land lends itself to farming and to cattle raising,
312 but both industries diminish in those years when the beneficial
433 action of the rains is scarce. Then the crops are lost, and the
132 cattle die from lack of food and from the great amounts of
water that they drink from the rivers and lakes on whose banks
they stay through lack of energy; nonetheless this rarely happens throughout the region, which, because of embracing a
wide area, in one place or another receives showers which renew nature.

Extent and Area

131 The Chiriguano tribe or race was extremely numerous and
[161] thus once took in an extraordinarily large area; traces of these
[464] Indians are found in the vicinity of Tarija, and they may be
found beyond Santa Cruz, where even today Chiriguano men and
women are in larger part those in domestic service with the
genteel families. Toward the capital of the Republic the
Indians still remember that their grandparents used to live in
Tacopaya and even beyond, in Talisco, included in the same
district. Then they extended toward the Bermejo River and,
finally, eastward to within a few leagues of Carandaiti, where the
arid zone, inhabited by the Toba and other savages, begins.

/4 cont./

131 Thus formerly the Chiriguano territory in the north was contiguous with the province of Sara, in the south and southwest with Argentina and the city of Tarija, in the west with Tarabuco country, and in the east with the colony of Carandaiti. According to its former boundaries, it then included an area of 200 leagues from north to south and southwest, and more than 90 leagues west to east.

131 16 [648] Today this extensive territory has been much reduced because of emigration, caused in part by the whites, under whose dominion most of them will not resign themselves to staying; the plagues which decimate the race have a powerful influence on its further reduction, and very soon /5/ barely the 131 name will remain. Today to the north it scarcely reaches Abapó, to the south, Itiyuru de Yacuiba, to the west, Monteagudo, and to the east, Carandaiti, some hundred leagues from north to south and about 40 from west to east.

131 648 [433] Formerly it embraced several degrees of latitude and three and a half of longitude; as they lost a considerable part of this area, so will they end up by losing it all, for despite their being heirs to the country which God had given them, as one of them was saying to me not long ago, they do not know how to farm it and improve their agriculture; they prefer to go far away and work for others rather than to own land at home. This very day only a few leagues remain in the hands of the Indians, Caipipendi in the province of Cordillera, Gutierrez Canton, and all the territory occupied by the missions, but both are likely to pass into foreign hands, because in fact the Indian is incapable of making the land that he does possess bear fruit; then the few survivors in the territory will be servants in their own house, as are so many others in lands that were once their own.

311 134 [132] The land is very unstable, at least that now occupied; it lacks stone and gravel, and since in their season the rains are torrential, they easily open cracks which in a few years become wide, deep ravines. Contributing a great deal to this are the cattle, which, because of their weight, stir up the land with their hoofs more than other livestock; for this reason

/5 cont./

311 in certain valleys that are narrow or not too wide there is
134 scarcely room for fields, because so many little ravines have been formed. Such is the valley of Huacaya Canton; if there lived in it today the multitude of Indians which formerly were there, it would be hard to find, because of the woods and the ravines, sufficient land in the tiny level places for all the fields of maize, French beans, and gourds which they value much for food and gifts; only for other elements would a little valley be very desirable, were it not all owned.

Hills or Mountains

133 Chiriguano territory, because it is very extensive, as has already been seen, is quite varied; from Talisco to Monteagudo and from Tarija to the salt flats of O'Connor Province in the city of Entreríos it is very mountainous and few are the places which extend far enough to form a level place of a few leagues. Although there are /6/ no very high hills, between the two hills which limit the valleys there is an infinity of low hills of all sizes in height, width, and length.

The pampas begin imperceptibly from Monteagudo in the west and from Aguairenta, where the Gran Chaco begins; said pampas from Monteagudo little by little grow larger or again become small as the ridges permit, until they reach the last cordillera, which is found to the east of the Mission of San Buenaventura de Yvu, at a distance of one league, behind which begin the immense plains of the Gran Chaco, where the horizon becomes lost.

The principal mountains are: Padilla, called through antonomasia "The Hill," because its configuration is the same one that is called "Curi" toward San Juan del Pirai (1).

1. The hill is different from the Curi, because the former is more an enormous rock which ends in the ranges of Limon.

At this point the road across the hill is very rough and long, but if it is rather long toward Padilla, it is, by contrast, as

/6 cont./

133 comfortable to go down as to go up, if an occasional short
[241] section be excepted. The hill of Padilla attracts the attention of
[361] all; there grow and ripen well both potatoes and maize, and the hill is sprinkled on both sides with houses of all sizes. From January to May the fields give it a quite picturesque and pleasing appearance as it rises some 2,340 meters above sea level, for which reason no doubt it is unforested with the trees which are found nearby growing exuberantly on the plain toward Monteagudo along the rivulet called Limón.

Next come the hills called Huacangui, Bartolo, and Cazaderos, the first two found on the right bank and the latter on the left bank of the Acero River, which touches the slopes of the last named; the three have no peculiarity, only that they are tree covered, rather high, and the road through
[136] them is very bad. Cazaderos Hill abounds in jaguars, and it is the same hill which must be crossed or climbed in order to go from San Juan del Piray to San Pablo de Huacareta; before one climbs this hill near San Juan, there is another small one called Ñañoloma, which attracts the attention of all because it is very narrow, low, and straight; it is a straight line which rises in the middle of the valley and continues without ending to the southeast; the Piray and Parapiti rivers wash the base of Ñañolama.

/7/ Monteagudo has a somewhat irregular plain, but it is not interrupted by hills until three leagues away, that is, at the Parapiti River in Matara, where there is another hill renowned only because it is a road and an extremely bad one. The Parapiti River bathes it at its base, and along the river itself the way is very boldly opened through the hard rock, forming a waterfall there; this same hill must be climbed to leave Ingre Canton, as well as Igüembe, where the passage is also quite rough.

133 From Matara to Ivu there are hills and rises of little im-
173 portance, if one makes an exception of the hills of Itiranti,
648 Saararenta, and Incahuasi, which last separates the province of Acero from that of Cordillera; on Incahuasi there are an infinite number of ruins of fortresses and houses, which, according to what they say and the name Incahuasi, "Inca's House," was an encampment of Quechua Indians; when, at the orders

/7 cont./

133 [173] [648] of one of their emperors, they tried to conquer all the Chiriguano, but they had to halt at the top of said hill without daring to go down to the pampas of Caraparicito, where they were awaited by all the Indians, allied with the Toba.

Cuevo, like all of the cantons of the frontier, is shut in by two ridges, that of Saararenta to the west and that of Aguaragüe to the east, the latter being the last one which is found; it is quite high, measuring 1,500 meters, and with it end the cordilleras in the east, giving way to the plains of the Bolivian Chaco.

From the peak of Aguaragüe the view is most delightful; to the right can be seen the picturesque panorama of Cuevo Canton with its hills, lakes, fields, forests, and stream, which, with its sand, looks like an immense ribbon of homespun twisting through the entire region, and to the left extend the immense plains, lost to view in the distance. From this peak can be seen the lakes and fields of Carandaiti, until the horizon is lost in the pampas inhabited by the savages.

The above-named ranges of the former and present territory of the Chiriguano continue to the north and south to Santa Cruz and Tarija and Argentina, assuming different names in each place, but they are ramifications of the renowned Andes. I have crossed the last one, Aguaragüe, to Santa Cruz, and it passes north of that city, as well as on the southwest toward Tarija and O'Connor Province, ending in Tartagal in the Argentine Republic.

/8/ Rivers and Lakes

It can easily be understood that this immense area and extent of land, crossed from north to south by so many mountains of all heights and dimensions and by a great number of hills in every direction, would be furrowed with rivers, torrents, streams, brooks, and abundant springs, while in the Gran Chaco all of these disappear and natural and artificial lakes and ponds begin to appear.

/8 cont./

133 The rivers which bathe the Chiriguano region are four; the Pilcomayo, the Parapiti, the Grande or Guapay River, and the Acero. / The Pilcomayo begins in the northwest of Potosí Department and crosses Chiriguano country in the southeast. Its water, sweet and clear up to the southern part of [135] Igüembe Canton, is somewhat salty in Huacaya and Villamontes, because to the southeast of Ibopeiti it receives as a tributary the Salado River with its rather abundant waters; these waters are quite salty, because they pass through the salt flats of O'Connor Province. Its bed is wide and shallow, but its flow is very abundant from December to April, because this is the rainy season. If in Villamontes the Germans or others open the great canal proposed by the Supreme Government, the navigation of this river up to the estuaries /esteros/ of the P. Patiño, even in small boats, will be made nearly impossible, because there will not be enough water for it.

136 In the Pilcomayo fish are abundant: bagre, shad /sábalo/, and dorado; some of the latter are very large, up to a meter and a half in length. The first freshets of the rainy season wash up and kill many fish, leaving them stretched out on the ground on both banks or piling them up like stones or firewood. Then 226 the Chiriguano Indians, the Toba, and Mataco fill their houses, and dogs and crows come there by the thousands and stuff themselves, while the air is full of unbearable miasmas.

[221] The most satisfactory and safest season for fishing is from the May cold until the end of July and in certain years up to [251] the middle of August; then all the Indians are fishermen; they fish for themselves and for trading; they open the fish though [438] the middle vertically and dry it in the sun. If nobody goes [435] there to barter, they go off to sell it at 20 centavos apiece, but generally during the fishing season the tribes far from the rivers go to the banks of same, taking maize or parched meal and bringing back abundant fish. /Illustration appears here./

/facing p. 9/

133

Parapiti River

/9/

157 The banks of the Pilcomayo are difficult for the opening
181 of canals because they are quite high, but it must also be
185 admitted that the Indians do not concern themselves with
[133] progress, are not ambitious like the whites who have settled on its banks; the latter also, because of being few, poor, and of limited means, almost all prefer to get rich with little work and little outlay of money, for which reason they devote themselves to raising cattle and hogs, which thrive without much care or expense.

133 The Parapiti is the second river named; it contains less water than the first and in Pomabamba, where it begins, it is very insignificant, but ten leagues farther, or after it has crossed Curi Ridge, it already begins to be respectable, and in front of the town of San Juan del Piray it appears as a ferocious beast ready to do battle with a weaker adversary, like the Armado River, whose waters it stops or makes recede, just as a lackey halts in the presence and at the sight of his master.

This river runs from west to east with few digressions as far as Mariqui in Parapiti Canton, whence it goes north and from its beginning it crosses the central part of Chiriguano country. In San Juan del Piray the river is some 12 leagues from the Pilcomayo; both rivers could easily be joined to make them one, for which there was once a project, but it would cause much harm to agriculture, especially in Cordillera Province, and the Pilcomayo would have the slight advantage of an increase in flow which would perhaps make it navigable from Villamontes to the Esteros.

In San Juan del Piray the Parapiti River receives as tributaries the Armado and the Piray rivers, and beyond San Pablo de Huacareta the waters of the river of Sauces and several others join it. Thus the Parapiti is a river of some consideration, and its bed is very dangerous at nearly every crossing because of the absolute lack of stone, especially from the Missions of San Antonio and San Francisco to Isoso Canton.

/9 cont./

133 At this point the river disappears completely from the
[312] month of June to December or January, forcing the farmers
[231] to make great excavations in its bed in order to be able to water their livestock; they have to go down to five meters in certain places. The course of the now dry river is easily seen, because in the season of great floods it leaves on the bank all the trash which it drags along and in its bed all the sand; the waters reappear to form the San Miguel River in the province of Velasco.

133 /10/ The benefit that agriculture and cattle raising draws
312 from the Parapiti is indisputable; without it the existence of Parapiti and Isoso cantons would be almost impossible. All the wealth of both areas would disappear, there would be no livestock, sugar plantations, or rice fields as there are now on both banks, which lend themselves marvelously to the opening of canals and irrigating the sugar-cane fields which abound there. Nevertheless, the extraordinary floods of certain years do much damage, making plantations and their equipment disappear almost completely.

136 This river contains few fish; there are only bagre and shad and others of little value; the big dorados do not exist and there are only a few small ones in its tributary, the Piray River, but strangely they do not enter the Parapiti; at the confluence they go back. Below the San Francisco Mission the fish disappear, because the water diminishes until it almost all disappears near Mariqui.

241 In Isoso maize is planted in the month of June in order to
311 harvest the crop before the beginning of the big floods which
312 inundate it all, and during the rainy season they are content to sow frijoles, gourds, melons, and watermelon far from the riverbed, but fruit is not always produced, since the region is rather arid. The waters of this river are quite sweet, and this must be one reason why agriculture is very vigorous on its banks, as any traveler can see.

/10 cont./

133 The Guapay or Grande River is the third river that I mentioned. in Cordillera it is called Abapó and Guapay, or the Valiente River by the Chiriguano; it begins in Cochabamba Department , waters Arque Province, and crosses the northern part of the Chiriguano region, washing a part of Cordillera Province. It passes through Santa Cruz and mixes its waters with those of the Mamoré; its sweet and clear waters contain a great abundance of fish.

The banks of this river in Cordillera Province easily allow the opening of canals to make the adjacent lands fertile. There on the left bank, especially in Abapó and Cabezas, it seems that the river is inviting man to make use of its waters by irrigating great stretches of land. What wealth the Republic would have were a foreign colony to be established on the banks of this river! But as long as there is no method of transportation by the construction of railroads, all progress is impossible; it is impossible to think of colonies, /11/ because the immigrant neither comes on foot nor is he accustomed to eating only parched or stewed maize or squash with beans.

The Acero River is a tributary of the above. Its source is beyond Supachuy, and some four or five leagues from the town it is already a torrent; its waters operate many mill wheels, are clear and fresh, abound in fish, shad, bagre, dorado, and many others. The bed of the Acero is full of rocks, doubtless because it runs through rather rugged hills and hillocks; only in the rainy season is it dangerous to cross it, because then it is full of water and turbulent; at other times it can be crossed without the least concern.

In addition to these four main rivers there is another multitude of brooks and streams which contain abundant water, so long as they do not run far from the hills or do not fail to run between rocky slopes, but as soon as they arrive at sandy ground they are lost, and then, just in order to drink, it is necessary to make more or less deep excavations. In Acero Province in Tiencha Canton there is the rivulet called Taperilla which comes from far away and converts that district into a delight and makes it very productive; great plantations of all kinds of plants and productive crops could be made there.

/11 cont./

133 From Igüembre Canton natural and artificial lakes begin to appear, the first ones end in Cuevo Canton and the later ones begin to appear from Buyuive, vice-Canton of Ñancaroinza, and continue through Caipipendi, Carandaiti, and Parapiti, on the right bank. Some of them may well dry up during the year, but if the rains are plentiful they will easily last until the new rainy season. The lakes are a great benefit in the arid zones, and without them there would be no life, since there is none where they are lacking; it is precisely through the lack of water that it is difficult to cross the plains of the Gran Chaco to get to Paraguay more quickly. A railroad from Santa Cruz to Isoso and from the east to Oriente in a straight line would avoid all difficulty; it would be 100 leagues through level, only slightly irregular terrain.

Climate

132 821 Without taking into consideration an occasional isolated exception, in the entire area or in most of it we can state as a general principle, through experience, that in the vast region inhabited by the Chiriguano race there are only two seasons of the year, called summer and /12/ winter, despite which they distinguish by name four seasons, "Aracu, Roi, Maentiha, Ipiroha," hot, cold, planting, and harvest, or summer, winter, spring, and fall.

132 The two seasons of which I speak are very marked: the summer by the abundance of rain, and the winter by drought. The first rains begin in the month of November or sometimes at the end of October, increase gradually and are frequent in the month of January, scarce in February, irregular in March, and generally stop in the month of April, or after Easter. The rains are preceded and accompanied by lightning and thunder, which fill one with fear, especially when there is added to them violent wind, and they end leaving in the air an incomparable freshness; rarely does rain fall calmly as in other parts of the world.

The rain is nearly always brought by the south wind, rarely by the others, and never or almost never by the north wind. In the area now inhabited by the Chiriguano snow is almost never seen; on rare occasions it falls in the highest

/12 cont./

132 mountains, where it melts away in the first hours of sunlight. On June and July nights a small quantity of water will freeze, but this does not happen every year.

The temperature is quite variable everywhere, and is even irregular throughout the former area, both because of the elevation of some places and because of atmospheric accidents. The lowest temperature is 5, the highest 34, and the average 18. The hottest months are November, December, and January, and the coldest May,June, and July; nevertheless there is frost even in the months of August, September, and October, which are very oppressive because of the lack of rains to cool the atmosphere. Although the heat may be very intense in the months of November, December, and January, it is tempered by the beneficent action of the rains, which fall frequently and abundantly, but if, as happens, they cease for a relatively long period, the heat is nearly unbearable by day and insufferable at night, with sweat running off the body like a bath, which does not allow one even to think of sleeping, except in the mornings, which are always somewhat cool.

The above-noted temperature is regularly observed in the center of the area; it varies to the north, west, and southwest. In Santa Cruz the thermometer registers higher temperatures, in Padilla and Tarija lower; there are days when a thermometer placed in the sun registered 60°, and despite this it does not cause frequent sunstrokes among these Indians who wear nothing on the head for protection while they work in the fields.

/13/ In the cold months, only when the north wind dominates can very pleasant and remarkably clear days be enjoyed, but the south wind upsets it all, covering the sky with clouds and beginning the drizzle and the cold which saddens the heart, producing sickness, because the changes are very sudden, even in the rainy season. The south wind in the summer can easily bring about the loss of crops in a few days. What could be the cause of this? I have said that the rains almost always come with the south wind, but it happens that instead of rain hail will fall over much of the area; then the

/13 cont./

132 atmosphere immediately cools down and there begins a cold wind whose chill is increased as it passes through the region of hail, and since the maize stalks are still tender they are easily stricken. The hail that falls is big, the earth is churned up, and it kills birds, sheep, goats, and other animals, if they are unable to hide in the bushes or under thick trees, but this does not happen often nor every year.

[133] Earthquakes are most rare; I felt them twice during my stay in the region, in 1899 and 1909, but the wind is sometimes so strong that it seems to make the earth tremble; there is no doubt but that it tears up trees and strips them, ruins buildings, and dismantles tiled roofs. Foreigners in this [145] so hot and changeable climate soon age and turn gray, but the natives who are used to it from childhood, despite the vices of drinking and others to which they surrender, enjoy a relatively long and healthy life.

It can readily be understood from what has been said that here the seasons of the year follow a different order from that which is seen in the Old World. Despite the fact, then, that there are no more than two seasons, we always can and ought to consider the four, in order to follow the general rule of the universe which divides the year into four parts. Summer begins December 21, fall March 21, winter June 21, and spring September 21, but all of these come ahead of time, as anyone who has lived here can testify.

Fertility

133 The Aguaragüe range, which is found to the east and one
182 league from the Mission of San Buenaventura de Yvu, is the
311 last one in Chiriguano territory. Small towns and families of
312 these Indians are scattered here and there are still found east
361 of the said range some 15 leagues away, but beyond that /14/ there are none because the area is arid and dry, "igũ utini vae," as they say, and the Chiriguano accustomed to planting maize, beans, and gourds cannot live where there is a scarcity of rain for his crops and water for his daily bath.

/14 cont./

311 The closer the traveler gets to the Gran Chaco, the less
312 water and the less fertility he finds; the very fields of Yvu
241 are patent proof, for crops are rarely abundant there. When the rains are torrential in other sections, they are sparse in Yvu; the farther to the west one travels from Aguaragüe, the more fertile is the land, because the hills and hillocks are more frequent and higher, water more abundant, and consequently the land more moist, which is necessary for agricultural production.

The fields are suitable for raising cows and horses, for the multiplication of sheep and pigs; the year when it fails to rain, however, there is lack of food for the livestock, as well as lack of water, the suffering is great, and numbers die near the waters which are found at some distance from the spots where there is feed, such as the slopes of the hills and the tops of the hillocks, abounding in tree leaves.

137 The countryside is clothed with grasses in the summer, but the region begins to turn beautiful in the spring and even earlier. The vigorous woods, dry and leafless during the cold months, begin to dress in verdant foliage at the beginning of the month of September, and in a few days nature is rejuvenated. Then it is very lovely to contemplate from some slight rise a broad pampa where there are carob trees, groves of catalpas or lapachos, the first green, the second red, and the third yellow and purple.

241 The territory is productive only in the rainy season, be-
182 cause the Chiriguano in general will not take the trouble to put
[132] in a good irrigation ditch when he can; he waits for it all from
[433] the high heavens. Miracles could have been worked on the banks of the rivers in times past; today it is difficult because they are very few and, like their grandparents, are satisfied with maize, a little sugar cane, and other delicacies, like sweet potatoes or batatas, mandioca, and peanuts.

241 Large-scale planting begins at the end of November or the
[221] beginning of December, after the country has been watered by two or three abundant rains. The maize grows very high and, when there is no lack of water, produces two or three ears on each stalk. The frijoles produce three crops. The sugar cane

/14 cont./

241 grows up to two meters and even more. the mandioca /15/ produces one arroba per plant. and the sweet potato even more because a single plant can spread and extend eight or ten meters. being productive in every root put in the ground, just so it is suitably covered with earth there.

311 The fertility of the region which I describe cannot be doubted. but the inhabitants do not cultivate it. If in this area there were persons who liked to work. the land would produce more; for this is of no use to mestizo people either. since he who was a peon in Sucre or Tarija wants to be a gentleman here because he is not a Chiriguano, as a result of which the very banks of the rivers. those shores of the Parapiti and Río Grande which appear to be beckoning the farmer. remain almost uncultivated. Ticucha Canton is another area where a colony of foreigners would work miracles, planting vineyards and fruit trees and so many other products that could be developed there; the same could be said of so many other sites.

[245] It seems that the grape does not grow in certain places. but this is because it has not been tried. Not long ago the missionary padre of San Antonio del Parapiti planted some 200 vine stocks. Who would believe it? Within six months some plants yielded quite ripe fruit. and the plants developed in an extraordinary fashion. In nearly all the missions there is cultivation of the vineyard.and in Charagua it is on a large scale through the work of foreigners; therefore what is needed are thinking men and good farmers in order to make these beautiful lands productive. especially along the river banks. where sugar-cane plantations. banana plantations, coffee fields. vineyards. and so many other things that are productive here could be established.

433 241 From the foot of Padilla Hill the forest is very vigorous and continues so to the east until it ends at Aguaragüe. Fig trees yield with little cultivation. the nopal with none at all since it flourishes on hillocks and hills and. such an agreeable and refreshing fruit. is the principal occupant. Chirimoyas, oranges. lemons. and guavas also grow. as well as onions and

/15 cont./

433 241 sweet potatoes; cotton grows everywhere, tomatoes and garlic mature the year round, and in the gardens lettuce, cabbage, cauliflower, and peppers create the beauty of a spot, without taking into account the gastronomic advantages. Even the peach trees would yield fine fruits, but they suffer much from the black butterflies, which damage them before they ripen.

Without work the land will produce only briars and brambles, and /16/ as long as there are only Chiriguano and [157] cattle ranches here, progress will be slight and the population [181] sparse, because the Indian has no ambition, and life is rela- [185] tively inexpensive; the whites prosper by taking good care of their livestock, and no greater fertility can be obtained from the land because the holdings of a few families are very extensive and do not facilitate the residence of numerous renters, who do not always give good results nor do all come or ask to rent for farming alone. All of them want to get rich easily and quickly, and the best way is to raise stock, the result of which is that great areas of briars and brambles exist.

Flora

13 In the course of this hasty description I have noted that in Chiriguano country atmospheric changes are very sudden, but it has been noted that the region is quite fertile when it is watered by the rains or by irrigation ditches, because small rivers are plentiful, particularly in the mountainous region, and an occasional river of some size bathes the adjacent territories with its abundant waters.

There are many hills, pampas, and valleys, and for this reason every kind of climate may be found in this territory. [137] There are in fact oppressive heat, intense cold, and a temperate climate, thus making it possible to find land for every product from the lowly gourd to the savory chirimoya, from the ubiquitous maize to wheat, rice, and barley, from the mulberry /mora/, which grows spontaneously, to the rich grape, whose bunches reach weights of three and four libras.

824 /16 cont./
139
[144]

I am going to make a brief list of some trees and plants which I know, without pretending to be a botanist, a subject I have not studied. I shall only say that I have learned it through experience and careful reading: when describing certain plants, I shall also make note of the use made of the bark, root, leaves, and branches of some.

ACACIA BALSAMICA. -- This is the quina-quina, under which name it is known here in Chiriguano country, a tall, straight tree, whose wood is ideal for building because the wood borer does not damage it; it is much used here in the construction of upper roofs, especially for the beaches or trusses on which the roof frame is to rest. It is plentiful in Cordillera Province and even in Acero Province.

/17/ ACACIA SAPONARIA. -- This tree is large and its
[342] wood light, perhaps even lighter than cedar, but it is of less
[492] value; it is whitish and much used for making doors and windows, but the main use to which said wood is put is in saddleries to
[296] make pads for saddles. The seeds are similar to monkey ears
[515] and are good for washing clothes and to keep the skin of the face free of blemishes; here it is known by the name "Simbey."

ACACIA AMARILLA /A. moniliformi/. -- It is a medium-sized tree of rather lightweight hardwood, for which room drawers or wash basins and yokes for oxen are made with it.
[372] It is no good for making fire, because it smells when it burns from which it gets the Chiriguano name "Tatane," fire that smells; the wood is yellow.

ACACIA ASTRINGENTE. -- There are many groves of trees of this class here and there; it is the most abundant tree,
[342] the wood is good for small joists because the wood borer does
[281] not eat it; the bark contains much tannin, and it is the wood most used for tanning hides by both Indians and whites; the latter call it sebil and the former "Curupau."

245 ACHIOTE. BIXA ORELLANA. -- This is cultivated in
137 fields and gardens, grows to a height of two and a half meters,
824 its leaves are dark green; it produces abundant fruit in a sort of pod covered with bristles and filled inside with fiery red seeds, which are what makes the little tree highly valued. They
[302] serve as food coloring, and the Chiriguano paint their faces
[303]
[439]

/17 cont./

and feet with them, as will be seen; for this last purpose it is prepared beforehand, many pods being boiled in an olla, and pastes of every size are made from the decoction, depending on the value that they wish them to have; it is traded by Chiriguanos and whites.

The Rosa oxellana, or /Urucu," as the Indians call it, is a plant of high value for the Chiriguano; he will travel far to obtain a small amount in the towns or places where it is prepared.

ALGARROBO. -- The place where this extraordinarily large tree abounds is in the pampas; thus in the plain of "Cuyuqui" of Yro Mission, Iomo, Pacapiri, and the Gran Chaco it is found forming forests. It is very bulky and has long branches which in some touch the ground; its trunk is thick and not always erect, the wood is excellent, similar to oak in spite of being dark, and it is much used for making tuns, door and window casings, and even for barrels. In Chiriguano this tree is called /10/ "Iyoqui," and the "Iyoqui" pod is long, compressed, and yellow; when it is ripe, it is sweet and much sought after by livestock and by the Chiriguanos; it is their food and drink in times of scarcity as well as other times, and the mead that they make is extremely intoxicating. On the back of the Pilcomayo even the whites eat this pod; the Toba, Chorote, Mataco, and others hold their orgies when the algarrobo ripens.

ALGARROBO CHICO. -- This is a smaller tree than the previous one, even its fruit is smaller, speckled in color, and sweeter than the true algarrobo, but not as abundant as the first. As the pods are small and the seeds within abundant, it is not highly thought of among the Chiriguanos; they only eat it out of necessity or as a tidbit; the wood is not valued very highly because undoubtedly there are others that are better. In Chiriguano it is called "Iyoqui iai."

ALGARROBO AGRIO. -- This is also small, and it is called "nino" because the flavor of the pods really is sour. In times of scarcity it is also food for the Chiriguanos; the pods are small, and the tree has its congenial sites. The Chiriguano Indians call it "Iyoqueyi."

/10 cont./

137 [321] ALGARROBO NEGRO. -- Among the Indians this is called "Iyapuna," and the whites call it tuna: it multiplies and grows very fast. Sometimes 20 or 30 newly sprouted plants can be counted around a single cake of cow dung, which indicates that the cattle eat it in abundance, and where it does not already exist they sow it with their bowels. It grows to a height of some three meters and is very thorny, which makes it difficult to travel through places where it is abundant; when there is no other food it is one of the Chiriguano's resources.

[322] ALGARROBILLA. -- The wood of this plant, which the Chiriguano call "Iglinayapiro," is black and very good for cabinetmakers: it is a species of ebony and is strong. Implements of war and those for fiestas of the tribes are made of this wood; its trunk is twisted, and it rarely has a single trunk; the flowers are yellow and the berries much sought after, by guan, but it makes them sleep.

ALGODONERO /cottonwood/. -- This is a leafy tree with many branches; it grows to a height of two meters, has yellow flowers and a white boll when it is ripe, which is then picked, dried in the sun, the material pulled away from the seeds and cleaned. The "mandiyo" cotton is very useful; hammocks, ponchos, coldbloop, and sacks are made with it; it would even be easy to manufacture macana, but this is not done because what comes from outside is very cheap and /10/ [197] showier, even though it is not as strong as the other. Its leaves used as a poultice are antianeurotic, and its seeds in the form of a pomade work against herpes and skin eruptions; oil for lighting can be extracted from the seeds.

ANONA. -- The anona is a bush which grows to barely one meter; it has congenial places, the pampas, which have soil mixed with sand. In the said pampas it thrives in abundance, but it is even found in other places. The ripe fruit is red and like the pineapple in shape, but the pulp and seeds are like the chirimoya, as is the flavor of the pulp. Before it ripens, even the skin is very similar to that of the chirimoya. The Chiriguano call it "Anoyo."

ASPIDOSPERMO BLANCO. -- This tree is of great size and it is abundant almost everywhere; the wood is white and good

/19 cont./

139 in dry places: when dampness penetrates it, it is destroyed in a
824 few years, as experience has shown. The bark that is found
[159] under the first layer is split, washed in tepid water, and left
to steep overnight: it cures intermittent fever. The Argentinians
call it cacha, the whites quebracho, and the Chiriguano "Iguiraro."

AZUFAIPO /jujube tree/. -- This is abundant hereabouts
[262] and is a tree of medium size. Its wood is not valued very
highly, but the fruit, the size of a grape seed and of a dark
coffee color, is a great resource in times of scarcity for the
poor Chiriguano. It ripens in January and February and is liked
even by cattle and by sheep and pigs. The whites call it
mistol and the Chiriguano "Yuá."

245 BANANA TREE. -- Cultivated in orchards and well fenced-
in fields, it forms a grove, and each plant yields or produces
a cluster, very large on some of them. When the ripe cluster
is removed, the plant that produced it must be cut in order
that the others may produce their own. There are several
[262] varieties, large and small, the latter very sweet and eaten
as fruit, and the former only when boiled and roasted; the
whites call them plátano, and the Chiriguano "Pacoba."

139 BIGONIA ACUOSA. -- This is a tiny little bush one vara
824 in height, which under the ground has a large root like a
[871] watermelon and even larger; it contains much pulp which,
when squeezed, yields potable water and is used for it in times
of scarcity. The Chiriguano call it "Sipot."

[342] CATALPA. -- This is a large tree and fairly strong. Its
wood is used in the construction of houses. The color of the
/20/ wood is dark, but when it is newly cut it is somewhat
[515] green. Its flowers are purple, and the Chiriguano chew them
to whiten their teeth; they are bitter and because of this
the tree is called "Tayi," or bitter, in Chiriguano, the whites
call it lapacho.

CEIBA. -- A large tree with deformed trunk, and furnished
with sharp points, broad leaves, and large, white flowers which
produce a material similar to cotton without fibers, for which
reason it is smoother and shinier; it is used for mattresses
[342] and pillows and candle wicks. The wood is spongy and not at
[415] all hard; from it are made troughs to hold water from year
to year and in this way they are not soon damaged. Its ashes

[137] /20 cont./ ITS ashes
[824] are good for the manufacture of soap, the bark is an emetic.
[388] The whites call it toborochi and the Chiriguano "Samuú."
[757] There are several varieties and all of them are utilized to some degree or other.

[322] CEIBO. -- This tree is smaller than the former, but its
[415] wood is much superior, very fibrous, and rather light in weight, being used to make troughs which are very durable since they neither split nor are eaten by wood borers. It is very pretty when
[262] it blooms; the flowers are fiery red and good for salads. The Chiriguano call it "Suinandi."

DRAGO /dragon tree/. -- A tall tree, straight and quite thick; the wood is strong and useful. If an incision is made
[757] in the tree, a very red resin comes out; its bark is the best for making the teeth hard and for curing scurvy. The gum called "dragon's blood" is extracted from this tree. The whites call it tipa and the Chiriguano "Güirapitiyu guasu."

ENEA /cattail/. -- An aquatic plant which abounds in certain ponds and pools formed by the water of rivers which flow away from the main stream; the Indians use it for roofing their houses, muleteers for packsaddles, and others for mats in the dwellings, on which they also have their bedding for sleeping. This is the totora or matara of the whites and the "Caipempe" of the Chiriguano.

[262] ESTORAQUE /storax/. -- This is a very large tree of the forest; it has whitish flowers and yellow fruit the size of a fig, which is edible and a favorite of parrots and monkeys; the Chiriguano eat it as a fruit and call it "Aguai."

GARGATEA or CARICA MAMAYA. -- This tree is not very abundant nor is it found in every section. It is of normal size, with a straight trunk and smooth bark softer than the fig tree; the wood is soft and is of no use at all, being similar to that
[262] of the ceiba, or toborochi. Its leaves are like those of the fig
[252] tree, and the fruit is of the /21/ same size and form, but yellow; it is edible and good when boiled or roasted, if eaten raw, it hurts the mouth. In Chiriguano it is called "Caincantina."

/21 cont./

137 GUAYABO /guava/. -- This fruit-bearing tree is found
824 wild and cultivated; it is of medium size, and the fruit, when
[245] ripe, is yellow on the outside and purple on the inside, and its bittersweet flavor is very pleasant and laxative. The green fruit and the roots are astringent; the Chiriguano know it by the same name. The wood has no use at all, and even if it
[262] did, the Indians would not use it because it produces edible fruit. They regret it when any of these trees and others, like the algarrobo, are destroyed.

GÜEMBE. -- This plant thrives on the trunks of high trees, where it puts its root, and others which penetrate the ground
[492] hang down from there. The roots and lianas are dark in color; very strong and durable halters are made from its bark; it is not found everywhere. One encounters it from the left bank of the Parapiti River; its fruit is similar to that of maize, for which reason it is called maize of the air, and it is edible.

HIGUERA AMERICANA /Amerigan fig/. -- This is the
[262] guapoy of the Chiriguano and the bibosi of the populace; although the fruit is rather sour, it is edible. Bats like it, and it
[757] is annoying to have this tree near the dwellings; it has a milky juice like the common fig tree, which, applied to wounds, heals them. In addition to the above fig tree, there is the
[245] common one which flourishes with very little care, in the towns,
[439] especially the Mission ones, it is widely cultivated by the
[431] natives and its fruit is used by them for gifts and trade with the whites.

244 MANDIOCA. -- This plant is called "Mandio" or "Mandiporopi" by the Chiriguano Indians. A little book written by a Jesuit missionary of the old Paraguay missions relates that this plant was left to those Indians by Saint Thomas the Apostle who, according to their tradition, came here to preach the doctrine of the Redeemer. Mandioca is
[252] an excellent food and very digestible; it is eaten boiled,
[262] roasted, and fried in lard. It is a plant cultivated by whites and by Indians.

/21 cont./

137 824 MARA or CAOBA /mahogany/. -- This tree is found in all sections. It is a strong wood, but the white part at the sides is subject to decay. It is rather heavy and hard and is [342] [352] only used for door and window casings and even for tables. The leaves are permanent, but not too good for shade. If the [757] leaves are touched with some force in order to pick them, they cause a skin eruption which disappears only when treated with bees' honey; I cured myself this way twice.

137 /22/ MELOCOTÓN /peach tree/. -- This tree, native to Persia, is quite productive in this region, but its fruit, severely attacked by the black butterfly, does not reach maturity because it always has worms. The apple tree grows in high places and where the atmosphere is not so hot, but both of these are orchard trees, not native ones, having been imported by the whites, who cultivate them, which can also be said of the quince tree.

137 824 MOLLE. -- This tree is not found in the central part of the region and thus is not native here, being obtained only by cultivation. The whites and the Missionaries have introduced it into the towns with good results. It is found in abundance in [757] the district under the jurisdiction of Padilla; it has permanent [273] leaves, which are medicinal, as is the resin which comes from the trunk; a cooling beverage, pleasant and similar to wine, except that its odor is somewhat disagreeable, is made from [757] the seeds. The eucalyptus is another tree which thrives regularly here, but it has also been imported; its leaves, also permanent, are very good medicine for the endemic fevers; its trunk is an excellent wood. Neither tree has a name in Chiriguano, from which it can be deduced that they have been imported, like the grape vine, the common fig tree, the peach, quince, etc.

MORA OR MORERA /mulberry/. -- This tree is found wild from the left bank of the Parapiti River in Cordillera Province. It rises to a height of some 15 meters, is bulky with a very leafy top, and the fruit is smaller than that of the cultivated mulberry; the wood is solid and compact like that of the soto and has even better qualities; it is used for machines for milling sugar cane, plantations of which are common from the banks of the Parapiti River, where sugar of the highest quality

/22 cont./

137 824 is manufactured. On the slopes of the hills is also found the blackberry /zarzamora/, whose fruit is so pleasant to the palate, but whose thorn, which is like a cat's claw, is quite dangerous and barbed. The mulberry in Chiriguano is called "Tatayigua."

245 NARANJO /orange/. -- Neither the orange nor the lemon are native to the Chiriguano region, but they flourish greatly and grow to some height. Where it is easy to open irrigation ditches and possible to irrigate orange and lemon trees, they produce large, juicy fruit, the former being very sweet and the sourness of the latter being mild. The citron tree flourishes and is a plant imported here; its fruits are as big as gourds. The Chiriguano cultivate the orange tree here and there, but the whites cultivate it on a large scale; I know of some /23/ rather large orange groves, and they exist in nearly all the missions.

137 824 NOGAL. -- This tree of extraordinary height is only found wild; the leaves are very small and somewhat like those of the true nogal; the fruit is edible, but its shell is hard to crack. [258] The flavor and characteristics are the same as those of walnuts, so that oil, which is used instead of that from the olive, can be extracted from them. The wood is rather dark and good [322] for carpentry and cabinetwork, but it is inferior to that of the true nogal, which is found in the cultivated state where there [386] is sufficient moisture; a dark coffee-colored dye is prepared from the leaves, the bark of the trunk, or the roots, for dyeing wool, for staining other woods, and for printing ink.

NOPAL. -- This is the fruit-bearing plant which is most abundant in the region and which is found everywhere without any cultivation, for which reason it is most highly regarded by the Chiriguano, who is naturally lazy. But since it is sought [245] by the cattle, it is beginning to disappear or, more exactly, it is not found very much in the woods and clearings, but the Indian still cultivates it because it flourishes easily without need of irrigation and multiplies without the need of planting other shoots. It is convenient for the laziness of the Indian; the yellow flowers come out around each spathe and the fruit matures there as well; it is full of small seeds and sweet pulp, pleasant and refreshing. Some trees are covered with long

/23 cont./ Some trees[1] are covered with long
137 sharp points and others are not, only having an occasional im-
824 perceptible sharp point; the fruit of both is pleasant and serves
[439] for gifts and trade for the Indian, who sells it to the whites,
[431] the ones who, rushing to get rich more quickly and easily, are
[648] little concerned about the nopal and the fig tree. In Chiriguano it is called "Saini."

PALM or PALMER. -- The palm tree has congenial places, where immense forests are formed and sometimes grow all around a lake like a great garland; it is a very tall and smooth tree without a single branch. Its leaves are in the form of a
[435] fan and are used to make hats and for sieves, which are sold
[342] for 30 or 40 centavos apiece. The wood is good for joists in houses, and it is also split into shingles for roofs and is quite durable, if the precaution is taken of cutting them after the full moon. In Chiriguano it is called "Carandai," and the place which they occupy, "Carandaiti," palm grove.

PALMA CHRISTI. -- A not very durable plant, it grows to a height of four meters, has a soft, hollow trunk, large leaves, /24/ and flowers in the form of a bunch of grapes. The seeds are found inside little burrs, like chestnuts; said burrs in some plants open by themselves in the warmth of the sun, while others must be opened or carefully broken with a little hammer or a stone. The name indicates that it is a beautiful plant, but this beauty is in the broad, abundant petiolate leaves. There are several types with reference to
[757] size and quality of seeds; I know five kinds. Castor oil is
[302] extracted from this plant or from its seeds for use as medicine; we use it in the missions to fuel the lamp of the Blessed Sacrament, and the Chiriguanos mix it with "Achiote" seeds and put the resulting cosmetic on their faces and on their calves down to the feet. In Chiriguano the plant is called "Causiro," and the oil, "Yandi." Even the leaves of the
[757] palma Christi are medicinal, some being hot and others cool; thus when headache is a result of overexposure to the sun, the leaves of the white spurge are applied; if, on the other hand, it is the result of high humidity, the leaves of the red spurge are applied. The seeds of the dark purple spurge are very small, but contain more oil than others.

[1] [i.e., Nopal trees, -Analysi]

/24 cont./

245 PAPAYO. -- This tree is neither native like the palma Christi, nor is it found wild like the latter. It is grown in orchards or in well-fenced fields, grows very fast, and produces fruit one year after being planted. Its trunk is straight, soft, and hollow; some have two or three branches and rise up to four meters high. The fruit is refreshing, yellow, with a smooth skin, of the size and shape of a small melon, even the flavor being somewhat similar, but it is more digestible. Many fruits are bunched around the trunk and are also found here and there at each leaf, but always attached to the trunk. The plants which produce the fruit are the good ones, and they call them "females." There are others which they call "males," but their fruits are useless and are not attached to the trunk, but rather hang from it like streamers. It is useless to pick them. To have a good papayo tree they assert that, in transplanting one, it is necessary to take the precaution of always putting or burying two plants in each hole, one of which will always be a female, and the one which turns out to be male will be pulled out. I do not know if this is true, but I did it this way in January of this year. The fruit contains many seeds which, [757] when ground and drunk in an emulsion, are good for getting rid of worms. The fruit and the tree have a resinous milk. [252] Therefore, in order for the fruit to be good and digestible, it is better to cut off the ends and make about five or six vertical cuts so that this resin may come out; by the next day /illustration appears here/ /25/ it is already very pleasant. It is nevertheless best to take the precaution of letting them begin to ripen on the plant itself; in this condition, uncut, they will last up to six days without going bad; then they can easily be transported great distances.

137 824 [252] [262] PASSION FLOWER. -- This is a climber which is found on fences, clothing them in the rainy season with abundant foliage, as does the "supua," whose fruit is edible and good roasted or boiled, as is the leaf. The fruit of the passion flower is of the size of an apple and just as smooth, the skin is thin and the inside is found to be covered with a white, stringy membrane. When this is broken, the seeds of the fruit come

[TEXT CONTINUES ON P. 43]

245

A Papaya Plant

/25 cont./

137 824 forth bittersweet and very good. These are ash-colored and pearly and very highly regarded by Chiriguano and whites. The blossom of the passion flower is purple, forming a garland like a crown of thorns; it has its calyx, five petals and three pistils, for which reason it is called passion flower, and it is certainly worthy of admiration. The Indians call it "Murucuya."

PIÑON. -- A euphorbiaceous plant, this little tree exists [177] in a cultivated state and was introduced into this Chiriguano region by the white Christians. It grows in orchards and elsewhere, and its maximum height is three meters. Its small [757] trunk is slender and top heavy, and its fruit consists of black seeds which are not edible but which, when ground and diluted in water, make a powerful purgative and therefore must be used with great care, because they can cause death.

137 SAUCE /willow/. -- It grows and develops on the banks and in the bed of torrents, as well as on the shores of streams, which shows that it seeks damp places, but from these places the force of a flood often uproots it. The common willow has [342] no special qualities; only its branches are useful in the building of houses because they are flexible, fibrous, and not heavy; little use is made of the trunk. It is a tall, large tree with very tiny leaves. In addition to the common willow there is also the weeping willow, whose branches touch the ground; it is neither native nor found wild; some whites plant it to beautify their interior patios. In Chiriguano the common willow is called "Igüirapucu."

SAÚCO /elder/. -- It is not found everywhere, only being found along streams with little water which are in the wood. It grows to four meters in height, its trunk is slender and soft, its branches have a pith which is easily extracted, and its white flowers in the shape of a parasol are sudorific. The whites do a good deal of searching for this flower /26/ for their illnesses. Even the leaves are medicinal; when drunk in a decoction they are a good purge. What a pity that it is found in such limited areas!

/26 cont./

137 SOTO. -- This gigantic tree is found everywhere from
824 the province of Tomina, but there are places where it is more abundant. In the spring, when the budding begins, its leaves are red, and later they turn green. In the autumn its fruit, which the parrots like, are red and are in bunches like cherries. Seen from a distance by a European, he thinks they are cherries. The wood of the soto is strong and does not rot; in dampness or in water it is better than iron, since it does not deteriorate.
[342] It is very widely used in the construction of houses, especially when they are of frame construction. A great deal of tannin, which the Europeans use in tanneries, is extracted from the soto. It is called palo cuchi by the whites here and "Urundei" by the Chiriguano.

249 TOBACCO. -- An annual plant which flourishes everywhere, but only the whites cultivate it on a large scale, especially in Sapirangui and Chiquiacá, whose products have some fame. Even an occasional Indian cultivates it for his own use and to give to his friends. There is another similar plant, and, when he lacks real tobacco, the Indian deceives himself with its leaves. The true tobacco is called "peenti" in Chiriguano, and the other "huacapeenti," which, literally explained, means
276 "cow tobacco." In Bolivia there is considerable consumption of tobacco wrapped in paper or maize husks; rarely does one see cigars of pure tobacco, like the Havanas and others; the Chiriguano smokes a lot and acquires the habit at a tender age.
[857] Children of four years of age have already begun to smoke;
[562] women also smoke.

137 TACUARA. -- In the past when there were no cattle, the
824 tacuara, or hollow cane, was very abundant; vestiges still remain of some immense canebrakes, but the plant has been re-
[435] duced almost to the cultivated one, with the result that what was previously found in the forest at the disposal of the first occupant is found today in the possession of private parties, and anyone who is planning to build a dwelling must pay for hollow cane at the rate of 80 centavos per hundred, and the worst of it is that it is not found everywhere. This lack is made up for by small rods from trees, but these are neither as light nor always

/26 cont./

137 as straight as cane. Beyond Santa Cruz there are still groves;
824 in addition there are groves of another cane called "Bambú," which is the best known, and in Chiriguano it is called
[417] "Tacuarembo." It rises to a height of about 15 meters and is used for making /27/ ladders and scaffolding in construction
249 because it is light and strong. The shoots are tender and contain a sugary substance highly regarded by the Indians; it is not sought much today, because there are abundant plantings of sugar cane, which is of great utility for the production of sugar and alcohol. This last thrives with great ease and little work. Planting is done in two ways, making furrows and burying it or planting cuttings. The former is the better method where the
137 freshets of the rivers do not penetrate. On the slopes and tops
824 of hills which contain water there is another sort of slender cane, very strong and heavy, which is not hollow like the other classes and is called caña brava by the whites, and
[285] "Tacuarembo" by the Chiriguano. They use it for weavers'
[513] reeds and for sleeping cots.

TAMARIND. -- This beautiful and useful tree is not native, but it thrives with enough care and grows to a respectable height; the fruit that it produces is abundant, consisting of abundant pods more or less the size of chick-pea pods; the pulp is blackish and pleasant to the taste, but it is bad for
[157] the teeth. It is astringent and is administered as medicine for intestinal inflammations, especially to children. It is also
[272] a good tonic drink on excessively hot days; it is prepared with sugar, water, and a little of its pulp. The tree is rather sensitive to cold, and the flowers wilt easily with the south wind. For this reason the whites plant it in their patios, which are surrounded by the living quarters.

TARINGUI. -- The name of this tree is Chiriguano. The taringui is found in some regions, but not in others. It is of the cactus variety, rises up to six meters, its branchage is abundant and close, which gives a fine shade against the blazing rays of the sun. Its branches or leaves are striated and armed with spines; the fruit is tiny, but sweet and otherwise pleasant, and much liked by foxes, who only get it when it falls from the tree. The ulala or opuntia is smaller than the taringui, its leaves have the same form, the color is ash-gray and they are less a abundant, or, more properly, few. The fruit is a smooth berry

/27 cont./

137 which is purple when mature and opens into three sections
824 when ripe. It has an insipid sweetness, but one which both
[262] whites and Chiriguano like. The color is a bright purple, it is abundant, and in certain years of scarcity it is a resource for human life in the months of February and March. In Chiriguano it is called "Ñacagüina." The carapari is another cactus, taller than the preceding ones, which also has its congenial land. /28/ since it is not found everywhere. It is admirable for its tall, striated leaves or branches, ash-gray and armed with spines; its fruit is very pleasant and also sought
[342] by foxes. The trunk is soft like that of all cacti; nevertheless
[759] doors are made of this wood and are durable enough. The pulp of the trunk is used medicinally to cure liver ailments, etc. They say that it is even good for goiter. There is another species of cactus which grows to some 20 or 25 centimeters; it is round and thick, striated and armed with spines. In Chiriguano it is called "Zipepe." The children, as we shall
[524] see, make wheels by cutting off its spines, and, making it roll, they use it as targets for their arrows. Finally, there is another which is trailing and long, covering the ground where it grows and making the place impenetrable. This has and
[262] produces a very delicious fruit which is called "Tapiacaru" in Chiriguano.

TILANDSIA. -- This plant is known to the Chiriguano
[342] by the name of "Caraguata guasu." Its special place is the
[283] hills, and among them it has some more congenial to it; it
[492] grows well enough, and its leaves are extraordinarily broad and long and ash-gray in color; in the middle there is a thick stalk which rises quite high and is good wood for house rafters; from the crushed leaves they make cord and from these are made first-rate halters for tying up animals in the rainy season.
[286] The Toba and even the Chiriguano make a kind of net which
[171] they call chipa or "añapoca," which is very useful, inasmuch
[482] as the women can carry any weight in a bag of that kind; from
[227] the same they make nets so as to be able to fish in the rivers, and these are pieces of work which would attract attention in any part of the Old World.

/28 cont./

139 There is another small caraguata which invades wide areas
824 of land, preventing any animal from entering there, because it has spines on the bottoms of the leaves. In times of scarcity
[262] its root is food for the poor Chiriguano; the root contains a little starch which has the taste of mandioca, but it requires
[283] great effort to pull it up. The leaf of this tilandsia is also good for making cord.

Finally, there is a third one which flourishes abundantly in trees and on the rocks of the hills, but which has no peculiar properties; it is large because of its leaves, which measure up to one meter in length. The plant is thick, the leaf fleshy, and it is used to decorate the streets with arches during processions. The aloe is similar to the second type of tilandsia, but aloe leaves are wide and thick, full of juice, while those of the tilandsia are slender, arched, and dry. The aloe is not abundant; only an occasional shrub or plant is found.

244 /29/ TOMATO. -- This plant which produces fruits so pleasant and useful to the culinary art flourishes exuberantly in these lands; the fruit from each plant is abundant and is produced the year round when some care is taken to protect the plant from the cold or from the light frosts which customarily
[237] fall in June and July. To do this it suffices to pile up dry cow dung in two or three places in the tomato patch and set them
[177] afire. True tomato plants are also found in the woods, but it is presumed that some bird must have carried the seed to such places; the tomato is a plant which has been brought into the Chiriguano country, as is the case with the onion, the sweet potato, and the cabbage.

222 In the woods there is a kind of tomato in the wild state, which is somewhat similar in appearance and taste, but which is quite different from the true one; it is picked green and allowed to ripen in a room on top of a piece of wood; in a
[244] few days it turns red, which is a sign that it is ripe. The chili pepper also produces abundantly and with little care; it is a plant which lasts up to three years if care is taken to prune it, and the second and third years the fruits are very hot. Another kind of small, round chili pepper abounds in the woods and bears spontaneously; it is called arivivi by the whites and "quii rai" by the Chiriguano. It is hot, and some cure sickness,

222 /29 cont./ It is hot, and some cure sickness,
[957] or inflammation of the eyes, with it. Nevertheless, one should not confuse this little plant with another similar one whose fruits lack flavor and which is called by the Chiriguano "Aguara quii," which is to say, literally, chili pepper, of the fox. The best way not to confuse it is to taste the fruit; it is found everywhere.

243 TRIGO /wheat/. -- The Eternal Creator of all things in his bounty and mercy arranged that this small plant, necessary in every aspect, should yield its fruit in every region inhabited by man; thus, in spite of the excessive heat, it is harvested here in abundance, and the farmer is not robbed of his hopes if he takes care to irrigate the field opportunely. Barley also flourishes in irrigated lands, but the cultivation of both has been abandoned for reasons already expounded in these pages and also because birds greatly bother both crops, as also happens in the rice paddies, which will be found empty if they are left to the discretion of our flying friends.

[824] There also thrives together with maize, or in other places,
[412] the wheat called Guinea, or sweet sorghum, which the Chiriguano call "Tricu" and which is indigenous; it is sweet, matures with maize, and they suck it, as well as the panicled sorghum, which is a kind of sorghum /30/ without sweetness and used for making brooms for sweeping. The seed of both plants is liked by birds.

137 VID /grapevine/. -- Farther on I have said that this plant
824 pre-eminently required for the Sacrifice, like wheat, thrives quite vigorously in this region. I add here that in the woods
[262] there is a tree with small leaves and unimportant wood, which rises up to some eight meters above the ground and whose fruit is the size of an olive, has a dark coffee color and a flavor like that of the grape, matures in the month of February, is edible, and is called "Ivaviyu" in Chiriguano. Also in the wild state is the native grape with its twining trunk. Its fruits are like a bunch of grapes; they are white and some even black, and they are good for the manufacture of brandy.

/30 cont./

137 824 276 YERBA DEL DIABLO. -- This is the datura which is so abundant in the countryside and fields and which is a real plague. It rises to one meter in height, has branches, broad leaves, white flowers, and fruit armed with spines which, when dry, are enough to draw blood. The leaves and seeds make one lose one's memory. In this respect I remember one incident when an Indian woman absent-mindedly or out of ignorance covered an olla of hot food with datura leaves; half an hour later she ate it and it gave her a bad headache and a short spell of vertigo. Her little granddaughter, a schoolgirl about six years old, ate some also, and she suffered a complete loss of memory and all her actions were those of a demented person, a state which lasted some 24 hours. It seems that the Chiriguano [757] do not know that this plant and its seeds and leaves are poisonous; the latter, dried, are medicinal, alleviate the effects of asthma, and are prescribed for asthmatic Indians. Christians know it by the name of chamico, and the Indians by that of "caazi," that is, painful herb.

137 824 SAPALLO /squash/. -- There are eleven species of this creeping plant, which I shall discuss in another chapter, only adding that watermelon and melon also grow here, as well as the cucumber and the beet. The "curugua" and the "curuguami" [262] of the Chiriguano are plants which are similar to the sapallo, but they climb trees and produce there an oblong, sweet, and fragrant fruit; when one enters a house, it is immediately evident if there are curugua fruits there; they are edible both green and ripe, but they are preferable in the ripe state.

I shall forgo describing many trees and plants whose [342] medicinal virtues are known; I shall take up others when dealing with medicines; however, before I forget it, I shall note here at the end of the flora that a region where /31/ there are damp places abounds in secular cedars, whose wood is used in carpentry for doors, windows, tables, etc. So that it may not be subject to rot, it is necessary to get mature plants whose color is light red; the whitish one is attacked by the wood borer; the odor of the wood is narcotic, and this property keeps away insects; its odor is similar to that of the cedar of Lebanon, and for this reason the conquistadors gave the name of cedar to this tree which the Chiriguano call "Igüirane," or stinking stick.

/31 cont./

Fauna

Quadrupeds

#136 #825 In this section I shall concern myself with a description of the quadrupeds, as the title indicates, and then, in the following sections, with other living beings. When dealing with them, I do not intend to make a complete list, so as not to make this little work too long; I shall therefore limit myself to a description of some of them.

AGOUTI-HUTIA. -- It seems that this quadruped rodent is peculiar to South America, but it is certain that it is found in the Chiriguano region, where they call it "Acuti." River banks and large permanent lakes are its most favored locale. [224] When pursued by hunters and dogs, it plunges in and swims under the water, fooling both by coming out on the opposite bank, where it quickly disappears into the woods. Its burrows have several entrances and exits, which are covered with leaves, while only one is left open; it has five toes on its feet; if some dangerous animal enters its burrow by the open door or entrance, it flees through any one of the others which are lightly covered.

Two other classes of agouti, live in the hills, woods, and pampas in this region and are very similar to the true one, but they have neither the same instincts nor the five toes on their feet; they have cloven hooves like lambs and get into planted fields, eat gourds and corn, and even feed on the husks of ulalas and other cacti; they are regarded as the archetype of thieves by the Chiriguano; thus, one compares a man or a woman who is light-fingered with the agouti, saying: "Mbuimonda acuti," thief like an agouti.

ANTA OR DANTA. -- This is the American tapir, unknown in other regions; it is the size of a year-old calf, does not have a hoof, but toes on all four feet, lives in the woods in a totally wild state, /32/ and it is ferocious, becoming enraged if it finds itself pursued. Otherwise it does not attack and feeds on grass and leaves; its meat is flavorful and plentiful. Its hide is tough and for this reason the jaguar is hardly able to slaughter it; it runs slowly, but tramples over everything.

/32 cont./

*136 bending or breaking every bush in its path. It is also a swimmer.
*825 Saddlemakers make from its hide headstalls and reins which
[281] are durable and hence highly valued. When the tapir is very small, it has a pelt like a fawn with yellow stripes and is easily domesticated. It is abundant near rivers and is very rare on the plains; few are found in the province of Acero. In the region of Cuevo and in others there are none at all, doubtless because these places are being settled by another type of man, that is to say, by whites, who can destroy them easily with the use of gunpowder. The Chiriguano like its
[262] meat very much, and they call this animal "Borevi."

ARDILLA /squirrel/. -- A climbing quadruped which looks for its food in the trees which it climbs and goes down very quickly. There are two classes of these, one large and red in color and the other smaller and dark, but both are very graceful, with a rather long tail almost as large as the body as far as the neck and covered with rather long and very soft hair. When they sleep, they cover themselves up and protect themselves from the cold, the dew, and even from the rain with this tail, which they keep horizontally along the length of the body in order to climb and descend more nimbly. They
[262] have very little meat, which is full of gristle, and, despite
[224] the fact that they are quite edible, the Indians hunt them very
[859] little; only the children hunt them for diversion and for practice in the use of the bow.

ARMADILLO. -- This animal, called "Tatu" by the Indians, is abundant. There are six types, which are: "Tatu," the generic name, or the true armadillo; "Taturapúa," balled armadillo; "Tatu rabuco," armadillo with hairs; "Tatu guasu," large armadillo; "Tatu acuti," a species of viscacha; "Anguya tuti," a species of large rat, but also with scales in common
[262] with the armadillo. For the Indians the flesh of all of them
[224] is edible, and the Indians of Yvu and Ikatiqui continually go out hunting them. In dry places, like the pampas of the Gran Chaco, armadillos are more numerous; there they make their burrows under the ground in great lengths, making it dangerous to go on horseback through such places because the animals can sink in easily and at a gallop can break their legs, if they are not unlucky enough to crack their heads open. /Illustration appears here./

[Text continues on p. 53]

Tapiete Skin
142
291

Group of Tapiete Indians

/22/

#136 #825 The large armadillo is slightly less than one vara long: its burrow corresponds to its size and even more, and not infrequently the wild boar or peccary, when chased by hunters and dogs, finds a safe refuge in these holes. The meat of the large armadillo is not so good for civilized people, but that of the others is: I have eaten it many times. The fat softens the tendons and gristle in it. Armadillos feed on worms.

[241] Nevertheless, the true armadillo is harmful to the maize fields when they are newly planted, because it searches out and eats the seeds: it is also very harmful in maize patches, of which it scarcely leaves a slender shoot: when it gets into the

[226] maize, it does not allow any to ripen. The Indians know well where the armadillo abounds: as soon as they finish planting the maize, on nights with a moon or without it, they go there and, helped by hunting dogs, kill them.

COBAYO /guinea pig/. -- This little animal is innocuous and plentiful everywhere. Its places are the fences, where it

[162] hides with ease. It is similar to large rats without a tail:

[237] its meat is very tasty, and bags in which smokers store tobacco, tinder, and flint are made from its skin. When it sees a hunter

[224] or believes that danger is near, it hastens to hide in the thickness of the fences, but when the hunter hides, it is not long in coming out again in search of food, morning and evening, and then it is easy to kill with arrow or dongan. The Chiriguano call it "Apeera." There is another sort of multi-colored guinea pig

[231] of the same size as the previous one, but this one is domesticated. The color of the true guinea pig is light brown.

CONEJO /rabbit/. A quadruped in the wild state, native to America. It is the size of a large cat. Its color is a shaded

[224] white, and here there are none of any other color, but there

[242] are in other parts of South America: its meat is delicious, and the Indians like it and hunt it: its form is the same as that of the domestic rabbit, and in the Chiriguano language it is called "Tapiti."

/30 cont./

#136 CORSO /deer/. -- This is found everywhere and is called
#825 "Huaso" by the Chiriguano and borina by the whites: there are even white ones. the females without horns and the males with them: another type is called "huasacara." Both feed off
[231] grass. and the little ones are pleasing with their hide dappled with light spots: they are easily domesticated while they are still nursing: for food. when they are domesticated. goat's or sheep's milk can be used. The huasacara is very similar to the deer: both male and female have branched antlers when old. but /36/ their meat is not so good. They travel in herds.
[226] Hunters pursue both types because they have a lot of meat. for
[227] which reason they are called "huaso," which means "large." They hunt them with considerable work and with the help of dogs trained for the purpose. or. if they are hidden. they imitate their bleating or cracking sound. and when they come within bowshot. they do not miss in killing them. The
[230] Chiriguano tan the skin of these animals and make a jacket
[231] from it. which I shall discuss in its place. but today this do have Chiriguano garment is disappearing. nor do they tan leather any more: today they use these skins for their beds: it is nonetheless a perfect material for footwear because of its natural softness and smoothness.

#136 GAMO /fallow deer/. -- It seems that this class of animal is from the mountainous and temperate regions: it is not found beyond Monteagudo. nor do the Indians here know it. but it used to be found and still is found in their former territory of Padilla. Tomina. Tarvita. etc. This is the fallow deer. the size of a goat. with cloven hoof. ash-gray in color. and quite a swift runner: it is horto-meat. quite edible. and goes in herds.

GUANACO. -- This is a kind of camel. from which it differs in size and because it does not have a hump. They are found in abundance at the top of the high hills of Pomé and other cold mountains: it thus seems that the hills and the cold must be congenial places and the only ones in which they can prosper. Nevertheless immense herds of this quadruped can be found in the pampas of the Gran Chaco. where the heat is oppressive and where there is nearly always a scarcity of water: it is easily domesticated and in this state is a real llama.

/34 cont./

#136 #825 GATO /cat/. -- There are domestic ones, which are called "Minta," and there are wild ones, which are of two kinds. One is called "Baracaya" and is very harmful to [224] chickens: at night it approaches dwellings in the country and even in towns, and it beheads any chickens it can; its meat is delicious and pleasant, and the Indians hunt it. The second species is called "Eira," or "Yaguarundi," depending on the locale; it is a species of small jaguar, slightly smaller than a fox; it has light spots on its pelt, and it runs and climbs trees very rapidly. It is not dangerous nor does it approach [224] houses in towns. The Chiriguano hunt it only for the pelt, which they sell at any price.

#136 #825 224 JABALI /wild boar/. -- Nothing suits the jabalí better than forests and the slopes of hills where it is difficult to penetrate. Therefore they multiply in the forests and form immense herds; the beast is /35/ ferocious. It is a rare occasion when one finds this type of quadruped, so similar to the [262] domestic pig, in a solitary state. The Indians call it "Taitetu," and they like its delicious and pleasant meat, but they almost never go out alone to hunt it, because it is a fearsome animal and charges impetuously, and only with the aid of dogs do they manage to kill some, and then the rest flee, but woe to the hunter who finds himself alone! The way to save oneself is to climb a tree which has a good trunk and better roots; otherwise in their rage and with so many of them they will tear it to pieces. If the hunter took the precaution of not abandoning his bow and arrows, he can easily kill all the jabalí he wants from that somewhat safe and sure place. When this animal chases the hunter, the dog will stop the chase and remain at some distance, because, without his master to defend him, he becomes cowardly at the sight of the immense tusks which sound like a hammer on an anvil.

#136 #825 LEÓN /lion/. -- This is not the majestic beast of Africa, nor could it here be the king of the beasts. It is the puma, and the Indians call it "Yaguapinta," or red jaguar, and in fact it is quite similar to the jaguar in its features, so much so that there is often a cross between the two animals, resulting in a neuter animal which is more ferocious and rapacious

/35 cont./

*136 *825 than either. I have seen the pelt of one of these crossbreed animals which did incalculable damage among the cattle and horses of San Pascual Mission. The lion here is of the size of a large red dog and will not attack unless pursued, and wounded; it does damage to the flocks, making depredations until they are all gone, and it climbs trees when it finds itself pursued. The Indians kill it with arrows, and a good dog can chase it away from the flock that it is guarding. The lion has short hair and a long tail, a large head, and large paws like those of the jaguar, but it does not have a mane like the African lion. Its meat is pleasant when put in brine for a few hours; the hide has no intrinsic value, for which reason they only hunt it as a harmful animal. The aforesaid hide, however, is [157] medicinal; when applied on aches of the spine or hips, it cures or alleviates them.

MOFETA /skunk/. -- This little animal is very pretty in appearance and abounds in certain spots; it gets into hen houses to eat the eggs and, if it can, the chicks as well. The Indian sees nothing whatever attractive about the animal; rather he runs from it, because, in order to defend itself, it throws an extremely malodorous liquid, for which reason all animals flee from it, including the jaguar, and even more logically so does man; it can be smelled at a great distance, and should that liquid touch the clothing of some hapless person, the stench lasts for several days. /36/ Such defense is only used when it sees itself pursued; otherwise it is neither large nor dangerous, and in Chiriguano it is called "Amiane," or stinking animal.

MONKEY. -- The common monkey is called "Machi" in Chiriguano. It is found throughout the region, but it abounds from the left bank of the Río Grande or Abapó River, where especially in the morning it makes a great deal of noise with its whistles or some similar noise. They go in great numbers and prefer to clamber about on the rocks, where there is an abundance of tilandsia, which in these pages occupies the third place, the pith of which they eat. They do much harm in the maize fields. When the Indians go to their field at the time of choclo, or green ears of maize, before returning to town they

/36 cont./

*136 pick eight or ten ears, remove almost all the husk, leaving a
*825 few leaves on each ear and tying them together like a saddle-bag, put them over the shoulder in such a way that they hang down the back and chest, and go on their way. Meanwhile the monkeys have observed it all, come down, perform the same operation, and go back up the trees, or to the rocks, happy and content, to eat the fruit of their accomplishments.

There are four classes of monkeys: black, white, yellow, and red. There is also an orangutan that the Indians call "Caraya," hence the place called Carayagua, cave of caraya or orangutan. Monkey meat is good, but the Chiriguano do not hunt it; they do kill them because they are harmful, and they catch the young alive for pets. The abilities of the monkey are already known.

OSO /bear/. -- There exists in this region the true bear, which the Indians call "Yaguapope" and the whites, jucumari. It has long hair which comes down from its head, covering its face so much that, in order to see well, it raises it with its hands. It is fearsome when irritated; it throws stones and strips branches from trees and uses them as a club; the jaguar can do nothing with this animal, and should it measure its strength and ability against it, it is unlikely that it would get
[224] out alive. It has excellent meat, and the Indians hunt it,
[262] but woe is he who dares to do so alone and whose arrow misses and wounds it slightly, since it will quickly charge and smother its enemy!

PECCARY. -- The peccary, called "Tayasu" by the Chiriguano, is similar to the wild boar /jabalí/; this animal is more fearsome than its fellow-creature and has the same instincts. Both quadrupeds feed off roots, mistol, chañar, algarroba, and such other fruits as there are in the forest; the hides of these animals are easily tanned, but the Indians scarcely even use them for their beds. The jaguar is the constant companion of the female peccary who have young, /37/ because when it can, it quite calmly and patiently catches one, but if it is not careful and the little animal grunts loudly enough to be heard, the mother and the males come to its defense, and if the jaguar values its life, prudence will advise it to climb a strong tree.

/37 cont./

000 to climb a strong tree. The young[1] are quickly domesticated
*136 and more than the domestic pig: they will not go away from
231 the person who was kind to them when they were little. One of these piglets was domesticated by the apprentice musicians of the Parapiti, was with them day and night without bothering them, and when they came out of the music hall to practice marches through the town, the peccary would go along in front of them, making a thousand faces and hopping about to the sound of the instruments.

*136 PORCUPINE. -- This small animal is not numerous, but
*825 it is found. It gets into chicken coops, which are generally located in trees. According to what I have heard, it is not harmful and merely likes the company of the hens at night, but the latter are afraid of it, as they are of any strange animal. Its skin is entirely covered with long, flexible quills, and when it sees itself pursued, it humps up and throws the said quills with so much force that they injure any part of the body. It
[224] is sometimes hunted because of the chickens, but not for eating. The Chiriguano call it "Cuñi." If a dog bites it, it gets its mouth full of quills which cause pain.

TAMANDUA /anteater/. -- This is an innocuous wild animal which is easily domesticated. It has a very long, narrow snout, which it introduces into ant hills, and it takes its delicious lunch with its tongue, to which an infinity of ants stick. In the domesticated state it even feeds on milk, but it is painful to watch it sip this liquid drop by drop with its exceedingly slender tongue. Apparently males are unknown in this species of animal, and it seems that all of them belong to the female sex. It is very probable, however, that all the individuals of this species are members of both sexes, despite the fact that only the female sex is apparent in them.

The anteater, or tamandua, is inoffensive and does not
[224] bother the fields; rather it destroys ants. The Indian hunts it
[262] in order to eat it, because for him almost all meat is good, since he says that he is poor and thus avails himself of anything, even poisoned animals and those that have died of hydrophobia.

[1] [i.e., of the peccary. —Analyst]

/37 cont./

*136 Tamandua meat is rather strong; it smells of ants, and they
*875 use its hide for their beds. This, that is, the leather, is
[237] medicinal when applied to the hips when they ache; it cures
[757] quite rapidly. It is called "Tami."

*136 TIGRE /jaguar/. -- Here we have the animal which is the king of the forests in the Chiriguano region /38/ and elsewhere. A fearsome animal because of its strength, speed, and cunning, fearsome because of its fangs and claws, fearsome, in fine, because it will resolutely attack every animal when it is hungry or is pursued and wounded. This king of the forest walks, runs, and leaps, climbs trees, scales cliffs, or crosses rivers, as circumstances dictate, for its own preservation. Wild and domestic animals, small and large, birds and reptiles, and the very fish flee and hide from the sight of this ferocious beast; man himself is often left the victim of its claws and fangs, and one experience is sufficient for it to continue attacking man. If the jaguar starts on calves, generally these are its daily diet; if it tries the meat of the ass, this will be its lunch, its supper, and its everything. Only with the bull, when it pits its strength against this powerful animal, does it always get the worst of it.

When the jaguar takes possession of a region and begins to fell cattle, horses, or burros, it is necessary to kill it or drive it away by pursuit, because it is so bold that it will fearlessly enter corrals near houses and kill the calves that it wants, being content with sucking their blood, but should it not have time for so much, it will pick up the first one and carry it off a short distance and calmly have its way. It seems that this animal knows the dominion it holds over the rest, including man himself. Should one meet it on any road, it does not flee, but calmly continues on its way, and then prudence dictates that the man stop, not be afraid, and speak loudly, and then the animal will go off into the woods; I have had this experience and others the same, but should one not behave in this way and is without weapons and good dogs, he exposes himself to being its victim.

The Indians call it "Yagua," and it is the jaguar of Spanish-speaking people; similar to the panther, it is not the

/38 cont./

*136 true tiger of Africa; nevertheless it seems that both are equal in ferocity, but not in size and beauty; I have also seen the [224] African one. In spite of this the hide of the tiger, or jaguar, is most highly regarded here; there are cattle owners who will [435] give the killer of a jaguar quite a valuable fat cow. The ordinary price is from 30 to 40 duros.

224 The Indians kill the jaguar with arrows and with the help of good dogs, called tigreros; the white Christians have different methods, with bullets, strychnine, and traps. To kill by gunshot, one seeks fresh tracks and shows it to the best dog, who immediately sets off /39/ in pursuit, and the other dogs and the hunters follow the tigrero. If the jaguar climbs some tree, the tigrero dog will not go on until he discovers it; then he will begin to howl like one who is asking for help; the rest of the dogs arrive, the hunters arrive, and, seeing the animal up in the tree, they kill it with one or two shots; if it does not die then, once it is on the ground they finish killing it between hunters and dogs.

But the matter does not always end so easily; there are jaguars which tire out men and dogs by climbing up and down trees, running and stopping to face and kill some careless dog with a blow of his claws, and hiding in thickets where it is dangerous to approach and difficult to shoot at it accurately, and finally by scaling cliffs which are inaccessible to other animals. Thus the day often ends without anything achieved and with the jaguar fiercer than ever; it will stay away from that area for a few days, however, both in order to rest and so that it may avoid another unpleasant and dangerous encounter.

The second method of killing jaguars is with strychnine; the effects of this most powerful poison are well known. To accomplish this end the whites try to find out first where the animal has fresh meat, and there they put poison in the piece that it likes best, taking care not to handle the prey and to erase their tracks. But it is to be noted that some jaguars kill, eat a little bit, and leave the rest; for that reason it is not always certain that the jaguar will be killed by the use of poison. In addition, inasmuch as it has a very strong sense of smell, it is unlikely that it will return to the poisoned meat

/39 cont./

if it senses any danger; fear makes it very circumspect when it has done damage.

There is a third method of killing a jaguar, with traps. When it takes possession of a place, one must select a spot and a narrow path where it must necessarily pass without being able to go off to the side. Generally a path leading to a slain animal is sought; then at one side of the path a rifle is tied with the barrel pointed at the path. Somewhat ahead of the rifle there is put across the path a taut bejuco which the jaguar will push against to open the way, and at the rifle end a string of bejuco is run to the trigger, or, better, to the hammer, to which it is tied; with the rifle covered with leaves, the jaguar will not pay any attention to the bejuco, because it is accustomed to passing under it. When the beast arrives, unsuspecting, it pushes against the bejuco or cord, which in turn makes the hammer fall, the weapon discharges, and the beast falls mortally wounded, because the bullet enters it at the scapula or /40/ axilla. The bejuco must be placed at the height of the beast's chest; only thus is it infallible; the dogs themselves fall into this trap.

224 Finally, although it is rare, the jaguar can be killed with a dagger. One who has the courage for this does it with all serenity. Once the place where the beast has begun to be harmful is known, he will go in search of it with a poncho, a strong dagger, and a tigrero dog. This last is only necessary to find the place and stop the animal; as soon as this happens, the hunter wraps the poncho around his left arm, tucks in his sleeves and trouser legs, and resolutely approaches with dagger in hand. The jaguar then attacks at once, but the hunter lets it pass to one side, letting the same thing occur on the second and third charges so that it will tire a * [85] little. When it charges for the fourth or fifth time, he meets him head on, sticking his protected arm into the animal's mouth, and with his right hand, armed with the dagger, stabs it to the heart; the only thing that one needs is calm, valor, and dexterity, and anyone who does not have these qualities should not expose himself to the danger of death, nor should he even hunt the jaguar in the company of others, since this

/40 cont./

224 animal is capable of distinguishing between the brave and
*[825] the cowardly, and the latter is the first to be attacked and consequently to be badly injured.

*825 Jaguar skin, as I have already said, has intrinsic value;
[554] it is used in saddleries for the bottom padding of saddles and
[281] for saddlebags; it is a luxury for persons of rank. The ani-
[757] mal has a quantity of fat, and this is a good remedy for
[439] rheumatism, aching bones, and other ailments; the Indians take it and sell it in the interior of the Republic and trade it for used clothing. It is to be noted, however, that they do falsify it, as they also falsify snake grease, because it can be understood that the killing of this ferocious animal is not a
[466] frequent thing. Rarely does the Chiriguano hunt the jaguar, and he is not always inclined to help the white man, but the latter forces his peons to do so, and they gather the fat and
[262] sell or present it to their friends or relatives. Jaguar meat is good food, although, to be sure, it smells wild, as does the skin, but this meat, if placed in salt water or brine overnight, loses its bad smell; they assert that this meat is like that of a cow.

*136 The male jaguar is quite large. I measured one, and it was two meters long from the tail, one meter high, and it weighed seven arrobas. The female is smaller; I measured one that had just been killed; from the tail it measured one meter and ten centimeters, was 75 centimeters high, and weighed four and a half arrobas. The female gives birth
[231] every three years, and the newborn cubs are always a pair, one male and one female; the mother is most dangerous when she has young /illustration appears here/ /41/ and defends them at any cost, but hunters first kill the mother and then try to catch the cubs alive; they almost always succeed and take them home to domesticate them, but this is an impossible job because they are jaguars forever; I have seen two of these cubs well chained but very bad. In general, cubs when taken away from their mother die in a few days either through lack of adequate food, which is milk, or also out of desperation upon finding themselves in the midst of beings foreign to their nature.

/41 cont./

*136 ZORRO /fox/. -- This quadruped is not scarce here among the Chiriguano; it thus seems that it adapts to every climate. It is so intrepid that at night it will go about the towns without betraying its presence to the dogs, but if they do smell it, they pursue it immediately and even kill it, although they may suffer for it, because the dog of the Chiriguano Indian and the fox are equally skinny, but among several of them they achieve their purpose and kill it.

This dauntless beast leaves nothing; it makes its meal off whatever it encounters; it causes considerable damage in the cane fields from the time when the plants begin to become sweet and even pulls up recently planted shoots from their furrows or holes. It slashes watermelons and melons without allowing them to ripen, and as a result of this the farmer often does not taste these gifts. It also does damage in maize fields, but this is an abundant crop and the harm is not felt so much; when it can obtain chickens, it does not fail to provide itself with a good lunch or supper, and to this end it approaches towns and houses in the country by day as well.

There are several classes and sizes of them, but they are smaller, like every animal, than those of the other hemisphere. It is difficult to chase them out of the cane fields, the damage to which will only be reduced by reducing the number of foxes, and this can only be achieved by the use of strychnine or some other poison, which, mixed with small bits of meat, is placed on the various trails that they have opened, causing damage to the sugar-cane plants.

*136 *825 176 178 [161] We shall see in the course of these pages that the Chiriguano used to venerate it as a divinity with the name of "Aguara-Tunpa," or Fox-God, to whom they attributed more power because he was capable of destroying the works of the true tunpa. Today, when the region has been invaded and populated by so many whites and foreigners and the Chiriguano have been reduced to a handful scattered here and there, those who believe in such humbug are few.

/41 cont./

*136 The Chiriguano hunts and kills the fox as a mischievous
*825 and harmful animal, but he does not eat its meat because
[224] it is very strong and lean; /42/ he does eat it occasionally,
[262] when he finds it to be fat, airing it so that it may lose its bad
odor; it is a common food of the Toba Indians. The children
[857] entertain themselves with this poor animal, catching it alive
and making it fight with the dogs, who kill it slowly.

*136 I here bring to an end this brief resumé of the principal
quadrupeds by size, ferocity, and special characteristics.
I have omitted the description of many because they are found
in other regions, and others because they do not offer anything
unusual for consideration. Rats are plentiful and in some years
invade the towns. There is no lack of female foxes /raposas/,
[231] which are easily domesticated; the ferret is rarely seen and is
very nervous and harmless, but it has the peculiarity of hunting
all the insects in a house.

Reptiles, Amphibians, Fish, and Insects

It is not necesary for me to dwell particularly and extensively on the types of living things indicated at the beginning of this section, because they are found in every region of the world; I shall describe the singular peculiarities of the known ones and the nature of some which are peculiar to this place and to South America.

Almost all the snakes here are poisonous because the place
*[825] is very hot, but the most poisonous is the rattlesnake; it
[231] operates rapidly with its fang, and only with immediate
cauterization can the patient free himself of its death-dealing
effects, while the boa, which is thick and long, is harmless,
so much so that some domesticate it and put it into their
cane fields so that it will scare off every harmful beast, even
the fox which, as we have seen, is the animal which does the
most damage to the sugar cane.

/42 cont./

*136 We can count among the amphibians the "Boicururu," or snake toad, which is nothing but the water tarantula, but it is very poisonous here; it is found near lakes in the swamps. Frogs are found in small numbers in the center of the region; [262] they abound where there is water on the banks of rivers; only the Toba and other barbarians eat them; the Chiriguano do not. There is an infinity of "Cururu" toads in terms of size, color, and song, one being distinguished among all of them, the one that the whites call "Rococo" and that is heard continually and loudly at a distance of one kilometer at night in rainy weather and where there is water.

*136 *825 [757] [164] The toad is medicinal; one or two large ones are gently caught alive and, one after the other, applied /43/ to parts of the body affected by erysipelas, which is cured very efficaceously, with the animal being left dead, doubtless because with its cold belly it absorbs all the heat which the sick person has in the said painful parts; more than once I have seen erysipelas cured in this way. In rainy weather there are so many of them that it is impossible to sleep near the place where they gather to sing their discordant tattoo; at the end of a heavy shower is when the noise of the toads is most unbearable.

*136 Fish abound in the large rivers, where there are shad, bagre, and dorado; the latter reach a length of two meters, as I have seen, and are very palatable and drip blood like cow's meat. Then in the same rivers, streams, and permanent lakes, there is an infinity of small "pira" fish, which are good to the taste, and finally there is no lack of eels, "Chorinchi," 43 or the useful leeches, "Evoipe." Indians who live on the banks of rivers of great volume trade in fish; to be sure, they plant fields, but generally they do not harvest because of the lack of rain, but obtain maize in exchange for fish; dried shad tastes like cod and is worth 10 and 20 centavos.

*136 Insects are innumerable, but not as abundant and varied in their form, size, and color as they are in the region of the Beni, the Mojo, and others; they are a hundred times more numerous than all the quadrupeds and birds together; there are bothersome ones, like mosquitoes and zancudos /long-beaked mosquito/, and there are poisonous ones, which, however, rarely cause death.

/43 cont./

*136 There are wasps, and they are of several classes, but the yellow or red ones are the most vicious; there are bees in the trees, in the roofs, in the walls, and in the ground, and all of them make hives in order to make honey and wax, but the best honey is that of the bees called señoritas. Both things, that is, honey and wax, are known as beneficial by the Indians, but they devote themselves to this very little, because they consider it the work of lowly and poor people, and the Chiriguano does not like to consider himself such. Wax is seldom gathered, even in times of scarcity, nor does the neophyte or new Christian work at earning his living by looking for beeswax.

222 237 [461] 237 464

A spider bite almost always produces bad consequences, which can be avoided by the use of ammonia; this is another plentiful insect. In the rainy season they extend their webs from one tree to another, obstructing the road, no matter how wide it may be, and frequently travelers who are out at night or who get up early are bothered by these webs, which stick to their faces and clothing, /44/ just as the spiders themselves, which are so loathsome, not infrequently catch hold. The bite of those that live in the forest, they state, is not poisonous.

*136 *825 [959]

All spiders are called "Yanduti" in Chiriguano, and the web, "Yanduti nupa," or spider's bed; from the web of the forest spiders the children make nets for catching birds or for their games. When wet they are quite elastic. The true tarantula, which the whites call apasanca and the Indians "Yanduti huasu," is quite ugly because of its fuzz, eight legs, and two arms. The natives state that it is poisonous, but its bite is not fatal. They almost never come out by twos, but upon killing one and wanting to know if it has a companion, it is enough to burn the dead one in order to cause the live one to come out the moment it smells the odor. The apasancas, or tarantulas, come out when it is about to rain and do not make a good impression. The natural enemy of spiders, including the tarantula, is another flying insect the size of an acorn, which the people of Santa Cruz call

[859]

/44 cont./

*136 "Cavadifunto" and which others assert to be the ninanina; it is
*825 certain that this small creature, which gets into dwellings, does not go after man, but if it is disturbed and cannot get away, it bites.

The sight of alacranes /a kind of scorpion/, scorpions, and centipedes, which are called "Apeusa" in Chiriguano, causes horror; they are not abundant, but they are found in every
[114] section. Their bite does not seem to be fatal, but one which stung me in the armpit through my woolen underwear did not let me sleep for a whole night, in spite of the ammonia which I took and put on the barely perceptible wound.

*136 Vinchucas /a nocturnal bug like the bedbug/, cockroaches, and a moth which eats paper are loathsome, especially the first two, which are numerous in inhabited places, stink, and dirty all the clothes and the whitewashed walls of buildings. The way to kill them is to destroy the proboscis or long beak, and then they cannot live. They are quite cunning. In the dark they will first approach a person who is in bed, give him a prick, and then retire to see if he moves or is awake. If the person gives no sign of life, they approach and suck the blood until they are sated. Nevertheless, the small ones are the most bothersome and can cause fever or sickness. They multiply naturally, depositing their eggs anywhere, and the young hatch by themselves. At first the eggs are white, and when the young are about to come out, they become red. Cockroaches abound in certain living quarters where they find food. They even eat the eyebrows and eyelashes of people who are asleep; they lay their eggs in the walls. If these are whitewashed, they pull off the whiting and cover their little nests with it. /45/ out of which can come up to 50 little ones, which soon start to run. The moth only bothers books and papers and is a nuisance for people who have these. Its color is silvery, and I do not know the principle of its multiplication. The vinchucas are black, the cockroaches the color of coffee, and
*[825] none of the three is poisonous. In Chiriguano the vinchuca is called "Timbucu," or "long nose."

/45 cont./

#136 #825 245 Ants are a constant plague for the fields of maize which they destroy completely when they germinate: they are also a plague for gardens and grapevines, which in certain years wasps and black butterflies also greatly damage: they damage the grape when it is ripening. The latter can only be killed and destroyed by placing honey in bowls, where they die during the night by the thousands. The former are destroyed only by burning, thus destroying the bunches of grapes in which they have lodged. In Chiriguano ants are called "Tasi," and the black butterfly is called "Covocovo."

#136 #825 Locusts and worms do not constitute a constant plague. The former come in certain years, and the latter appear when, in November, there are many white butterflies which place their eggs in the grass. Worms generally travel by night, in the early morning, and in the afternoon, and flying locust from ten o'clock until four or five in the afternoon: wherever its larva goes, the fields are left as though they had been swept. The larva does not retreat, nor does it deviate from its course: it goes eastward and toward the hills, crossing pampas and climbing mountains. If one stops them on their way, they are able to remain for a month in the same spot. Their number can only be reduced by killing them in the ditches: nevertheless, when the maize plants are about 60 centimeters high, the larvae pass under them without doing great damage, and in this case it is best to let them pass and hurry them slightly. With daily struggle one can manage to defend a field against the larvae, even though they may be countless but to defend it against the worm is impossible.

#136 #(825) The locust is white and red: the latter is called "Tucupiona," the former "Tucuxi," in Chiriguano. The white one appears *at the end of October or at the beginning of November*, and its passage through a region is not rapid: it will remain for days and weeks flying from south to north and vice versa, until it has deposited its eggs, which are put in the ground by the female, assisted by the male. They consist of a little cylinder about three centimeters long which contains up to a hundred eggs. Once the tube is put in the ground, the hole is closed with a yellow humor which comes out of the

/45 cont./

*136 month, and then it goes to another place to repeat the operation. The eggs remain in the ground one month /46/ so that the larvae may hatch: these take three months to reach the state when they can fly. Red locusts have no fixed direction, but fly and stop in the hills and rarely come down to the pampas. Only if the pampas are very extensive will they spend the night there, but always in trees or thickets. Then [164] the Chiriguano gets up very early and puts in provisions for many days, and dysentery immediately appears in the town, carrying many to the grave.

Nigues are abundant where there are pigs and dogs, which they bother constantly. The nigua is a small flea in form and color, but not in its effects. It gets into the skin, causing a slight smarting. It is easy to get it out if its presence is soon noticed, but if it manages to establish its dwelling there and to make a nest, which consists of a small ball of skin, it is difficult to get it out. The nigua causes swelling and discomfort and makes walking impossible when it establishes its domain in one's feet. So that this may not happen, one first raises the skin around the ball with a needle, trying to get it out whole: ashes, especially cigar ashes, are deposited in the cavity which remains, and all danger of becoming immobilized for several days then disappears.

The guasaco is similar to the inuse, but larger, and there are some of every size. In Chiriguano they are called *125 "Guasaco." These insects are also slightly buried in the ground, and they can easily bite one who goes barefoot or in sandals. They are abundant from Yvu to far beyond Santa [164] Cruz de la Sierra. Their bite is not poisonous, but some of them do cause pimples or swellings all over the body, and in others the swelling is in the most immediately affected parts. The first of these effects was caused in a companion of mine, and he was later cured with five drops of ammonia in water: I had the second effect. It was during a trip, and since I had no ammonia, I cured myself of the swelling, which bothered me all day, with tender plantain leaves and melted grease, which an old woman in Guarini put on me. I spent the night there and woke up with no symptoms and no pain. The Indians chew tobacco and cure themselves easily.

/46 cont./

*136 In the rainy season there is an abundance of glowworms,
*825 "Chocopi," beetles, "Ene," and cicadas, "Naquina." The first are very luminous and eat both large and small algarrobas. With two or three glowworms under a glass, one can read perfectly, and children light their way with them at night. The second-named announce the change of season, because at that time many of them come out around the light or fire, and the third-named, with their strong and vigorous whistle, sound like the signal for the arrival or departure of a train, or like a whistle /47/ when the workers are to begin or end their work. There are five kinds of these: "Ndi, Raquina guasu, nancanance, gote, chipitiriru."

*136 Flies, which are not seen in other places, at least in abundance, are here in excess when it is the hot and rainy season. They become very bothersome at the change of the season, invading the kitchen, pantry, and meat markets. Even the cantharis is found, from the powder of which are manufactured the so-called "flies of Milan." Horseflies, "mbutu," are annoying and abundant in the months of February and March, and there is another class of large flies which molest all injured livestock; it deposits its eggs in the wounds, and they turn into loathsome worms, which make the poor animals walk, run, and drag themselves across the ground, and hide themselves as though they were mad. They even deposit the same eggs in the wounds of careless or sleeping men. I have seen and treated several in the nostrils, ears, and even in the throat. If they are not treated in time, death can result, as frequently occurs to the young of livestock.

The moth which damages woolen clothing is found here in abundance, and such clothing should not be left neglected for a long time. Wool is free of this moth only when closed up in cotton covers, and the little animal is chased out of chests and trunks by means of smoking tobacco. Maize and other cereals are molested by another moth called gorgojo, which does not leave maize good for another year, but if it is kept in new storage places with maize husks, is not stirred up and is kept in places with some ventilation, it is not damaged for two years and even longer.

/47 cont./

#136 Crickets abound in the fields and dwellings: they do little damage in the former and a great deal in the latter. Not even silk escapes their tiny mouths, but rather this seems to be the type of clothing or adornment which they most prefer. Sometimes they get into the chests of drawers in the sacristies and do irreparable damage, ruining the best sacred vestments.

4 [125] Another insect, which apparently has three names during its life cycle, to wit, polvorín /powder/ at first, colorada /red/ later, and garrapata /tick/ when big, is present in great numbers in the fields, meadows, and woods. It is dangerous in all three stages: it produces a smarting sensation, and if the affected person scratches himself, there then appear lesions which are only cured with difficulty and over a long period of time. Once I had them for three months, in spite of the medicine which I applied to them three times a day. The garrapata is easy to remove at first by pulling it off and trying to see to it that the head does not remain in the skin, but if it is well attached /48/ the affected part is anointed with grease or oil where the tick is attached, and it will come loose of its own accord; otherwise the pain and the trouble last for several months.

There are lizards of every size and color; the smallest ones are inoffensive, although they cause some fear, but they are the most useful because, like toads, they hunt insects in dwellings. In the woods there is a kind of lizard one meter long. It runs very fast; when it sees that it is being hunted and is cornered, it defends itself by biting, but it is not poisonous. [149] It lives in certain places and is hunted by the Indians, who eat it and assert that its flesh is tasty. In the large rivers there is the cayman, a species of crocodile, which is also found in the lakes with permanent water, but rarely. This is a very fearsome and dangerous amphibian, which is difficult to kill because it has very tough scales, but above all because the one shooting is almost at the same level as the animal; the bullet is fired horizontally, and it is natural that it should bounce away. Does this not perhaps also occur when children throw stones across the water? The cayman lives for months on end submerged in the water, and even submerged in the

/48 cont./

¶136 mud when the lakes dry up. In the water it is not so fearsome as it is near the shores, where it can easily kill any careless animal or person. The female cayman lays rather large and oblong eggs and covers them with dry leaves near the shores of rivers and lakes, but does not sent upon them, caring for them from the water and defending them from aggressors. The young come out of the shell with the heat of the sun, and then the mother leads them to the water, caring for them for a more or less long period. The cayman eats any living and dead thing, but the dead ones make up its ordinary food. It attacks living things when it can, but always from the front; from all that they say about this repugnant amphibian, there seems to be a great deal of exaggeration. Consequently, the little that I have written about it must suffice. It is called

¶(125) "Tacaxe" in Chirigusno.

Finally, in certain places there is an overabundance of a type of insect very similar to ants. They are white with red

¶(125) heads. Some call them white ants and others land lice, and the Chirigusno, "Cupii." It is evident, nonetheless, that they do not have the instincts of the ant. This insect, which is loathsome even to see, is harmful to buildings and to somewhat soft cedar wood and even to hollow canes; they eat the pith of these two materials, leaving barely a thin outer shell without the slightest damage on the outside. It thus can happen that an owner believes that the roof of his house is in excellent condition, and, when he least expects it, it can fall on him, with the danger of his finding his grave in his own /49/ house or room. The confessionals of some of the churches in our reductions have been left completely destroyed. Where this class of insects exists, there is also a number of toads, and behind them come vipers and snakes, looking for a delicious lunch, even though they may be in a confessional, as happened to me in a certain place.

At times this insect takes over the walls of a building or church, forming there its little cylinders similar to tree branches, which are made of earth taken out of these walls. Others take over the foundations and continually extract earth.

/49 cont./

#13 The best remedy in both cases, in order not to damage either one or the other very much, is to leave them in peace and not take away from them the earth that they build with or extract; otherwise, the more one takes away from them the more they extract, often leaving the foundations and walls completely hollow. They say that foundations can be freed of this easily by burning gunpowder there or setting fire to petroleum. From year to year, or perhaps more often, these lice grow wings and fly away, not to return, but the larvae remain in the place.

To close this section I shall say something about three other types of insects, so that my readers may see that there is nothing lacking in the Chiriguano region. I am going to name them, with the leave of any delicate girl or genteel lad who by chance may read these lines. They are the flea, the louse, and the bedbug. The first are only abundant in the cold season, from May to August, when the south wind is strongest; the second are peculiar to dirty people, who kill them by prettily eating them for fun; the last nest in the beds, and the best way of getting rid of them for a long time is to place the infested bed for one or two days in the water of a stream where the current is strong or in a lake.

Birds

#13 If in the region which I am describing, tame and wild quadrupeds are abundant in town and forest, if there are innumerable insects which annoy man day and night, causing swellings, tumors, and even worse injuries, such as the occasional loss of an eye, if there is no lack of poisonous animals, such as the cattlesnake, if there are delicious and enormous duraznos which are gifts to its consumers' stomachs, there is also an infinity of birds of every size, shape, and degree of beauty, which cross through the air, making the cool mornings joyful with their harmonious songs, fluttering above the buildings and resting happily thereon; they play about in the /50/ air, purifying it and providing the Chiriguano, as well as one who is not, exquisite food with their flesh, despite the fact that some of

/50 cont./

#136 [262] them. if they do not destroy the entire field, do make the work of the harvest somewhat lighter. I shall deal briefly with some of them.

#136 #825 AGUILA /eagle/. -- The one that is known in this region is not the true or the real eagle: it is similar to it in form, but not in size. There are two types, one black and red and the other ash-gray. It always lives in the country, does not approach towns or country houses, and lives on dead vipers, locusts, crickets, little birds, lizards, and insects; it is not harmful to man or to his belongings, nor does he hunt it, with the result that it lives as it pleases. It is called "Gilirapinta" in Chiriguano.

AVESTRUZ /ostrich/. -- The region of the ostriches, which the Chiriguano call "Yandu," begins from Yvu. I have seen them here in the wild state, in Santa Rosa and Igllembee in the domesticated state. Nevertheless, if their region begins in Yvu, where they are abundant, it is in the Gran Chaco, there in the pampas of Carandaiti, where I have seen them as big as a lamb with a ribbon of black around the neck and chest. I have seen them in flocks of 10, 15, and 20, and some of them so tame and so near the road that it was very easy to kill them with a single shot from a shotgun, which, of course, attracted my attention, since on other occasions I have seen them alone, and they ran away like the wind when they heard only a human voice. When I asked for the explanation of this different attitude when they are alone and when they are together, my Chiriguano and other companions of his told me that they only gather together in the months of July and August for the propagation of the species, the same as they gather in fewer numbers in October or November, which indicates that they lay their eggs during two periods not very far apart.

The female ostrich is smaller than the male, her feathers are less colorful, and she does not have a collar like his either. She lays some 20 or 25 eggs in the month of September, which are the equivalent of 240 of those of a hen in weight and substance. Other eggs, in lesser number, are laid in the month of December, but not always, nor by all the females, but only the youngest. I measured and weighed one of these eggs; it

/50 cont./

*136 was 15 centimeters long and 28 and five millimeters in
*825 circumference; its weight was one libra and a half, equivalent to 12 chicken eggs that I also weighed. With one of these eggs a family of four or five Chiriguano can eat well.
[262] They get these eggs both in times of scarcity and other times as well.

*136 The nests are found in September and December, and the male /illustration appears here/ /51/ is the one who sits on them, especially when two females deposit their 40 or 50 eggs in the same nest. While the male is getting thin on the nest giving necessary warmth to the eggs, they go off looking for another male to frolic again as they please in some
*[825] distant pampa. My Indian and all of those whom I asked about this matter state that it is the custom of all ostriches not to hatch one to three eggs that they lay; the female at the time when she lays them scratches about, prepares the place where the nest is to be, breaks up the earth with her beak, and covers the two or three reserve eggs with it. When the young begin to come out of the shell, the male breaks the spare eggs, and this attracts flies and other insects on which the newborn feed. How admirable is the Providence of God which has endowed every living being with a special instinct in order to fight for his own preservation!

The ostrich feeds on everything it finds, especially insects, field crops, and grasses; it cleans and refreshes its body with sand or earth which it picks up with its broad beak, runs very rapidly with the assistance of its wings, but never flies, because its wings are small and delicate and its body heavy. To catch or hunt it, dexterity is needed more than valor, because in its mad dashing it always swerves and dodges, especially when danger is near. If its flight were in a straight line and did not have the sudden and quick dodges, a good horse and a pretty good dog would soon catch up with it. This semiflying animal would be the king of birds if it flew. In the domestic state it can be harmful to careless people; it swallows everything it finds, even keys and money, and in a field of beans it will finish them off without letting them ripen. It will destroy everything in a garden. When captured alive in a wild state, it will attack and defend itself with painful pecks.

237
293

Picture of the Yandugua or Parasol

/51 cont./

*136 *825 [262] [237] [293] [157]

Its meat is excellent, and I have eaten it on numerous occasions. The Indians go to hunt the ostrich to prepare for their bacchanalias; they trade their feathers or keep them, and with five of them make the "Yandugua," a kind of parasol of which I shall speak in its place. The fat is a most efficaceous remedy for the side, rheumatism, and ailments of the hips in men and animals, for coldness of the members, and for removing thorns by anointing with it the part opposite the place where the thorn has penetrated.

BANDURRIA. -- This is a bird which the Indians call "Toté" because this is the sound of its song. It has a long beak, long red legs, red and ash-colored feathers, /52/ and a long neck. It feeds on little worms and insects and is generally found in open fields and banks of rivers and lakes. The meat is like that of guinea fowl, but very tough, although if the outer skin is taken off before boiling or roasting it, it can be cooked easily.

The bandurria resembles the crane somewhat, but it is stationary, abounds everywhere, and is not solitary, but neither do they gather together much. A flock is composed at the most of some 12 or 15, and frequently one finds a single pair. If one of these is caught, its companion will fly away immediately, but will come back two or three times to find out what has happened. In this way it is easy for the hunter to kill both. The bandurria has a highly developed instinct, and when the hunter approaches, it quickly flies. When there are many, they fly like cranes, with one out in front to break the air. They do not fly very high and generally sleep in a hole in the rocks, where it is easy to hunt them after sunset.

BUHO /owl/. -- This is a large nocturnal bird like a condor and whitish in color; there are two kinds, the second is smaller and black, ash-gray with a white collar; the Chiriguano call the first one "Yancuruntu," because when it sings it seems to articulate this word. The female of the Yancuruntu answers "Yaparapiti," which in Spanish means "matemos" /let us kill/, from which the whites are inclined to jump to conclusions and start rumors that the Chiriguano are thinking about an

/52 cont./

*136 uprising, should this pair of owls start to sing on occasion in
*825 a town or near the house of some whites. The second is called "Surumucucu," because its cry sounds like this. Neither of the two is harmful. They are plentiful where there are trees; the first eats bats, toads, and mice, for which reason it is not attractive to the Chiriguano, but it is a very
[223] pretty bird, and its feathers are like the finest velvet. The
[262] second is good food for the Indians, who hunt it on bright moonlit nights.

CARDINAL. -- A little bird the size of a swallow, with a red crest, ash-gray feathers, and a white breast. The region of the cardinals begins in Parapiti Grande; occasionally a pair of them appear in some part of Yvu, and there are also some in the countryside of Carandaiti. I have seen them in both places, as I have also seen flocks of 15 to 20 in Parapiti. It has no peculiarity other than its crest and its song at certain
[439] times of the day. The Chiriguano Indians of Parapiti and some Tapii of Inoso try to catch this little bird alive and take it to the interior of the Republic, to Sucre or Potosí, to sell or trade it /53/ for used clothing; in this sense it is a small, lucrative business.

*136 CARPINTERO or PICAMADEROS /woodpecker/. -- This
*[825] is a black bird with a fiery red crest, and it is called "Arapatuare" in Chiriguano. When it flies away in fright, it makes a loud noise with its wings, is fast, and flies in a straight line. It is the continual desire of this little creature the size of a rondón to clamber tirelessly about dry and hollow trees, beating on them with its hard beak in order to make come out and to eat the insects that they contain. Sometimes the traveler, upon hearing these noises in the woods, believes that someone is cutting firewood and doing carpentry, or is inclined to believe, from the prolonged rattling of a hollow, dry tree being struck by the woodpecker, that it is about to fall, if he does not know that it is being pecked by this little bird. Both of these things have happened to me on occasion.
[223] The Chiriguano does not waste time hunting the woodpecker, because it is a semisolitary bird, and scarcely three or four
[859] are found together in one place. Only the children hunt them for fun and in order to learn to be accurate in the handling of bow and arrow.

/53 cont./

*136 CONDOR. -- The condor is the king of the birds here and is called "Guapi" by the Indians. It lives in the highest places in the high hills and comes down to the pampas when it sees or smells the carcass of some decaying animal. It wheels continually through the air at a high altitude, forming great circles in its continual flight, doing this doubtless in order to discover its food by sight or smell, since with this method of flying it not only has the four winds in its face, but also other breezes which may carry the odor of carcasses. It is a proven fact, whatever may be said, that as soon as the putrefaction of a dead animal begins, condors and crows will quickly gather there.

Only where there is carrion will a large number gather, and only then also can the traveler contemplate at a short distance their size, the blackness of their wings and feathers, the whiteness of their breast, and their beautiful collar. There on the height of Ipaguazu hill, on the way to Igüembe, I had the satisfaction of watching for a few minutes some 20 or 30 of these kings of the air, which were the size of calves. How beautiful and how immense! The entire body is white, with the exception of the wings; when the first feathers, which are somewhat rough, are pulled out, there is an extremely fine and soft plumage under them. The skin can be removed whole with this plumage on it, and with ten or less one can make a regular blanket of an extraordinary whiteness and perhaps of a value which could be compared to that of the fur of the chinchilla.

/54/ By what has been said it can be understood that the condor is one of the largest of the birds that exist here; its presence is advantageous for the purification of the air, considering that its food is the carcasses of cattle and other animals, in addition to the fact that its skin is useful, as is the fat, which is an excellent medicine for rheumatism and arthritis. Nevertheless, there are favorite places where they gather in numbers and are a real plague for the livestock; they blind newborn calves separated from the mother which is grazing at a distance, and then they disembowel them. If the calves

/54 cont./

*136 are somewhat grown, the condors have another procedure when the former are far from their mothers; two or three condors together push them toward some precipice, beating them with their wings, and, as they cannot escape, they run from side to side at the edge of the precipice and easily slip and fall into it, where, if they are not killed, they are left unable to run, either because they may have injured their legs or because the place they fell into is too narrow. The birds that did this then come down, as do others that see it, and they strike the animal repeatedly with their cruel wings and beaks and make an excellent lunch or supper of it, returning the next day to finish and to look for other careless calves.

[223] Nobody hunts condors, because they have no charm for either the Indians or the whites; the latter, of course, must defend their cattle when the condor is harmful, the same as is done with the jaguar. It is difficult to kill the latter because of its boldness and ferocity, and it is just as difficult to kill the former, because it will take flight at once, since it knows instinctively when it has done some notable harm. Nevertheless, as the number of cattle is great everywhere, the damage that these two creatures do is not great since it is not done to a single owner.

*136 CHUÑA /South American crane/. -- Some say that this
*825 semiflying bird is the "snake hunter," that is, the bird which
[262] hunts and feeds on vipers and snakes, but it seems that they are not correct, since the Chiriguano who constantly hunt it to eat its meat insist that its food is not snakes, but other small animals, such as beetles, locusts, crickets, and other insects, from which it can be deduced that the others are in error. The Indians from the right bank of the Parapití southward call this bird "Sariama," and from the left northward the Indians and whites call it "Socorí," as it is called in Guarayos.

*136 The chuña has long red legs, ash-gray feathers, and a crest; it runs across the pampas and low hills a great deal and also flies sometimes, especially when it is pursued. It sings in the morning /55/ and in the evening. They are in every section, but not abundantly; they generally go in the company

/55 cont./

*136 of a mate, and at the most there are three of them. Both sing at the same time. The female begins, and then the male continues, the song thus being prolonged for some four or five minutes. It is a very strange song or cry. They say *[825] that these birds announce the approach of wind or rain, and, if it is cloudy, they foretell the approach of clear or cloud- [223] less weather. Hunters who do not have the help of good dogs can only capture this bird with difficulty, because it runs and flies when hard pressed.

GARZA /heron/. -- This is a rather large, but light bird. It has a thick and somewhat long beak, flies little, and its locale is the lakes, ponds, and banks of rivers, where it finds its food. There are two kinds, one completely white, very *[825] white, for which reason the Chiriguano call it "Guiranti," or white bird, and the other is ash-gray and stays in the same places. [223] The Chiriguano do not hunt them, because they have very little meat.

GALLINAZO /buzzard/. -- This is a black bird,and repugnant to the sight, especially because of its bald head and neck; it feeds on the carcasses of dead animals, even a human body, nor does it refuse the chance to rip out the entrails and kill calves, lambs, and newborn suckling pigs, which it finds asleep and at a distance from their mothers. In the first instance it constitutes an excellent purifier of the air by making all the miasmas which come from the carrion disappear, because when there is any they finish it off in a few hours, for when it is abundant many of them gather. The buzzards discover dead animals and cattle killed by the jaguar; there are usually some turkey buzzards over the cattle and sheep corrals, where, despite the cleaning that they do, they sooner or later cause some damage.

[223] The Indian rarely hunts the buzzard, because its meat is [262] tough and strong-smelling. He does, however, kill it oc- *825 casionally as a remedy. The warm blood of this animal is 757 of some use in curing his double chin /papada/, or that of his daughter, who may be ashamed of such a protuberance. For this purpose the blood is placed on a strip of linen and tied around the throat. They state that it does have some effect, but this must have to do with incipient double-chins of a few ounces.

/55cont./

*825 757 and not those veterans of several arrobas like gourds in the form of saddlebags, which are seen in abundance around Pozuelos, Piray, San Juan, and Pomabamba.

*136 *825 There is another large bird with the same instincts as the buzzard, called carcancho by the whites and "Caracara" by the Indians. It does not, however, kill calves; it does hunt and kill little lambs, suckling pigs, and chickens, disregarding with boldness and dissimulation the brood hen. /56/ This shameless, fearless bird is abundant everywhere and is capable of getting into kitchens and sticking its beak into the ollas; but its favorite spot is the corral, where it scratches about, looks for things, and eats, and like the most natural thing in the world it will pull out the entrails of a sleeping lamb or at the least blind it in one eye. The rascal gets into the nests of smaller birds and steals eggs or kills the young to eat them. All in all, it is a sad and ugly neighbor, with the result that all are its enemies, and some birds chase it out of their nests. Such is the practice of the bird that the Chiriguano call "Guirapipasa"; another called "Suiriri" gets on the shoulders of the carcancho and pecks it until it runs long distances.

[757] The Indians assert that carcancho fat is an efficacious remedy for the vision, and that they used it before modern medicines, which turned out to be more efficaceous and [262] active, were introduced. They eat its meat if it is fat. The [237] feathers of the carcancho and the buzzard are very strong, and [411] they put them on the ends of their arrows, so that they will not turn aside when they are shot and consequently will hit the mark better.

*136 [132] GOLONDRINA /swallow/. -- The heat is altogether too much at certain times of the year, with the thermometer in the shade up to 32° and in the sun up to 60°, but let it not be believed that this state of heat is the normal thing. There are months of the year, and in these months there are weeks and days, in which it is difficult to endure the cold, which is most intense in June and parts or all of July. As a result of this, the swallow, even here, is a pilgrim, emigrating at the end of April and returning at the beginning of October. There are some entirely black, and there are some with white breasts. The

/56 cont./

*136 latter nest in flat country or in the hollows of cliffs, and the former under the roofs of houses. Both are numerous, as are the rondones, which only come out when it stops raining.

GAVILAN /hawk/. -- This dangerous bird is numerous, and no other bird hunts it because it flies very fast. For *[825] this reason the Chiriguano say that it is the king or president of the birds and call it "Gõiraqué": it does a great deal of damage in the towns, finishing off the chickens, because the former are generally quite free of grasses and fences, and the houses are found nicely lined up around the plaza.

In the houses located in the outskirts, which are surrounded by thickets or fences, the hawk does little or no harm, because the chickens can then hide. Many whites say that planting /illustration appears here/ /57/ a piece of wood about three meters high near the house and placing an olla or other pot on top of it will banish this bird of prey, from which not even the parrot is free.

LECHUZA /small owl/. -- A nocturnal bird that lives in the woods and even takes possession of buildings in which there are bats, which it destroys completely. It is not harmful, but rather is useful, because it even destroys mice. It is the size of a turkey, but has very pretty plumes: some or most of them are like velvet and quite strong, almost equal * [825] to those of the buho. I know only one class of lechuza, which the Indians call "Suinda." It is of no value whatsoever and flies about in its complete freedom: rarely does it approach towns because they do not provide any shelter for such creatures. The only shelter they can find is in churches, where there is stonework.

LOROS /parrots/. -- This region seems to be the land of parrots. There are a great number of them, of different characteristics, sizes, and colors, with long or short tails, blue, green, varicolored, white or whitish, good at learning to talk and to mimic man and animals, or completely useless for this. When the maize begins to ripen and until it is ready for harvest, the flocks of parrots are a real plague: if the farmer is the least bit careless, he cannot count on a crop. The whites, in order to defend their rather larger fields,

[Text continues on p. 86]

133
139

Small grove of palmettos in front of the house of Mons Isham. -- Galinas.

/57 cont./

*136 saddle their horses as if they were going out to hunt wild beasts.

*136 *825 Other Christians and Chiriguano also defend their fields from parrots in a different way. They kill two or three dogs, or, lacking these, goats or old sheep, put them in the tops of trees a certain distance apart in the fields, and the parrots will not even come close to them. Let my readers not believe, however, that parrots are afraid of corpses, as some or most people believe around here; what they are running away from are the buzzards, who flutter about their meal or who sit in the said trees, attracted by the bait, for which reason one must take the precaution of placing the bait where the buzzards cannot reach it with their beaks or where it is not easy for them to roost. Thus some become tired and others arrive, the maize ripens, dries, and the parrots will go on their way or go to eat the seed of the soto, which is also abundant at farming time. Nevertheless, most people prefer to have their children in the fields to shout continuously to scare off the parrots or to shoot arrows and throw stones at them. [262] Even the adult Chiriguano engage in this work, because the meat of the parrot is very delicious, in spite of the fact that some are very tough, and they prefer it to any other bird, [223] wild or domesticated. /58/ In order to catch talking parrots alive, they tie up a tame one, and they capture with traps the companions who approach the prisoner.

*136 HORNERO. -- This little bird is called "Tiantía" in Chiriguano. It is red in color and is the size of the gorrión /a Spanish bird some 12 centimeters long from head to tail/. It is tame and not easily frightened, doubtless because nobody chases it. It is called hornero /baker/ because of the structure of its nest. What an admirable thing that so small a bird should make with its beak a true oven in miniature! When it has just rained, the little mason then begins to make its house, but if the rain is late, it flies to the shores of rivers, rapids, or lakes and gathers the necessary material. It is not satisfied with an old house; it wants a new one every year. For this reason certain trees or their branches are full of these ovens.

/58 cont./

#136 For the location of its oven, the little bird selects large secular trees, such as algarobos, quebrachos, and tolas, but the latter are the ones it prefers. It tries to make sure that the branches are strong and free of small branches. The oven is relatively large. On one side it leaves a high, narrow opening, extending the walls inward up to a certain point, so that when it is windy the rain will not penetrate its nest, which it places behind said wall. Thus its eggs and its young are completely sheltered. The wall of the opening is in the form of a spiral, which takes two turns and a bit more. The mud of the whole house is mixed with the excrement of a horse or burro, and the bed, or true nest, is made out of clean, loose wool.

In these ovens there is a second round, narrow opening to the right of the first, about five centimeters high, perhaps in order to escape from some danger, but it is easier to conjecture that this little window comes into play when some strange animal, for example, the mouse, takes possession of the first turn of the spiral, where the mouse himself will make a third opening to get out on that side. I conjecture this because the ovens which I am describing are not all alike; there are some with one, with two, and with three openings. Other birds, called tarachis, nest in the abandoned ovens and often dislodge the owner from its still new house.

MACAGUA. -- An animal or bird which is very common, but which is not numerous. Indians and whites call it by the name which precedes these lines, which makes one suppose that it does not exist in other places or is not known by this name. Its song is monotonous and long in the mornings and evenings, made up of a monosyllabic "guá guá guá," and it goes on in this fashion for hours and hours until it is tired. This bird is the size of a large dove, /59/ with whitish feathers on the breast and ash-gray ones above. I am of the opinion that this is the true snake-killer, because it catches snakes alive to eat; the latter are very afraid of it and flee upon seeing or hearing it. The Chiriguano does not eat its meat, with the result that it flies and sings as it pleases.

[262]

4: Nino--96 M-3 (1820-1911) 1912 SF19 Ching-ano SF10

/59 cont./

136 MATICO. -- This is a very pretty little bird with three colors: yellow, red, and black. The first color predominates. It is easily tamed, but its song is not varied. It is amusing to put it in front of a mirror, especially if it is a male. It will ruffle up, sing vigorously, and charge at its reflected figure, believing it to be its competitor. As far as the right bank of the Paraptiti River, beyond the last ridge of the Andes, which is called Aguaraqhi, not a single one is seen. They begin to be seen on the left bank precisely at the San Francisco Mission. The San Antonio del Paraptiti Mission, located on the same bank, is scarcely 5,490 meters away from the San Francisco one, and nevertheless nobody sees a matico around it. Either it cannot find adequate food there, or the cold of the mornings may be felt more because the mountains are very close. The Chiriguano and Tapiti catch the matico alive and take it far away to sell it.

[223] [439]

MIRLO /blackbird/. -- This type of bird is not numerous in the region nor is it found everywhere. It likes to stay where there are streams of water so that it can sing to its satisfaction. It is shiny black and somewhat large. It sings strongly and very well after the sun rises and before this heavenly body sets. The clear, loud song of this bird, which can be heard at a great distance, is a delight to the traveler. The whites call it chivango.

MURCIELAGO /bat/. -- Bats are abundant in the hot season and are very repugnant; they establish their domain in certain buildings with a straw roof or in a similar place, dirtying everything with their droppings and causing true loathing. Churches which have paneled ceilings and which have no screens or gratings in their windows are full of these repugnant animals, and wherever they dwell there is little cleanness. At night they bite every kind of animal and even a sleeping man. There are two types of them, one small and the other large.

/10 cont./

§ 825 773 The Chiriguano Indian has a confused idea about the end of the world, which he calls "ara iyapi," a temporal term. At that time, he says, "andira guasu," a large bat, will appear, will eat us up, and everything will come to an end. The larbusa and the bubu are enemies of the bat, and they kill it not just for the sake of killing, but because it is delicious food for them.

§ 136 § 825 PALOMA /dove/. -- There are four types, to wit: tuncuro /wild pigeon/, mucutiu, ukikiau, and cirutau /turtledove/, whose respective names in /10/ Chiriguano are "piraso, piraiú, piraú, yerati." The large ones go in flocks which obscure the sun in the season and after the maize harvest in May, June, July, and August. The middle-sized ones are called mucutiu, because their regular abode is in the thickets; they too are numerous and perhaps more delicious than the first. They are as sociable as the tuncuro, and they fly in very large flocks. The ukikiau, which are very small, are much more abundant and delicious; they approach houses and even come into the patios. They look for trees with full tops to sleep in. The last-named, as I have already said, are a kind of turtledove and go in pairs. Their song is very sad.

223 To catch the tuncuro the Indian climbs a tree where they roost in numbers and sets and ties one which he has caught alive; he makes a kind of oven with straw, open underneath, and hides there. He carries arrows and waits for the tuncuro to come to visit their companion, and, if they do not see the enemy who is hidden there, they are wounded and many fall, until the Indian runs out of arrows. The same thing is done on the ground where they come down to drink.

They kill the mucutiu and ukikiau at night. Both children and adults go about with torches of fire, the latter blinds them, they fall, and they kill them with clubs. In May and June in certain pampas and low hills, a spectator may think he is witnessing the strategy which Hannibal used against Fabius Maximus, when, in order to make his way through the narrow pass of Casilino Valley near the Volturno

/92 cont./

223 fire. He tied inflammable material to the horns of 2,000 oxen, lighted it, and drove the oxen up to the heights, thus managing to get through and gain a victory over the Roman army, which, believing the oxen to be enemies running in every direction, abandoned the narrow pass to defend other positions and was defeated the next day. In the above-
[121] mentioned stimbis young men and children sleep little at
[122] night in order to go hunting for doves and to have a delicious meal the next day with their families, since the slaughter of doves and other little birds which are unfortunate enough to sleep near them is great.

¶ 136 PATO /duck/. -- Where there are lakes or ponds there are innumerable ducks of many sizes and colors; some are so large that they seem to be geese. There are black, white, pink, and brown ones; the last are fat and delicious. The
[121] Chiriguano eats the meat of the duck, but he does not pursue
[123] it, because he finds this so difficult. When he can, he hunts
[122] it, but more because this web-footed bird puts or deposits its eggs on the shores of a lake, on top of the grass or hidden among the reeds which grow near lakes; these are /61/ avidly sought by young and old, men and women, because the water is not deep in these places. The duck is called "Ipe" in Chiriguano which is, literally in the water, since lake is called "Ipa," or wide or extended water.

PAVO /turkey/. -- They have their favorite places and do not go far from them; they will be found there exactly at sunrise and before nightfall. They reveal themselves when a hunter or anyone else approaches, because they immediately begin to cackle and to fly from tree to tree in fear, which causes a disagreeable noise. The turkeys are as big as a large chicken, with quite a long tail and black feathers.
¶ [125] There are two kinds: the larger one is called "Yacu" and is found in abundance from the right bank of the stream Cuevo; the others are called chacras by the whites, "Anancua" in Chiriguano. These are numerous from the left bank of the Pilcomayo River to the province of Lagunillas.

/13 cont./

*134 [231] Both types are very delicious, but the charata is best. Charatas are easily domesticated when small. The male is very ferocious in the domesticated state, attacks everybody, even the people of the house. The charatas make a great racket before sunrise with their strong and repugnant cackling. Cuevo is some 20 leagues from Parapiti and a little more than two from the Yvu Mission; a charata is neither seen nor heard in the former region or in its vicinity, but an occasional pair of them is found in the latter, and as one goes north from this mission toward Parapiti, the number of these birds increases.

4 [325] PELICAN. -- This bird is called "Tangá" in Chiriguano, because when it sings it seems to be saying, "Tangá, Tingui, Tangá." River banks and lake shores are its locale. There it finds its food. It feeds on newly born toads, which have a little tail, and it also eats small fish. It sleeps in trees and flies perfectly in spite of its size. It flies at a great height, and along its way it sings every so often, and the Indians say that when the pelican sings rain is near. This bird is not numerous; they always go by twos and sometimes threes. [326] Their meat is good to the Chiriguano.

PERDIZ /partridge/. -- This type of bird is not lacking either in the Chiriguano area. Partridges are of three types, each larger than the other. They live in the pampas, in the woods, and in the hills. In the llanos the true partridge is called "Inambu," the second, which has a preference for the hills, is called "Guáico," and it whistles like muleteers who are driving asses. The third, which is the codornis /quail/, is called /??/ "Inambu ondi." There is a fourth large partridge, which is like the first, but red in color, and for this reason is called "Inambu pinta," but the guáico is the [323] largest of them all. The Indians hunt all of them with the help of dogs trained for this purpose.

PICAFLOR /hummingbird/. -- Many of these birds are seen, but it seems that there is only one species here. These are the smallest ones, and in Chiriguano the picaflor is called "Chiria." It can hang its nest on any little branch of a tree and also in the straw or hollow cane of the reeds. It is only

§ 136 /92 cont./ [illegible]
(859) hunted by children, for whom every little bird is a joy and a pleasure.

There is also a species of *oropéndola* /oyole/, which makes a very funny nest, conical like a gloves, with the wide part open toward the top; it hangs it from tree branches by means of long, slender threads. Sometimes there are many nests in a single tree. Neither vipers nor another large bird can do any damage in such a shelter.

TORDO /thrush/. -- Thrushes are innumerable everywhere from Monteagudo eastward. They fly in flocks. The males are completely black, blacker than writing ink, and the females a kind of tan. They cause incalculable damage in newly planted fields, scratching up and eating the seeds very dexterously. At the time of sprouting they pull up the tender plant of maize, wheat, barley, and rice; consequently they are a true plague, and the moment the farmer is careless, he will harvest only wind for his labor. Their flesh is good, but the Indians only hunt them because of the damage they do. The thrush, like no other bird, takes singular pleasure in following the cattle grazing tranquilly in the field, and some readers will be able to understand the object and purpose of this singularity.

§ (825) This type of thrush, called "Chorrochío" in Chiriguano, sings little and has less grace in its song. But there is another class of thrush which is quite amusing. It is found about nine or ten leagues south of Santa Cruz de la Sierra; it is also black, and the female is black as well. It is frequently domesticated and sings with variety and strength. This little animal is a precious thing and an enchanting one. Nevertheless, in the domestic state every small thing which it finds it comically carries off with its beak and hides; it could well be pounds sterling or quinces. It loses its master and shows strangers, ruffling itself up and pecking furiously.

§ 139 A thrush of this second species is worth something more
(835) than five bolivianos or duros in Santa Cruz, and in Salta or
(191) Tucumán it is worth up to 20 centavos. There are Indians in Paraguay and others who /92/ trade in thrushes. They catch

/22 cont./

439 191 tion in the area around the place called Sucito, and they take them in cages to the Argentine Republic.

K 136 TOUCAN. -- A very unusual bird because of its long beak, which is almost as long as its body. This beak is yellow, red, and black, but very light; otherwise, since it is so large, it would be difficult to hold up. One who for the [925] first time sees a toucan, called "Tuca" in Chiriguano, thinks that it is carrying an ear of maize in its beak. Toucans go in large flocks and have their favorite places; I know only [197] one variety of them. It is said that the beak, when ground up [925] and taken in water, stops the flow of blood. It seems that the toucan only lives in hot climates. If it is taken to other places, it dies.

URRACA /magpie/. -- This flying creature is rather large and abundant. There are several species of them. [231] differentiated by their plumage. It is easily domesticated, and it is useful in the houses, because it kills all of the bugs or insects which multiply in them, but its size is no larger than that of the toucan. It is as restless and noisy in the houses as it is in the woods.

121 I have put an end to this brief description of the land inhabited by the Chiriguano and what is contained therein. All will understand that I did not attempt to discover and describe minutely each and every one of the plants, each and every one of the quadrupeds, amphibians, and insects, each and every one of the birds, but only those which seemed to me to be of the most importance. If it seems to my readers to be too much, or too little, they will be so kind as to excuse my failing; meanwhile, I am going to begin the real ethnography, which will be somewhat long so that it may be clearer and more pleasant. /(a)/ /Illustration appears here./

Chapter Two

000

Origin, Language, Statistics

Introduction

There are many men, even among those who are considered wise, who on the great question of the origin of man pay homage to certain theories which sane reason, good logic, and well-understood science reject as absurd.

The ultimate absurdity in this series of disquisitions is the delirium of Darwin, who would have man, a rational being, originally descend from another being that was irrational, that is, the monkey. /The remainder of p. 65 and the first four paragraphs of p. 66 are omitted in the translation. The remainder of p. 66 follows./

What can properly be called history develops in peoples to the extent that they have advanced along the path of civilization.

Savage tribes cannot have a history in the strict sense of the word, because they lack civilization and the adequate means for obtaining it, principally writing. The latter is doubtless the great lever which has raised peoples from their prostration and ignorance.

173 [174] It is certain that the Chiriguano do not have a written history, but they do not lack certain traditions, more or less fabulous, with respect to their origin.

/67/ And as for matters dealing with that history which we could call modern, they do have knowledge of relatively recent epochs, the truth of which cannot be doubted, inasmuch as these historical facts are related to the conquest of these regions by the Spaniards, as will be seen in the following section.

/67 cont./

Origin

212 The Chiriguano tribe has no written language, for which reason it is difficult to determine exactly its origin, the place from which it came, and the time the immigration [529] took place. They admire our modern paper, which they call "Tunpapire," skin of God, and they say that we are fortunate because by means of this we are able to make our thoughts and wishes known to friends and relatives at great distances. What then would they say if they had the faintest idea of the telegraph and the telephone and so many other modern inventions, such as that of flying through the air, in this twentieth century, which quite justly might be called: century of the globes?

773 They recount that "Aguara Tunpa," Fox-God, tried to destroy the work of the true God by killing all men. To achieve this end he made use of the "Iguasu," big water; he then opened the gates or shores of the seas and flooded the whole land; the waters of the earth's surface called those of the sky "Iporu," flood, and thus the human race perished. But before there took place the total destruction of the Chiriguano, to whom humanity was confined, a woman took her two children, a male and a female, put them in a "Choguáo," big gourd, left them to the mercy of the waters, and, when these went down, they found themselves in Paraguay, where they again multiplied (1).

1. The two children, after disembarking, did not perish from the cold, because the "Cururu," toad, took pity on them, bringing them fire in his mouth, for which reason the true Chiriguano never hunts this inoffensive animal.

173 I have said that they do not have writing, but, on the other hand, they do have a kind of oral tradition, "Miani," [551] which is transmitted from father to son. This tradition is also wrapped in a veil of confusion, however, because they

/67 cont./

173 never name dead persons, with the result that the principal
[551] events are not known because the names of those great persons who took part in them are not known. The present ones know nothing about the many wars which were waged against the Quechua before the Conquest, after the enthronement of the Inca Yupanqui (1400), and /68/ against the Spaniards during the time of the colonization, the oldest people know little more, and we only know somewhat more through the Spanish historians and missionaries of the various religious orders of Paraguay and Bolivia.

173 Through their oral tradition they assert that their origin
167 was in Paraguay, that they multiplied there, and that when
648 the New World was discovered, because they had killed one of the Portuguese captains, they feared the revenge of his companions and fled en masse along the shores of the Pilcomayo River until they arrived in the region which they occupy today, displacing other natives who were in possession of these places (1).

1. This must refer to the flight of the 4,000 Carious who joined up with the Chiriguano here.

173 Nevertheless the oldest and most notable because of their
648 authority in this place give the impression that they originally came from Brazil. They say that in ancient times they had a formidable war with the whites who came from far-off lands; conquered by them because of the inequality in arms and their expertness in the art of war, they were pursued until they entered the plains of the Gran Chaco, which they crossed, coming into Paraguay. During the campaign they defended them-
726 selves and built fortifications at several points, of which I
712 know four: one is in Gutierrez, two in Cuevo Canton, and the fourth in Cunyuqui, which belongs to the San Buenaventura de Yvu Mission, where the uprising and defeat of the Chiriguano in the year 1892 took place (2).

2. I recently explored this last. It is one meter deep and one wide, and goes from the stream of Cuevo from northwest to northeast.

/68 cont./

126 712 covering an area of about 2,000 meters: it ends in a hill surrounded by the same foundations. It had its lookout and a small plaza and dominated the whole area.

172 712 These fortifications have stone foundations, are made artfully, and are very large: consequently it is not credible that they might have been built by Indians who were even less civilized than the present ones. I believe, rather, that it was the work of the conquistadors, who, following the example of Columbus, Cortez, and Pizarro, built them for protection from the Chiriguano arrow: the extent of these walls and the height of the lookouts do not suggest anything 173 else. The old men add that when they were pursued some 648 of them hid in the mountains out of fear or because they were tired and that these then populated the region (3).

3. This must refer to what Father Cardús says about the time when the Cruceños /people of Santa Cruz/ settled at the place which today is occupied by the city of Santa Cruz de la Sierra.

174 /69/ From what has been expounded it can be deduced that the Chiriguano race is most probably of Paraguayan origin: the inhabitants of that region also say this to those who annually go to work in the haciendas of the Argentine Republic and to the Indians who in past years went to Corumbá from Yvu, Caipipendi, and Parapiti. For example, they told them that they knew of the existence of a place named Yvu and of another called Parapiti, frequented by their grandparents who had formerly visited their relatives, the Chiriguano. In addition there is a tradition that in a not too distant time many families settled thereabouts traveled from time to time to visit their relatives who lived on the banks of the Paraguay River.

/19 cont./

174 199 In support of the aforesaid is the language, which differs little from Guaraní, spoken in the Republic of Paraguay, in various parts of Brazil, and even in Corrientes, and language is an irrefutable argument for one or more nations, but inasmuch as this language is very reduced in the latter places, and it was general in the former (Paraguay) until a rather recent period, it might well be concluded that the Chiriguano originated in Paraguay.

648 999 This Nation is attempting in our times to enlarge or extend its domain into the territories occupied by the Chiriguano, especially as far as degree 22, where almost all of the missions are located, including those of Parapiti Grande, which are located at 19°50' latitude south of the meridian of Paris. Bolivian diplomacy has powerful arguments to uphold its rights, with the support of the missions, principally those of Parapiti, whose first founding goes back to the eighteenth century. The Franciscan Father Narciso Llamedo built there a moral and a physical edifice, whose vestiges can still be seen today, by authority of the Most Illustrious Archbishop of Chuquisaca and supported by the Royal Audiencia of Charcas. Neither the Chiriguano language nor the invasion of this race gives any right to Paraguay, because all authors and explorers are in agreement that this race did not exist here before the thirteenth century. In the fifteenth century the Chiriguano were visited by the Inca Tupanqui with a large force of men from Cuzco. Later, in the sixteenth century, the resident viceroy of Lima vainly attempted to humiliate the pride of this race, and finally everyone sees that the Bolivian Nation has exercised full authority here since before and after the war of Independence, and that the missions have progressed and are progressing in the shadow of the Bolivian flag, which has always waved in these remote lands.

174 Someone might observe and says Why, when the Chiriguano /20/ emigrated from Paraguay, did they not settle on the banks of the Pilcomayo and on the immense pampas of the Gran Chaco? At first glance this question constitutes a grave embarrassment to one who does not know the race, but it is easy to answer it satisfactorily. All barbarous tribes remain in

/70 cont./

174 idleness and laziness and in indolence and are content with what nature provides for them to live on and subsist; this is the practice of the savages to the north of Santa Cruz, thus the Toba, Mataco, Choriti, and others who do not bother with planting and are content with only hunting, fishing, roots, and wild fruits, which, when they begin to turn yellow, are greeted by the Toba and Mataco with the "Pimpin," a kind of small drum, so that they may majure faster and better.

174 241 311 But the Chiriguano, in spite of being indolent, a recent émigré, like his neighbors, is not so much so as the other tribes, since he joined the Carious. In addition to liking to fish and hunt, he does not fail to make his plantings of maize on a large scale, where he uses his energies in order to profit from his sweat later by converting it into "Atipú," parched maize, "Atiruru," mote or boiled maize, "Aticú," meal, "Muyape," bread, "Cangú," or chicha, etc., dishes that the Toba and others know only in the house or larder of the Chiriguano. In order to obtain this class of foodstuffs, the banks of the Pilcomayo were not sufficient for a very large tribe; in addition, the other tribes which were hidden in the woods along that stretch must have devastated their fields, or their owners must have been in a continual state of uneasiness. Neither could they have obtained it on the pampas of the Gran Chaco, because the cooling action of the rains is scarce there, and, moreover, the soil in many places is like an immense sieve because of the holes made by the quiriquinchos /armadillos/, balled armadillos, and others of the species, which nest there and have built their subterranean towns (1).

1. The Toba began to plant maize and beans when they came under the control of the Franciscan fathers at the San Francisco dey Pilcomayo Mission, now Villamontes; today they plant very little.

/70 cont./

174 241 311 Consequently it was very natural that the race which was emigrating from Paraguay should seek out for its needs better lands which would permit it to make good use of its natural inclination to cultivate "Abati," maize, "Gilindaca," gourds, and "Cumanda," beans, because from the names that they give to all of these vegetables, it can be deduced that they did not get to know them after the discovery of America, but long before; and the same is true for the domestic animals, "Yaimba," dog, "Uru," /71/ chicken, "Minta," cat. What is certain is that the Chiriguano race has been distinguished and is distinguished from the others which still remain in the savage state, and the Toba, as well as the Mataco and the Choroti, regard the Chiriguano as nobles and masters, and they serve them in exchange for maize and other things, and there has never been a natural marriage involving a Chiriguano man or woman with the tribes named (1).

174 248 563

1. The Toba are more intelligent and more easily reduced than the Mataco; the latter were also exposed to the missionaries of San Antonio del Pilcomayo, located on its right bank.

The Toba have generally assisted their masters in wars and have lived for long periods among them, especially in the time of good and abundant crops. They did this before the missionaries opened Cuevo and Ivo to trade with the founding of the Santa Rosa and San Buenaventura missions, and they still do in the Franciscan missions of Machareti, Tigüipa, and Tariari, because they are near these tribes.

174 167 The places that the Chiriguano selected for their residence after the migration were the mountainous one and the one visited by frequent rains, necessary so as not to lose the fruit of their labor, and in fact we do not see this race settled in places away from the mountain range, nor in impenetrable forest, good only for those tribes in a state of

/71 cont./

174 167 complete savagery (?).

2. Cayuguari, with some 30 Chiriguano, went to the desert to live among the savages to the east of Carandaiti.

174 175 167 In addition to Chiriguano tradition and the fable of the Aguara-Tunpa, from which we understand that the race with which I am dealing originated in Paraguay, there are ecclesiastical and secular authors who support my opinion. Among the first stand out the Franciscan missionaries Cardín and Martarelli, and the most eminent among them is the Most Reverend Father Corrado, who in his history of the school and missions of Tarija asserts that the most probable opinion is that the Chiriguano came from Paraguay, despite the fact that the Guaraní language is scattered through many parts of Brazil and some parts of the Argentine Republic, since, as we have just finished saying, language is a powerful argument in learning about the origin of a tribe, and it has already been said that Guaraní is generally spoken in Paraguay, so much so that it would not be an error to say /72/ that the Guaraní have gone to Brazil and to Argentina from the same Nation (1).

1. In the chapter "Religion and Beliefs" I shall discuss the fable of Aguara Tunpa more fully.

175 Among the secular authors we have the famous d'Orbigny. According to him, before the discovery of America by the immortal Genoese, the Chiriguano occupied the last ramifications of the Bolivian Andes, lived completely naked, were 080 cannibals, and were of Guaraní origin (?). The Inca Yupanqui

[567 266]

2. The Indians of Parapiti told me that the Tapii natives were their slaves, and that in the uprisings of the latter they ate their ringleaders and others.

175 /19 cont./ The Inca Yupanqui
245 promoted many wars against the Chiriguano with the intention
[175] of conquering them for the Inca civilization, but his efforts were in vain because his army was always conquered by the ferocity of the Chiriguano, who also had in his favor the fact that this was his own land and as a result he knew it well enough to be able to play tricks on the Inca militia with ease.

It seems that the Incas in their insistence on civilizing the Chiriguano brought their armies to the frontier of Cordillera Province. In fact there exists along the top of the range which divides this province from that of Acero and from Sapirangui Canton a fortress of great size, all of it made out of well-set stones, called "Incahuasi," "house of the Inca," and given this name to the whole range, whose elevation to the south was set up by the law of interdepartmental demarcation as the boundary between Santa Cruz and Chuquisaca, when in the year 1896, the law of settlement was negotiated.

[192] Inca-huasi is a compound word of the Quichua /Quechua/ language: the Chiriguano language does not even have a word which resembles it: it is thus very probable that that fort was built by the Quechua and that, inasmuch as the forces were personally directed by the Inca, he should have ordered houses to be built along the whole top of the range, as can still be seen today (3).

> 3. The road from Carapariciito to Montenegulo through Incahuasi is not an old one. Don Octavio Padilla had it opened. -

194
195
169 It is also a verified historical fact that after the discovery of Brazil and other regions of South America, 4,000 Indians fled from Paraguay, because in the many wars which they had waged against the Portuguese, they had killed the leader. Fearing general destruction, they came into Bolivia along the banks of the Pilcomayo River: in the Gran Chaco they found the region near the cordilleras occupied and inhabited by the ferocious Chiriguano, /illustration appears here/ /73/ but since they could easily make themselves

Man of the Tapiete race on the Pilcomayo River between Guachalla and Estero de Pacifio.

174 /173 cont./
175 [illegible] because they spoke the same language with slight
167 differences, they joined them, and from that moment the number of the Chiriguano was increased (1).

1. These 4,000 Indians were not of the Guaraní race; they had gone to settle in Paraguay and had learned that language imperfectly; they were called Carios and had killed Captain García.

The 4,000 Indians who fled from Paraguay because of the continual relations that they had had with the Portuguese had, at the time when they formed an alliance with the Chiriguano, a slight tincture of superficial civilization, just as in Mexico the Indians of Tlascala had learned it from Hernán Cortes and other Spaniards. As a result of this trace of civilization they had begun to use some clothing to cover, in principle, the most delicate part of the body; they had stopped eating the flesh of their enemies and prisoners and were more humanitarian in their dealings.

Having established their abode and formed a single
166 tribe with the Chiriguano, they introduced their kind and
191 humanitarian customs among their ferocious friends, who softened slightly their haughtiness and pride, imitated their allies in the manner of dress, and began to abandon the barbarous custom of cannibalism, because of which they are distinguished today, and even for a long time before, from the Toba, Mataco, Tapiete, and Sirionó (2).

199 2. The Tapiete speak the Chiriguano language with a certain difference, and the Sirionó, it is believed, were ancient Chiriguano, because their language is somewhat similar.

175 The Chiriguano, thus united, continued to multiply
161 much more and to extend their dominions into the different departments of the Audiencia, the possession of which they now had in lesser degree. Before a century had passed after the

195 648 [31] [161] /73 cont./ Before a century had passed after the discovery of this New World, they were numerous in the area near and beyond Santa Cruz de la Sierra. The founders of this departmental city had quite a fight in the year 1575 in order to humble their pride, disperse them, and take charge of the territory: the Chiriguano lived in the areas around Padilla and Tomina, which were founded precisely to contain their advances, since they seemed determined to invade the territory of Chuquisaca itself, whose Audiencia ordered the creation of both settlements so that they might serve as a bulwark and impede successive new advances, new attacks, and devastations.

The city of Tarija with its territory owes its founding to Don Luis de la Fuente, who was ordered there by the Viceroy, Don Francisco de /74/ Toledo, by decree of January 22, 1574. On that date, Don Luis with his army entered the valley of Tarija in order to put down the audacity of the Chiriguano, who were advancing with their arms into the places conquered by the Spaniards. Don Luis and his soldiers were greatly surprised when they found the said valley full of a great quantity of wild cattle, which was to be a powerful aid to his troops (1).

1. It is believed that the wild cattle found belonged to a certain Zárate, who had been forced to leave his ranch by the Chiriguano, who had doubtless made him their victim.

[727] Before the Spaniards arrived and invaded the country of the Chiriguano, they were the torment of the surrounding tribes, the members of which they shot with arrows, or killed, and took captive, subjecting them to the cruelest slavery. But once the whites arrived, they had to have it out with enemies superior to themselves; fearing that some day they would have to pay for the casualties which they had exacted from those whom they had conquered and whose fertile territory they had taken over, they did not act like the Quechua, who surrendered when they might well have

[i.e., the Chiriguano. -Analyst]

/74 cont./

175 648

wiped out the few soldiers whom Francisco Pizarro led into Cajamarca, overpowering Emperor Atahualpa by killing 5,000 Indians.

The Chiriguano, better advised than the Quechua and their emperor, formed great armies to combat the invaders, and these were defeated many times by the terrible host; on other occasions they destroyed their fields in order to make them perish from need, and other times they made captives of the women, after having killed the men and other younger males.

175 777

The unequal struggle lasted for centuries, and finally they were conquered little by little by the missionaries. The latter, with only the Cross and preaching, obtained greater victories, because whereas the whites presented themselves to the barbarians with superiority of arms, sowing devastation and making the rivers run with blood, the missionaries presented themselves with humility, sowing the divine seed, and conquered them with the word of the Gospel.

The barbarians recognized the difference between them, and while in the beginning they destroyed the first missions, killing a missionary priest (7), when they understood more

> 2. The Chiriguano Indians of Ingre Valley set fire to the mission of the Jesuit fathers and plucked from the altar Father Lizardi, who was killed by 17 arrows in the mission plaza, dressed in his sacramental vestments.

perfectly that the priest proposed the conquest of their souls /75/ and the defense of their country, they delivered themselves completely into the hands of the missionary, not in order to be educated as Christians, but in order not to lose their independence. Only through the agency of the missionaries is the vast country which includes a distance of more than 260 leagues from north to south and more than 60 from east to west entirely open today to trade and civilization. The Jesuits were slowly replaced by the Franciscans, who

/ [illegible] /

175 177 hundred native missions, and today what is not in the hands of the respective diocesan authority is all in the power of the latter group, who have irrigated this soil with the sweat of their labors in common (1).

1. The Jesuit Father Pons made efforts to found missions in the events between the Pilcomayo and Paraguay, with whom Indians he began to speak, but he was unable to do anything. This was done in the first half of the seventeenth century.

174 169 There is no doubt about the Paraguayan origin of the Chiriguano nation, as there is none about that of the Guaraya, whose language is the brother of the former's, despite the fact that they do not understand each other well, owing to the great variations which both have undergone. Paraguay is southeast of Bolivia and the region occupied by the Chiriguano tribe northwest of the former, with the Gran Chaco being the extensive region which separates the two republics of Paraguay and Bolivia. The domicile of the Chiriguano in the Gran Chaco is another circumstance which weighs heavily in indicating the Paraguayan origin of the tribe.

All that remains is to know the route which the Chiriguano followed in their migration to Bolivia; it might have been done in a straight line, crossing the Gran Chaco, which distance from the last cordillera west of Paraguay and Chaupua to Paraguay is scarcely 100 leagues, but this route offers the insuperable obstacle of lacking the most important element for life, water. This has clearly been demonstrated by the calamities suffered by the various expeditions organized by the Bolivian government for the purpose of opening a straight road to Paraguay by setting out from Inmo (2).

2. The explorer Francés Thouar, after having gone over the route opened by the Arana, had to retreat because of lack of water and in a rash slip became lost and, with several others, nearly perished from hunger and thirst.

/73 cont./

[196] [67] They could have emigrated from their land of residence and followed the course of the Paraguay River on its right bank, arriving at Curumbá, and then across the salt flats of Los Janá, coming to the places which they occupy today. but the stretch is longer, the water to be found is scarce, and over great stretches there is no trace of anything which /75/ might verify their emigration over this route. if indeed they would not have been attacked en route by the numerous enemy thereabouts.

[135] [34] It is necessary to conclude that they followed the banks of the Pilcomayo River: this rapid course starts in the interior of the Bolivian Republic, crosses through the entire Chiriguano region, and empties into the Paraguay: its banks from near Azurduy up to Villa Moreno is a straight line of more than 50 leagues, all populated by Indians who are clearly Chiriguanos. From Villa Moreno to Gualacha near the Estero del Padre Pacífico there are Chorotí and Tapiete, who, with slight differences, speak the Chiriguano language: this stretch has plenty of water, fish, and fruit and is denser than the above-mentioned one. Dr. Campos followed the banks of this river in order to arrive in Paraguay: Colonel Rivas, the Frenchman Cerveau, and the Spaniard Saavedra followed the Pilcomayo River on their expeditions: they failed not through a lack of food or water, but some because they felt sure of the goodness of the Indians, and others because they had a very small force with them. All of these circumstances clearly show that the Chiriguano must have come into Bolivia along the banks of the Pilcomayo: the tribes along the way could not have offered them much difficulty, because their number was extraordinary: hardship on the travel rations was so insignificant that it allowed them to fight with vigor and bravery, and finally their attitude was peaceful (1).

1. Colonel Rivas and the Frenchman Cerveau were killed by the Toba, and Saavedra by other Indians.

/70 cont./

When experience showed them that they could settle in the regions which they occupy today because the harvests were certain, they made their homes there and, when invaded, defended the territory at all costs, as has been seen. The region, as was seen in the first chapter, is certainly very fertile; when it is irrigated by rain, it produces every type of cereals; maize matures exuberantly, and the crops have splendid with little labor. If the fields are kept free of weeds with a couple of weeding hoeks and there is no lack of rain, the Chiriguano can sing all year around the big chicha bowl in the company of his friends.

But if rain is scarce, the crops are generally lost, and then the Chiriguano suffers, digs roots for his food, and sells everything he has, even his trousers and his wife's new [illegible], in order to support his poor family miserably. In times of scarcity the Indian plants with considerable hope a small patch where it is damp, such as around a lake or /71/ along some streams; plantings of this type are called *[illegible]*, and in fact they are, when roots can scarcely be found. Oh a few green gourd leaves at this time are like syrup in the Chiriguano's mouth! Poor Indian!

Language

By what has already been related it can easily be understood that the Chiriguano are descendants of the Guaraní of Paraguay; thus the Chiriguano language is very analogous to Guaraní, as well as the Guanayo language, and it can be noted as a fact that both the Guanayo and the Chiriguano languages have the same relationship to Guaraní as that which exists among the Spanish, French, and Italian languages with respect to the Latin language, which is their mother (1).

1. The Chiriguano language has very few accented words; in Guaraní they are abundant. For example, "abati," maize,

/77 cont./

199 "Conumi," Ind. do not have an accent
194 on the i in Chiriguano, but they do in
171 Guaraní.

199 In past centuries the race, and therefore the language, em-
198 braced a great deal of territory, but today it is greatly
361 reduced, and I can state without danger of error that it is
162 still numerous in Caipipendi, Pipi, Chuquti, Tacuta, Aratico,
and in the Pozuí and Tarija missions; but in the former
places it is scattered among many little towns, while in the
latter it makes up respectable towns of 500, 1,000, and
2,000 souls (2).

2. Chuquti Guasu is located on the left bank of the Parapiti in Cordillera Province; it almost forms a single town with Membirai, and between the two of them they have about 110 families.

199 Purity of language is now no longer found in any town
198 or in the missions, in the first because of living among
199 whites and continually emigrating to the Argentine Repub-
997 lic, and in the second, the missions, for a third reason,
instruction in Spanish, which the missionaries give the boys
and girls in the schools; thus, if the race is not finished first,
as is feared, because of the continual epidemics and
vagrancy, the language will soon be lost, and then the few
books that exist will only serve as an historical monument
for posterity, which will be able to recognize the merit and
labor of the missionaries who spread among them, the
Chiriguano, and poured out sweat with the sole purpose of
civilizing them in a Christian way (3).

3. There are a grammar, a Spanish-Chiriguano dictionary, a catechism with its translation, Father Corrado's masterpiece, a small Chiriguano-Spanish "Nene" /"Infant"; the work referred to is Nino's Nene Chiriguano/, and many unpublished sermons.

/118/

Statistics

161 The tribe is in complete decadence and in a few more
162 years will be entirely lost. At the beginning of the nine-
(81) teenth century, that is, before the war of South American Independence, in the Tarija missions alone there were more than 25,000 souls, and nevertheless that number did not include any of the numerous towns existing between the two large Pasapiti and Pilcomayo rivers or the Indians of Caipipendi, Chuvei, Pipi, and others located south of Laguillas. At that time, I can state that the Chiriguano numbered more than 200,000, inasmuch as, according to the statistics of Father Lozano, the adult men fit for war, without counting women and children, numbered from 25,000 to 35,000.

169 Although Father Lozano was referring to the beginning of the eighteenth century, the difference must have been slight, because at the beginning of the nineteenth century there was not felt as there is today the emigration to the Argentine Republic, which began when the territory was opened to trade with the founding of towns of white Christians, which there are now in great number, up to the founding of large provinces with the names of Acero, Cordillera, and Gran Chaco, nor was there so much immorality as prevails today (1).

1. New laws have been made which make recruitment for Argentina impossible, and Dr. don Justo Padilla, the present national delegate from the Gran Chaco, at the present time does not allow the law to be merely written; he lets nobody through.

165 Epidemics, vagrancy, and emigration more than any-
161 thing, in addition to scarcity of provisions, are destroying this race, which is greatly needed and will be needed later for agriculture and cattle-raising in the provinces which have
080 been mentioned. Today there is already a need for farmers.

464 797 /78 cont./ Today there is already a need for farmers, and everybody is coming to the missions looking for day laborers, muleteers, and herders, cheese-makers, house-builders, etc., etc. How will it be later? (2) The immi-

> 2. H. Montero's project, approved by the Commission in the year 1910, may well be approved by Congress, but it seems impossible to me that the caciques will report the Indians who try to go to Argentina. To charge missionary padres to send 25 per cent of the people to the intendancies, where they will receive a daily pay which is lower than what they are paid in their own town, is to drive away the missionary who cannot comply with this obligation every month because the Indians will resist it or run away.

gration of useful people, not idle people, is necessary, but not in order to destroy the missionary centers, /79/ as is proposed, because this would soon end up by destroying the tribe, but colonizing what is unpopulated. What did the government achieve by the absence of missionaries in Villa Montes? That the Indians will now not work for anyone, and only do so when they are good and ready. All the authority of a delegation was not sufficient to get a few days' work out of its population, and for this reason the previous work was at the point of being completely destroyed; weeds had taken over in the vineyards and gardens which had been so fruitful and so well maintained in the time of the earlier missionaries.

178 464 [161] Now almost all of the great Chiriguano centers have disappeared, and barely the names of the great caciques of some faction or other remain; in all of the cantons the disappearance of the labor force causes astonishment, and [797] [162] service is scarcely to be obtained for fuel. Even the missions are undergoing this decline; in Acero Province there must be some 5,000 souls, in Cordillera some 8,000, in the

/79 cont./

178 Chaco and O'Connor Province, 5,000, in the Tarija
464 missions there are 4,500, and in those of Potosí, 3,905, which
[197] makes a total of 26,405, including men and women, big
[162] and small, old and young. But of this number there are scarcely 8,000 day laborers, or strong men fit for any work, and what is the extent of land in Chiriguano hands through
[131] their own will or that of others? Some 140 leagues from
[465] north to south, more than 40 from east to west; if today the cultivation of these lands is difficult, tomorrow it will be impossible; if today it is hard to pay 40 centavos to the day laborer, tomorrow they will not be found for 80 centavos.

648 There is a great struggle under way between the Chiriguano and the white; the latter struggles to increase
[167] his fortune and hacienda at any cost and tries to dominate and does dominate the Chiriguano, as one who is nobler and more powerful; the former struggles for his existence as long as he can, but, because he is weak and inferior, yields to the power of the white; when his spirit has been broken by the superior force which dominates him like a slave, he disappears and imperceptibly emigrates to a place where he is treated with more apparent humanity, though not certain and real, but which the Indian does not recognize (1).

[464] 1. According to references, the day laborer in Argentina earns 25 or 30 nacionales per month, without food, which in a foreign land is expensive for the Chiriguano; nevertheless, since the clothing and the animals which the company sells are not expensive, the day laborers who are economical and not given to drink come back well clothed, bringing a horse or an ass or clothing for his children and wife.

178 From this /80/ it follows that the large towns of former
797 times and the very missions which antedate South American
361 independence have in some cases disappeared entirely and others are on the point of disappearing.

/80 cont./

797 Because of the intervention of political authority, the present missionaries will fall heir to the same fate, if the law of the department is not changed, because, it seems, they have dropped to the category of agencies of said authority and of all the Christians who are continually coming here in search of hands; and H. Montero's proposal will not only aggravate the situation, but it will leave these regions without workers for agriculture and cattle-raising. It is certain that labor makes man more moral, but it must be confessed that the Indian is lazy and opposed to working for the whites, whom he considers the usurpers of his lands. They will voluntarily go to work where they are treated with humanity, but where they are allotted the worst food and hard labor, they go with repugnance, despite the suggestions of the missionaries.

46 648 797

The caciques who respect and follow the missionary's orders become tired of continually seeking laborers for the whites, because they are aware of the unwillingness to obey; the result is that sometimes both Indians and caciques hide in the country, and when they get tired of this, they go away from the mission for a long time, leaving their families in misery. The missionaries struggle to gather the dispersed ones together again, but it often happens that the efforts of several months are lost in one night or in a few days, and in spite of the laws that exist in Bolivia, nobody has concerned himself with Chiriguano emigration. Reasons for the disappearance of masons, carpenters, shoemakers, and musicians are not lacking at the present time, since the most important thing is to get apparently luxurious clothing from head to feet, which cannot be obtained here very easily, either because they spend the money on other trifles or because there are no companies which provide all facilities to the laborer (1).

46

1. Today the whites who mistreat the Chiriguano are few. When a day's pay was fixed at 40 centavos, there was some difficulty, which has now disappeared; the Indian is now earning

/80 cont./

46 well in his own home; he only lacks the facility to procure what the Argentines give him and then he will resign himself to not emigrating.

797 As I have said above, nowadays the principal centers of the tribe have been reduced to the missions. For this reason I judge it appropriate to speak briefly of each of these which exists at the present time, so that the reader /illustration appears here/ /81/ can form some idea, however vague, of the efforts of the Franciscan missionaries, who are the only persons who today spend years and even their whole lives in the midst of privations and infirmities, experiencing solitude and enduring a sad and woeful life, in order to instruct and reduce some Indians who have little appreciation of religious and civil instruction.

The First Missionaries among the Chiriguano and a Precious Discovery

000 The primary end which the seraphic St. Francis of Assisi proposed with the founding of the Order of Minors was the reformation of the customs in the nations of the world and the teaching of the true Religion to the infidels of the Universe. /The remainder of p. 81 and the first paragraph of p. 82 are omitted in the translation. The remainder of p. 82 follows./

797 But let us return to the primary object of this section.
175 We have at hand the Crónica de la Provincia de San Antonio de los Charcas, written by the Franciscan Father Diego de Mendoza, O. F. M., in 1665. In his first book, Chapters 13 and 14, may be read in summary what immediately follows.

The first civilized man who entered the region of the Chiriguano to the east of Tarija was Father Simón de San Payo, a priest-cleric, son of Portuguese people, a native of Brazil, and, as such, informed about the language of

[text continues on p. 118]

Woman of the Tapui race. Parapiti River, Isoso.

/82 cont./

797
175

these Indians; he was there for four years. But the arrival of this priest neither can nor should be considered in the sense of missionary, because his motives for going there were very different from the religious instruction of the Chiriguano, with whom he lived in a fashion not at all correct, for which reason the Viceroy Marqués de Monte Claros made him leave.

Nevertheless, the Viceroy, as a good Catholic, was burning with the ardent desire to have the many Chiriguano souls enlightened by the light of the Gospel, and, in order to bring this about, he decided to send to the region the illustrious Sons of Loyola. These, with the fervor which characterizes them, accepted the offer with much pleasure, with the condition that the ill-fated Father Simón de San Payo, who had behaved so badly the first time, should not return there.

But the Indians urgently asked for this cleric, and furthermore none of the Fathers and Brothers of the Company knew the language of the Indians whom they were to catechize. Finally, since the Jesuit Fathers had set the exclusion of that bad priest as a sine qua non condition, the Viceroy stopped insisting in their presence.

Had he perhaps also desisted from carrying on his project of civilizing the Chiriguano? No. He made proposals in the name of His Majesty before the Superior of the Convent of San Francisco de Chuquisaca, and, once the matter was known by the community, 17 religious spontaneously volunteered for such holy work.

From among these volunteers two were selected by royal decree, to wit, Father Agustín Sabio and Father Francisco Gonzalez, with the promise that more religious would be sent as necessity required.

Nonetheless, the Chiriguano Indians insisted that /83/ the Licenciado Simón de San Payo be allowed to come back, because, according to what was found out later from statements by the cacique, this misguided man had made many and various promises to the unfortunate savages.

/83 cont./

797
175

A new hearing was held before the Audiencia; there was opposition against the return of the said priest, but the opposite opinion prevailed, and consequently it was ordered that the missionaries who were dispatched for the civilization of the Chiriguano should take the Licenciado with them, as was done to their great regret and to that of the Franciscan community.

On November 2 of 1609 the three charged with this duty left Chuquisaca, passed through Potosí, where they baptized the first three Chiriguano, passed through Tarija, and arrived at their town, located near the Salinas Valley, on December 22 of the same year.

This first arrival did not correspond to the most noble purposes of our missionaries, both because of the intrigues of the Licenciado and because of the inconstancy and avarice of the barbarians, which we know perfectly well. Even today, despite being completely reduced in the several missions, they reveal the same inconstancy and avarice, which indicates that they have always been the same, not inclined toward the mysteries and practices of our holy Religion.

Nevertheless, the seed left in the field of Salinas by the first missionaries of San Francisco de Chuquisaca did not fall upon completely sterile ground, and it slowly began to yield its fruit, since in later years others entered the same region.

What is surprisingly impressive about this is that there was found in the area of Salinas a large and heavy cross that had been placed in a cave located in the depths of the forest.

This cross rested on three pyramids of medium-sized stones, was made out of a thick piece of quinaquina wood, 15 feet long and two-thirds of a foot in diameter, retained its natural bark, and had in same three spikes of the same wood with their octagonal heads placed in the arms and foot of the said cross; twelve men were needed to move it to the town of La Torre.

/83 cont./

799 175 The cross was found by an Indian who had followed a deer which took refuge in the same cave; it was later moved to Tarija and placed in the church of San Francisco.

[173] None of the Indians could give any certain explanation for this precious relic; nevertheless, tradition from father to son, to grandson, to great-grandson and great-great-grandson, etc., among those Chiriguano states that /84/ in very remote times a man "of considerable height, white of face, with a long beard, with extensive hair, who wore long clothing almost to his feet, with a tunic and square cape or blanket," had walked about with that piece of wood, preaching to them that God had come to the world and that He had died upon another piece of wood like that one, and, seeing that they did not wish to believe him or accept his doctrine, he had withdrawn into that cave, where he stayed for a long time; he had gone away later and left the piece of wood there.

When the Fathers of the Company of Jesus founded missions in Paraguay among the Guaraní, they found a tradition that the Apostle Santo Tomé or Santo Tomás /Saint Thomas/ had been among them, had taught them the religion of Christ, had predicted that this religion would be lost among them, and that in distant times others dressed almost like him and with a cross in their hands would announce the same doctrine to them. The Indians were convinced that the prophecy had come true with the arrival of the Jesuit Fathers.

We know through Christian chronicles and histories that God performs miracles by means of the relics of the saints and the things that have belonged to them or have been used by them. We can consequently lend credence to the coming of an Apostle, or of St. Thomas, first because of the Gospel, "Euntes in mundum universum praedicate Evangelium omni creaturae," and, second, because of the tradition among the Guaraní Indians, the Chiriguano, and those of Carabuco in the province of Omasuyos, department of La Paz, where another cross was found, and, thirdly, because of the miracles performed by means of it.

/84 cont./

797
175

We have said that the strength of 12 men was needed to move the cross found among the Chiriguano from the cave to the town of La Torre. Nevertheless, on the occasion of a fire which destroyed the church and a metal chalice, one soldier went into the temple to save the cross from the fire, and he alone took it from among the flames, which scarcely left any signs of the fire on the Holy Wood.

In a quarrel which occurred among some soldiers Francisco del Cerro was gravely injured by a deadly stab wound; neither doctors nor surgeons were present, and meanwhile this soldier was bleeding and was in danger of dying.

In those days they were very faithful, and since they fervently venerated the cross which they had found in the cave, they removed a small part of the Holy Wood, reduced it to powder, /85/ the wounded man drank it in some water, the blood ceased to flow, and within four days he was completely well, without need of any other medicine.

From these and other extraordinary deeds performed by the Holy Wood, we can deduce, still depending on the tradition of the Paraguay Indians, that it was quite probable that one of the Apostles of Christ came to preach the faith in this part of the world and even probable that this Apostle might have been St. Thomas, because the description given by the Guaraní and Chiriguano Indians corresponds to that of the same Apostle told to us in the ecclesiastical histories.

Missions of the Colegio de Potosí (1)

[361]

1. The department of Potosí does not have any Chiriguano Indians, and thus the Franciscans of that Colegio /school/ could not have catechized them by establishing missions, but by previous agreement with the missionaries of Sucre and permission of the government and diocesan authority, they came into possession of their territory.

/85 cont./

797 San Antonio del Parapiti Grande. -- This mission was founded on April 25 of 1903, in spite of the violent struggle against it made by the whites of the region through the press and even by actions, when on August 30 of this same year a stubborn corregidor at the head of 25 or 30 armed militiamen, almost all of them taken by force, tried to dislodge the missionary, who remained firm, without, however, putting up the slightest resistance or making any actual defense against such an attack. This settlement has continued to advance and to make material progress. It numbers 1,479 souls; the town is located on an immense plain, and the buildings -- the mission -- on a small hill; the elevation of the town above sea level is 580 meters -- meridian from Paris, 19° 58' south latitude, 60° 32' 45" west longitude (2).

2. This mission, founded by Father Francisco del Pilar, was organized by Father Narciso Llamedo; destroyed by the patriots, it was again founded in the year 1871 and abandoned in 1880 because of persecutions. It has been reorganized.

080 Here is how I described its panorama in the year 1908: It is an enchanting location, and anyone who comes here for the first time is ecstatic; he first sees the beaches and the Parapiti River, whose capricious course is admirable and whose waters are the plaything of the south and north winds, which make it change its direction whenever it suits their fancy. This immense beach, with the waters usually in the middle, looks like certain regional maps of the world, where /86/ centers of population have been engraved in the middle and immense deserts at the sides, and the painting grows when it is observed from the mission house among the branches of the leafy woods on the left edge.

/86 cont./

000 Next, the ecstatic visitor admires in the distance an immense savanna, that incalculable bluish-green carpet which seems to have been rolled out flat; it extends for leagues and leagues, giving a perfect impression of the sea; secular and gigantic trees, the algarrobas and quebrachos, which stand out, besides the other lesser trees which are present in abundance and which look like the waves of the stormy Pacific when they are agitated by the winds. Finally, the picture is made more interesting by the clear and cloudless mornings, as they almost always are, which offer a picturesque and otherwise enchanting perspective and panorama.

The smiling aurora is accompanied by the beneficent zephyr produced by the nearness of the river, which, with its gentle breezes, refreshes very early the heated atmosphere, and an abundant dew is sprinkled like diminutive pearls upon the leaves. Then there appear in the distance among the branches and the foliage the first luminous red clouds which announce the nearness of the great star, king of the universe, who seems to be rising unwillingly from his fluffy bed, finally letting his majesty be seen above the horizon. As he continues on his course, he becomes larger, and behind the woods is displayed that globe of fire, it being possible to look at it without its ardent rays damaging the vision of one who looks at it (1).

1. "Continuación de la Historia de las Misiones de Postosí," by Father Bernardino de Nino, p. 32.

797 2. San Francisco Solano del Parapiti Grande. -- This second mission of the great Parapiti was united with the aforementioned one up to October of the year 1908, and its residents depended on the same conversor /literally "converter"/ in both material and spiritual matters, especially in cases of grave illness. Since the first of November of that year two missionaries have resided there to do everything possible to advance spiritual matters; this date then may be regarded as the real and true date of its founding.

/87 cont./

797 and since it is a work of God, it is hoped that it will progress despite the lack of effort and the little willingness on the part of Indians in following the example of their neighbors.

Little by little, they will come to understand the spiritual good which is intended for them. /87/, because boys and girls are now being gathered together for instruction and, God grant, their number will increase with time! At the beginning the missionary lived in an ancient building left from the year 1871, and the tiny church is also ancient, but a new house has been built with a sala and two cells for dormitories. This new establishment is at present composed of some 300 souls, but it may grow, because there are many Indians in the forest and outside of the mission.

Its climate is satisfactory; its panorama offers little to see, because the town and the mission house are standing on a plain. It could be dominant only on a height, but, on the other hand, its location is convenient because of having the water of the river quite near, and it would not require much work to bring it close to it by means of a wide ditch. The town is at a height of 545 meters above sea level, 5,490 meters in distance from San Antonio, and the geographical difference is minimal (1).

1. Before Independence it was united with the previously mentioned one; in 1871 it was separated off, as it is at present.

2. San Buenaventura de Yvu. -- It is about 18 leagues from the above and was founded on May 3, 1893, after the end of the Curuyuqui war, in which the Indians were completely defeated at the end of January, 1892. At the present time it has 119 families and a population of 652 souls, while at the end of the last century its inhabitants exceeded a thousand. Near the mission house, at approximately 100 meters more or less, there is a hill with a surface of about half a league, which has small springs of rich and crystalline water, from which comes the name "Yvu," "water's eye" /hojo de agua/;

/87 cont./

797 the climate is very healthy, but the lack of food is continual, and they must often eat the roots of the serpentine arum, or mangara, bitter and poisonous before it is cooked (?).

> 7. Flora Crucella of R. Peña. The fire makes it lose the poisonous part, but not all of the bitterness.

The buildings are constructed on a level site located on a small rise. The panorama which runs from north to northeast is [133] extensive and pleasant; there in the distance can be seen the hills of Taremacua and the cordillera of Ururigua, through which Nature opened a gateway to give passage to the waters of the Parapiti River, which fearlessly and with great boldness hurls itself from a great height, forming by its imposing waterfall a lake of white foam, like a boll of wild cotton, and then following its rapid course through San Antonio, Mariqui, Cumbarúi, and Isiso, /88/ where it is completely lost. Still farther beyond, to [137] the north and northwest, in the midst of a thick forest of quebrachos, [133] thickets, and secular algarrobas, are seen the tops of the ranges of Salinas and Timboirenta and something of Incahuasi, and at a short distance from the town is seen a round hill called "Tunpa repoti," the Chiriguano history and meaning of which I am not ignorant, and in front of the mission house, at the distance of half a league, are the pampas of Curuyuqui located among algarrobas and other trees; up to here the panorama of Yvu is similar to that of green Umbria of the kingdom of Italy. The [137] picture is dismal to the west and south, because the heart is oppressed by a consideration of the sands of the desert, however, much the springs of the west suggest the ancient and capricious fountains of the temples of Arcadia. Nevertheless, in the rainy season the hills and the plains garb themselves with fresh grass and wild flowers, lending to the nearby horizon a pleasant and varied appearance. The town is located at 770 meters above sea level, and at 20° 44' 35" south latitude, and 65° 50' 7" longitude west of the meridian of Paris, according to what is recorded in the

/83 cont./

797 "Historia de las Misiones" (1).

1. The whites call this place "Ibo," giving rise to the Cuevo-Ibo question debated so much in the legislative chambers. The jurisdiction of Cuevo today extends from the Iventa range to that of Aguaragüe from west to east and in the north continues to the Parapiti River; Caimatindi and Tacuaranti ought to belong to Nancarointa, just as Itatiqui, Ipitacuapi, and Caimbeti, as far as the Parapiti River, should belong to the Carandaiti canton.

4. Santa Rosa de Cuevo. -- This mission was founded in the year 1887. Fifteen kilometers separate it from the previous one by an entirely level road, and today it has a population of 1,238 inhabitants, while at the time of its founding or a few years later its population reached 2,115, as is stated in the Historia of Father Angélico Martarelli (2).

[648] 2. During the Chiriguano uprising of 1892 the mission was the saving refuge of all the inhabitants of the Cuevo canton, and during the campaign it was made the headquarters. Colonel Frías, Colonel Chavarría, and General Gonzalez, with their respective troops, and many other militiamen, with their leaders, were there.

Its buildings, located on a very prominent hill, have the appearance of a fortress from whatever direction they are observed; when they are considered in terms of their solidity, beauty, and topographic level, it is difficult to find others like them in these parts. Its panorama is delightful; /illustration appears here/ /89/ it is surrounded by fields and hills very beautiful to the eye and pleasing to the heart, just as its inhabitants who breathe that perfumed air are pleasing. In the distance the hills of Aguaragüe to the east, those of Iventa and

[TEXT CONTINUES ON P. 128]

View of the Santa Rosa Mission

/8. cont./

799 Saararenta to the west and southwest, and those of Salinas to the north make its location harmonious. Its land is extremely fertile when it is irrigated by abundant rains, and in its fields there is no lack of water needed for the livestock, despite the scarcity and saltiness of the little that comes down by way of the stream of Irenta, from which the missionaries and settlers supply themselves and drink.

With the opening of this mission, there then disappeared the fear which had previously held sway among the travelers who had passed through these regions with distrust, because the numerous Chiriguano, together with the Toba, inspired terror in times not long past, so much so that, in order to found the missions of Parapiti Grande, Father Francisco Solano in the year 1870 had to make a wide swing by way of the Tarija missions and lengthen his voyage by more than 35 leagues. Today this is the route of the traders to Santa Cruz and Tarija; in this sense, too, the Republic has greatly benefited; it is one more town, quite advanced in every sense, in which the official language is making rapid progress. Its elevation above sea level is 855 meters (1).

1. It is located at 20° 38' latitude south of the meridian of Paris and 65° 42' west longitude.

5. San Pascual de Boicovo. -- This mission of Boicovo (butterfly serpent) was founded in the year 1875, 12 years before that of Santa Rosa, from which it is separated by the cordillera of Saararenta by a distance of 45 kilometers to the southwest, being at a height of 765 meters above sea level. It has a population of 300 or more souls, while at the beginning it had 1,210, according to the history of the missions. There are few infidels, and few also are those who do not speak the Spanish language; among the Christians, rare is the neophyte who does not know how to express himself in it and infants drink it with their milk. Oh, the prodigy of the Catholic religion! This is not seen where missionaries do not reside.

/89 cont./

777 The mission building is located on quite a high hill; it has a beautiful church, too large for the few settlers; the town has very little ventilation, for which reason contagious diseases do great damage. The smallpox of 1880 carried off more than 300 souls, that of 1894, 100, and that of 1895, 45, because the majority had been saved in the /90/ previous years, and yet the black vomit, or yellow fever, carried off 50 victims. The site occupied by the mission has no panorama because of the ranges to the east and west that are a few meters away. It is a mousehole, embellished with the mission building, houses constructed with some skill, and abundant fruit trees; it has little land of any value for agriculture and livestock, because it is completely wooded, but more than enough for the few settlers (1).

1. This mission was founded as the result of a bloody war which its settlers, together with the Toba and Chiriguano of Cuevo and Tvu, waged against the whites of Iglembe in the year 1874 to 1875.

7. Iglembe, Huacaya, Ingre, and Cuevo. -- In addition to the missions already described, the towns whose names head up this small section were founded by the Franciscan missionaries of the Colegio de Pomé. Their beginnings date from the years 1870, 1875, 1881, and 1887, respectively, and they continue to be cared for by the missionaries of Pomé, except for Ingre, ceded to those of the Colegio de Sucre in the year 1904.

Their settlers are all of the white race, having come from the departments of Tarija, Santa Cruz, Sucre, and Cochabamba. At the beginning they assisted the missionaries in the conquest of the souls and civilization of the Chiriguano, there being particularly distinguished in this regard the inhabitants of Huacaya and Iglembe, from which came the missionaries for the Christianization of the Indians of Boicovo,

/90 cont./

999 Cuevo, Iro, and Paraguí. Today these regions are populated by whites, and this evidently proves that the Cross of the Redeemer, planted by the missionary and watered by his sweat, is more powerful than the cannon of the kings, which could not make the Chiriguano surrender prior to South American independence (7).

> 7. The whites who assisted the missionaries in Boicovo and in Paraguí received from the Supreme Government an allotment of land half a league square.

7. San José de Humbía. -- The territory of the mission to be founded is located on the left bank of the Pilcomayo River at 22° latitude and 64° 50' longitude west of the meridian of Paris. 18 leagues from San Pascual de Boicovo and from Iglesiba, in whose canton it is located. Anyone who might like to know the particulars of the events concerning the founding of this mission should read my little work, "La continuación de la Historia," etc., p. 104.

/91/ The site is beautiful, located on the basin of a great river with an abundance of fish of all colors and sizes; five small towns must be joined in order to found the mission, which could be done, were times different, because the Indians are like the other Chiriguano. The missionaries of Potosí did everything necessary for the founding of the mission up to taking possession of the land and getting approval of the titles, which were handed over to the diocesan of Sucre, together with the chaplaincy of N. S. del Rosario del Inqui /Our Lady of the Rosary of Inqui/ (1).

> 1. The missionaries of Sucre were prepared to found the mission at the end of the year 1905, when the Supreme Court decided that the opposition of Lozza should be handled in the ordinary tribunals; thus it has remained.

/91 cont./

Cuevo

36
195
[183]

The town of Cuevo is located on the left bank of the tucuar or stream of the same name. Before the war of the year 1875, and even later, it was known by the Chiriguano who lived there as Ñambiriu, which means "halfway field," and in fact it occupies a beautiful level place located almost midway between the ranges to the west and those to the east.

Almost all of the first white inhabitants were from the department of Santa Cruz, and it is an undeniable fact that Colonel Víctor Aninsana moved to the region of Cuevo-Ibo with some militiamen from Lagunillas and built a fortress where the public cemetery of Cuevo is today, and another one where the church of San Buenaventura of the mission of Tvo has been built, both works which are owed to the constancy and activity of the Franciscan missionaries of the Villa Imperial. The fortresses are later than 1875.

[111]
[148]

Subsequently, the town was formed under the protection of the missionaries themselves and around the Cross of the factory; it was completely burned by the Indians in the uprising of Cuayuqui in 1892, but the inhabitants of Cuevo who did not perish, with the assistance of the flourishing mission of Santa Rosa, built anew and in better condition the new town, which continues to progress today.

195
[34]

In the war of the year 1875 all the Chiriguano of Cuevo-Ibo and Huacaya, together with the treacherous Toba and guided by the great cacique Cuema, who lost his life in the tucuar of Ñacua opposite the town of Iglesiabe, rose up as one man to overwhelm all the whites in the region.

/92/ In this critical situation the intrepid subprefect of the province of Acero, D. Antonio Mendiola, with the militiamen from Monteagudo, San Juan del Piray, Huacareta, and Ingre, flew to the region of Iglesiabe and with these people overwhelmed the innumerable and ferocious host, reducing it at once to impotence by the slaughter of Caipipendi.

/92 cont./

361 648 Cuevo had belonged by law from long before Independence, and still belonged by right of conquest after the defeat of the barbarians, to the department of Chuquisaca, but the Representación Cruceña /representatives from Santa Cruz/ has constantly demanded the region of Cuevo-Ibo as an integral part of the territory of Santa Cruz.

The current legislature has ended this much-discussed matter on the basis of the law of 1898. Cuevo consequently now belongs to the department of Santa Cruz, because that law fixes as the interdepartmental boundary the left bank of its stream, which is about 150 or 200 meters from the town.

[797] Even the Representación Tarijeña /from Tarija/ has been consulted in this matter and has fixed its boundaries at the right bank of the stream of Camatindi; this was based on the same law and on the fact that the territory was settled by Christians from Tarija and was won over by the Franciscan missionaries from the Colegio of the same city since before 1875. Tarija still retains the region of Caipipendi, which belonged to the Huacaya canton.

When the interdepartmental arrangement is finally made, Sucre will lose a zone of 12 to 14 leagues from Cuevo to the right bank of the Parapiti River, and another eight leagues or so from the right bank of the Camatindi stream, not counting the incalculable zone lost toward the east. Here is the law promulgated: /the remainder of p. 92, p. 93, and six lines, including a footnote, on p. 94 are omitted in the translation. The remainder of p. 94 follows./

Ibo or Ivu Canton

631 648 Once the interdepartmental problem is solved in a friendly fashion, according to the bill approved in the Chamber of Deputies in this year of 1912 and promulgated as the law of the nation, the department of Sucre is prepared to elevate to the rank of canton the region of Ibo or Ivu, the capital of which might be the San Buenaventura Mission, located at this very place.

/94 cont./

631 648 If this were the case, the boundaries of the new canton should be the following, according to the agreement made by the Representación Chuquisaqueña /from Chuquisaca/: on the south the left bank of the stream Vitiacua, on the north the parallel of the stream of Cuevo, on the east the range of Aguaragüe up to said parallel, on the west the ranges of Saararenta and Irenta, and on the southwest the stream of Chimbe.

[797] [162] Within this delimitation are included several Chiriguano towns, the most populous being the missions of Santa Rosa, with more than 1,200 inhabitants, and that of San Buenaventura de Ivu with 652 souls.

White families are few, but not less than 40, which could give a total of at least 160 souls. It might be that with time this small population will grow in the new canton, as that of Cuevo grew.

797 177 463 648 Years are needed for the Chiriguano Indian to be able to take over the political government of a town, in spite of the fact that in the relatively new missions there are musicians, carpenters, woodworkers, masons, saddlers, shoemakers, tailors, and young men who know how to write well and to read better, but it is one thing to know an art or a trade and quite another one to have to administer justice.

/95/ The experience of many years of missionary life and what I have seen in the missions abandoned since the war of Independence justifies my opinion that many years are needed for the Chiriguano Indians to be able to fill certain public offices such as that of corregidor and parish alcalde.

A Project

000 The eastern zone, which today belongs to the three departments of Santa Cruz, Tarija, and Sucre, is somewhat threatened by foreign countries, but it might be that the Bolivian Republic could make friendly settlements with the neighboring nations.

/95 cont./

000 These disputes are prejudicial up to a certain point, inasmuch as they impede the free colonization of the Bolivian Chaco, which would not be the case if everything were peaceful in those remote regions.

Once the friendly settlements were made and the spirits of the settlers were calmed, the region would be colonized more, which would increase the number of inhabitants. If this were the case, it is my opinion that in a short time the Government of Bolivia could establish a new department in the Gran Chaco. The Chaco is open to commerce and to civilization throughout its area, many towns exist there, and, in them, commercial establishments; one can pass through the region without any danger, and the Chiriguano race receives the traveler with demonstrations of affection and subjection. /The remainder of p. 95 and the first sentence on p. 96 are omitted in the translation. Page 96 continues as follows./

Cayuguari

175 648 [103] Cayuguari is the name given to the country inhabited by an Indian of the same name who fled from Macharetí with others in the year 1856 or 1857; they settled along the lake of Cumbarurenta, four leagues to the southeast of Yrentagüe, and subsequently withdrew 20 leagues farther to the east, because in the company of Toba, Tapiete, and other tribes they had committed innumerable cattle thefts, for which they were constantly hunted by the settlers of Carandaiti, where a picket detailed from Aguairenta is stationed today.

The flight of the Cayuguari Indian to Cumbarurenta first, and today to 52 leagues from Carandaiti, was not due to the death of Captain Taruncunti, murdered by the Macharitefios /persons from Macharetí/ Barapiche, Arasuque, and Yepoina, residents of Avay, but to their disposition and outrages committed against their relative, Mandepónai.

/96 cont./

175 648 The expedition entrusted by the Supreme Government to an Englishman, which was to enter the Cayuguari region through Picuigua (water for dovelings), can be said to have failed, because the two attempts which it made were without result and it had to return in order not to perish because of the absolute lack of water.

Picuigua is some 12 leagues distant from Cayuguari. Picuigua is a dry lake, but, with drilling, sufficient water can be obtained for the garrison of the fort which is to be established, should it turn out that the news of the existence of a permanent lake in Cayuguari, where there are some 50 families, is false. /The last paragraph of p. 96, p. 97, and the first three paragraphs of p. 98 are omitted in the translation. The remainder of p. 98 follows./

Itatiqui

361 [131] The town of Chiriguano infidels with which I head these few lines is located 11 leagues from the Franciscan Mission of San Buenaventura de Ivu and seven leagues from the missions of the Parapiti Grande, at 19° 43' 13" latitude south of the meridian of Paris, and at 60° 29' 42" west longitude.

797 361 The Colegio de Misiones Franciscanas de Potosí is trying to establish in this place a Misión Conversora which would depend on the Fathers established on the banks of the Parapiti River. The idea is eminently civilizing and progressive, because this place is located along the highway which, coming out of Yacuiba, passes /99/ through Charagua and ends in the city of Santa Cruz de la Sierra.

In the journey from the little town of Buyuive to the Parapiti Grande, there is no other town which might be able to provide services for the travelers and the vehicles which traverse it every day without being able now to count upon any assistance in their difficult crossing.

797 The Indian of Itatiqui is too poor and lazy; it is necessary to get him moving and watch over him so that he may become useful and progress; in his territory there is no water, nor are there artificial lakes so that he and his livestock

/99 cont./

797 might drink, but these latter could easily be obtained with well-constructed dams; but someone to direct him and make him work is lacking.

With the founding of a Misión Conversora the Indian would have the guarantees which at present he does not possess; he would live in his town, which was reorganized not long ago, with the prospect of being protected by the missionary; he would establish his artificial lakes, and the traveler would have a place in which to rest and to sleep, in guest houses, without any danger either to his property or to his physical health.

648 The Supreme Government has been more concerned with this advancement in the region of the Gran Chaco. It issued its decree for a measure of the lands of three leagues more or less in extent which they had possessed ab immemorabili, but when steps were taken to lay out the lines, it turned out that another private party had set boundaries, leaving for the Indians the town and a small parcel of uncultivated lands, and the latter quite limited. Because of the measures taken by this private party, the Indians have lost all of the cultivated land of Igüitiyapi, near which the said private party has undertaken the considerable enterprise of establishing an artificial lake in the place called Caapirenta, pointing out that the measure against the Indians was performed in the same year, 1911, a few months before the order of the Supreme Government in favor of the natives was put into effect.

800 In order that the good intentions of the nation and of the missionaries of Potosí might not come to naught, the Supreme Government should give an impartial person the commission to set himself up in the place, to seek data on the Indians and other well-intentioned people, and subsequently to give a conscientious report so that just decisions might be made. /The last paragraph on p. 99 and the first four paragraphs on p. 100 are omitted in the translation. The remainder of p. 100 follows./

/100 cont./

Missions of the Colegio de Tarija (2)

2. At present the Colegio de Tarija has only the missions located in the province of Azero, because Chimeo and Itau seem to be towns of whites rather than Indians.

To describe the glories of this apostolic Colegio of Franciscans is to attempt the impossible in this small work, the purpose of which is not a description of the works of the missionaries, as I observed in the introduction, but rather to tell of the origin and customs of the Chiriguano tribe.

/101/ Tarija might be called the land of missionaries, before and after Independence; it is sufficient to travel casually through that department, and it will become apparent that a church here, a parish house there, and yonder a mission building, all are due to the constancy, patience, self-denial, suffering, and anguish of the Tarija missionary; there are the churches of San Roque, Caraparí, Sella, and Tupiza, which are of yesterday.

Let us penetrate into Azero and Cordillera. What memories they evoke, although some are destroyed and others are falling into decay! Oh how majestically does the image of Brother Francisco del Pilar rise up, he to whose heroic patience are owed all of the missions prior to Independence! Abapó! What an imperishable memory! The church and the mission house are still there, and I have even seen a part of the schools, now almost destroyed; yes, these memories made me pour out tears! They were memories of my brothers, persecuted then and harassed today by men who do not know their merits and by an authority which calls itself the protector of missionaries. Oh no! We might call it by another name, but we shall not pronounce it, but continue forward, for missionaries know how to pardon, as followers of Christ, and even should they be somewhat dismayed by so many unpleasant events, they continue at their tasks, erecting new buildings and repairing the old deteriorated ones.

/101 cont./

361 797 1. Machareti. -- Father Jerónimo de la Peña was the first to enter Machareti, but, before he could begin any work, death intervened, and only after a century, that is, in the year 1869, could the Cross of Redemption be raised, around which began to gather the settlers dispersed by the war and the death of Captain Taruncunti, not very friendly to the missionaries.

[162] Before the mission had been founded for ten years, it numbered more than 3,000 souls, but today it is much smaller, [167] its inhabitants reaching 1,500. Emigration to the Republic [464] of Argentina is a real plague for this area, because the principal recruiters of Indians for work outside of Bolivian territory are there, and it is useless to cite laws, because there are clever interpreters; meanwhile all wail for workers.

361 [133] Machareti has a delightful and picturesque panorama; to the north and to the east the human eye cannot take in the immensity of the plains or the exuberance of the woods and the variety and caprice of the hills. The town is located on a great plain, but is now quite reduced; its buildings, atop a high hill which dominates everything; it has a beautiful church with painting and /102/ gildings, a mission house of two stories, two great halls, with their respective patios, for instruction, and a third one for the music school, and also other buildings for shops (1).

361 797 131 1. When the Machareti mission was founded, it cut off the retreat of the bellicose Huacayeños, who were coming into the Gran Chaco by the Chorro road, some 15 leagues from Huacaya and some 12 from Ivu; its altitude above sea level is 771 meters and it is located at 20° 49' 58" south latitude and 63° 3' 44" longitude west of the meridian of Greenwich.

/102 cont./

797 2. Tigüipa. -- This mission, dedicated to the universal Patron of the Church, the Patriarch St. Joseph, began its existence on May 20, 1872, the day when, for the first time, the Holy Sacrifice of the Mass was celebrated, and there was planted in its territory the Tree of Redemption; it is some 12 kilometers from Machareti, with quite a rough road.

361 797 [162] At present it has a population of 800 souls. The town, made up of both infidels and neophytes, is quite neat; the buildings are not very well arranged, and the ones which merit consideration are: its tall and beautiful church, broad and well-proportioned, with its magnificent choir, gilded altars, and well-turned railings; in addition, the beautiful mechanism of double trusses which support the roof. Its house is new, of a single story, and was begun in the month of August or July in the year 1910 and dedicated in March of this year; the other buildings neither follow any arrangement nor are of any worth, and lend to the whole a rather sad appearance, but once the renovation of both towns has been completed, the planned arrangement of the buildings for instruction and workshops will be made.

[133] Its panorama has nothing in particular: to the west, the last range of the Andes, to the north and south, some rather high hills rise at a short distance and obstruct the view for the curious observer, who, frustrated in his desire to see and observe, finds a slight relief to the east, where the horizon opens out and gladdens the heart; it seems to be the older sister of the San Pascuál de Boicovo Mission. The climate is in general healthy, in spite of the fact that the mission is located in a hollow, but the water, or the location of the place, dulls the understanding of its residents, according to what all the travelers note (2). /Illustration appears here./

[563] [464] [131] 2. In the years of abundance several nomadic tribes come to this mission and remain there serving the Chiriguano in exchange for food. Its elevation above sea level is 715 meters, and it is located at 20° 27' 18" south latitude and 62° 14' 44" longitude west of the meridian of Greenwich.

Music of the Tarairí Mission

4: Nino--141 M-3 (1893-1911) 1912 SF10 Chiriguano SF10

/103/

997 3. Tarairi. -- While the immortal Pope Pius IX was declaring the immaculate conception of Most Holy Mary, the Patroness of the Seraphic Order, a dogma of the faith, the religious of the same family belonging to the Colegio de Tarija, by ways unknown to human understanding, were founding the Misión de la Purísima de Tarairi, which was the first one on the left bank of the Pilcomayo and, of course, was very dangerous, being among Indians who did not wish to hear about either religion or morality, not to mention the dangers from the other Indians of the region, the Toba and Mataco. It is about five leagues from Tigüipa and three from Camatindi, a town of white Christians; the road is fair, but there are some ups and downs.

The buildings of this mission are colossal; it seems that everything, from the church to the workshops, was done magnificently; the former is high and wide, the roof has double trusses like the one in Tigüipa, one man being the director of both, its altars are carved, and the image of the Patroness is precious. The buildings are uniform, which indicates that the construction followed a plan; for this reason there is nothing superfluous or anything which is not in direct communication; this building is so convenient that the Padre Conversor can direct from his window the processing of the sugar, raw and milled, and even the manufacture of tiles and bricks and the respective kilns.

The town is large and is divided into two; the one of the infidels is located toward the south on one hand, and the one of the neophytes in front of the mission building. They are neatly lined up, as in every mission, and all have straw roofs. The population is made up of some 1,200 inhabitants, who leave much to be desired, perhaps because of the proximity of Villa-Montes, are quite insubordinate and will quickly refer any matter, however trifling it might be, to the Delegación del Gran Chaco, which, unfortunately, at least in past times, gave too much credence to the lies

/103 cont./
799 of the Indians (1).

[721] 1. This mission, because it was the first one north of the Pilcomayo, was the target of the Chiriguano and Toba, who repeatedly tried to destroy it; its elevation above sea level is 662 meters, and it is located at 21° 8' 27" south latitude and 62° 17' 4" west of the meridian of Greenwich.

4. Aguairenta. -- This mission was founded in the year 1849, and at the present time it is the oldest, because for a long time now Chimeo and the town of Itau have been elevated in rank to true Doctrinas /a curacy, also an Indian village newly consecrated to the Christian religion/. Three caciques of three parties joined together for the founding of Aguairenta, since each one wanted the missionary in his town. The distance which separates the Aguairenta mission from the one /104/ of Tarairi is more than 22 leagues by way of a quite level and wide road.

According to what has been described with some exaggeration and for not very good motives, Aguairenta is the queen of the plains, the muse of poets, and the contemplation of the wise men; it is certain that its panorama is quite delightful, as are its meadows, full of fragrance because of the many orange groves. It has abundant water, which makes the land fertile, but it is not found at any great distance.

[563] [191] [177] The settlers have been reduced to a few and are mixed with the whites; almost all speak the Spanish language well, and the customs and style of dress are like those of the mestizo settlers, in spite of the fact that an occasional one may be seen dressed in the old way (1).

1. By a decree of January 4, 1911, Aguairenta has been declared a headquarters for troops, who have had possession of the place since the end of 1910. Nevertheless the Government

/104 cont./

797

has left the mission house and the garden for the use and comfort of the Father-Chaplain. It is located at 778 meters above sea level and at 21° 46' 10" south latitude and 62° 48' 35" longitude west of the meridian of Greenwich.

5. San Francisco and San Antonio. -- In the missions called San Antonio and San Francisco del Pilcomayo the Supreme Government decided to found a city under the name of Villa-Montes; but after it was handed over by the missionaries in the year 1906, instead of progressing, those flourishing settlements have retrogressed. The vineyards and gardens have deteriorated. The buildings are falling into ruin, and morality fell precipitously and is progressively worse there. The schools for boys and girls have been reduced to very few students, and for these few the national treasury distributes 160 bolivianos per month, while to the chaplain who has to live there it pays no more than 240 bolivianos per year.

[871]

Everything that belonged to the two missions, such as implements, carpentry, buildings, sugar mills, cattle, horses, etc., was handed over with an inventory to the national delegate, Dr. Don Leocadio Trigo, and the missionaries, without being able to use even a cell which might serve as lodging for the night for the Father Chaplain, had no other recourse but to shake even the dust from their sandals.

[162]

The approximate population of Chiriguano natives in the above towns is 4,500 souls (2).

2. The Supreme Government rented the mission building to the German company, which has made little progress. It is located at 460 meters above sea level and at 21° 16' 15" south latitude and at 62° 20' 2" longitude west of the meridian of Greenwich.

/105/

997 Itau, Chimeo. -- Itau has been in existence for more than a century, and Chimeo more than half a century. In the first reside two missionaries, one of whom attends to spiritual matters for the parish of Chimeo, which has been reduced to almost nothing. Indians and Christians live in the area, the latter being more numerous than the former. Itau and Chimeo were missions and officially still are, because the diocesan authority could not accept them due to a lack of clergy, but in fact they are no longer missions. Itau has many white settlers, and in Chimeo the missionary is not even in residence, which indicates that a permanent stay there would be little less than useless, because of the lack of settlers.

7. Yacuiba, Caiza, Carapari, and Camatindi. -- The towns with whose names we have headed these few lines all belong to the white race and are populated centers, especially the first one, where the political authority of the province of the Gran Chaco resides, in addition to which the customs office is also there, because the town is the one nearest to the boundary with the Republic of Argentina. All of them are helped in spiritual matters by the missionaries of Tarija and in some they have a permanent residence.

997 361 8. Carandaiti. -- This recently formed town merits a few exclusive lines. It is some eight leagues from the Machareti mission by a somewhat rough road, deserted and lacking in water. It can be regarded as the largest canton of the province of Azero, inasmuch as its very extensive territory goes to the right bank of the Parapiti River, as long as the interdepartmental question of Cuevo-Ibo is not settled.

The town of Carandaiti owes its founding to the parishes of the canton of Igüembe, Huacaya, and Ingre. After the war of 1875, the Indians of Huacaya were pacified with the founding of the Boicovo mission and the military fort of Huacaya. In a few years several of them left this place, and, with the inducement of receiving in recompense one league of land, they explored Carandaiti and settled in that place. They were attacked by the tribes repeatedly, suffered a few

/105 cont./

797 361 setbacks, and endured the bitterness of having some captured by the savages, but the establishment of the town is now an accomplished fact. It has a pretty church, consecrated at the end of July, 1908, and the only thing lacking is a priest in residence to attend to them spiritually with great care, because Machareti is quite far for this widespread parish (1).

1. The Christians who explored the territory of Carandaiti received the land promised; there is no potable water other than that of the ponds, which are in danger of being emptied. The preservation of this town should receive the attention of the Government of Bolivia for the sake of commerce, the cattle industry, transportation, and the prospect of new explorations to the east.

128 127 /106/ With the brief summary which I have made with reference to the missionaries among the Chiriguano and to the towns of whites built in the same region, presided over by the Franciscans of Tarija and Potosí, I bring an end to this second chapter, in which several opinions regarding the origin and point of departure of the Chiriguano for the region which they occupied, and with slight differences occupy at present, have been expressed.

There is no invention in it; by means of patient verification from different persons at different times, by consulting numerous authors, who, by study, reference, or in passing, have left something in writing, I have come to learn certain facts which, if they are believed here, are also believed in other places, and I have concluded that not all of it could be a fable, and as I have heard them told, so do I present them to my readers. This is the chapter which has concerned me most, and I do not know if the time, vigils, and the sleep of which my eyes have been deprived have been well employed; be that as it may, the public now has it.

/106 cont./

Yacuiba

Because of an error in the demarcation of the boundaries with the Republic of Argentina, the town of Yacuiba is located to the south of the boundary stone, while it should be to the north, and the latter, the boundary stone, should be located precisely in Itiyuro, the limit of the Chiriguano race, which has occupied Bolivian territory since its immigration.

Yacuiba, or Yacuigua, as the Chiriguano pronounce it, meant lake of the wild turkey. It is a rich region throughout; its territory is level, the streets which are being built are as straight as a line of this name, the land fertile. There are grown there the arveja or pea, the garbanzo, and other cereals, which plants are irrigated with water which is relatively abundant.

The town, which also fell in the earthquake of 1899, is being rebuilt according to modern methods, and its progress is rapid. It now has a first-class hotel, where the traveler and the countryman are served with all culture and exactness, department stores, where every article is found, and permanent buildings, houses of great size, and a customs building all of zinc from the walls to the roof.

The little city, in addition, is quite picturesque because of the many orange groves which continually embellish it with their green foliage and yellow fruit, /107/ which indicates the fertility of the territory and the abundance of water.

The little city is located in the territory of Tarija; consequently it was founded through Bolivian efforts. It is the seat of the subprefecture of the Gran Chaco, and today it is a cosmopolitan town, whether because of the many foreigners who have settled there or because of the many others who are continually passing through, not to mention the importance given it by the continual arrival of vehicles and that which it will receive from the proximity of the railway.

/107 cont./

It would be difficult to build a new town, with the same conditions, in Caipitanti, one league to the northwest of the present one, where there is less water. This place, located to the northwest of the present one and at some distance from the vehicular road, would be very suitable for a stay of the Tarija squadron, because it has an extensive plain in front of it, while Aguairenta is encircled by the forest.

Nor would it be easy to locate it in El Palmar, four leagues or more to the north, because the water is obtained by digging, the terrain is sandy, almost in its entirety, and, consequently, not very suitable for agriculture and big buildings.

If the present city passes into the hands of the Argentines, it is likely that it will disappear, just as all the enchantment which it has at present may disappear. The neighboring nation would do nothing but cause incalculable harm to its residents, who would abandon their orchards, gardens, and houses, on which they have expended quantities of money.

It is not possible that the inhabitants of Yacuiba would stay there, were the Bolivian Government to build another town in Caipitanti or in El Palmar, because what attracts them is commerce, and this must necessarily be at the place where the customhouse is established, to which the continuous vehicles come loaded with merchandise and deposit their loads which the muleteers carry to Santa Cruz.

The customhouse thus being taken away, there will also be taken away the traffic, without which the town will be dead and necessarily disappear, because the foreigners themselves would prefer to go to the new Yacuiba, where some will find everything needed to live, and others, everything needed for resting for a few days. /The last paragraph on p. 107 and p. 108 are omitted in the translation. Chapter Three

Characteristics of the Chiriguano

Introduction

At the end of the nineteenth century, and specifically in the year 1897, the whole Catholic world was invited in advance to attend the great exhibition of sacred art which took place in Turin, beautiful and grand Italian city of the Piedmont. The Pontiff of Rome made his voice heard and the Catholics of the five parts of the terrestrial world made preparations to participate in the literary, scientific, manufacturing industry, and other competitions.

The missions could not fail to take part in this contest of competency: they could not close their ears to the voice of the Supreme Hierarch of the world: with the fervor of the first Christians, with the humility of neophytes, directed by missionaries of all of the Catholic orders and congregations, they prepared an extraordinary contest. In Turin were seen the rarities and products of the missions of China, Africa, Palestine, North America, the colony of Eritrea, Oceania, Patagonia, South America, etc.

Although Bolivia occupies a quite modest place on maps of the world and is slowly being organized to rise to a very great height, it exhibited its products in the said world exposition and was even represented by its tribes. They sent there everything that could be sent from the missions of Guarayos, the missions of Tarija, and those of Pomé. It was then that an Italian photographer, employed in Tarija, went through its missions and those of Pomé, taking pictures of views, panoramas, groups of Chiriguano, families, churches, missionaries, etc. (1).

792
126

1. The order to take part came from the Curia Generalicia of Rome and the Most Reverend Father Commissioner in Bolivia Expressed that the Colegio of Pomé be united

/109 cont./

with that of Tarija because the inhabitants of the missions of both colegios were of the same Chiriguano race.

/110/ The illustration placed at the beginning of this chapter /see p. 149/ is one of the said photographs. It shows a group of Chiriguano women with their festive clothing and adornments, who are ready to attend a public gathering for drinking: it was made in the Beccero Mission and taken with the others to the exposition. The group of Indian day laborers is reserved for the chapter which deals with work and chores: both groups show the physical constitution of the race, about which Señor del Campana, after the exposition was over, wrote his book; perhaps this gentleman also had seen the four Chiriguano who were brought from the Tarija missions (1).

1. Nozione intorno ai Cirigiani /Information on the Chiriguano/. Florence, 1902. This is the most complete work that exists in Italy, in view of which I decided to write the present one here where the Chiriguano live.

Physique

After having studied the territory that a tribe occupies and consigned to paper what is most characteristic, and, next, having discovered appropriately by means of traditional and historical data or well-founded suppositions the origin and derivation of the tribe, the first thing that is exhibited to the ethnographer and to any observer is the physical body: its proportions, whether large, small, or average, soon strike the eye, the latter, the observer, considers mentally what the former, the physical ethnographer, sees, and begins his narration and then goes on to the character.

/110 cont./

Some explorers and travelers, after having happily concluded their investigative labors, have set down in their reports that the Chiriguano Indians have changed greatly in physique since the whites or Creoles entered their territory, but nothing could be less exact than this. Clandestine unions between Christian men and Chiriguano women have been quite rare, and even rarer are legitimate unions through Catholic marriage, from which generally comes propagation and change in races (?).

> 2. In 30 years of missionary life I have blessed but four marriages between Christian white men and Chiriguano neophytes.

If Sefior del Campano states that for a period of 40 years the Chiriguano have maintained themselves without change, on the basis of photographs taken in the year 1860, which were placed at his disposal by Professor Mantegazza, and those which the missionaries of Potosí and Tarija sent in 1898 to the Turin Exposition, among /111/ which was a skull collected by the author of this work in the fields of Cuoyuqui and sold by Father Giannecchini to the Florence museum, what can be said by some missionaries who have grown old and who are growing old among these Indians and who know the race in old men and in young boys, in old women and in damsels, before and after the white Christians were introduced in number?

In my judgment the said change does not exist, because an occasional isolated case, an occasional family, where the mixture of the two races has taken place, cannot be adduced as proof that the physique of the race has varied greatly. Travelers and explorers pass through a region rapidly: they can devote little time to the study of a race, and consequently their written reports, worthy of all respect, are somewhat exaggerated, as were those of the Spaniards

/111 cont./

144 114 who conquered Mexico and Peru (1).

[113]

1. Guillermo Robertson. Historia de América desde el descubrimiento hasta antes de la Independencia /History of America from the Discovery to before Independence/. Travelers exaggerate their stories in order to attract more attention.

144 [191] [142] There are extensive areas where mixture of the two races was frequent, but it must be pointed out that in these areas the children of such have ceased to be Chiriguano, both because of the Spanish language, which they now speak perfectly, and the color, which is completely different; it is no longer parchment, as Father Corrado states, but a skin which is up to a certain point fine and velvetlike, so that for this class of persons who descend from white and Chiriguano the appropriate name is mestizo and not Chiriguano, and consequently the physical characteristics of the race have not changed. In these same areas families which have kept pure Chiriguano blood are not rare, and these families, or the individuals which make them up, have the same characteristics as other Chiriguano, without any noteworthy difference (2).

2. From the left bank of the Parapiti River northward this radical change is taking place, making the race disappear.

On the contrary, in the great Chiriguano centers, such as all the missions and a few other areas outside of them, the physique of the native has not changed at all. As a rule their stature does not reach one meter and 70 centimeters in men, and rare are the women who reach 1.60; the hair is black, glossy, and coarse, and very vigorous in

141 142

/111 cont./

141 both men and women, and fair hair indicates either an
142 oddity or a clandestine affair. The forehead is rather small, as are also the languid, downcast eyes; the face is round, the nose flat, the mouth wide, the denture white as ivory, the chin short, and the lips rather thick. /112/ The
142 men do not wear beards, and anyone would believe that they
302 are beardless, but the main reason why they do not have one is that they pull out the hairs as they grow, and for this they have some tin tweezers with which they make all the hair disappear, and they do well, because otherwise, in view of their slovenliness, with long beards they would really be orangutans (1).

[186] 1. The Toba call the Chiriguano tigre face because of his round face, and the latter gets back at them by calling them horse face because of their long faces. In the missions the neophytes wear mustache and goatee.

141 They have a chest thrust forward, rather heavy
[291] shoulders and arms, normal-sized hands, and not very big feet, in spite of the fact that they grow as they will since they always go barefoot, especially the women, and not
147 all of them wear sandals /ojotas/. When they are enjoy-
[853] ing good health, they are very robust, and the women without the slightest bother will nurse two babes at their
[609] breasts. Whenever some white Christian woman is not able to nurse, she usually seeks out a Chiriguano woman to wet-nurse her child; this, in addition to being very advantageous because of the goodness of the blood, is also quite eco-
855 nomical. But it is true that most Indian women do not
[609] wish to take care of children other than their own; most
[466] of the time they agree to it with reluctance, or by force, this last occurring when the Indians are subject to a master.

/112 cont./

142 The Chiriguano at the time of birth has a color which is difficult to define, but, and let nobody laugh at this, his color is that of newborn mice, and as he grows the color changes until it is that of sunburnt parchment. The causes [147] of this change are the tropical heat, the sudden winds and changes, and the burning sun, to the action of which they expose themselves with untoward pleasure, with no bother and without fear, even should they be but tender infants.

441 147 From this it can easily be deduced that the Indian does not fear the canicular sun, or heat either; he works on the hottest days without shirt, trousers, or anything which re- [291] sembles these; he stretches out full length, very content, [516] receiving on his back the rays of the firey sun, and nothing daunts him. But when the north wind changes to the south and consequently the cold begins and the frost comes, he is very cowardly, and it is hard to make him work well and happily; in such cases it is easier to suspend the work for a few days, not to pay the laborers anything at all, and not to get uselessly angry; but this can only be done when the suspension does not have any bad effects (2). /Illustration appears here./

2. It is not only the Chiriguano Indian who hates the cold, but also the other races of America, such as, for example, the Quichua /Quechua/, according to what the historian Robertson says.

165 /113/ Life Span

The Chiriguano normally lives a good many years; he is little affected by heat, cold, and the inconstancy of the climate, nor by drunkenness and self-indulgence, to which capital vices he abandons himself from a tender age. Some [145] reach and pass 100 years, judging their longevity by their hair, since their hair does not turn white except at a very

Children of St. Buenaventura School in Ivo

/113 cont./

165 [145] advanced age, and I have seen Indians with the head completely white, and others with a white the color of smoke or something smoked. In the performance of my ministry I have met and baptized many centenarians at the time of their death, and in the towns through which I have passed I have met several who fought in the Caraparí war and who witnessed the War of Independence.

273 276 [178] But today the Chiriguano has degenerated greatly; in somewhat distant times they did not know about either liquor or coca, and today both are general, and because of liquor and coca, the use of which they much abuse, they ruin their health and shorten their existence. Much youth disappears with the abuse of these substances, and as a general rule in the missions the best disappear, those who know some art or have some fortune; all that they earn, after buying their clothing (although not always), they invest in liquor and coca, and [165] [648] thus shorten their lives. I have seen towns where out of 40 or 50 young men of the same age there are scarcely two or three alive who will reach 50; it can thus be seen that the drunkenness produced by chicha is not so pernicious as that of liquor or alcohol, for which any tax imposed on them by the Supreme Government is never too much, and would that such a tax were higher, more general, and that it was not felt to be enough [142] [147] simply to write it out. In spite of this dissipated life, it is very rare that one encounters a bald Indian, which indicates great robustness (1).

1. I have known many large and small Chiriguano towns; I have only found three semibald persons.

Morality

181 At present the Chiriguano Indian differs slightly or not at all morally from the common mass of men. I mean that not all are good nor are all perverse; there are good ones and bad ones

181 /114/ the same as everywhere else, so that certain travelers who say Indians are very bad would be wrong, as would those who call them very good. A celebrated explorer said not long ago that he found more goodness in an Indian than in a white man and that it is enough to notice only with average attention the faces of the two to be sure of the relative morality of both; as a missionary I neither can nor should consign to these pages my judgment in this regard (1).

1. The same explorer approves of the resolute attitude of the Curuyuqui uprising, taking the point of view that they were fighting for their independence and for the recovery of their territory.

186 648 Before the conquest so gently carried out by the Catholic missionaries took place, it was extremely dangerous to enter their territory, even just in passing, and not too long ago it was difficult to pass through the Cuevo-Ibo countryside, where the Franciscan missionaries of Potosí founded their missions, as they had founded those of Tarija in other regions. There was reason for the danger to exist.

The Indian now knew the white man by his deeds; he called him and still does call him caray, that is, astute, greedy, oppressor, and owner of what belongs to other people; if then he looked with misgiving upon the caray and up to a certain point did not wish to have relations with him, it is because this extremely bad image had been formed, from which arose the idea of not wanting to have a bad neighbor in his territory, and he blocked his way in order that he might not come to like the fertility of the area. He was wise to the fact that after exploration comes reconnaissance, and from this rises the desire to possess, which sooner or later is put into execution, as has been the case (2).

[113] 2. Giannecchini. Expedición al Alto Paraguay, año 1883.

/114 cont./

648 721 Once the conquest had been completed through the work of the missionaries and through colonization by the inhabitants of several departments, the Chiriguano had to submit to the rights of the stronger; on several occasions he tried to raise his head by means of general uprisings, such as the one of 1875 and the one of 1892 in Curuyuqui de Cuevo-Ibo, but they succumbed because of the difference in arms and because the whites were well situated (3).

[113] 3. Martarelli. Addition to the Historia de Misiones del Colegio de Potosí, which deals with the Curuyuqui war and the beginnings of the founding of the San Buenaventura de Ivu Mission.

648 178 /115/ A new uprising seems unlikely today because they are few and because the territory is populated by whites who have taken over the territory by right of conquest and through purchase made before the Supreme Government, but the Indians have not resigned themselves to permanent servitude, having once been lords of their house and land; their pride has been put down by superior forces, and most of them endure their fate with resignation.

To be sure, it is a fact that the Chiriguano of today is not the Chiriguano of other times; he is not the one who fought so tenaciously against the soldier of the Inca army, against the Spaniard, and against the Bolivian soldier himself. This change has taken place, I shall say once more, through the loss of territory and his independence, and in repeated struggles of extraordinary tenacity, which only resulted in aggravating a bad situation, and in the loss of their most beloved people and of their lands. For better or for worse they have had to submit to the laws of the Government of the Republic, which still exercises supreme authority over them, in the missions, where it is embodied in the conversores, in the provinces in the person of the subprefects, and in the cantons in that of the corregidors, who generally make use of the cacique or the alcalde to

648 /115 cont./
178 obtain the participation of his people when some work of public utility is ordered.

157 Dominant among the Chiriguano are idleness, incon-
181 stancy, intemperance, thievery, infanticide, abortion, and even
[847] suicide, which is generally committed by the women. They
[762] only work when it is necessary and when they are overcome
[461] by want; then they will sweat in order to eat, and then with all humility they appear at the house of a Christian and deliver themselves into his charge with the whole family.
[186] But if near the carai /sic; see caray, p. 157/, they find another of their own race who might favor them, even though it be disadvantageous, they do it, because they abhor the one whom they consider the author of their misfortunes or of their captivity. Therefore whenever they speak of the carai, they append the adjective pochi, bad, perverse, tyrannical, rascally, etc.

[533] They learn very easily everything that is taught them, especially music, for which they seem to have been born, but their fickleness ruins it all; they are not set in their ideas nor do they worry much about any loss, even that of
[273] their honor. Temperance is not even known by name, and drunkenness is glory, and for that reason in years of plenty, there are continual orgies in their towns. Thievery and
[178] cattle-stealing are relatively recent; they were not com-
[674] mon formerly, and the cause is probably that of bad example. In certain areas young cattle disappear from sight, and they are so united that the facts are not easily uncovered. Only after /116/ some time has passed or because of enmity will some fact come to light (1).

[648]
[685]
[754]

1. In their peaceful denunciations they urge great secrecy so that the authorities will not make public their names, out of fear that the person informed upon may take revenge with the use of poison or witchcraft, and, if the crime is not proven, the authorities can do more than reprimand and admonish.

/116 cont./

797
829
177

Difficulties in Reducing Them

If among other tribes missionaries have been able to found missions without considering the material advantages for the Indian, among the Chiriguano this has not been the case. I can say that almost all of them have been founded when the Indian was undergoing some calamity or persecution by his neighbors; Santa Rosa, Ivu, Parapiti, etc. were founded in this way. The Indian does not consider his spiritual well-being; when he admits the missionary into his land, he is thinking of the material advantages. By the same token if in other missions young and old are baptized without distinction, among these people this is not what happens. To baptize an adult Indian who is enjoying good health would be like asking for pears from an elm; he only requests this sacrament when he sees that there is no longer any hope of life, and in the first years of a mission even this is difficult and a great many of them reject it categorically. I could enumerate cases which have happened to me. There are persons who want to be condemned simply because they have heard from the lips of missionaries that those who do not receive baptism are not saved, and, inasmuch as nobody received it before the founding of the mission, they want to descend to the place of punishment in order to see their loved ones again. Oh sad and lamentable ignorance, from which some do not wish to emerge (2)!

2. In Yvu there was less difficulty because of the proximity of Santa Rosa, and in Parapiti there was none because of the repeated foundings in that place.

In case of calamity or persecution, the missionary is quickly sought by the caciques, who do not rest until they have gained their ends. One modern proof of this is offered to us in the case of the cacique of the village of Pipi, who

/116 cont./

797 829 177 not long ago continually appeared at the Yvu mission to take me to found a mission in his town and thus to free it from persecution by a neighbor, according to what he said. For this he promised everything, goodness, docility, adherence, free work, and all the rest; religion and baptism only were reserved for children, as in other towns. While the Indian is well off and not bothered by anyone in his lazy life with its frequent drinking, it is not easy to get good things out of him.

797 829 871 177 /117/ Even for the education of a child it is necessary to bribe the Indian with material things. He does not resist handing over his children, but he wants them to be given clothing. No matter how much they may have, he brings them to school completely naked or with a shirt all ragged and torn, so that the missionary will immediately dress them, and let it be noted that he does not ask this as a favor. Up to a certain point he seems to demand it, saying, "Ropa emeé chupé," give him clothing. If the missionary asks something as a favor, he must pay them back in material things; should he forget, they ask for them.

829 797 177 It has already been seen that the Tarairi mission was founded in the year 1854, this being the first founding to take place on the left bank of the Pilcomayo River, being due to the zeal of Father José Giannelli. It was near Easter, and the missionary let it be known to various caciques that at that time there would be a commemoration of the death of God and that they should also come, with their pains and afflictions, to demonstrate their adherence to the truths and dogmas of the Catholic faith. He knew through experience that the Chiriguano have a special tenderness for the dead. In fact, a great number of them gathered there to hear the word of the missionary father, who thought that he had conquered them all, seeing them so attentive and silent and seeing them crying and full of compunction. But Easter came, the day of joy, and those who had come to cry about the death of Jesus came once more before the missionary, asking for new

/117 cont./

829 clothing in payment for the service. Let the reader imagine
797 how the poor father, who had nothing, felt when he heard
177 such a petition (1)!

1. Corrado, Historia de las Misiones del Colegio Apostólico de Tarija.

Vices and Their Consequences

883 It seems to be and is an unfortunate truth that in this
842 tribe, once so numerous, there is no lack of coquettish girls, who, if they restrained themselves from flirting any more, would not be so bad. The unfortunate thing is that these poor girls, in order to enjoy mundane pleasures and drink to the depths the dregs of corruption, or also in order not to have the nuisance of nursing children and training
[756] them, have recourse to a very simple thing. They consult
[278] the old women who bear the name of sorcerers, and these
[885] show them the remedy, which consists of a drink that they extract from certain plants or herbs which almost all the Chiriguano women and Indian sorcerers know wonderfully well.

883 /118/ These unfortunate girls, usually orphans, once the
786 period of puberty is over, drink this venomous beverage,
[881] suffer a great deal, if indeed they do not die, and are
[842] sterilized, and they then give themselves up to orgies at the time of general drinking, which is the most terrible thing that you can imagine, because at them morality is offended by words and very licentious stories, by raucous laughter and giggling by men and women, by their glances, and finally by their acts, although these take place at a
797 suitable distance from the said gathering.

/118 cont./

797 These facts cannot be denied, because they are based
[786] on the experience of centuries. Unfortunately, they do
[883] occur, and it is very difficult to uproot them. There is no lack of repentance or lack of punishment, admonitions, and fears, but civilizing action is not enough for this, nor even often the Gospel, because: animalis homo non percipit quae Dei sunt. We can say that the action of the missionary is one of yesterday among the Chiriguano. The Christians or neophytes have changed much in relation to the infidels throughout the region, but a great deal more is still lacking for them to come to understand the strength of Religion and civilization, since, naturally, abandoned humanity gives free rein to passions and it is indeed difficult to contain it afterwards in a short time (1).

1. The infidels of the missions complain about the neophytes, but they do not understand that times have changed, and the
[674] race as well. Murders are committed in other places, but this does not happen in the missions.

847 Sister to the sterility which the coquettish girls manage to procure is abortion. There is no woman who does not know the thousand ways for procuring this, always provided that they have not obtained or resorted to remedies for
847 sterilizing themselves at puberty. In general it is those girls
586 who have been betrayed by their lovers or abandoned by
836 those who have sworn fidelity to them throughout their
848 lives who come to this excess of killing innocent babies. For this reason they not only hate the perpetrator, but also his fruit in their bellies, and thus they make an effort to get rid of the innocent one by plucking it dead from their breast.

/118 cont./

847 But if they do not achieve this purpose, they do not hesitate to commit another greater crime, that of strangling
[692] the newborn or burying it alive. In spite of the fact that these cases are not very frequent, neither are they very rare, and they are easily discovered by relatives or neighbors, who denounce them to the town authority, who cannot remedy the matter either, because should he take measures, /119/ they scarcely listen to reason or to the advice that they hear, which they listen to as one listens to the rain fall.

000 Let it thus be understood once and for all that the Chiriguano, like every savage race, need first of all instruction, and later firmness, because without the first they will always be ignorant, and without the second they will scorn the instruction they have received. The Hebrew people, accustomed to religion from the beginning of the world, received admonitions, advice, and laws from Moses, with whom God communicated directly. When the people prevaricated, it was God himself who imposed upon them the punishment which suited their guilt. Sacred history is full of such acts (1).

1. With the law of encroachment, there was committed the error of carrying off prisoner an old missionary. Other such acts will follow this, and when the Chiriguano see that not even the padre is freed from jail, they will lose all fear, and they will henceforth always be criminals. The Indian does not listen to advice; rather he listens to what hurts him.

Suicide

Love is natural to humanity. There must always be an object which is loved. The scholar loves his books, the mechanic his tools, the astronomer his telescope, the mathemetician his theodolite, the philosopher his principles,

/119 cont./

500 the wives of Christ their infinite goodness, and the priests the sciences and their Author. Each one in his branch turns his affection to the object which pleases him most. Even Indians have this privilege, because they are men who come from the same tree, whose trunk is in Adam and Eve (2).

773 2. They say that the first forebears of the Chiriguano race are different from the progenitors of Christians and missionaries, because we are of a different color, wealth, intelligence, and worth. They add that their first father's name was Araparigua.

839 684 593 As a consequence of the foregoing, the Chiriguano has no object which he loves other than his fellow man, because idleness and ignorance do not make him aspire to other things. A man and a woman love each other reciprocally, but as they also inherit the original sin, they are subject to its many consequences. Thus it happens that cases where a man betrays his wife, or she him, are not rare. What is the result of this? If it is the woman who was unfaithful to the conjugal bonds, the man will remedy it by providing her with goodly number of whacks with a stick and separating from her definitively, and if it should be the man, which is generally what happens, it is not so easy for the woman to do anything /120/ about it. Instead she usually sees herself more and more oppressed. The husband makes a martyr of her. Well-founded jealousy begins to destroy her. She can do nothing against her rival. She has no religion which will help her resign herself to her fate. She makes every effort to avenge herself in some way, but it is difficult, she thinks in this extreme case that she achieves all she can do by taking her life. To do this, she finds a rope, puts it around her neck, ties it to any small tree or such thing, casts loose her body, and, since no one sees her, in a few minutes she ceases to exist (1).

committed suicide in her own home early one Sunday morning at a height of one meter. She did it by kneeling down.

Suicide is not rare even among men, and there were several during my stay among the Chiriguano. The men, if they are young, commit it in order not to suffer the reproach of their parents for something bad they have done. If they are older than their wives, it is because they have no other way to remedy the woman's infidelity, because there are cases in which a man dominated by his wife and somewhat timid in nature does not dare in such circumstances to throw the bad one out of his house, and thus he believes that he can fix everything by taking his life. These unpleasant happenings and accidents happen in the fields or in the woods.

Boxing and Dueling

In ancient times this race was very numerous and constantly in a state of war against its common enemies, but there were other wars in which one town rose up against another for trivial reasons. In the middle of the nineteenth century there was a bloody war between the towns of Yvu and Caraguatarenta against those of the right bank of the stream of Cuevo because of oppression which the cacique Gilracoti had tried to practice (2).

2. This regional war occurred before Chimeo Mission was founded. Gilracoti deceived the authorities of Cordillera, who were quartering people in the vicinity and around Parapiti in order to repress the audacity of Yaveau, whom they believed to be the head of the revolution.

/120 cont./

578 Out of these general wars were derived other private ones, which civilized people called affairs of honor-dueling. This does not happen in private, as occurs among civilized people, who go off to a determined place with
578 their respective seconds. All is public, in the presence
541 of many people who come to drink. It is /121/ the caciques who incite their soldiers to match their strength and to avenge with crime an affront or an unfounded jealousy. When this happens, with or without a reason, the fighters place themselves in the midst of a whole crowd of spectators in the presence of the caciques, who urge them on with a word of command, while the poor angry men hit each other cruel blows.

578 Boxing is ancient, because formerly knives were not
[412 known and, if they had them, they only used them in
178] their work in the fields. Now the picture has changed;
167 the young are succeeding the old, and these young people
464] continually go to work in the Argentine Republic. There they learn how to drink pure liquor, to handle the knife with which they are armed for their work, and to defend themselves. One small word is enough: it is enough if one says yainano, let us fight, the word of challenge, and knives are unsheathed, and then blood flows. Fortunately, they usually are content with inflicting wounds which rarely bring death because they do not deliver the blow with the point of the weapon but with the edge.

167 This mania for going off to the Argentine Republic has
464 them in continual movement, and, unfortunately, many of them remain for years, to return finally bringing almost nothing with them, and if one asks them, they answer very
167 rudely, "I drank it all." Last year's law has made recruit-
464 ment impossible. Several Indians went off, but they could
648 not get through Villa-Montes and returned (1).

1. If the authorities in Villa-Montes and Yacuiba continue to capture the Indians who are trying to escape, the law will not be in vain this time.

/121 cont./

Love for the Home

574 152 When someone has been away from his town for a long time and returns, he is received with much love. He enters his house without saying a word, and if he arrives at night, to the question of "Who is it?" he merely answers "Checo," it's me, and then those in the house begin to cry or give shrieks of joy which may last for five minutes, and soon they give him something to eat and the [114] questions and answers begin. I witnessed this without being seen one night in Paraspiti at the San Antonio Mission.

152 591 169 186 It is not rare that once in a while a smaller or greater proportion of Indians temporarily leave their town, either because of scarcity or in order to avoid the anger or ill will of the cacique. They then go away with considerable unhappiness, and they go into exile like Hagar /122/ with her son Ishmael when they were ordered out by the patriarch Abraham. They cry as they leave, they cry along the way, they cry upon arriving in the land that receives them, where, in spite of the good reception which has been prepared for them by other people, they do not find peace, and they always sigh for their home.

When they decide that in their former dwelling place things may have changed, or that the cacique who is responsible for their misfortune and exile may have disappeared from among the living, they return (1). In Yvu, where

> 1. The Indian Cayuguari, because of a crime committed in Machareti, fled with a group of Indian friends and relatives, settled quite far away to the northeast of Carandaiti, and, as the cacique whom he offended is still alive and as furthermore Cayuguari began a life of cattle rustling, he never returned to his town.

the war of Curuyuqui (1892) occurred when the San Buenaventura Mission was founded, all those Indians who had taken part in the uprising were wandering about in

/122 cont./

152 other towns, and they returned almost en masse, and the first
591 thing they did when they once again trod the soil of their home-
169 land was to cry. I witnessed the arrival of a cacique with
186 his large family. Men and women came loaded with their household goods and children. They arrived in poor condition, covered with dust and sweat (it was at the end of December), tired and sad, and when they saw their fellow countrymen and relatives happy and content under the paternal rule of the Catholic missionary, they put their burdens down on the ground, in the houses of others, and then there broke out the tears and the wails, thus arousing the consternation of all the inhabitants and the missionary (1).

1. Father Cuenado relates an analogous case in his Historia de las Misiones de Tarija.

Poor unfortunates! In spite of the vices which dominate their corrupt nature, there is something noble in the Chiriguano race. Their fondness for their native place, for their home, is great. They will make any sacrifice to return and prefer to die of hunger and thirst. They will never abandon their town and their home, unless constrained by necessity, fear, or persecution.

Along the road from Tvo to Parapiti there is a town called Itatiqui, where not even drinking water can be found in the vicinity. Want is eternal there: the crops are miserable there: and they either beg for water or steal it from the lakes which are more than five kilometers from the town. Some six years ago there were about 150 families there, persecuted by some whites to whom they did not wish to be subjected. I tried to take them away to form a part of San Antonio Mission, but it was impossible to move them from the place.

They prefer to suffer hunger, thirst, vexations, and persecu-
790 tions there, but they do not abandon the place. They would re-
829 main there very happily /123/ if a small mission were built for
199 them, as they desire, which is somewhat difficult, considering the special circumstances of the place, since the civil and

/120 cont./

797 829 199 religious education of the boys and girls would not make much progress because their parents are in continual movement. Some effort at least has been made to help them by means of the property rights which they have in the territory. About three leagues long by half a league wide, and the plan was then to build them some small chapel, but I believe that these efforts will be left in the filing cabinet for centuries to come (1).

1. Today, instead of missions, they are building forts for the purpose of colonization. Doubtless the epoch of a new method of colonization has arrived, but nobody is ignorant of the fact that this costs the Republic millions, while the cost of a mission is relatively nothing, and the advantages and progress incomparable. What advances are there in Corrasco, in Guachalla, and other places? What buildings are there of note and stability? None. In a single hour the Tuba or any other savage may destroy them by fire. Don Fernando Guachalla, the president-elect, said it well when he said that the best and cheapest method of colonizing is that of founding missions.

175 511 [132] [NC] Before the Paraguiti missions were organized, these Indians suffered considerable misery, because the place was quite dry in the rainy season, and they had no means of planting along the banks of the river, since the few lands there were in the hands of the whites. Father Giannecchini passed through there in 1887 as an expeditionary to Paraguay, and when he saw them so poor and so reduced in number, he exhorted them to move to some mission, but they answered that it was not easy to leave the place where they had been born and had grown old.

Aptitudes

461 157 It cannot be denied that laziness is innate in the Chiriguano Indian, but, when compared with the Toba, Mataco, and other tribes, I assert that they do a great deal or even too much. They need a guide, they need to be watched over, but when this is not lacking, they are hard working. The whites 464 in the regions inhabited by these Indians do not know of any other laborers. All the towns of Cordillera, Azero, and Gran Chaco have been built with the energies of the Chiriguano. With these same laborers are sustained the agriculture and cattle raising of these provinces, and even by means of them are the national roads of these regions kept clean and open, as well as those from one canton to another, the one from Tacuiba to Santa Cruz and the one from Taperilla. The Chiriguano laborers began and are continuing the work on the Azero bridge, /124/ and many of them are still working on the Bermejo River close to where it arrives at Tacuiba (1).

1. A private enterprise composed of Don Braulio Zapata, corregidor of Carandaiti, the subprefect, Don Ramón Menduiña, and other well-known and rich men of the same town is organizing an expedition to the fields of Cayuguari to found a fort there and to conquer the territory. The subprefect plans to open a cart road, with the help of the Chiriguano cacique, Mandepónai, and his soldiers.

999 The paternal rule of the missionaries has managed to make the Chiriguano much more docile: it has succeeded in building towns and large centers of population around the Cross; there is not one of the towns of those who live in complete ignorance of Religion that can be compared with them. The Missionaries have succeeded in building magnificent churches, great teaching establishments, comfortable and airy houses, workshops for arts and crafts. They have managed to implant the teaching of

/124 cont./

797 Religion, that of reading and writing, and even the art of musical chords, which is only seen in the great centers of the world (2).

[533] 2. In the Potosí missions there are four music bands, and in those of Tarija, two.

The history of the Tarija missions is glorious in all of its pages. The reader can consult, whenever he wishes, the one of the Colegio of Potosí in its two epochs as well. This will cast a brilliant light upon the matter, and the traveler can say nothing to contradict it when, ecstatically, he contemplates the grandiose, strong, and well-planned edifice of the Santa Rosa Mission, that of the elevated Machareti Mission, that of the old or semisecular Tarairi Mission, and the one which, as though by enchantment and with order, is being built in the mission of San Antonio del Parapiti Grande.

797 All of this shows that the Chiriguano, in spite of his
157 indolence, is docile, and with gentleness and a little strictness
177 at the same time he will do whatever the white and the missionary wish him to do. It finally demonstrates that, though he does have his vices and defects, certain human virtues are not lacking. It shows that it is necessary to educate his nature by teaching, with civilization, as the carpenter with his plane smooths a piece of wood if he wants to make the job elegant, or a blacksmith with his file smooths the rough iron until he has made a key, a lock, or any other object.

/125/ Philanthropy

577 To end this third chapter and then pass on to deal with
829 Chiriguano religion, I am going to say in passing that they are very compassionate with the unfortunate. If one of them suffers the harshness of imprisonment, they all make every effort to ask that he be freed and will even sacrifice whatever they may
[936] have to obtain it. If someone is sick, he is visited by many; if one is left an orphan, all are his fathers, mothers, grandparents, and brothers and sisters, or at least they are his uncles and aunts or brothers-in-law and sisters-in-law.

/125 cont./

736 [578] Thus, being an orphan is unknown among these Indians, and the worst insult that can be given to a Chiriguano is to call him Tinei, orphan, or paravete, poor. The family which takes charge of an orphan who was left without a father or mother or close relatives, treats him better than its own children. To the latter it shows strictness and obliges them to do certain chores of minor importance, but to the orphan never. He works because he wants to, and he sees that gratitude to his new parents demands it of him. He remains in the house in which he is a guest until the age of puberty, and then, with no thanks whatever, he disappears and goes to live in other towns, where he may settle down temporarily or forever, depending upon how well he may be received there (1).

576

1. Chiriguano boys never thank anyone for anything, but when they take leave they say *Ayema, I am leaving. Old people and* adults utter an occasional word of thanks.

574 609 With transients or travelers, whether they be Indians or whites, they use proper manners. If there is chicha in the house, it is the first thing that they offer him when he has taken a seat, and then they prepare for him whatever food is available. There are travelers who remain in a Chiriguano house for weeks and months, and never does the Indian get tired of him. He serves him just as he served him on the first day, and when he leaves he even makes him promise to come back to visit. Oh, how the barbarians who are called savages shame the conduct of so many men who call themselves civilized, and, greater dishonor, Catholic Christians! They treat inhumanely their fellowmen, comparing them with quadrupeds. They cheat the helpless, are bad examples for the unfortunate, making them pay dearly in times of want for even a handful of maize, while the Indian, when he has it, will give it away, or charge very little for it, and makes no request for payment should the white come to his house to ask for water or for chicha, which is never lacking in times of abundance (2).

2. I have seen maize sold on the scales at

/125 cont./

574
609

20 centavos the libra, and 25 as well. In the Chaco this is too expensive.

Chapter Four

Religion, Divinities, and Beliefs of the Chiriguano

/The introduction to this chapter, "An Illustrious Franciscan," pp. 126-127, is omitted in the translation./

/128/

Religion

/2/

It is beyond any doubt that all peoples profess some religion. This fact is proved by the testimony of all missionaries and confirmed by innumerable travelers of various nationalities and who profess different creeds.

But to the extent that religion implies external demonstrations of veneration, the variety of ways of worship is so great that it may well be stated that every people has its special way, proper and peculiar to it, in which it honors its divinities.

The most advanced peoples display in their respective demonstrations of worship all possible splendor. They have magnificent temples, priests, and a ceremonial which, if it is not always in conformity with the dictates of common sense, does tend, nevertheless, by its nature and form, to awaken in man a sense of veneration and respect for a superior being, represented by something which strikes the senses.

From this point of view it would not be too bold to state that the external worship of peoples in general is in direct proportion to their level of civilization and culture.

This explains why among savage people there can scarcely be discovered a single sign, a ceremony, which might be a sign of external demonstrations of worship. But in reality it does

/128 cont./

121 exist, even among savages, since it could be said that, just as there is no people without God, neither is there a people that does not show Him homage in some way.

771 As far as the Chiriguano are concerned, I have tried to find
124 out with special care, constancy, and assiduousness what religion they profess and what type of worship they render to their divinities. But all my efforts have been in vain. This is no doubt due to their state of ignorance as a result of their savage life.

[115] I have asked the oldest men of the tribe about their religion, and I have only received vague and insufficient answers on every point, thus being unable to form any idea, even an approximate
776 one, of the religion which they profess. It is beyond doubt true,
775 however, that the Chiriguano have some religion, since they recognize a superior being. They admit the immortality of the soul, rewards and punishments in the other life, and they preserve certain Biblical traditions which would have no explanation if they did not believe in a god and perhaps in the Jehovah of the Holy Bible, or God, Creator of all things (1).

[805] 1. The Chiriguano, like the Hebrews, count the
[171] months by moons, and they have other very
[192] similar customs. It is very notable that they also have some Hebrew words.

577 /129/ The Chiriguano must have a moral code, that is,
771 natural law, perhaps augmented by some traditional precepts, since they admit rewards for the good and punishment for the bad.

The law, to the extent that it is imperative, comes from the same God, but only religion serves as its base, and this teaches men that it is an unavoidable duty to submit to the precepts of the Supreme Legislator, under penalty of falling into grave punishments conceived by Him.

From what has been said, it can be understood as a logical consequence that the Chiriguano do profess some religion, even though this might not be known.

/129 cont./

196 This same thing is not true with respect to the external
18 demonstrations of worship. The Chiriguano, like every savage
171 people, have no temples, priests, or ceremonial to regulate manifestations of worship. Does this also demonstrate that they completely lack external demonstrations of veneration of a god? It is not easy to give a categorical answer regarding this, because
[186] if it is the truth, as now seems to be the case, for I have not been able to discover any fact which shows the existence of that worship, this could be explained if we take into account the fact that the savage, because of his condition of isolation in the midst of the forest, is distrustful; he looks at the white man with suspicion. This is more than sufficient reason for him to hide his religious acts from the view of the latter.

Nobody could deny us the exactness and solid foundation of this observation, since it is a fact that civilized men, even among themselves, are ashamed to practice religious acts for human reasons, from whence comes the fact that they neither fulfill the duties of their religion nor come to the churches, and, what is worse, they make a show of a religious indifference which is very far from what in fact they feel.

Let us agree then that the Chiriguano does profess some religion, like all other peoples of the world.

This conclusion will be corroborated by what we are going to see in the following sections.

Divinities

776 That the Chiriguano have some divinities is undeniable, but it is very difficult to determine what character they have and to what category they belong according to the concepts of these savages. This is the reason why it is impossible to determine with certainty whether or not they /130/ profess polytheism or monotheism, when one considers the diversity of excellence, power, and pre-eminence which they attribute to their divinities.

/130 cont./

776 What I am going to set down here will cast some light on this subject and will enlighten the intelligence of the studious man for its investigation.

124 776 From conversations with the true Chiriguanos it is impossible to form any idea of the supreme being that they accept. I say true Chiriguanos, by which I mean those who have had almost no contact with missionaries or whites. Today it is difficult to find one of these. Yet despite this, if one should ask the old people who live far from the missions, "Who made all that we see?" they answer, "Quia ndipó?" Who can it be? "Who created us?" They answer: "Ti! Ndicuaá á?" What do you mean? Do you not know? And they give a purely material explanation, as happened on an exploration and trip that I made several years ago in the company of other missionaries south of the canton or town of Huacaya, where I talked with an old cacique who had taken part in the war of 1875 against Igüembe and who, after the pacification, preferred to live outside the mission and planned to die there, because he is convinced that Indians who live in missions die earlier, just as, according to him, all of his companions from Boicovo have already died, which is not true, because they still are alive there, as old as he is (1).

790 177 829 [114]

1. The Indians have had and will continue to have the false and erroneous idea that baptism makes those who receive it die, because it is administered to men and women who are in immediate danger of death, and hence those who are old do not wish to be baptized when they are enjoying good health.

192 In the Chiriguano language we find the word Tunpa, which means "superior being" or "marvelous being." When for the first time they saw a large clock with its "tick, tock" and the pendulum making the hands move and giving energy to the hammer to strike the hours with its little bell or wire string, when they saw for the first time the photographic camera which reproduced the image of one or more of them, the clock and camera were Tunpa for the Chiriguano. They applied this word to both things,

/130 cont./

192 and it is the one that they apply to anything that causes them wonder or admiration over something new.

776 192 [197] It is the missionary and the Christians who have made it understood to the Indian that Tunpa means God, the maker of all things visible and invisible. Father Corrado, one of the most illustrious Franciscan missionaries, who thoroughly understood the Chiriguano language, in which he wrote a brief but profound catechism, says clearly in a note on its first page that it cannot be stated /131/ that the word Tunpa means God, and he only puts it in his catechism because all the writers who have dealt with the Chiriguano race give the word Tunpa the meaning of God.

This Tunpa of which the Chiriguano cannot give a clear idea and which the missionaries and Christians explain as meaning the true God, Tunpaete vae (1), is for the Indian the source

[193] 1. The particle "Ete" in this language expresses the superlative degree. It is put after a noun, pronoun, adjective, or verb.

of all that is good, a living and material being, in contrast to another divinity. He makes it rain, he makes the algarrobas, maize, gourds, and everything edible ripen, he wards off sickness and all calamities, in spite of which all these kindnesses are still attributed to the sorcerers, men of flesh and blood like anyone else, who consequently have the name Tunpaete, for which reason I said that, for the Indian, Tunpa is a living physical being. If the missionary, as Columbus did, could announce in advance an eclipse or the appearance of a comet, for the Indian he is a Tunpa (2).

2. Several times I have announced beforehand eclipses of the moon. Last year, long before it became visible, I announced to the Indians the appearance of Halley's comet. This was sufficient for me to be called Tunpaete.

/131 cont./

776 Besides the Tunpa, the old people accepted and still accept in certain places another divinity more powerful than the one described. This second divinity is the astute and intrepid fox, called in their language Aguara-Tunpa, fox god. According to them, he is almost always in a struggle with the first one, and they state as a dogma of faith that he does everything possible to destroy the work of the true God, sometimes showing himself to be a friend of the human race, limited to the Chiriguano, and at other times its enemy.

A Fabulous Belief about the Flood

773 I am going to tell a fable which confirms the second property of the Aguara-Tunpa, because it also gives an idea of the universal flood, argued about so much today, concerning which so many opinions have been forthcoming, some of them admissible and others poorly thought out. Here it is:

It is told that in very remote times the Aguara-Tunpa declared himself at war with the true God, creator of the Chiriguano race. The reason for this enmity is not known, but it seems that he did it because of a contradictory scheme or spirit. In order to spite /132/ the true God, the Aguara-Tunpa set fire to all the fields and pastures at the middle or beginning of autumn, and, together with the plants and trees, all the animals which served as food for the Chiriguano died, so that the latter, who had not begun the sowing of maize and other cereals, as they do now, found themselves close to perishing (1).

1. In a not too distant period, before spring began they burned the fields in honor of Aguara-Tunpa.

In this extremity they came to the banks of the rivers and lined their banks to seek in the waters what they could not find on the land, which was still smoking from the terrible fire, and then Aguara-Tunpa, who was close of being frustrated in his

/132 cont./

773 purpose, thought up another supreme effort, making fall from the heavens torrential rains, Iporu (2), in order to destroy the Chiriguano

[192]

2. I means water, and its pronunciation is gutteral and nasal; poru means to lend oneself /prestarse/; thus, Iporu is explained literally: he lent himself to water /se prestó agua/.

race completely inundating all men in the waters.

He would have succeeded in destroying all the Chiriguano, but they in extremity and perhaps by advice from the true God, Tunpaete, found a large gourd, Choguao, put in it two small human beings, children of the same mother, male and female, cuimbae, cuña, and they let the little vessel float on the surface of the water.

The rain continued to fall in all its force. The waters rose over the surface of the land, rising to great heights, and drowned all the Chiriguano except the children in the Choguao, or large gourd, who were saved from the catastrophe. Later it ceased raining, and the waters dried up again, leaving a thoroughly filthy mud. The children came out of their receptacle, without which they would have died of cold and hunger.

It can be easily understood that the fish and their kind did not perish in the waters of the Iporu, and thus for a long time these had to be the food of the two human beings, but how to cook them, when even fire had disappeared? Before this happened, there was another compassionate being who did not permit the total loss of this good element. This being or second cause was the Cururu, toad (3).

[192]

3. The word Cururu should not be confused with Curu, which means mange. From Curu comes Curuyuqui, salt which cures mange. The pacifiers of the war of 1892 wrote incorrectly Cururuyuqui.

[114]

/133/

773 The Cururu then, before the total flood, went into the ground, carrying burning embers in his mouth, and there, by blowing on them, he did not let them go out. When he found out that the liquid element had disappeared from the face of the earth, he once again took into his mouth the embers of fire, came out into the open air, sought out the two children, delivered the fire to them, and thus they were able to cook the fish which they were patiently extracting from the fresh water, and thus they were able to give warmth to their shivering members (1).

[538] [825]

1. When children bother a toad, it will puff itself up to remind them that by blowing it did not let the fire go out, reminding them that they owe it gratitude. This is what the very old people tell the children.

The two children grew older until they were old enough to propagate, which in fact they did until the Chiriguano had again multiplied, all of whom, according to them, descended from those two beings.

This story, as I said, clearly manifests, with very slight differences, the idea of the universal flood, of Noah's ark, and of the human race which was saved in it. At the same time it demonstrates the ill will of Aguara-Tunpa against God and His creatures, and the new multiplication of the race on the banks of a river.

776 173 792 The primary divinities, one completely good and the other good and bad, depending on his will, are only two, but tradition and relatively contemporary history teach us that in different times and in various regions some daring Indian who was fond of laziness and other people's property, with a degree of loquacity and extraordinary promises, managed to gather around him in his new house, which he had deliberately built outside the town, a multitude of Indians from near and far and claimed to be Tunpa, an extraordinary and marvelous being. Others, including a certain woman of great daring, have claimed to be Tunpa ichi, "mother of God," which had little effect, and on other occasions,

/133 cont./

776 finally, the caciques, tired of being oppressed in certain areas by
173 certain bad Christians, have called some unfortunate, but alert
792 and bright boy Tunpa, in order to gather Indians from other areas to hear a flesh and blood God and fight with courage in the holy war (2).

000

2. The Mexicans, at the time they were conquered by Hernán Cortes, had temples and idols, with priests serving them. When they beat on the holy drum, the fury of the warriors was kindled. In one battle Cortes lost 60 Spaniards, who were burned before the idols.

776 In this last case the illustrious Missionary Father Angélico
173 /134/ Martarelli, in his appendix to the history of the missions
792 says in substance the following: "The boy whom the caciques
791 chose to deceive the rest assumed the name of Tunpa so that his oracles would be believed and respected with great reverence. He was shut up in a hut and from there, through his counselors (one of whom is still alive and very attached to the missionary), gave answers to those who asked, Indian or white. These must respect his advice with all humility, and they were damned if they declared themselves unbelievers, while those who were good joined the ranks behind his flag.

Beliefs in the Spirits

152 It is not unusual for someone who is passing through Chiriguano towns to hear, either near or far, a man or a woman, or some-
[775] times many people, crying, especially at night. In this last case it causes sadness and who knows what terror for white hearers or for missionaries, because these wails sound like those of condemned
775 souls, and it seems as if they are crying about their misfortunes and the loss of eternal blessings.

/134 cont./

775 If one asks the Indians about this point, they answer that a woman has seen in her dreams the shade of her departed husband, or he that of his departed wife, and both, those of their children, relatives, or grandparents, for all of whom they have an excessive fondness, and it can be deduced from this that in the Chiriguano race there is a confused belief in the immortality of the soul, since, with regard to the body, they themselves can see that everything turns to dust and earth.

775 776 192 Some explorers and travelers have set down in writing that they call the soul Añia; the Indians also confirm these accounts, but they do not give the name Añia indiscriminately to all souls, but only to those which had a very bad death, such as suicide, and those who took a long time to die. But in no case would a mother call her child's soul Añia, nor would relatives use this term for their departed, because Añia means demon or evil spirit (1).

[123] 1. At times I have been called to pray near a person gravely ill, so that he might die sooner and thus be free of that spirit, which, according to them, is bad, but I made it understood to them that I would neither pray as they wished nor was the sick person evil because of taking a long time to die.

The true enemy of the Tunpa is the Añia, demon, but /135/ this latter word only means demon through use, just as iã by the same use means soul. The Indians today give both terms the meaning that I attribute to them, and I still lean on the authority of Father Corrado, who in his catechism defines Añia as demon, Anãrenta, place of demons, Añia inuna, the demon's companion, 775 yaneãgũe, our soul, iãgũe, their soul. The Indians have great 776 fear of a demon and souls possessed by demons; they say that they frequently see them at night, and when they have to walk in the shadows, they carry a burning firebrand (1).

[192] 1. Añia means phantom in Chiriguano; iã means shade, cuarasi iã pe, in the shade. Missionaries should make them understand the true meaning.

/135 cont./

775 776 because the Indians know that the evil spirit is a phantom, and the soul of the dead a shade; chemembi iã ahecha, I saw the shade of my son, says the mother.

776 784 [123] One night while the smallpox epidemic was going on, they called me, being the Conversor of the Santa Rosa Mission, to catechize a poor and miserable old woman who was some two and a half kilometers from the town. Among those who accompanied me there was one whom I well remember, who is still alive and whose name I shall not forget, who carried a burning firebrand, which was not necessary for me because the night was quite bright. When he was asked the reason for such a thing, he answered: Añia añuguae vaena, to chase away the demons. They all do this especially when they are alone, which is rare, because the Chiriguano only rarely goes out at night because of his fear of evil spirits.

776 174 171 From this it can be deduced with considerable probability that the Chiriguano are descendants of the Guaraní of Paraguay. There were in that region, in past centuries, the missionaries of the Company of Jesus, who are famous for their apostolic work and for the suffering which they experienced in the reduction of the region. Because of the sorcerers some of them even suffered martyrdom.

I had the opportunity to read a brief history, which I have mentioned above, written by Father Antonio of this same company, and I learned that the Guaraní believe in sorcerers and saw the Añia, demon, at all times and places. It destroyed the wheatfields and other plantings, did damage in their houses and burned them. Even the Guaraní called the bad spirit Añia which the said missionary applies to the demon (2).

2. A work written in the Guaraní missions of Paraguay.

/135 cont./

000 Revelation teaches us that legions of angels were lost because of an error or the grave sin of pride and passed into the category /136/ of the condemned or demons. Faith, reason, and common sense teach us that perverse men who die in their perversity are separated from good ones, as evil-doers are separated in this world by being imprisoned in jails. Divine justice demands punishment for the perverse, who, like condemned persons, pass into the category of lost spirits and as semblance of the demons, God allowing this, and they can appear to those of us who live here in the world to detain us along the way of sin or to warn us about it.

776 787 Under this concept it is not repugnant even to common sense to admit the probability that the Chiriguano do see the Aña, demon or evil spirit. Sacred history speaks of visions and apparitions; profane histories cannot combat them, but rather they relate innumerable facts of demoniac apparitions which have appeared by means of spiritualism. It is not strange that such a thing should happen among the Chiriguano. Doubtless it is incredible that it should be so frequent. They say that they see the demons at every moment of the night, whenever there is no fire or light, but this is a puerile worry, and due to fear and fright in some and to ignorance in others (1).

[372] [789] 1. In all the houses of the true Chiriguano there is always a fire burning at night for the principal end of keeping away the evil spirit or Aña.

773 Beliefs Relative to the Creation

[115] Before going on I am going to relate what was told to me by the cacique Anduari of the San Buenaventura de Ivu Mission, who, in order to increase his income, is a sorcerer or witch doctor for the Indians and some whites in a wide area. According to the account that follows, the human race, or the Chiriguano, was destroyed twice. The first time and its restoration have already been seen. The second occurred in the following way (2).

[585] [777] 2. Anduari gave his account in the presence of his

773
[585]
[177]

/136 cont./

wife and his Christian daughter, whose name is Candelaria Asúmbai, married according to the Catholic marriage ceremony.

Anduari then says that the first Chiriguano man, named Araparigua, without others knowing it, was saved from the universal flood, because, as a creature who had come directly from the hands of God and consequently was very beloved, he was taken up to the sky before the earth was flooded. /Illustration appears here./ /137/ When the Chiriguano had multiplied anew, he came down again to enjoy as before the pleasures of Bacchus and Venus, but very soon he made himself abhorred by all the people because of his haughtiness and his abuse of the property and women of others. Hence he was at the point of perishing, murdered by his own vassals, but Tunpa came to his aid, took him away again, and put him in his company. There Araparigua swore vengeance and asked Tunpa to destroy the whole race. God, knowing that his privileged creature no longer had any close relatives, such as a wife, mother, father, and children, acceded to his desires, and the Chiriguano were destroyed for a second time (1).

[595]

1. The caciques follow the example of Araparigua, having several wives and abusing others,to the great sorrow of their parents and of the damsels themselves. It is completely false that the women of this race who fall to the cacique consider it an honor, as is stated by Dr. Leocadio Trigo. I do not know if this happens with those of other races, but he writes in general of all of the races of the Chaco.

But the Tunpa did not wish to be without privileged creatures for a long time, and he came down to earth again. He made a human body from clay with all the members corresponding to the masculine sex. Then he made another with all the members of the female body. He gave life to both, they lived, and he left them in their nakedness, leaving them in possession of a beautiful place.

Girls' School of S. Buenaventura de Ivo

/137 cont./

973 In this beautiful and picturesque place there were fruit trees of all kinds, the fruits that they produced were beautiful to see and agreeable to the palate. Before leaving them the Tunpa gave them free use of all the fruit produced by the trees, prohibiting them from touching and eating the fruit of only one.

826 973 After a few days the man, passing under the prohibited tree and seeing the beauty of its fruit, said, "Why would God not want us to eat such beautiful fruit? There would not be anything bad in my simply tasting them, and furthermore he cannot see me." So he took one and put it in his mouth to eat, but at the same time that he was doing this he turned his head, and the fruit, instead of going down to his stomach, stuck in his throat, thus forming the haseuranti, or what is commonly called the Adam's apple (2).

> 2. The woman never touched the forbidden fruit, and the proof is that there is nothing in her throat; there is no haseuranti or Adam's apple: this is what the Indian himself says.

973 According to the account the woman did not eat the forbidden fruit, but in spite of this she felt the effects of the disobedience of her husband or companion, since, like him, she was ashamed of being /138/ naked and she felt the stirrings of concupiscence, which previously neither she nor the man had felt, and as a consequence of which they were united matrimonially, only after having broken the divine precept.

The Tunpa was not long in appearing, and before him they were both ashamed to see themselves naked, and they covered their nakedness by sitting huddled up on the ground. The Tunpa, who knew everything, called them to him gently, forgiving their sin, and gave them each proper clothing, and bade them farewell, allowing them to multiply.

The Indian, as anyone can understand, sees this as the reorganization of the Chiriguano race, but we can all see in this story the creation of man, his primordial innocence, his life in paradise, the prohibition which God imposed on him,

/138 cont./

993 the disobedience that was his sin, and the confusion which the guilt caused in him, with its consequent reprehension (1).

> 1. This story lacks the promise of a Savior, a most important fact, to be sure, but it should be kept in mind that this is a centuries-old tradition. The Indian is ignorant and only sees material things.

It can clearly be seen that this account, with only a slight difference, follows the story told by Moses in the first chapters of the Bible and adds even more to the proof that the inhabitants of the Americas came from and are descendants of the first man, a fact which so many enemies of Religion make efforts to deny. It also proves the unity of our race or species against Darwin, who would have it descend through evolution until it is related to the orangutan (2).

> 2. Hernán Cortes visited the Emperor Moctezuma during his first visit to Mexico. The latter assured him that they descended from other very ancient men, similar to the Spaniards, whom they called brothers.

It is easy to see that the Chiriguano tradition just related has been altered slightly, and that they attribute the reconstruction of the race to it, which, according to the Bible, is in fact the creation or formation of the first man. Centuries have passed since the universal flood and even more since the creation of the first man. The Chiriguano race is ignorant, has no books, no writing. It is descended from the Guaraní, who always lived apart from civilization. It could never be subjugated by the Incas, and thus it is not strange that the said tradition regarding creation might have changed until it is believed to be a second creation. Instead it is strange that /139/ up to now it has been preserved so clearly and with so few differences. I confess that when I first heard it I could not but be surprised and amazed, and I present it for the consideration of my readers just as I heard it.

[212]
[174]

/139 cont./

Belief in the Future Life

[115] This belief has suffered many more alterations than the previous one: nevertheless it reveals that even under the rude and ignorant nature of the poor Indian and the unfortunate Chiriguano there is in force the idea of the great philosopher, *non omnis moriar*, which so many materialists would have end with material life, doubtless in order to drown apparently the remorse of the gnawing worm which from time to time appears and unintentionally reminds us of the perversities which have been perpetrated (1).

[117] 1. It is difficult for the Chiriguano to understand spiritual matters, for which reason his ideas concerning the future life are purely material. Without revelation this dogma of faith is not understood.

When the soul of a Chiriguano leaves the body, it does not die. All, without realizing it or even suspecting it, have this idea of the immortality of the soul. Mourning and sentiments of grief, burial, and things that they put in the coffin when someone dies, with which I shall deal later, are related to this. Should someone ask them about this, they would answer, "Mahano" How will it be? I don't know. In spite of this ignorance, in order to express their thoughts regarding the soul and its immortality, they admit that there are three places for souls: Tuparenta, Ibora, and Cocaigli, Heaven, Purgatory, and Hell.

[123] [191] I am going to deal with the three, rectifying what concerns Ibora, which belief I was acquainted with from the beginning of residence among the race and an account of which can be found in my little Nino, which was printed in the year 1905 to help Chiriguano children learn the Spanish or Castilian language.

The Tuparenta is literally the place of God, or his dwelling place, as the aiarenta is the dwelling place of the devil. I have already noted the fact that Tunga is the source of good, of all virtue, of everything good: Tocoaci. With this idea that he has of God, the Chiriguano naturally concludes that God only

/139 cont./

775 admits to His company good, virtuous people who are free of all evil, Mbia hecocavi vaé, cuña hecocavi vaé, a man or woman of good habits. /140/ excluding the wicked, murderers, and suicides, who become Aña, demons, or souls of the bad ones (1).

[192]

1. Tenta means town and place: joined to another noun the T changes into R, which is why one says Tunparenta, Añarenta, Irenta, etc., or God's place, devil's place, and water place.

In order that the Chiriguano may go to the Tunparenta, even for the sole purpose of visiting his relatives, he must subject himself to four difficult tests, which, without help, directions, or advice, would be insuperable, from which can be seen the necessity for the sacrifice subjecting oneself to the arrangements of the Tunpa and of following the wise teachings of a sagacious guide, for if a traveler needs one to pass through a mountainous or desert region, exposed to innumerable dangers, how much more logical is it that the man should also have one when dealing with knowledge by means of sacred books on the road to eternal life? From this the reader can deduce how much in error are the followers of Luther, Calvin, etc., who attempt to investigate the true meaning of the Bible only by the dictates of their conscience, and doing without the infallible mastery of the Church established by Christ in the person of St. Peter and his legitimate successors!

An old Chiriguano had lost his wife whom he loved with all his heart, for which reason his grief and pain were incalculable. As a result his life was in danger and he was about to die. At this a compassionate soul appeared to him and said: "Why are you crying so much? Why are you in such pain? No doubt you don't know the fate which has befallen your wife! Know that she is enjoying herself, that she is in a place of delight where all is pleasure and there is no suffering, where one drinks every day and there is always a fiesta, where there is no poverty, or cold, or heat, or sickness. Let us go so that you can see and stop crying. But I warn you that before going, like all, you too must pass the four tests, which you will overcome easily in my company."

/140 cont./

975 The afflicted Indian, desiring to see his mourned wife again, quickly dressed himself in his best clothes, adorned his person, painted his face with Urucu, Bixa orellana, put around his neck the Itogüi, necklaces, picked up his lance, and went off, following the strange and mysterious guide (2).

2. It is natural for fallen humanity to clean up and dress up in order to present itself decently before a respectable public or before venerated persons. Christians ought to practice this when they go to church to hear or receive the divine mysteries and sacraments.

/141/ They made the first day's journey without incident and prepared their first night's lodging on a green and beautiful plain, where grew perfumed flowers and gigantic trees, which, with their leafy tops provided shelter for an infinity of birds. There they slept very peacefully without having their sleep disturbed by the wild animals of the nearby woods, and the next day, early in the morning, they set out again, and when the wide plain ended, the guide said to the Indian: "Get ready because we are now near the first test." And in fact he could see it. It was an enormous fire which rose almost to the clouds and then quickly came down again. Every time it rose up, it formed an arch, which allowed one to take a quick step. When he was warned by the guide that he should drive his horse forward at a gallop at the instant that the great flame rose up, they did it and passed through without incident (1).

1. Before beginning his trip the Chiriguano, on the mysterious guide's order, stole without permission two horses belonging to others and saddles for the comfort of both.

Before arriving at the end of the second day's journey they found themselves facing another danger. This was a wide well of boiling water which completely blocked the way, as did the first and later things. The well was easy to get over by a great

/141 cont./

775 jump on the part of the horse, but the boiling water kept rising to a great height and then would come down again with great force. The passage, however, was managed by the travelers quite happily, and they got far enough away from the place so that the noise did not disturb their rest and their sleep that night.

On the next day, before sunrise, they again began their trip toward the Tunparenta. The clear dawn and the fresh morning breezes announced a beautiful day; the little birds of the woods with their sweet and gentle songs brightened those lonely places. The jaguar in the distance showed his displeasure because the silence of those woods had been disturbed by alien living beings, and other beasts of the forest fled in fear, while the star of the day appeared with its shining face, casting beams through the thick woods which covered the region.

Now the sun was shining in the firmament as on the other days. They had now covered one third of the way when the third test appeared. This consisted of two enormous boulders in continuous movement, opening and closing continually with a terrible noise like thunder. /142/ With the guide showing the way, and the Indian passed through without difficulty, and very soon they arrived at the fourth test. This was made up of some huge scissors with the points down, which would have cut any careless person in half without any possibility of escape, but the travelers passed without difficulty, and after this they found themselves in front of the Tunparenta.

This was an immense pampa, carpeted with flowers and grasses of every color and full of happy people who drank continually the favorite liquor of the Chiriguano. The Indian there saw his wife and his daughter, richly dressed, resplendent like the moon, and he asked them to return in his company, but they did not consent. The Indian returned alone, promising to behave well in order to be able to join them soon (1).

1. The first of the spouses to die waits in the Tunparenta for the survivor in order to be reunited again. Bachelors must wait until spinsters die, in order to contract matrimony in heaven, where they do not experience the jealousies and debauchery of their companions.

/142 cont./

775 The Iboca which I have mentioned is in a certain way similar to the purgatory of the Catholics, and in some ways similar to limbo, since the Indians state that souls which go there are in utter darkness, which is the same thing as not seeing God, and this alone constitutes great suffering. Other corporal and moral punishments do not exist there, but the darkness is perpetual (2).

2. In Iboca, located southeast of Igüembe Canton, souls can be heard at night in continuous joy and bacchanalia with songs and dances. By day all is sepulchral silence, so they all say.

The Cuarasigüi, literally, under the sun, is for the Chiriguano the true hell, where is felt the true eternal fire which is represented by the sun, in the immediate vicinity of which it is impossible to remain, as the natural sciences, cosmology, demonstrate. According to the Chiriguano, those Indians who take the life of another, those who take other people's property, those who commit suicide, and those who commit sins contra naturam go to Curasigüi.

773 According to a famous explorer and ethnologist who not long ago passed through the region from Guachalla to the boundary which divides Bolivia from Peru in the northwest, there exists among the Chiriguano the idea or belief in the Tower of Babel, where the confusion of languages took place. According to that reference formerly there was but one language spoken, and, according to them, this was Quichua /Quechua/. The idea of creation, of the flood, of the confusion of languages, the method of counting the months by moons and the seasons by what they signify, /143/ and various Chiriguano words similar to Hebrew are powerful arguments to demonstrate the unity of the human race against the rationalists who are trying to show that there were men destroyed by the flood in America (1).

[192] [197]

1. The Chiriguano words ava, hae, húú, and mahanu?, man, he, black, and what is it?, are similar to the Hebrew av, ael, húm, and mahanu?, man or father, he, black, and what is that?

/143 cont./

Prayers

771 Certainly the fact that this race does not have external manifestations of worship greatly attracts the attention of men of science and missionaries. The Chiriguano is born and grows like a little lamb is born and grows. They do not know where they come from, and all of their actions are reduced to pure nature. The Chiriguano never raises his mind or his heart up-
[821] ward. He discusses the firmament; he counts the stars and even separates them into groups as though by astronomical principles; he admires the grandiosity of the sun and of the moon, he understands the beneficence of the nourishing world, but the totality remains mute and silent before the works of nature or
[782] of creation. Visible things do not lead the intelligence of the Chiriguano to the knowledge of the Cause of such effects, and inasmuch as he has a rather vague idea of God, he does not offer worship to Him or to anything which resembles Him.

782 It is consequently useless to look for idols in this country, just as it is extremely useless to inquire about temples or hermitages for religious gatherings. Prayers, however much they may be investigated, are very abridged, if there are any, and are not worth being called such, because they are rather a kind of boasting by the one uttering them, in order that all may see that he is eloquent in speaking. This is what they do in the general gatherings when they drink for many days and eat in the
[539] plaza. Enthusiasm comes in the heat of drinking, and, on seeing an immense multitude, someone will raise his voice, saying more or less the following: Çheru Tunpa, icaviño taicó, pucu emeé cheve cherecovena, cherimbiuna emoñimoña cheve, tacherori catu taicó, anu tamano. My God, make me be well off, give me a long life, make my food be produced, give me happiness, do not allow me to die (2).

[761] 2. The only thing that the Chiriguano wants is to live forever, but he sees that it is impossible and contents himself with expressing his vehement desire, but he does not believe that death comes to him naturally.

/143 cont./

000 The sun is a beneficent star; it gives us light, warms us in winter, causes food to grow for men and animals, /144/ it is a creation which God has put in the world so that, as a second cause it will maintain the universe and all things in it, this being the principal virtue granted to it by the Maker of all things.

821 782 The Chiriguano understands the virtue of the sun to the extent that it strikes his corporal senses, and thus it was with difficulty in ancient times that he elevated his spirit to the contemplation of another invisible Being superior to the star of the day, from which it came about, according to some writers, that the Chiriguano would address some prayer to this king of the sky, like some tribe, and timidly and courteously uncover the head upon meeting an intrepid fox.

But however much I asked about this subject, no one gave me any information about such a prayer. The only thing they said that the old people did was to call the sun father and ask it not to hide its face. Today, when the country is invaded by whites and [799] even by people from the Old World, today when there is no Chiriguano place that has not been trod by the foot of the missionary, founding missions here, passing through there, and in another place exploring the will of the Indians, all has changed and those who do not know of the existence of the true God are few. There are few Indians who do not know that the sun is a work of God and therefore incapable of receiving outward demonstrations of veneration, when they do not even render it to God (1).

1. It is very probable that formerly the ancients were happy when the sun came out, as anyone would be happy, and that they would have a special fondness for it, whence comes the argument by some that they address prayers to it, but it is natural for man to be happy when the sun appears.

/144 cont./

Genii

776 171 Where ignorance dominates, superstition is the result, I imagine, since all the tribes adjacent to the Chiriguano must believe in the existence of genii or owners of certain places who, not to offend anybody, are even accepted by some members of the white race, especially when dealing with buried treasures. This is not the least strange, since before the arrival of Christ all humanity, except for the Hebrews, believed in this, and even today in those places where the light of the Gospel has not penetrated a belief in genii prevails, even among enlightened people, because only the Gospel dissipates /illustration appears here/ /145/ the mists from the soul and destroys error, consequences of the fall of the first man.

778 776 In Chiriguano the tutelar genii of a place are called Iya, owner in the literal sense. If the Chiriguano pass by places where there is some genie, they find it difficult to approach, and if one asks them where there might be some limestone or gypsum, they will not tell for fear of the Iya, who would take revenge by killing the Chiriguano who caused the place watched over by the genie to be discovered. If something useful must be taken from such a place, they do it with the permission of the Iya (1).

[278] [317] [231]

1. The presence of the Iya in places where petroleum is found is undeniable for the Chiriguano. They will take what is absolutely necessary of this liquid to cure the sores of their horses, cows, etc.

135 When the San Buenaventura Mission was founded, the missionary made every effort to try to find gypsum and limestone, but no Indian was willing to tell where it was abundant. Nevertheless, by chance, while the foundations of the church were being built, it was discovered that many of the stones being used were of hydraulic lime, an abundant vein of which was found about 300 meters from the church itself on top of a hill. Gypsum up to today has not been found in the areas thereabouts for the same reason, but there are signs of its presence. In

797

The Santa Rosa Mission Band

135 /145 cont./
Caraparirenta there is an occasional stone of this, which has been brought there by water.

In Huacaya Canton, along the shores of the Pilcomayo on the lower slopes of the hills of Oriente, it is asserted that there must be mines or deposits of gold. A stream brings little nuggets to [648] certain places. Almost all the whites there say that the Indians pick up these nuggets, sell some of them, and work others into rings or earrings for their wives, but up to now, however hard the whites have tried to discover the place, they have never found an Indian who would take them (2).

776
778

2. They say that in the woods on the peak of a small hill there are two bells hanging from a tree and in another place a building with two

/145 cont./

776 778 small apartments, owned by the Iya, a child who leaves footprints when it walks. They believe these things as though they were real.

312 778 823 776 Among the many springs that are plentiful in the San Buenaventura de Ivu Mission there are several with hot, sulphurous water. None of the old people will go near these springs, and the only ones who do it are boys and girls who, because they have embraced the Catholic religion perhaps and because the teaching of the /146/ missionary makes them understand that only God need be feared, have no fear of these inoffensive things. Nevertheless, [761] when some schoolgirl dies, the old people say that such a thing has happened because of the lack of care shown by them when they approached and bathed in these springs owned by the Iya.

778 776 The aforesaid shows that the old Chiriguano is very superstitious, and because of his love of life he respects the places where the imaginary genii can be found. If such places were [761] [753] discovered and disturbed through someone's error, he either would soon die or he would lead an unfortunate life full of long sicknesses ending in death, and for this reason it is impossible for a true Chiriguano to reveal the places which, according to his affirmations, are possessed by genii (1).

1. At the end of the year 1899 a gentleman from Sucre began work in the petroleum site of Mandiyuti in Cuevo. Unfortunately, he died of acute bronchitis, but the Indians attributed his death to the anger of the Iya.

Sorcerers

754 756 Another consequence of ignorance is a belief in sorcerers. This belief, however, is much more general. The working man accepts it, as does the moderately enlightened. The man who is in a completely savage state accepts it, as well as the one who is beginning to become civilized. It is accepted in America, as in old Europe, extensive Asia, deserted Africa, and newest Oceania. Nevertheless, the word "sorcerer" does not have the

/146 cont./

754 same meaning everywhere. In Europe the ignorant masses call
756 sorcerer or witch the man or woman who has made a formal pact with the devil; among the Chiriguano and whites of the Gran Chaco it is the man or woman who succeeds in curing illness or who is in possession of other prestigious abilities (2).

752 2. I know an Indian who treats snake poisoning
756 without using any medicine. He blows upon and rubs the bitten part, and it gets well with no
[825] other remedy. He catches snakes, holds them against his breast, puts them in his pockets, in his hat, and they do not bite him. I cannot explain this phenomenon.

773 But who was the father of sorcerers among the Chiriguano?
825 Guarerai, Indian, Iñeé iya vae, eloquent one, told the following
776 story: In a very remote epoch there was a general drought which
756 continued with the imminent danger of all the sown fields being
754 lost. When the cause had been discovered by the king of the birds, Güiraqué, the kite, organized a commission to the lord of rain, called Choncho, so that he might /147/ make it rain. But as the latter paid no attention to the king's embassy, he came personally to find out why and to punish his disobedience if he found him guilty. But the choncho answered that it was not up to him, but up to another bird called chena, whom King Milano confronted, and as he wavered when he denied it or tried to free himself of blame, suspicion was aroused that he was the author of so much evil, and as the evil-doer he was immediately run through by King Milano's lance.

787 This is a fable, but it is certain that the choncho is respected
825 and feared. If this small bird sings in an angry tone, it is a sign to the Chiriguano that evil will come to him, and then he commends himself to it and says: aguye ndepochi, cheru mi, tome taicó cavi; do not be angry, may everything go well with me. If it sings happily, the Chiriguano will be well received by his relatives and friends, and if the choncho says, To, To, it is a sign that wherever he goes he will find a lot of chicha, for which reason they never do any harm to this little bird.
